Studies in the English of Bunyan. By J. B. Grier. (Philadelphia: J. B. Lippincott & Co. 1872.)—Mr. Grier is a tutor in rhetoric in the college at Easton, Pennsylvania, and this volume informs us of his method in the class-room at the same time that it makes a book having a much wider interest than the common run of text-books. "As I walked through the wilderness of this world," says Bunyan, "I lighted on a certain place where was a den, and laid me down in that place to sleep; and as I slept I dreamed a dream." Any plan of teaching rhetoric and composition which should set the young men, or the young women either, to the careful studying, sentence by sentence and word by word, of a style such as that, would seem to be a good plan. This is what Mr. Grier has endeavored to do. Taking as his text a few pages of the "Pilgrim's Progress," he divides them into very short portions, and the class being assembled he first calls for the parsing of the sentence, making the pupil find the "predicative combination which is the framework of the sentence"; and what the predicative combination may be, is taught to the benighted boy by a chapter or two of appendix which is adapted from Fowler's English Grammar. The "pre-

dicative combination" and then to the "subject" and "predicate" are fitted the "adverbial combination"—or "adverbial element," as it used to be called in the days of "Greene's Analysis"—the "adjective combination," and so on, after which comes the rest of the grammatical analysis, to show whether the sentence is confused, or complex, or simple. When this is done it is in order to make an etymological review of the sentence, and after the grammatical review and the etymological are concluded a rhetorical analysis follows. A lesson in some good grammar accompanies the instruction in Bunyan. This may seem like elementary instruction for a college; but we doubt if there are many colleges the world over where English is spoken in which instruction quite as elementary would not be exceedingly useful. And outside of colleges the case is of course worse. What senators or representatives write good English? How many large manufacturers aspiring to become governors of States can send neatly and well-expressed replies, to say nothing of grammatical and well-spelled replies, to their business correspondents? How many, indeed, of us whose business it is to write do it decently? We suppose Briareus could count on his fingers all the editors and tutors in English who could sit down to-morrow morning and write like this:

"As I walked through the wilderness of this world I lighted on a certain place where was a den, and laid me down in that place to sleep; and as I slept, I dreamed a dream. I dreamed, and behold, I saw a man clothed with rags standing in a certain place, with his face from his own house, a book in his hand, and a great burden upon his back. I looked, and saw him open the book, and read therein; and as he read, he wept and trembled; and not being able longer to contain, he broke out with a lamentable cry, saying, What shall I do?"

Of the state of things inside of the colleges a witness competent to speak of a college which is among the six or seven best in this country speaks as follows. The University of Michigan is the institution in question, Professor M. C. Tyler being our authority:

"There is a stateliness in the name University which is apt to impose upon us with the beautiful hallucination that because a person is inside of so august an establishment, he must certainly be a master of these rudimental and alphabetic subjects. But this is a sphere in which all illusions are barriers to improvement; and I can think of no better way in which to inform my fellow-teachers of the real condition of English culture among our students, than to give them some samples of the orthographic curiosities which I collect from week to week in the essays and speeches which are laid upon my desk. Here are a few gems which I found glittering in essays written by Sophomores: 'axidental,' 'wrot iron,' 'meny,' 'scientiffic,' 'tital,' 'imoral creachers,' 'oppertunities,' 'lucretive,' 'merchantile,' 'the vast pararies of the west,' 'togather,' 'togeather,' 'has to pas,' 'perhapse.' I assure my readers that though the above specimens are gems, they are by no means rarities with us. Indeed, the fields referred to are so rich in this form of treasure, that in almost any batch of a dozen essays brought in for examination, I could promise to find jewels quite as many and quite as brilliant. One year I had the curiosity to see what I could collect of this kind from the speeches carefully prepared for Junior Exhibition by members of the classical section of the class, then in the third year of its course; and this was the luck I had: 'ageant,' 'unintelligable,' 'contrairy,' 'plausable,' 'Cipio Africanus,' 'clowd of darkness,' 'faverite.' I will add that the samples now given were taken from the writings of students who have been since graduated; but that the supply is still apparently as abundant as ever.

"What have we a right to infer, with reference to the state of English culture in the University, from the fact that in every dozen essays written by our students can be found so many and such gross examples of ignorance and neglect? May we not conclude that, if the students are capable of such outlandish pranks in spelling, they will be equally heedless in the choice and combination of words, in pronunciation, and in the mechanical execution of manuscript? If it were necessary, I could support the implication which this question suggests by documentary evidence that would be simply overwhelming."

These no doubt are specimens of the English of the lowest quarter of the junior classes of students in a college of wide range. But defective grammar and bad rhetoric are not exceptional in universities of higher rank than that at Ann Arbor. On the other hand, it is of course true that ninety-nine in a hundred of our good writers are bred at the universities. It is because we think this plan of Mr. Grier's a means of breeding more of them that we are glad to call attention to its merits. It is not complete; there are things to be learned in regard to good writing which the Elston tinker did not know, and which, if he had known, he would not have used in the "Pilgrim's Progress." Bunyan is a good writer; so, too, is De Quincey a good writer; and while Bunyan was tagging laces in Bedford jail, Milton was writing in an English style which will be of equal date with his great contemporary's. But hardly anything could be better practice than this minute and thorough study of such English as Bunyan's.

As regards the execution of Mr. Grier's plan, it is no doubt to be remembered that this little volume does not present it in its fulness; and that even though we should have here every word of comment, the instructor who should propose to use it would not the less be compelled to fill out the details of it from his own resources, and would necessarily depart from his model. We should not agree with all of Mr. Grier's rhetorical remarks, and, perhaps, neither his instruction nor ours would, in the long run, be the worse for the difference, though we should doubtless prefer our own. And, moreover, we should disagree with some of his philology, the chasm becoming widest, perhaps, at the fourth and fifth lines of page 118, if we get the author's sense.

A Latin Grammar for Schools and Colleges, founded on Comparative Grammar. By Joseph H. Allen and James B. Greenough. (Boston: Ginn Brothers. 1872.)—The reaction against the full and minute Latin Grammar of Andrews and Stoddard, or rather against the vicious manner in which that manual has been used in certain quarters, produced some four years ago the little work of Messrs. W. F. & J. H. Allen. But this fell into the opposite extreme of excessive brevity. It did not even contain a full exhibition of the paradigms. Its successive editions, however, which followed each other with quick rapidity, embodied many additions to meet the demands of practical teachers, and these improvements, with the real merit and value of the work, secured for it a wide and growing popularity. The grammar before us is not called, and perhaps ought not to be called, an enlarged edition of the Messrs. Allen's little Manual. Still, Mr. J. H. Allen is one of the joint authors of each of these works, and they are still further identified by having, in the main, the same arrangements of subjects, the same numbering of the successive sections, and, to a considerable extent, even the same phraseology. But we do not find any reference whatever in the later to the earlier work. This may be owing to the very great differences which nevertheless appear between the two. To speak of nothing else, the new grammar contains twice as much material as the old, and this is brought in without any sacrifice of lucidity, and without the introduction of any subjects which should have been omitted. This, of course, greatly increases the value of the book, for it still covers only two hundred and fifty pages, and ought, so far as its size is concerned, to escape the condemnation of those who stand in chronic dread of voluminous Latin grammars. But we think it sufficiently large and complete to answer all the ordinary demands of students of Latin, whether in preparatory schools or in college. We have, to a limited extent, tested the claims set forth in the preface so far as the rules and principles of syntax are concerned, and in each case have found our demand satisfactorily met.

The general methods of the work show sound judgment, and will commend themselves to good and enterprising teachers; for while the authors have not been led by their familiarity with the most advanced linguistic scholarship to depart from the simplicity of their task, they have at the same time made this new grammar peculiarly useful by giving just enough glimpses into the growing field of comparative philology to awaken the curiosity and engage the interest of such boys as give promise of developing any natural aptitude for broad linguistic studies. The substantial contributions to Latin Grammar gathered from this field are used without parade, and in a way to occasion no perplexity to teacher or learner.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Alvergnat (V.), Modern Class-Book of French Pronunciation.	(Schoenhof & Moeller)
Bastian (Dr. H. C.), The Beginnings of Life, 2 vols.	(D. Appleton & Co.)

HARVARD UNIVERSITY,
CAMBRIDGE, MASS.
The next term begins in all departments on Thursday, Sept. 26, 1872.
The examination for admission to Harvard College begins on Thursday, Sept. 26, at 8 A.M. The examinations for admission to the Engineering Department of the Lawrence Scientific School, to the Mining School, and the Bussey Institution, begin on Thursday, Sept. 26, at 9 A.M.
For Catalogues, circulars, or information about any department of the University, address
JAMES W. HARRIS, Sec.

YALE COLLEGE.
THE SHEFFIELD SCIENTIFIC SCHOOL
Offers professional training to Civil and Dynamical Engineers, Chemists, Geologists, Naturalists, etc., and also courses preparatory to such pursuits as Mining, Medicine, Agriculture, Manufacturing, etc. Letters may be addressed to Prof. GEO. J. BUSH,
New Haven, Conn.

WHITTIER'S NEW VOLUME.
THE PENNSYLVANIA PILGRIM, AND OTHER POEMS.
BY JOHN G. WHITTIER.
1 vol. 16mo, illustrated, $1 50.
Of the leading poem in this volume, the Literary World says:
"Like 'Snow-Bound,' it is a pastoral, and, though dealing with a less familiar theme, seems to us hardly, if at all, inferior to that almost perfect poem. In it the poet reproduces, with that serious fidelity and felicitous art which distinguish all his descriptive writings, features and phases of life among the Quaker colonists of Pennsylvania two hundred years ago. His sketches naturally and gracefully grow and cluster around the noble figure of Francis Daniel Pastorius—a stranger to most of us hitherto, but now familiarized and immortalized in these grave yet glowing verses."
The other poems include "The Pageant," "The Singer," "The Brewing of Soma," "Marguerite," and several additional pieces never before collected.

ORIENTAL RELIGIONS,
And their Relation to Universal Religion—India. By Samuel Johnson. 1 vol. 8vo, $5.
This book is an important contribution to Comparative Theology. Mr. Johnson has given many years of study to the general subject of the relations between the great religious systems of the world, and especially to the Oriental religions. The present volume is devoted to India, and is remarkably full in historical information, graphic in portraying the diverse and little-understood religious systems and beliefs which have held, and still hold, sway there, and profoundly catholic in its appreciation of ideas foreign to the thought of Western nations. It contains the results of the best modern researches and extracts from the best translations of Hindu literature. Mr. Johnson's great ability, thorough study, analytical power, and large religious sympathy, assure a work of far more than ordinary value—a work that all thoughtful persons will read with interest and instruction.

SPECIAL NOTICES.

[TERMS: In advance, one insertion, three cents per word; five insertions, two cents per word each. The enclosure of an addressed and stamped envelope will secure a numbered box to which communications may be addressed.]

WANTED.—A first-class experienced Salesman in the general book business. Address SOULE, THOMAS & WINSOR, *Law and General Booksellers, St. Louis, Mo.*

WANTED.—Employment in any department of a publishing house, or as managing editor of magazine or paper. Experience of several years in one of the largest houses in New York, with five years' travel in connection with school-books. Satisfactory reasons given for the change, and very best possible reference. Address R., *care P. O. Box 1672, New York City.*

A LADY, who has had much experience in teaching English, French, German, and Music, desires a re-engagement either in a school or family. Address W., *P. O. Box 100, Irvington-on-Hudson, N. Y.*

PUPIL IN MATHEMATICS, ETC., Wanted. Address S. I. N., *Nation Office.*

A YALE GRADUATE, lately Principal of a classical School, desires private pupils in New York City or vicinity in English or classical studies. Testimonials from Ex-Pres. Woolsey, Pres. Porter, Professors Thacher, Hadley, and Northrop of Yale College and others. Address G. C. *Box 753, Portland, Maine.*

A YOUNG MAN, now in Berlin, desires one or two pupils, or would travel with young persons as tutor. He speaks French and German, has had several years' experience in teaching, and is a Classical Fellow of the College of New Jersey. References exchanged. Address LOCK BOX 648, *Yonkers, N. Y.*

TWELVE YOUNG GENTLEMEN receive the exclusive instruction of a very experienced teacher and his assistant. Fine residence. Healthy location. Address Box 82, Hempstead, Long Island, N. Y.

A CLASS of Fifteen Young Gentlemen will be received and instructed in English, the classics, and modern languages by THOMAS R. ASH, *No. 17 East Sixteenth Street.*

CHOIRS and Congregations supplied with new music. HENRY CLARK, *Pawtucket, R. I.*

A.—MISS WHITCOMB'S English and French Boarding and Day School for young ladies and children, No. 82 Pierrepont Street, Brooklyn Heights, N. Y., will reopen on Wednesday, September 18, 1872. Address as above.

PROFESSOR CHARLES CARROLL, of New York University, will fit young men for College or form classes for private instruction in French and German. Address at the University, or personally at No. 2 East Fifteenth Street.

S. A. FARRAND'S SCHOOL, 1400 Broadway, reopens September 25. Great pains are taken to teach boys how to study. This is done so thoroughly that they need no help at home. Among the patrons of the school are, Rev. Thos. S. Hastings, Rev. Isaac Ferris, Rev. Geo. L. Prentiss, Rev. E. H. Chapin, Rev. James O. Murray, Rev. Harvey D. Ganse, Rev Prof. Henry B. Smith, Rev. J. F. Stearns, Rev J. Few Smith, Rev. D. W. Poor.

DUANE S. EVERSON'S School for Boys Reopens Sept. 23 at 1146 Broadway, above Twenty-sixth Street. Thorough instruction. Ancient and Modern Languages and the English branches.

MEDICAL INSTITUTION of Yale College—1872-73.—The Collegiate year of Medical study embraces a winter and spring term. In both terms the Faculty are fully engaged in the work of instruction, which is so divided among the Professors, ten in number, that all departments and specialties usual in the best medical schools are fully taught and illustrated. The next winter term, devoted to public lectures, begins October 17 and ends February 13. The next spring term, occupied chiefly with daily recitations from text books, begins March 6, 1873, and ends June 26. Fees (paid in advance): Matriculation Fee, $5, payable once only. For both terms, in one payment, $100. For either term separately, $60. Tickets to the Hospital and Dispensary gratuitous. For further information and circulars, address the Dean of the Faculty, Prof. C. A. LINDSLEY, *New Haven, Conn.*

CHARLIER Protestant French Institute, Boarding and Day School for Young Gentlemen only, Nos. 126, 128, 130 East Twenty-fourth Street, near Madison Park.—Eighteenth year begins Sept. 17. College, Business, West Point, Annapolis, German, Spanish, Primary Department, Gymnasium, Military Drill. Catalogues with full details. Home after Sept. 2. PROF. ELIE CHARLIER, *Director.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 3, 1872.

The Week.

THE only noteworthy contribution to the literature of the campaign made during the week, has been a speech of Mr. C. F. Adams, jun., at Quincy, Mass., in which he, as one of the originators of the Cincinnati movement, explains why he was disappointed in it, what he intends to do under existing circumstances, and what he looks for as the result of the present muddle. The reasons of his disappointment have been so frequently set forth in these columns that we need not reproduce them. What is most important in Mr. Adams's address is his strong expression of the hope and belief, in both of which we share, that the Greeley movement is likely to make the way far plainer for real and honest reformers four years hence than it could possibly have been this year, even if the Cincinnati Convention had done what was expected of it. Perhaps the greatest obstacle in the way of any real change for the better in the matter of nominations was the avowed faith of most of the politicians that it was not only still possible to have a "hard-cider and log-cabin" campaign, and that it was possible to sing and cheer any picturesque old "champion" into the White House, without reference to his mind, manners, or antecedents, but that this was the only possible way of beating Grant. This delusion, as Mr. Adams points out, the Greeley canvass has thoroughly exploded. It is well known that the Greeley type of man has not gained but lost in public opinion, and that when reform is attempted hereafter it must be attempted with the heaviest mental and moral metal the reformers can command. As a striking illustration of this, Mr. Adams called attention to the fact that the one man in America who has made a deep impression on the political mind of the country—made a real reputation, in short—during the last ten years, is a man of facts, figures, and arguments—Mr. D. A. Wells. Of this all old "war-horses" and "champions" would do well to take note.

The Springfield *Republican* has announced this week that "the essence and the basis and the hope of the Liberal movement are found in the principles of the Christian religion," and that "the Cincinnati platform is the outgrowth of the Sermon on the Mount." This information will take a good many people by surprise, and, if true, ought certainly to have been communicated to the public at an earlier period in the canvass, for very few, if any, have even suspected anything of the kind since Mr. Greeley's nomination. In the first place, it is rather odd that a body pious enough to take the Sermon on the Mount for its platform should have planted on it, as a candidate, the most obstreperous old "war-horse" and one of the wildest and most unscrupulous vituperators the country contains; and, in the second place, people find it hard to believe that a movement has "its essence and basis and hope in the Christian religion" of which one of the first effects has been to set hundreds of newspapers and hundreds of orators lying and equivocating for its defence and propagation. There is no Democratic orator or Democratic editor now in the field for Greeley who does not in his heart despise and dislike Greeley, and yet he is daily engaged in trying to persuade his countrymen that Greeley is a great statesman and an able and honest man. The fact is, if we are going to take a theological view of the matter, it must be admitted that no movement in American history has set in motion so much of the devil's machinery, is doing so much of the devil's work, or is in all its methods so hostile to the principles which lie at the basis of Christianity. In saying this, too, we have the pro-slavery movement in our mind. Slaveholders were honest men. They believed what they preached, and showed, when the occasion came, that they knew how to die for it; but you, Greeleyite brethren, do not, even one-half of you, believe what you say about Greeley. You know he is not what you represent him to be; in other words, you are engaged in a game of imposture on a gigantic scale; and to talk of Christianity in connection with your movement, or your "hopes," or your "essence," or your "basis," is to blaspheme it. Christianity is a religion of love, but it is also a religion of truth. It commands men to forgive their enemies, but it also commands them to stop lying and deceiving.

The *Christian Union* has been making enquiries as to the levying of assessments for political purposes in the Custom-house of this city, and has satisfied itself that nothing of the kind is now done. Some slight voluntary contributions are made, but this is all. We are very glad to hear this, and hope that the same thing may be said of other custom-houses; but the civil service will never be reformed in this particular until there is an absolute cessation of the forwarding of circulars soliciting contributions from office-holders, signed by persons high in authority. Requests of this kind are apt to be regarded as commands, or at all events are apt to intimidate subordinates. In fact, the collector of this and every other port ought to *keep out of politics*. The real collector does, and we propose that the political collector should either do the same thing, or else go into some other calling. If he merely voted, he would be no worse off than the rest of the community, and the community would be much better off. We also must express our dislike for the cant we hear about office-holders on small salaries "wishing" to subscribe to campaign funds. They wish nothing of the kind. Persons of the same means in other walks of life never think of such a thing; they want the money for their families; and Federal officers on $1,500 a year ought to be encouraged by their superiors *not* to give money for campaign purposes, but to keep it for the clothing and education of their children, and for their own washerwomen. It is a ridiculous and shameful thing for a man in this position to give $25 to help to secure the valuable services of a Banks or a Butler or a Fenton for the American nation.

Both Democrats and Assistant Democrats—as some one has happily named the Greeley Republicans—were naturally much depressed just after the New England elections. Vain sacrifices on the part of the one, and very vain boasting on the part of the other, seemed to be proved by the results of the coalition in Vermont and Maine. During the three or four weeks since then, however, they have taken heart of grace again, and are now working and waiting in the professed hope that they are to carry Pennsylvania almost certainly, Ohio probably, and Indiana probably—in fact certainly, if anything is certain in politics, and by a decided majority. The grounds of this confidence are not unplausible. Indiana, after having gone Republican for some years by steadily decreasing majorities, went Democratic at the last election; Mr. Hendricks, known as an able man, respected for his ability, and in training as a party candidate for the Presidency, is running for governor; a Republican leader formerly influential, Mr. Julian, is a prominent Greeleyite. As for Ohio, it was the seat of the original Cincinnati movement—a movement of men impressed with the belief that the Republican party ought to be put out of the way; it is the home of many thousands of German voters who are opposed to Grant; the Republican majority in Ohio has been fluctuating, and once of late years has been a minus quantity. As regards Pennsylvania, we confess ourselves unable to get or give a succinct and reliable account of the true state of the case there. Of the hundred or two of men who could explain the precise nature of this Cameron-Curtin-McClure-Hartranft coil, with its railroad radiations and Washington-lobby connections, not one but is engaged up to the eyes in the active fight on the one side and the other, and the truth is not to be had or expected from any one of them. We certainly cannot give it our

readers, and we, as having had experience, advise them to give up the attempt of learning it from the newspapers. Somewhere or other there must be some tremendous and persistent lying going on, and we grope in the dark after Forney's motives, Curtin's motives, Yerkes's or Geary's motives, Cameron's relations with Hartranft, and a dozen other things necessary to be known before a just estimate of causes and results can be made. We do not, however, so far as we can see, find reason to believe the Greeley prophecy that Hartranft is to be defeated; on the contrary, it appears to us that he will be elected; and that in any case the other results of the election will be such as to leave it beyond doubt that it is with him personally and his managers in the State canvass that dissatisfaction exists, and not with the general record of the Republican party. The pardoning of Yerkes, in order, as it would seem, and as is alleged, to enable him to make an electioneering affidavit, was one of those things which it is impossible to characterize in moderate language, no matter what the merits of his story may be.

Among the few things certain in the perplexing canvass in Pennsylvania we may count these: Mr. George H. Stuart, the eminent Philadelphia merchant, and a man of great consideration in that community, and of weight in the religious world, is one of many business-men who certify that, after careful examination of the wilderness of charges brought against Hartranft, they find him blameless, and advise his election. Mr. Forney, whose singular course is not the least of the anomalies of the campaign, is a self-confessed beneficiary of the Evans corruption fund. Governor Curtin, in his speech at his home in Bellefonte, said that against General Hartranft he had nothing to say except that he allowed himself to seek the governorship under the auspices of the Cameron ring—and the Cameron ring is not the Curtin ring we must recollect, but its victorious enemy. These things, together with the enthusiastic endorsement of Hartranft by his companions-in-arms, all of whom appear to think very well of him as a soldier, have inclined us to think him a calumniated man. At the same time, it will require a more decisively favorable result of the election than we are now expecting to make us think his nomination other than unfortunate. Such, too, seems to be the opinion generally among Republicans outside of Pennsylvania. These latter, however, may be presumed to know their own business tolerably well, and for anything that can now be said, and proved, he may be the strongest candidate that could be put up. Very possibly the disruption of the party in Pennsylvania may be just like the disruption here—one which simply could not be healed, and one of the parties to which had to be exterminated. Tuesday will show what is the truth of the matter.

Meantime, to go on with the things certain in the Pennsylvania canvass, about 13,000 colored votes will be cast in Pennsylvania for the first time in a gubernatorial election, and these, it is reasonable to expect, will be solidly for the Republican candidates in October as in November. Then the campaign work has been done with great skill and energy on the Republican side—speakers, torches, music, and documents being applied systematically and without stint, bolting encouraged, labor-reform tickets set up, and all sorts of bargaining and every kind of persuading being used by masters of the art. It is very difficult to believe that, under these circumstances, the Democracy, led by Mr. Buckalew, are going to succeed, and, as we suppose, they will not. Indiana appears more doubtful, and we confess we should not be distressed were it to be the result of the election that Mr. Morton is dropped out of the Senate. The exacerbations caused by him and Mr. Conkling have been as influential as anything else in making this contest so hard a one, and in offering the unterrified Democracy with the South leading it one more chance to open a record which ought to be closed. We hope the party, when it turns over its new leaf, will bear both these gentlemen in mind.

Dr. Ayer, the well-known Massachusetts advertising physician, has acquired a fortune by the sale of his pills, and has become ambitious. For some time he has been busy, if his neighborhood papers tell the truth, in "laying pipe," "pulling wires," "seeing" people, "log-rolling," "working," "hiring workers," and otherwise exerting himself after the approved methods in procuring from the caucus or district convention of the Seventh Congressional District of Massachusetts a nomination as Congressman, and there was fear that he would get it. This was undesirable, we are told, for two reasons: one was that he is not fit for the place, which certainly used to be a reason in Massachusetts; the other, that if he were elected there would be every probability that General B. F. Butler would count for at least two in the Massachusetts delegation instead of counting for one, the Doctor being understood to be the warm friend of the General, and the General being known not to be warm friends with the holy and the wise; nor with the unholy or the unwise either, unless he can make them serve his turn. There was a third reason which turned the scale against the industrious Doctor, when we fear the other two, excellent as they were, would have been unable to prevent the disgrace of the district, and that was, that not only is Dr. Ayer not a fit man for the place, and Mr. Butler a man whose influence should be diminished, but Judge E. R. Hoar consented to allow his name to be used as a candidate. The escape was a narrow one, the ex-Attorney-General beating Ayer by only ten votes. It is true that many of Ayer's delegates were pledged to him before Mr. Hoar had appeared as a candidate; but think of a delegate's being pledged to Ayer! Massachusetts is to be congratulated on this strengthening of her delegation. The loss of Banks and the gain of Hoar is indeed a gain.

The controversy raised by the late refusal of the Bank of Commerce and the City Bank to pay the certified checks to the Gould operators, has ended substantially in the approval of the course of the banks by public opinion, but they have acknowledged the illegality of their course by paying the amount of the checks with costs. An attempt was made to annul the transactions for which the checks were given, on the ground that the refusal of the banks constituted non-payment; but the Stock Exchange has ruled that where a certified check is given on a bank in good standing at the Clearing-House, and payment refused, "there is no such default as to authorize the closing of the contract under the rule," but any claim for damage sustained must be presented to the Arbitration Committee. The money market is still in a disturbed condition, as the banks are still short of money, and the "operators" are consequently occupied with daily raids on borrowers and holders of stocks. No great prospect of a change, for some weeks to come, is held out by any of the financial authorities. The demand for money at the South and West continues as strong as ever. On the other hand, the flow of foreign capital into the country is in no way abated, and seems likely to increase, in spite of the rise in the discount of the Bank of England. Two new loans are reported as having been effected in London, one of $5,000,000 by the Baltimore and Ohio Railroad, and the other of $6,000,000 by the Alleghany Valley Road. The English Chancellor of the Exchequer has announced that the Geneva award will be paid "at once and without a murmur," and the *Economist* congratulates the British public on the fact that the payment comes in a lucky year, when there is probably a surplus in the revenue of $20,000,000.

The result of the last meeting of the International at the Hague is the disruption of that body, though the centralizers have nominally achieved a victory. The Association, as we have already explained in these columns, was originally intended to cover Europe with a great trades-union, which would secure to strikers in any one country the co-operation of their fellow-workmen in all others. When the organization was completed, the "General Council" was intended to be simply a means of intercommunication between the

local sections; but, as time rolled on, and politicians poured in, and the aims of the body became wider and higher, the Council began to assume authority over the sections; and at the Basle Congress a new rule was adopted, which gave the Council "the right of suspending any branch of the International until the next meeting of Congress." The branches have been kicking against this ever since the chiefs made common cause with the Paris Commune—the English, Belgians, Dutch, and Spaniards wishing to have nothing to do with politics, while the Germans and French, headed by Karl Marx, wish to have the association, above all things, political; and, instead of confining it to the discussion of wages and labor, to use it for the complete reorganization of society. On this issue the parties came into collision at the Hague, Marx and his friends gaining the upper hand, and securing increased power for the General Council. The sober-minded have accordingly seceded, and the General Council is to move for one year to New York, in order to be free from the suffocating influences of European despotism. The Congress at the Hague has as usual been mainly composed of men who have hardly ever done a day's work with their hands, and whose fury against the "bourgeoisie" has therefore something very comic about it. The proceedings suggest once more the question, which nearly all socialist plans for regenerating society thrust into every sensible man's face, namely: Since you cannot create a body capable of managing a small organization of true believers, where are you going to get the force which is to superintend your "regenerated" society, which is to put every man to the right kind of work, give each his due, and get from each his best service, educate all the children, and distribute all the capital and all the profits, and see that nobody is poor, or desolate, or oppressed? When we see the mental calibre and moral quality of the "parties" who now offer themselves for this work, and meet with philanthropic people of fair repute for sanity who can hardly rid themselves of the suspicion that there is something in their schemes, we cannot wonder that the knaves are so plentiful and look into the future so hopefully.

There have been two curious incidents in France of a politico-ecclesiastical kind, which have been occupying the public mind very seriously. A Jesuit father, Dufour, was accused by the conductor of a train of improper conduct in a railroad car with a lady of rank with whom it was shown his relations had been for some time previous of a very intimate kind, he having been in the habit of making long walking excursions with her. There seemed to be no doubt about the truth of the charge, but the court saved the father by one of those *tours de force* of which only French judges are capable. It ruled, in the first place, that the offence was not "an offence against public decency," as the car was not a public place, and the conductor had no business to be prying into it; in the second place, it ruled that, as the conductor was a sceptic or Voltairian, and an enemy of religion, his statement was doubtful, and it refused, contrary to all the French rules of evidence, which admit everything near and remote calculated to throw light on the issue, to allow him to produce testimony as to the former relations of the accused persons, so as to strengthen the probability of his own story; and it then committed the crowning absurdity of severely admonishing the father and the lady on the impropriety of their behavior. The case has excited all the more attention in France because the German Jesuits are flocking into the country by the score, and because a determined effort is being made to take the public schools out of clerical hands. This effort is deriving much support from a terrible scandal which has just taken place near Bordeaux by the atrocious conduct of a certain Father Ange, a member of the order of Christian Brothers, in charge of a school at that place. Three hundred fathers of families have petitioned the prefect for a lay teacher, and refuse to send their children to the public school as long as it remains in the hands of an ecclesiastic. Father Hyacinthe's marriage has of course fed the flame of discussion which these incidents have excited, and has brought out the confession from the *Journal de Paris*, a staunch Church paper, that from twenty to thirty priests marry every year in the diocese of Paris alone. But a priest's marriage, or the marriage of a man who has ever taken orders, is null in French law, and the children born of it illegitimate. The Jesuits at Brest have returned public thanks to God for Father Dufour's escape.

Political speculations concerning the meeting of the three Emperors at Berlin were baffled by the programme of their daily occupations. The Emperor of Russia arrived in the afternoon of Thursday, September 5, the Emperor of Austria on the evening of September 6, and visits of state consumed what remained of these two days. On Saturday morning, at 9 o'clock, the three Emperors appeared together at parade, and on returning, at 1 o'clock, to their respective palaces, they received separately visits of courtesy. At 4 o'clock was the grand dinner at the Schloss, at 7 an opera, at 9 an illumination and a military serenade; and after this a supper. Retiring at midnight, they attended worship betimes on Sunday morning at the churches of their several faiths; at 1 P.M., they rode in company to the Zoological Garden, at 3 went to Potsdam, and there remained till 10, dividing the time between a family dinner at Babelsberg and a brilliant supper and illumination at the New Palace, under the hospitality of the Crown Prince. On Monday and Tuesday, at 8 A.M., the Imperial party went by rail to Spandau and Wustermark to witness corps and field manœuvres, returning in the afternoon to dinners, soirées, concerts, at Berlin. At every public appearance they were greeted with the most hearty enthusiasm of the people. Wednesday was devoted to picture-galleries and to visits of courtesy; in the evening the Emperor of Austria took his departure, and the Emperor of Russia followed him on Thursday morning. In this crowded programme there was no opportunity for a private political conference, nor was there any between the Emperors. If any such conference was held by the three Ministers, Gortchakoff, Bismarck, and Andrássy, the secret has been most carefully kept. But there is the best authority for the statement that at no time were the three Ministers together in consultation, though Bismarck had long interviews with Gortchakoff and Andrássy in turn, and these again had opportunity to confer with one another. No treaty was made, no "Holy Alliance" formed, but good-will was promoted upon all sides.

The real diplomacy preceded the meeting. In view of the domestic strifes of the Austrian Empire, it had become important for that Government to put itself openly upon a friendly footing with the new Empire of Germany, and the visit of Francis Joseph to Berlin was agreed upon many months ago as a token that Austria accepts without grudging the results of Sadowa, and that Germany has no intention of "annexing" the German population of Austria. But as soon as this visit was fixed upon, it became of the greatest moment to Russia to place herself openly in accord with the new order of things. If Vienna was going to Berlin, Petersburg must go there; and this would also be a symbol of fraternity between Austria and Russia. Moreover, the visit must not be to Wilhelm as King of Prussia, but to Wilhelm, Emperor of Germany; and so a grand Imperial Court was assembled for the occasion of all the princes, dukes, and notables of the Empire. These preliminaries required weeks of negotiation and volumes of correspondence; but once these were arranged, and the meeting brought to pass, the substantial object of the conference was attained, and it proclaimed itself as a symbol of unity and a guaranty of peace. The convenient device of a deputation of the civic authorities of Berlin to congratulate Prince Bismarck upon the restoration of his health, gave the Chancellor the opportunity of interpreting the conference in these sententious words: "The friendly personal meeting of the three Emperors will strengthen in our friends the assurance of the preservation of peace, and will make plain to our enemies how desperate would be the attempt to disturb it. For myself, I should not be sorry to have the world-history seem for a while to stand still."

THE PROVIDENCE IN THE TREASURY.

THERE is probably nothing more remarkable in the present remarkable canvass than that Mr. Boutwell has not figured in it more prominently as a "thief," and "embezzler," and "bribe-taker"; for there is nobody in the country whose temptations are so great, and, if we are to believe even half what we hear, there never was a time when men, even of the highest standing, succumbed to temptation so readily. According to one account, three senators, who have borne a good character for years, are nothing but corrupt jobbers, using their official position for the purpose of filling their pockets and those of their relatives and friends. We mean Messrs. Trumbull, Schurz, and Doolittle. One senator who has not stood so high as these, but nevertheless enjoys great influence, has, we are assured on the same authority, been guilty of theft and arson. According to another account, nearly all the leading Republicans in the House of Representatives, headed by the Speaker, have sold their votes on important bills without the slightest scruple; indeed, we are told that the Speaker "is always for sale," and is now worth a million in dishonest gains. In the midst of this sink of corruption stands the Secretary of the Treasury, not only charged with the custody of the national funds, but charged with the duty of keeping down the price of gold, and even of "keeping money easy." In other words, just as Congress, under our tariff system, has it in its power to raise or lower the price of nearly all the principal necessaries and luxuries, the Secretary of the Treasury has it in his power to determine in any given week the purchasing power of the paper dollar by raising or lowering the price of gold. That his position is popularly believed to be one requiring wonderful self-restraint may be inferred from the praises bestowed on him for applying the surplus funds in his possession to the reduction of the national debt, as directed by the Act of Congress, instead of appropriating them to his own use, or giving them away to his friends, which people seem to think would have been the natural thing for him to do, and was hard for him to avoid doing.

There is, indeed, in the praise bestowed on the Administration by the orators who defend it in the present canvass for using the public money in the manner directed by law, a striking illustration of the irrational and unhealthy condition of the public mind on matters of finance. In private life, if a gentleman learnt that his friends were filling the town with glorifications of him because he had not run away with funds committed to him for safe keeping, and every morning sent round handbills giving notice that So-and-so was at his house last night as usual, and thus far had not shown the least disposition to abscond, he would certainly repress their zeal with a good deal of indignation. Nobody with even a shred of self-respect left would submit to such marks of affection in silence; and, if we were all in a right frame of mind about our politics, public men would be just as sensitive on this point as private persons. But the Administration is as much pleased with the public declarations of its press and orators that Grant and Boutwell are not common thieves like Tweed or Sweeny, as if they credited them with the originating genius of Turgot or Stein; and the press and orators themselves, after having proved that the President and his Cabinet do not steal, look round with pity and contempt on "the reformers." To this complexion has it come at last. We have gradually so lowered our ambition in matters of administration, that what we seek of our Minister of Finance is not that he should reform our taxation or our currency, or infuse purity into our fiscal concerns, but that he should keep out of the penitentiary.

Now it so happens that we have in Mr. Boutwell a gentleman who finds it easy to avoid stealing and jobbing; but does anybody suppose that, as things are going, and are likely to go if people do not bestir themselves during the next four years, it will be possible to keep the enormous power Mr. Boutwell wields out of hands that will be by no means as scrupulous as his? And suppose we had in the Treasury, while our finances are in their present condition, a man who would enter into any of the numerous "combinations" which are every day springing up in Wall Street, what sort of defence should we have against him? The delicacy of our public men about these matters is certainly not increasing. If anybody had suggested even ten years ago that the American Minister in London would sell his name to a speculative mining company, to assist them in palming off their shares on foreigners, he would have been laughed to scorn; or, if he had predicted that Horace Greeley would take stock, along with a batch of swindling City Hall politicians, in a company for manufacturing tobacco, great numbers of intelligent men would have treated him as a malignant lunatic; and yet our eyes have seen these things. We have now a condition of the currency which enables the Secretary of the Treasury, by choosing a particular time for the exercise of enormous discretionary powers with which we have armed him, to make or mar the fortunes of scores of very wealthy and utterly unscrupulous speculators, or which enables him, by simply refraining for a particular time from doing a particular thing, which he might lawfully do, to aid in the success of the most outrageous conspiracies against the mercantile community. Anybody who has seen the part which Mr. Boutwell played in the convulsion of "Black Friday," and which he was by many expected to play in the financial disturbances of week before last, understands what we mean. We believe in the force and value of character as much as anybody, but there are strains to which no community in its senses ought to subject character even in times when a good name is of much value. In our day, when a good name is for political purposes of little or no value, there is something almost appalling in the coolness with which we make a single person master of the money market, and with which we continue a system of finance in which a single will takes the place of law, and with which we allow it to set law aside even in cases in which the law exists and is plainly laid down. We shall, if we persist in our policy, wake up some fine day to look upon a scandal which will make the "scandals" of the present campaign, supposing them all true, seem mere bagatelles. When we are told that the Speaker of the House "is constantly for sale," and that one of the leading senators has committed arson to defraud an insurance company, we may rely upon it that the day is not far distant when we shall be told, and when thousands will believe it, that the Secretary of the Treasury is at the bottom of a "corner" in gold, or has instigated a raid on the banks. Possibly the story will be false; but even if it is widely believed the mischief will be enormous, for confidence is at the basis of all sound finance, and a Secretary of the Treasury has, like a judge, not only to be honest, but to maintain a character for honesty.

The evil of which we complain is the natural and proper result of dishonesty. Whatever of confusion there is in our finances is the result of a protracted and persistent effort to conduct national finance on principles which, in private life, would be called knavish; and performances of this sort on a great scale water the soil on which individual knaves grow. The policy which we are now pursuing with regard to the public debt, and which gives Mr. Boutwell his great power, is one which, if pursued by an individual, would destroy his character. If a merchant refused altogether to redeem his overdue promissory notes, and devoted all his spare cash to buying up his own bonds at a discount, he certainly would not long retain the good opinion of his neighbors. We are undoubtedly reducing the bonded debt through this process, but if our morals continue to decline under it, as they have declined thus far, it is hard to say where we shall be by the time it is all paid off.

THE JAPANESE EXPERIENCE OF OUR CIVIL SERVICE.

A CURIOUS illustration of the indirect but baleful influence of our vicious and absurd civil-service system has been recently brought to light in the history of certain experiences that have befallen the Japanese in their intercourse with our Government. Thus, it is well known that, from the time when the Americans, under Commodore Perry, broke through the seclusion of Japan and negotiated the first international commercial treaty, the Japanese have

evinced the most friendly regard for the Government and people of the United States; and in their efforts to "conform"—we will not say "elevate themselves"—to the standards of Western civilization, have made no secret of their intention to accept our methods and experiences as their models and examples, rather than the methods and experiences offered them by the people and governments of Western Europe. To the United States came accordingly the first Japanese embassy, and subsequently their first foreign resident representative or diplomatist. With this latter personage came also, for the purpose of acquiring an American education, a considerable number of young men, selected with care from the noble or higher classes; and later, and for the same purpose, a carefully selected corps of young women. But as the services of all these persons were prospective, and as the occasion for service with the Japanese in dealing with foreign nations, their methods, tools, machinery, and other agencies, was immediate, a movement was made by the Japanese Minister, soon after his arrival, to obtain in behalf of his Government the assistance of such citizens of the United States as, through abundant knowledge and experience, were especially qualified to impart just that information and assistance which the several departments of the empire felt that they needed. He accordingly applied to our officials in Washington for advice and co-operation; and taking it for granted—in unhappy ignorance of our civil service—that the same barbarous custom that exists in China and Japan, of calling only men of great attainments to high public office, prevailed equally in the United States, he naturally expected to find in our Federal officials occupying stations corresponding to the requirements of Japan exactly the material that was wanted. And in accordance with this hypothetical but erroneous view of the situation the Minister appears to have made his selections—no one in authority at Washington taking sufficient interest in the matter to advise or influence him to the contrary.

The first requisite of the Japanese was a man learned in international and civil law—one skilled in the foreign policy of the United States and other nations, and who, as a high attaché of their Foreign Office, would assist in the drafting and negotiating of treaties, in the settlement of foreign claims, and who, above all, through wise counsels, would guard the empire from international difficulties and liabilities. The salary offered was understood to be $15,000 gold per annum, with a guaranteed term of service of several years. For this office a subordinate of the State Department was selected—a man brought into the Department through the favoritism of a former Secretary, past middle age, of no social position, of dissipated habits, and who could not hopefully have aspired to the smallest office of diplomatic responsibility under his own Government.

The second requisite of the Japanese was a man skilled in the methods and machinery of American agriculture, the mechanic arts, and manufacturing and mining chemistry. For this office the then head of the Agricultural Bureau of the United States was chosen, and his name was "Capron." To most Americans, this simple announcement is sufficient to give an idea of what, in this case, the Japanese got for their money; but as some may not know the history of the Agricultural Bureau, it may be well to call to mind that its first Commissioner was one "Isaac Newton"—not "Newton" who investigated the laws whereby apples fall—but Newton who acquired his knowledge of agriculture by peddling ice-cream in Philadelphia, and who, when once taken to task by a Congressional Committee for bad spelling, triumphantly retorted, "If S-h-u-g-g-a-r don't spell sugar, what does it spell?" Capron was the successor of Newton, and although the phylacteries of the former were somewhat broader than those of the latter, they were not sufficiently large to prevent the Agricultural Bureau from being what it yet is, the laughing-stock and contempt of every educated agriculturist, wool, cotton, and grain dealer throughout the country. Of the suite which Capron took with him, it is enough to say that they were like unto himself; had no standing or recognition in the professional circles of the country, and would have found it extremely difficult to earn a living in any other than Government employment.

The third requisite of the Japanese was men gifted in finance and in the modern methods and theories of assessing and collecting revenue—men who should be able to take the existing fiscal system of Japan, and shape and modify it in such a way as to promote the interests of the empire. For assistants, a selection is understood to have been made from the officials of the San Francisco Custom-house; but for the chief place in this department a deputy in the office of the Internal Revenue was taken. If there is any truth in the proverb, "Like master, like man," and if the head of the Treasury Department, as is currently reported, does not believe in the existence of any such science as political economy, and classes Adam Smith's "Wealth of Nations" in respect to truth with the Koran, then the financial qualifications of the subordinates of such a master may easily be predicated. But in this case hypothesis does not need to be indulged in, for it is known that however worthy may have been the private life of the Deputy Commissioner in question, his qualifications for acting as financial adviser to the Japanese were based mainly on a somewhat limited experience as an internal revenue officer, appointed originally for political considerations in a country district of Indiana.

The fourth requisite of the Japanese was a man experienced in matters relating to education, and as in this department the Federal Government had but a single officer, and as no one in Washington takes any special interest in his office or his work, the Japanese were forced, as it were, to look elsewhere. And having once got out of the sphere of the Government civil service, and beyond the taint of political influences, they found that high reputation and position in private life do as a general rule imply high individual ability; and so inferring, they are understood to have secured the services of one of the most competent men that the country could offer, namely, Prof. Northrop of New Haven.

Of persons thus selected, all but the last-named have departed for the field of their labors, and entered upon their work; and the report of their usefulness which comes back to us is exactly what might have been expected. One distinguished himself during the first month of his residence at Yeddo by getting publicly drunk, and then entering a complaint to the authorities that he had been robbed in a place which he had no business to be in. The Japanese, it is understood, have quietly set him aside, making no complaint—paying him with great regularity his salary, but in other respects ignoring, as far as possible, his existence, official or otherwise. Meantime, the person in question has sunk so low that he has been excluded, in a great degree, from the society of his own countrymen in Japan, and from that of other foreign residents.

In regard to other members of the corps selected by the Japanese in the United States, we copy the following extract from the news summary telegraphed from Washington under date of July 28, 1872:

"A private letter received here from Japan speaks in severe terms of the character of the officials employed by the Japanese Government on the recommendation of the heads of departments of the United States Government. The letter, which is from an accomplished and trustworthy citizen of the United States temporarily sojourning in Japan, says that Mr. Capron, ex-Commissioner of Agriculture, and employed by Japan in a similar capacity in that country with a number of American assistants, is regarded by the Government as almost useless, and that his commission has broken to pieces. 'It will in a fragmentary form go to Yezo,' adds the letter, 'but it will do nothing, and the officials here have lost confidence in it.'"

The scandal of General Schenck's connection with the "Emma Mine," and the detriment that has thereby accrued to our financial interests—Federal, State, and corporate—in Europe, have been made painfully apparent to every American who has been brought in contact the past summer with English and Continental bankers; but there is another matter currently talked about in the East, which equally illustrates how the common interests and honor of our country suffer from the practice we indulge in of making our diplomatic appointments depend on political services to party rather than on qualifications and ability. Other recent American correspondence from Japan which we have seen, thus gives us a hint of it. It says:

"The Japanese Ministry want solid counsel upon almost all of their foreign associations. They will not take anything of the sort from English, French, or German sources, but they would gladly accept it from the United States if they could fairly feel that our representatives here were animated by a genuine regard for the welfare of their country. Of this they are not now convinced, nor will they be until United States officials exhibit a disposition to measure their own countrymen and the natives with whom they come in contact by the same standards, politically, commercially, and socially. The Japanese diplomatists are as clever as any of ours whom they are likely to meet, their merchants are just as shrewd and quite as honest, and their people generally are as respectable for intelligence and humanity. Yet in all intercourse, an assumption of superiority is maintained on our side for which there is no sort of warrant, and which certainly would not be tolerated or attempted in European communities. And in commercial transactions, the Japanese have too often reason to suspect us of trampling upon their rights. The position of the United States Minister is extremely delicate in this respect. As there are no courts here for the settlement of foreign accounts, all disputed claims on the part of Americans are turned over to him for presentation to the Japanese Government. It of course becomes his duty to ascertain their validity, but such investigations are naturally distasteful, and it may be that a Minister cannot always give the time to consider them very minutely. It need hardly be said that no punishment or disgrace could be too severe for a Minister who should present a claim known to be fraudulent; but who can tell with what skill the irregularity or injustice of some of these accounts may not be concealed? It is certain that false claims for vast amounts have hitherto been submitted to our Minister for presentation, and I believe it is indisputable that some demands have actually been urged and settled which could never be justified in equity or honor. Mistakes like these are very dangerous. They directly impair our influence and imperil our reputation, and they should be guarded against by measures so peremptory as effectively to prevent their recurrence."

Of the nature of the demands which some of our virtuous fellow-citizens, dealing with Japan, have made against that Government in times past, and would doubtless make again if opportunity offered, the following is an example which has already passed into history. When the Americans first began to trade with Japan, after the negotiation of the commercial treaty by Commodore Perry, there were two coins in general circulation in that country—an oblong silver coin, called the "ichibu," and a thin oval gold coin, called the "kobang." During the long years of the non-intercourse of Japan with the rest of the world, it had happened that the silver coin had become so overvalued as to exchange equally with the gold "kobang," although, comparing equal weights, the silver "ichibu," according to American and European standards of value, was worth but one-third of the gold coin. It happened, however, in the treaty negotiated by the United States, and also in the subsequent British treaty, which, to all intents and purposes, was a copy of the American, that—probably through some inadvertence or want of knowledge, but possibly because some sharp Yankee saw his pecuniary opportunity—the Japanese Government were induced to bind themselves for the space of one year to give Japanese coin in exchange for American or British, weight for weight, metal against metal. Taking advantage of this, the foreign trader or merchant operated as follows:—Bringing $100 to the custom-house, he first exchanged their weight for the "ichibus," receiving 311 of the latter. With this money he went into the market, and obtained as many gold "kobangs," worth about three times the intrinsic value of his dollars. The "kobangs" were then sent with all haste to China, exchanged back into dollars, and the same operation repeated. Such an opportunity to coin money was naturally not long neglected by the foreign residents, and as real trading transactions would not suffice to get the kobangs fast enough, a fictitious trade was soon inaugurated, and documents were presented to the Japanese authorities representing exchanges of articles of the most absurd character, as warming-pans, elephants, etc., and demanding coin facilities for trade for persons having no real existence, and bearing names which, not understood by the Japanese, were of the most insulting and offensive character. Leon Levi, in his "History of British Commerce," states as an actual fact that one person alone, probably with an idea of clearing out the market at once of ichibus and kobangs, entered an application at the Japanese custom-house for one sextillion, two hundred quintillions, eight billions, nine hundred and ninety-nine millions, two hundred and twenty-two thousand, three hundred and twenty-one ichibus, in exchange for an equal weight of dollars. Of course, under such a condition of affairs the supply of kobangs soon ran out, the country being literably drained of them, and when this happened, and the Japanese found it impossible to comply with the treaty stipulations, the proposition to compel them to pay indemnity was so urgently put forward by the traders, and so treated by the diplomatic corps, as for a time to threaten the further continuance of all commercial relations.

A PLEASING PICTURE.

THE Rev. Cotton Mather held the theory that America was originally peopled by a shrewd device of the Devil, who enticed the Indians to this country in order that in this remote and unknown region he might have them all to himself and out of the reach of the Gospel. We are inclined to think that if Mr. Mather were to rise from his grave, and read our newspapers during the last two months, he would be driven to the conclusion that the advent of the white man was no such serious blow to the seignorial rights of Satan, whom he calls "the great landlord of America," as at first sight it might seem. In fact, judging from the statements of the newspapers, he would probably confess it to be very doubtful whether the Devil is not, on the whole, doing better with the Caucasians than ever he did with the Iroquois, and whether he did not make a great mistake in concealing this continent so long from the Old World. We do not know in what history a more shocking picture of manners and morals is to be met with than the *Times* and *Tribune* now daily draw of American society. Tacitus and Suetonius tell some sad stories of the ancient Romans, who were undoubtedly bad fellows, but in comparing them with ourselves we must remember that they made no such pretences to virtue as we make. The Roman rascal was an honest fellow, however cruel or licentious, while nearly all our knaves are professed moralists.

In the first place, the General who saved the Republic "from the greatest rebellion the world ever saw," and who five short years ago was the idol of his countrymen, turns out to be a beastly drunkard, who sells the various offices in his gift to the highest bidders after having put some of his own relatives into some of the best, and takes bribes however small from anybody however mean. The Senator who has been nominated for the vice-presidency by one of the two great parties is a deliberate liar and sneak, which would be sad if he were a simple worldling, but which is perfectly atrocious considering that he is a member of a church and professes to be a very pious man. Turning to the opposition ticket, we find that the candidate for the Presidency, besides his general political recreancy, entered into partnership with several notorious swindlers for the manufacture of tobacco, and induced one of the corrupt judges to issue a fraudulent injunction to help him in getting pay for joint-stock shares which had cost him nothing. The second person on the ticket is an habitual drunkard. The person whom it is supposed the opposition candidate would, if elected, make Secretary of the Treasury, and who is now a Senator from one of the greatest States in the Union, was in his youth convicted of theft, and escaped jail by the clemency of the prosecutor; in mature manhood, burnt down his own house in order to cheat an insurance company, sold his votes when a member of Congress for cash down, and sold pardons when he was Governor of New York. The late Assistant Secretary of State took a large bribe from a band of swindling railroad operators to induce him to betray his client as the trustee of a mortgage. The Speaker of the House of Representatives takes bribes freely to influence his votes and his appointment of committees. The Administration candidate for the governorship of Pennsylvania, it is charged, when State Auditor, in company with one swindler, shared the proceeds of a fraud on the State, and in company with another speculated in stocks with the funds of the State, and this on the testimony of the swindler himself; but the swindler, on being pardoned out of jail by the corrupt governor, testifies that the affidavit ascribed to him was a forgery, and that the accusation was got up by the unprincipled head of a medical college who sold diplomas to all comers for a trifling sum. The same Auditor also trumped up a false claim for taxes against a corporation, and then speculated in its stock for a fall. The Administration candidate for the governorship of New York, on the other hand, though outwardly a respectable and honorable man, when a general in the army avoided going under fire through personal timidity, and is ready to support any party which will give him an office. The opposition candidate for the lieutenant-governorship is a man who makes a living by "lobbying," or, in other words, by bribing legislators. One of the most prominent supporters of the opposition, and a United States Senator to boot, used his influence corruptly to get a cotton permit for a man with whom he then went into partnership and shared the profits. Another, who was a distinguished general of cavalry, when appointed to a foreign diplomatic position

took a prostitute into the society of the capital to which he was accredited; and when he tried to prosecute an editor of a leading paper for saying so, the editor got off by corrupting the grand jury. The Attorney-General of New York, too, made arrangements to let certain notorious criminals escape prosecution on their consenting to pay money towards the support of one of the candidates in the pending Presidential contest, and probably, something for his personal use. The leading diplomatic representative of the Government abroad also took $58,000 from a swindling corporation to help them to palm their stock off in the markets of the city in which he was resident.

The Sheriff of the great city of New York is a very important officer. The late incumbent of that office, we are told, can neither read nor write, has undergone a term of imprisonment for theft, falsified his accounts as sheriff, committed perjury, given fraudulent checks in payment of gambling debts, and tried to defraud the city out of $104,000. The present Sheriff, on the other hand, while equally ignorant, having begun life as a keeper of a pothouse, has defrauded litigants and prisoners of large amounts by overcharges, and the city of $14,000 by making fraudulent alterations in a lease. One supports one candidate for the Presidency and the other the other, and each is attacked by the newspapers of one side and defended by those of the other.

In the press the state of things is about as cheerful. The *Tribune* says the editor of the *Times* is "a cad" (English slang for a low fellow, a low-bred man) and a flunkey or lacquey; and the *Times* says the editor of the *Tribune* is "a vulgar rowdy," "a booby," "a professional defamer," "a liar," "a lunatic," "a vile slanderer," and "a hack"; and a "literary swindler," that "there is no crime which he will hesitate to ascribe to any man who offends him—murder, burglary, arson, he will swear to anything"; in other words, that he is a perjurer. The same paper says the chief editor of the *World* is either "infamous" or "constitutionally incapable of acting as an honorable man"; and, supposing him to be on his death-bed, and tormented by remorse, offered "to mingle a little pity with its contempt for him." It also says the editor of the Chicago *Tribune* is a noted liar, and insinuates that the editor of the Springfield *Republican*, whom it familiarly calls "Sam," is a liar too. The *Commercial Advertiser* mentions, casually as it were, that one of the editors of the *World* is a thief, a charge which the *Times* copies gratefully, while the *Tribune* observes that the material for the ideal of a perfect journalist entertained by the *Evening Post* is obtained by mingling "ignorance, bad manners, and lying." It adds that the *Post* has "neither enough intelligence nor enough honesty to conduct a controversy with anybody on any subject," and is "a refined rascal," and an utterer of "deliberate falsehoods." It will thus be seen that there is strong testimony that nearly all the leading editors in the country are liars, lunatics, blackguards, thieves, perjurers, and that, in some cases, editors are all these things together, thus presenting the world with characters at once composite and disgusting.

"A REVIVAL" IN FRANCE.

PARIS, Sept. 12, 1872.

RELIGIOUS emotions and passions seem to obey a secret law of periodicity, like the movements of the heavenly bodies. This is well shown in all free Protestant countries by the outbursts which go under the name of revivals. We have now in France something which may pass under the name of a Catholic revival, but the moving cause of it is not difficult to perceive; it lies evidently in the misfortunes of the late war. The national feeling, which has been so deeply wounded, looks for consolations to a world where consolation and hope are always found. France, which could find no allies in Europe, can still find allies in heaven. It is not very singular if this revival has taken especially the form of Mariolatry. All the shrines which are visited now by thousands of pilgrims are particularly those which are devoted to the Virgin Mary. There is, I suppose, some deep and mysterious philosophy in this sentiment. The hero of the popular resistance against the English conquest is Jeanne d'Arc, a woman. She personified in the Middle Ages the French unity, and all the sneers and pleasantries of Voltaire have not succeeded in diminishing the prestige of this popular heroine. The figure of Mary, which is so well adapted to the Celtic mind, is a living and eternal protest of weakness against strength; it is the deification, as it were, of the negative forces of mankind—a glorification of defeat, of suffering, of helplessness.

It is idle to discuss with those pilgrims who go to La Salette or to Lourdes; they obey instincts which lie much deeper than any reasoning. And the true philosopher must confess that, in this instance, these instincts are of the right sort. These poor people are chiefly led to the altars of the Virgin by the love of their distressed country, by a profound sympathy for its misfortunes, by a great horror of the crimes which have been committed during the Commune, and by a desire to see France free from invasions and revolutions. The Catholic Church, of course, is all ready to use for its own profit, and for the profit of the Papacy, these very natural sentiments. The leaders of the Church count their armies, and would like to bring them against the Republican armies. But the movement is, I believe, chiefly a national movement, if we regard the immense majority of the pilgrims and try to analyze their sentiments.

If you leave the railway at Grenoble, and go to a town called Vizille, you will not be very far from the mountain, belonging to the system of the Jura chain, on the top of which is the now famous church of La Salette, dedicated to the Virgin Mary. A few years ago a young shepherd, named Maximin Giraud, and his young sister were on the mountain. They had an apparition; they saw a woman come to them, who told them that she was the Virgin Mary and that a church must be built for her on the mountain; she showed them a spring near which the church must be built. It was a great pity her people of France had become so irreligious; she could not long withhold the heavy arm of God from them; awful misfortunes would soon fall upon them. The Virgin then grew to enormous proportions and ascended slowly towards heaven. Her head vanished first, then her body, lastly her feet. Giraud and his sister told the story of the apparition. It was accepted by some, rejected by many even in the church. The discussion which took place at the time even led to a lawsuit, and not the least curious incident of it is that it was Jules Favre, the Minister of Foreign Affairs of the 4th September, who undertook to defend the veracity and sincerity of the little shepherds. A church was built on the mountain. The waters of the spring were sent in bottles to all believers in its miraculous powers, and Maximin Giraud, who is now a man, keeps, much to the annoyance of the church, a small shop on the mountain, where he sells *objets de piété*—chaplets, pictures, bottles of the miraculous water, and also bottles of a liquor which he composes of brandy and the herbs of the mountain. He has turned his miracle to his own profit, and makes a living by it. Two convents, one of sisters, the other of brothers, are annexed to the church, and Giraud's sister has entered the convent as a nun. Every year, thousands of pilgrims ascend the mountain on mules or on foot, and spend a few days or hours on the summit. This year, a special train composed of pilgrims gave occasion to the Radicals of Grenoble for an anti-clerical demonstration.

The city of Grenoble has a paper of the reddest Red, which was established during the latter part of the Empire by Delescluze, who became the last Minister of War of the Commune, and who was one of the few Communist leaders who died on the barricades. This paper has succeeded in establishing the domination of the Radical party in the municipal council of the town. When the pilgrims' train arrived, a demonstration was prepared. The pilgrims were divided into cohorts, each of which was under the guidance of a voluntary captain, who was to provide for food and lodging. The men of each cohort bore a badge, some red, some blue, some white. These white cockades gave the Radicals the occasion they wanted. They maintained that the pilgrims were making a sort of holy crusade in favor of Henri V. They received them at the railway station and pursued them through the town with their insults. There were many priests, of course, among the pilgrims, and they were pursued with threats like these: "You will be hostages some day"—an awful and ferocious allusion to the fate of the Archbishop of Paris and the Dominican monks during the Commune. These revolting scenes were again enacted the next day at Vizille, where the pilgrims arrived in omnibuses and cars of every description. The Radicals of Vizille, who were once famous for their Bonapartism, the sons of the men who received Napoleon I. with enthusiasm on his fatal return from the Island of Elba, insulted the men, the women, and the friends who formed the inoffensive procession. It is quite conceivable that under such circumstances the religious fervor of the pilgrims became even more excited. They felt that they were martyrs for a holy cause. Eye-witnesses, even newspaper reporters, cool and disinterested as they were, have given the most curious account of the proceedings on the mountain. Hundreds and thousands of people, without shelter in the night, slept under the sky or in the church. Barely fed, they spent all their time in praying, in singing. Several bishops sanctioned the proceedings by their presence, and delivered sermons, in each of which the misfortunes of France and the impiety of the age were largely dwelt upon. There was much sobbing and crying; miracles took place; paralytic girls who were brought to the communion-table, left it quite free in their movements, and with a transfigured look. There is no doubt that such scenes seem to develop hidden powers and capabilities in the human frame. We find ample proofs of it in all great religious movements in all times.

Let us go from the Jura to the Pyrenees. There we shall find at the entrance of the valley of Argelès, in the vicinity of watering-places much visited in the summer, a little village named Lourdes, which, since 1858, has

become as holy as La Salette. There is a grotto where also the Virgin Mary made her appearance. A church is now erected near the spot to Maria Immaculata. The pilgrimage of Lourdes may almost be called fashionable, as it is accessible by rail, and is in the way of travellers who visit the Pyrenees. A pilgrimage to Santiago de Compostella in Spain or to Notre Dame du Puy in Auvergne was, in ancient times, and is even yet, a hardship; but now railway companies have realized the programme of "religion made easy," so much attacked by Pascal in his "Provinciales." For instance, I see before me the time-tables of the Southern Railway of France; there is a special pilgrims' train which allows nine hours at Toulouse for a visit to Sainte-Germaine of Pibrac; twenty-three hours at Lourdes; six hours and a half further on for Notre Dame de Verdelais; three hours at another station for Notre Dame de Bon-Encontre. How charming these names are, by the bye—like the various denominations given by the Greek mythology to the same god. A national pilgrimage is announced at Lourdes for the 6th of October. The committee say that "on that day France will make before the grotto of Lourdes the most meritorious and solemn confession of faith." Among the members of the committee are seen the names of Madame de MacMahon, Madame de Lamoricière, Madame de Tocqueville, and hundreds of others.

There is a religious paper published at Lourdes, and I read in its columns such phrases as these: "At last, we have entered on a new path. France seems at last tired of her revolutionary agitations. And what is the cause of this social renovation? The apparition of the Holy Virgin in our grotto cannot be wholly without weight in the balance of our destinies. It was perhaps the culminating moment of the period. Why should the Queen of Heaven come down among us if it is not to revive our hopes, if it is not to make her subjects happy, as we know that France is the kingdom of Mary?" The Abbé of Lourdes, who is the chief editor of this local paper, becomes even more grandiloquent: "I know," he says, "you have heard men say: There come times when nations have existed long enough. What has become of the Persians and of the Greeks? I will answer you that the oldest daughter of the Church has the privilege of resisting age as much as the rock on which the Church stands itself. France is still the France of the Crusades, and the day is not far distant when she will again seize the sword of St. Louis." After such an ominous declaration, it is not wonderful if the three Emperors of Germany, of Russia, and of Austria found it necessary to make a pacific demonstration at Berlin. The poor Abbé of Lourdes is, however, not quite so confident as he would like us to believe. He ends by saying: "If France disappeared from the map of Europe, what would become of civilization? Where would be the rampart of the Church? Persecution of it would soon be organized with a horrible cruelty. When God abandons France he will abandon this world, for tradition says, 'Deus amat Francos.'"

I have only made these citations to show you in what a world of illusions the lower clergy of France is immersed. However childish and innocent and naïve such phrases appear in print, when they are uttered in the pulpit they have quite another effect; they fall on ground ready to receive them, on souls already moved by the ceremonies, by prayer, by a sort of religious fever. Now, would you know how many pilgrims have been this year already to Lourdes? From the 1st of May to the 31st of August only, the Southern Railway has sent to Lourdes as many as 117 special trains, which supposes nearly a hundred thousand pilgrims. The months of September and of October will be quite as animated, as the autumn months are beautiful in the Pyrenees. It is only just to say that there are, under the name of pilgrims, many persons who are merely excursionists, and who wish to profit by the cheap rates of these special trains.

Notes.

MESSRS. HURD & HOUGHTON announce "Ballads for Little Folk," by Alice and Phœbe Cary, illustrated; and "My Recreations: Verses by Emily E. Ford," of which the publishers say that it "will persistently refuse to disappear in the limbo of unrecognized genius." In that case, it is a pity that the edition is to be limited.——A. Williams & Co., Boston, announce, by special arrangement with the author, a book for boys, entitled "The Deserted Ship: a Real Story of the Atlantic; being adventures in the early life of Cupples Howe, mariner."——Ginn Bros. will issue immediately "The National Fourth Music Reader," giving instruction in musical theory. ——The enterprising publishers of the *Anglo-American Times* have added a third to their publications relating to this country—a magazine of American periodical literature called the *Transatlantic*, of which the first number (for August) is before us. As its readers on this side of the water will probably be few, we need only say that its contents are well selected, and give a very fair idea of our current literature of all grades. Dr. Gryzanovski's article on the International in the *North American Review*; "John Brown and his Friends," from the *Atlantic*; a letter of Mr. Nordhoff's to the *Tribune* from Southern California; "A Nevada Funeral," by Mark Twain; "Dolly Varden," by Bret Harte; extracts from *Lippincott's*, the *Phrenological Journal*, the *Galaxy*, etc., should be an attractive bill of fare for the "average Englishman." Besides these, there are several articles contributed by the editor, which are also worth reading.

—Goldsmith's "Deserted Village" has just been translated into Armenian, and Disraeli's "Lothair," which had already appeared in Dutch and French, can now be enjoyed by the Italian enemies of the Pope.

—The Twentieth Annual Report of the Boston Public Library, just published, is rendered more than usually valuable on account of three plans which it furnishes of a building designed for a branch library in Roxbury. Though only 81 feet long by 56 feet wide, and two stories high, and to cost $40,000, it contains a double delivery-room (for adults and minors), a reading-room 37 feet by 45 feet, a librarian's room, a trustees' room, and storage for 50,000 volumes, or, with some changes, for perhaps 80,000. The arrangement is such that all the books are within a very short distance of the delivery-counter, those most used being immediately behind it, and the librarian's room communicates directly with the public-room, the delivery-counter, the book-shelves, and the reading-room. The attendants will not have to take any needless steps; the public will get its books in the least possible time. How this good result is obtained can be easily understood from the plans. For city and town libraries, in which the public is not admitted to the shelves, the present design is much better than the ordinary method of a large central hall surrounded by alcoves, an arrangement which seldom gives a good light for readers—unless the light comes from the top—obliges the attendants to travel far for the books, and makes the cost of storing a given number of volumes more than double what it will be on the Roxbury plan. Architects like a central hall on account of the fine vista of a long line of alcoves; but, on this point at least, let no library committee listen to them. Undoubtedly a spacious, handsome hall gives a pleasure to casual visitors that is not to be despised, and perhaps has an unconscious elevating effect upon those who frequent a library. Let there be such a hall in the building for a reading-room, if it can be afforded (for committees must always remember that what is spent in building cannot be spent in books); but do not arrange the circulating part of the library along its sides, or so spread it over a wide area as to cause an average journey of sixty yards to get any volume called for, when the library can be compressed into a small room, and volumes got by an average journey of twelve yards. To this end, books may be advantageously placed in parallel stacks of shelves separated by the narrowest passable alleys; though when, as in various Athenæums, the shelves are accessible to the public, the passage-way should be somewhat wider, both to allow of a more comfortable consultation and comparison of the books on the spot, and to avoid giving the reader a feeling of being crowded. One other point deserves mention. The galleries should be so constructed that it shall never be necessary to climb to reach a book. It is time that ladders were banished from libraries.

—A modestly composed manual on the antiquity of engraving, and the utility and pleasures derived from prints, has been published by Gebbie, of Philadelphia, in which the history of the art is traced with considerable research, while time is taken to make a passing obeisance to most of the great names that have illustrated it. These enquiries, which are only signed with the initials W. S. B., betray intimacy with a number of divergent schools, and are interesting because they are understood to be inspired by the study of one of the most ample private print-collections in the country—that of Mr. James W. Claghorn.

—City corporations will grow richer rather than poorer when they provide free ice-water for the public fountains, and reconcile themselves to some loss in liquor-sellers' licenses. On one of the hot days of August—a period of twenty-four hours following six o'clock A.M. of August 10—no less than 7,202 persons drank of ice-water at Mr. Probasco's fountain in Cincinnati, and 117 buckets and pitchers were filled from it. The continual persuasion of a temperance-lecturer like this fountain is an incalculable benefit to the cause of temperance. The history of the Cincinnati fountain we find narrated in a little pamphlet issued by Robert Clarke & Co., of that city. Mr. Probasco paid for it $110,000, and the councils expended a further sum of $50,000 for the esplanade in which it stands and for the subterranean ice-chamber, where the water is chilled in a coil of two thousand feet of pipe within a cellar of ice ten feet square. The story of the fountain is not without incidents, such as the resistance of fifty determined butchers to the removal of the markets originally on its site, and the accident at its final dedication, where the oratory of Governor Hayes was punctuated by the fall of the benches, one bank

at a time, the last group to go being the city fathers, who plunged beneath into inarticulate ruin. This ceremony was on the 6th of last October. It is not necessary to sulk over the fact that this splendid fountain is a work of foreign art, put up by a member of the Munich bronze-casting house, who came to this country for the purpose. Something, however, might be said in favor of having spent the money among American sculptors, even at the risk of getting one of our frank native abortions. As Mr. Probasco presents it as a work of art, it may be humbly asked, What is the lesson of art it is meant to teach? Much praise has been lavished on the Cincinnatians by editors and orators for refusing to entertain the idea of a fountain decorated with Neptunes, Nereids, Egerias; and their provincial contempt for the classics has resulted in the manufacture of a brand-new mythology. Instead of the fair humanities of old religion, the water is dispensed by a lady-nondescript, who spouts little jets out of a riddle formed in each finger. The attendant figures were ordered in a spirit of absolute realism, the reward of which restriction is that they are completely local—Bavarian, in fact. A distinctly German farmer, a distinctly German fireman, a sick German, nursed by a girl who represents the artist's daughter, and a German bather, conceived in the sentiment of Kaulbach, are brought together in Cincinnati to hold up their hands in supplication for water from the Mount Auburn reservoir. This slight incongruity is fastened upon the Cincinnatians that they may conceive modest ideas of American plastic art, that they may be confirmed in their honest Bœotian scorn of the antique, and that they may intimately learn the habits and dress of the Bavarian peasantry. It would be most unfair to disparage the intrinsic merits of this splendid monument, which is a masterpiece of German taste. The designer is Professor von Kreling, of the Nuremberg Academy, and the drawings for it have been in his portfolio, waiting for some grand opportunity, since 1840. It is forty-three feet high, and contains twenty-four tons of bronze obtained from Danish cannon. The exterior basin supporting the four ice-water fountains is forty-three feet across. This is made of porphyry from the Fichtel Mountains in Bavaria. The whole monument is dedicated by Mr. Probasco to his deceased partner and brother-in-law, Mr. Tyler-Davidson, and called from him the Tyler-Davidson Fountain.

—The usual wail at the names of American towns, mountains, lakes, and rivers we see appearing again, after a short interval of rest, in a letter from a correspondent of the *Evening Post* who has been visiting Colorado, and who greatly mourns such names as Long's, Gray's, and Pike's Peaks for three mountains which are much finer than these names. Certainly the alliteration in Pike's Peak is not pleasant, but how Gray's Peak would sound would depend on the merit of the poem in which it was used. Poetry does much more towards making ordinary names impressive than fine names do towards making poor poetry good. The writer speaks of the advantage that Byron had in writing about Mont Blanc, but we over here have the White Mountains, and as we can hardly be expected to give French, German, and Italian names to our hills and streams, and pronounce them accurately, we must content ourselves with the English language and such Indian names as may seem fit. At times one hears regrets that more of the Indian names have not been kept, and in many cases it would have been much better if they had been, while in many cases it is very well, indeed, that they were dropped; think, for example, of the names of many of our gunboats during the war—uncouth combinations, which must have been anything but inspiring to either sailor, horse-marine, or poet. In New England, where the growth of separate parts of one town has made the distinction of North and South, etc., inconvenient, there have lately been many changes of names, and most high-stepping are the titles which have been often chosen. Then in this State there are a number of people who want to change the historic name of Dobb's Ferry to something or other "on-Hudson," as gross an affectation as was ever imported into this free country. The *Evening Post* writer imagines "a mountain veiling his lofty head in helpless rage when the tremendous name with which God or Adam first called to him out of Paradise is changed for that of some local politician or militia general." Such rage on the part of the mountain is unreasonable, however, since, however well he himself knows the name given him in his baptism, no investigation by mortal man can discover it; it is wholly lost. Still it was very improbably a French name, or an Italian, or a German, however sonorous such may be in general. All this is a part of a widespread affectation, a yearning for elegance, a vain belief that any brand-new village, staring with white paint, can be made as interesting as any town or city in Europe by a mouth-filling name. A little rudimentary knowledge of the etymologies of the best-known names of Europe might console our new-fangled godfathers of old places. What is Naples but a shorter form of Newtown? Take the Pyrenean *Eaux-bonnes, Eaux-chaudes*—how many refined selectmen in any American watering-place would endure names of only that degree of pretence? In Germany we doubt if there is any such affectation; the Bavarian pronounces his Schweinfurt or Schweinheim without finding them offensive, and indeed, the world over, people are content with a good descriptive name, and are willing that a spade shall be called, if not a spade, at any rate "an agricultural implement." Our young ladies would have it a tripod, at the least, or a rood, or a teocallis. We should ill exchange our Red Banks and Lynchburgs and Sulphur Springs and High Bridges for the finest of Glenmarys and Charlemonts and Melroses.

—M. Lagrèze has had the happy idea of describing in a single book the three monuments of antiquity which reveal to us Pagan life at its decline, Christian life at its dawn, and Moslem life at its apogee—Pompeii, the Catacombs, the Alhambra (Paris, 1872). He has visited the places, has made himself thoroughly acquainted with the results of the latest researches in regard to them, has described them, narrated their history, and painted the lives of their former inhabitants with imagination and sentiment; and he has had his book plentifully illustrated with good woodcuts of Roman antiquities, Christian inscriptions, and Moorish architecture. Of course, for a thorough treatment of the three subjects one must go to Gell, Zahn, and Overbeck, to Northcote, Marriott, and De Rossi, to Lewis and Owen Jones. But one cannot always peruse folios and polemics, and M. Lagrèze's lively picture of Roman life and sketches of the history of the Moors in Spain are very agreeable reading.

—Adolph Henze, an enthusiastic patriot, and of course an admirer of Bismarck, has just given to the world a detailed analysis of the great statesman's handwriting; and, what is more, seems to think that he sees Bismarck's entire history reflected in it as in a mirror. Henze proves beyond a doubt that the battle of Sedan might have been predicted by a careful inspection of the ch's and tz's of Bismarck's writing, and we may expect him shortly to enlighten us as to the Chancellor's future career. He tells us that Bismarck's chirography is the longest—and for the truth of this we can vouch—of any handwriting in existence; *ergo*, Bismarck is the greatest man in the world; for if he were not, how could he write the longest hand? That the characters are firm, from which flows his tenacity of purpose; true, straight, inspiring confidence, bearing witness to like qualities in himself; plain, well-defined—which we deny *in toto*, as a faithful copy of one of his letters is before us, and the characters are very ill-defined and certainly not very plain—"consequent," sharp, testifying to the Bismarck logic and acumen. It may be we have here made the effect the cause; but what matter? Herr Henze can prove that they are convertible. It is a pleasing thought that if some catastrophe should blot the German Empire from the globe, we could read its past history in the hieroglyphics before us.

—"Lectures on Buddhism," being three discourses delivered at Hongkong by the Rev. Dr. Eitel, a German missionary connected with the London Missionary Society, is a small pamphlet giving more information on this little understood subject than many volumes by preceding writers. Dr. Eitel takes rank as one of the foremost living Sanskrit scholars, and, like Max Müller, has the faculty of presenting his views in an eminently popular and winning way. Even in so money-loving a community as Hongkong every copy of his brochure was sold, and a second edition is called for. For his "Dictionary of Sanskrit Terms" the honorary degree of doctor was conferred upon him by the Strassburg Faculty.

—The most important work of late issued from the China press is the fourth volume of the Chinese Classics, by the well-known Dr. Legge of Hongkong. Like its predecessors, it consists of the native text, a translation, critical and exegetical notes, and copious indexes to the whole, and is printed in a style that would reflect no discredit on the best of our own publishing houses. To those familiar with the previous volumes of the series, we need not insist upon the immense scholarship and research displayed by the learned Doctor in the lifelong work which has placed him in the foremost rank of sinologues. No living foreigner, in all probability, possesses an acquaintance with the classic lore of China in any way comparable to that of Dr. Legge, and, as regards accuracy of rendering, his version may challenge the most exacting scrutiny. The volume before us, known as the Shi King, comprises the classic odes of China, and, being written in the metrical form in use presumably some two thousand years before Christ, presents unusual difficulties to the translator. It is scarcely too much to say that sentences occur of which the meaning is as obscure as anything to be found in the hieroglyphic inscriptions of Egypt; and though the modern Chinese attach to them a conventional significance, there is no evidence to show that it corresponds with the original intention. This is to a great extent due to the fact that the infamously celebrated Emperor who built the great wall, decreed the destruction of every printed or written book within his dominions, hoping thereby to pass down to posterity as the founder of Chinese literature. So deeply engraved in the minds of the people, however, were the classic

books that the text was in the subsequent reign easily recovered. Still, much in the way of comment and explanation was lost, so that as characters began to modify their significations—for even in conservative China such changes have taken place, just as our word "prevent" has entirely passed out of use in its primary sense—doubts arose as to their meaning, and the received intention can only be regarded as approximately correct. The mass of commentary upon the sacred books, amounting to as many volumes as would make a respectable public library, has not tended greatly to clear up doubtful points, while verbose enough regarding renderings of slight importance. Hence the work of the translator has been one of extraordinary difficulty, and that he has achieved so marked a success is matter for sincere congratulation. We cannot, at the same time, disguise from ourselves that everything like grace of diction has been sacrificed to rigid accuracy, and it becomes a nice point whether a prose version in English of a poem, or even verses, in another language can be accepted as in all respects fulfilling the idea of translation in its highest sense. Upon this point, however, we shall leave Chinese scholars to enlarge, simply contenting ourselves with re-echoing the verdict passed by those in China competent to judge, that Dr. Legge's work marks an era in Anglo-Chinese literature. A sure proof of its value lies in the fact, communicated by a correspondent at Hongkong, that a member of the Canton literati has *pirated* the edition, printing from native wood blocks and Roman type, set up in a manner that would drive an American printer to despair; the whole impressed on paper not quite so good as that used by a grocer for his sugars.

THE LAW OF INHERITANCE IN FRANCE.*

THE best evidence of the hold which France still has upon the sympathies of mankind is the eagerness with which the process of her reconstruction is watched, the approval manifested towards those of her statesmen who discern and declare her defects, and even the perhaps too officious advice we all have to offer her as to the reforms which she imperatively needs, and the order in which they should be taken up. No one can doubt that for interested lookers-on the present development of France promises the most important lessons in the science of government, in political and social economy. Exactly how much we may learn, and how much it will profit us, will depend on the knowledge which we bring to the observation of passing events—it being as true here as in the use of the microscope, that what one sees depends upon what he knows, or knows how to look for. And if we would either divine correctly the true way for France out of her present difficulties, or estimate the just value of her steps towards recovery, we must have an adequate idea of the causes which have brought her where she now lies. In other words, we must put ourselves in the place of Frenchmen patriotically engaged upon this very problem, with the advantage on our part that we can approach it without prejudices, and without the temptation to conceal the truth because it is disagreeable. Some of these causes are as old and as difficult to trace as they are difficult to remedy. Others are much more recent, and perhaps on that account all the more unsuspected; and this is the case with the one which we purpose now to consider, with the aid of the valuable memoir of M. Jannet, embodying the results of a private enquiry made five years ago under the auspices of the Société des Etudes Pratiques d'Economié Sociale.

This enquiry contemplated the practical results of the laws of succession in Provence, with reference to their influence on family morals, as well as on the system of agriculture. It revealed first of all the fact that this portion of the Code Napoléon has but just begun to bear fruit in Southern and Southeastern France. "For one or two generations the people strove against the application of it, as being repugnant to their traditions and received ideas; the present generation alone is fully imbued with its spirit, and will push its application to the furthest limits." Not that the Code Napoléon is the prime source of this evil legislation, nor that the First Consul, already weighted down with the curses of posterity, must add to his sins this of the *partage forcé*. When the Civil Code which perpetuates his name was under discussion, he proposed to leave this compulsory division in force for all fortunes of 20,000 francs and upwards, but to make the disposition of property below that amount absolutely free. He was overruled, in favor of the example of the Convention of 1793, which suppressed the right to devise property *(droit de tester)* for fear lest aristocratic fathers should disinherit their patriot children. So it happens that, since 1803, a decedent can dispose absolutely of only a portion of his effects *(quotité disponible)* according to the number of his children—never exceeding one-half; while the remainder must be divided among them as co-heirs having a right to an equal share, *and that in kind*, of each article of the inheritance. The law is precisely the same for all divisions of property made during life, which are not valid without the consent of the children, but which nevertheless afford a means of evading the law in cases where a division in kind would be impracticable or ruinous, from the nature of the soil or from other circumstances.

First among the ills which flow from this prolific fountain, M. Jannet depicts the disorganization of small farming. Small proprietors and small properties, it is true, antedate the Revolution, though their numbers were greatly increased by the confiscations of that period and the division of communal possessions. The tendency of the *partage forcé* is to multiply them indefinitely, and it has on this account been lauded as an element of stability for the country. But precisely the past seventy years have been most remarkable in the history of France for unrest, change, revolution, and war, of which we have not yet, perhaps, witnessed the climax. The fact is that the laws of succession now destroy more small patrimonies than they create, and constantly impoverish those which remain. In the process of subdivision a point is reached at which it becomes unprofitable, and indeed impracticable, to use the labor of beasts in cultivating. For this purpose a piece of ground must be at least fifty yards long; yet often, when this condition is satisfied, the width does not exceed four or five plough-lengths. In the canton of Cadenet, arrondissement of Apt in Vaucluse, a certain proprietor's landed fortune consisted of eight "parcels" or lots worth $1,200, some of which were 800 feet long, but only 10 feet wide—too narrow for the working of beasts. Frequently the proprietor of one of these parcels is compelled to lease enough more from his neighbors to enable him to use a plough on his own and to raise a few head of stock. The result is a widespread condition of poverty on the part of this class. It has been calculated, says M. Jannet, that more than half *(la forte moitié)* of the small French proprietors have an income of less than $16. For all such, compulsory division means selling out to the sheriff; and, in fact, there are in France 8,500 auction sales of this kind every year. In 1865, 937 sales of property, worth $100 or less, produced $51,800, while the costs amounted to $64,000; and 1,382 sales of property, worth from $100 to $200, produced $207,700, at a cost of $100,000. In the unfertile and hilly regions of the Basses-Alpes, the *partage forcé*, when carried out, results in depopulation. "Estates, becoming too scanty to sustain a family, are converted into commons, or abandoned to the devastation of the torrents," and, while the territory thus grows poorer and poorer, the taxes grow heavier and heavier, since the official appraisement remains unaltered. The final issue of this state of things is that the land put up at auction is either bid in by small proprietors anxious to enlarge their insignificant domain—in which case the value of the land to the State is enhanced by the very fierceness of this wretched competition—or by capitalists who supplant the small proprietor with the small farmer.

What becomes of the families whose ruin is implied in these annual sales? Where there does not exist a normal and periodic emigration (such as is to be found in the Basses-Alpes, for example), "les familles ruinées vont seules grossir la population urbaine." They flock to the cities, bringing not a fresh, strong, virtuous infusion of country blood, but shiftlessness, despondency, vice, and misery. They furnish the unsettled, discontented, cowardly, and brutal material of which revolutions are bred in France, at once the product and the producers of social disorganization. "In reading over this memoir," says the author, in his preface to the new edition, "after an interval of four years, I have been struck with the fact that those regions in which the disruption of families was the rule have proved exactly the ones in which the International, and the divers associations of the Radical party, have taken root and spread with the greatest rapidity." Eighty years ago it would have been possible to make a similar observation with regard to Champagne. Here, as in some other parts of France, the *partage forcé* had long been practised, although in some measure neutralized by other customs; but in the seventeenth century it began to take effect. "The condition of the peasants grew more and more miserable from the sixteenth to the end of the eighteenth century, in contrast with other parts of the country, notably the South and West. Deprived of a sound constitution of the family, they developed secretly the spirit of antagonism, and the Revolution found among them the scene of its earliest violence. They were all the more disposed to make war on the chateaux from the fact that the nobility and the burgesses of the towns had a different law of succession, founded on entail and the right of primogeniture." In the late war with Germany, "except a few battalions of Mobiles in which the sons of ancient families and the sons of peasants joined with a common devotion, the people of the South [in their turn infected by the *partage forcé*] showed none of the patriotic *élan* of their fathers in previous invasions. Demagogic agitation took the place of it."

We have touched upon only one of the three evils which M. Jannet endeavors to ascribe to the French law of succession, and our space warns us to be brief. To exhibit the change which is taking place in rural society,

* "Les Résultats du Partage Forcé des Successions en Provence, etc. Par Claudio Jannet, avocat à Aix." Nouvelle édition. Paris, New York: F. W. Christern. 1871.

he gives as the original type the *famille souche*, which corresponds as nearly as may be with the American farm life of forty years ago. It supposes the succession to the estate in its entirety of some one of the married children, and the independent establishment of the rest with an allowance. The home thus perpetuated is the refuge of such of the family as meet with misfortune, and the centre of the family traditions and affections. M. Jannet traces all the steps of demoralization by which this kind of family passes into the *famille instable*, without a homestead, without integral transmission, with no strong ties of interest or affection, impatient for a division of the patrimony, and separating carelessly when each has received his portion; living in crowded villages as the centre of the township, and going long distances to till the petty fragment of soil inherited. In so doing, he reveals phases of the domestic relations in rural France which it is hardly too strong to call sordid and repulsive. For instance, a father who, wishing to make provision for his old age, divides his property among his children, instead of leaving it in his will, is often only able to reconcile them to his endowing one with a larger portion than the rest in consideration of that one's receiving his parents into his house. "The extra endowment is not generally included in the son's marriage contract, for fear lest, having an irrevocable right, he neglect to discharge his obligations towards his parents." The *quotité disponible*, out of which the extra endowment is taken, is usually also burdened with the cost of purchasing exemption for the sons from conscription. Since 1855, the average price of exemption has been $500, a sum large enough to swallow up all the peasant's little economies, to leave no dowry for his daughters, and to render a division in kind inevitable after his death. Long before that, he may have had to endure the sight of his sons "passing their time in the cafés, assured of their future by rights which give them the means of living," and not respecting him "because they perceive that they do not depend on him for a living, and that the future belongs to them." After his death his children become strangers to one another, never so much as dreaming of living together, and neither giving nor expecting mutual aid in reverses. "In this respect the peasants are no whit inferior in selfishness to the bourgeoisie. When the Civil Code laid down the principle of the equal and absolute right of the children to their father's property, at the same time it shattered every bond of solidarity between them; for the moment they no longer owe anything to their common author, but are invested with a personal right which they derive from society, there ceases to be any basis for reciprocal moral obligation. In this manner has the family been 'simplified,' according to the expressive euphemism of a sceptical contemporary."

The mother's fate is decidedly worse than the father's. Before the Revolution she occupied a high position in the family, which continued after the father's death to group itself about her. The Civil Code denies the widow all right, even of simple enjoyment, in her husband's inheritance. This wrong is of course remedied as far as may be in practice, but it has been the potent ally of other influences in degrading woman in the family, both in the relations of wife and of mother. "It should not be overlooked that our modern laws, in suppressing the ancient maxim that *don entre concubins ne vaut*, have given to immoral celibacy just that full and absolute liberty which they refuse to moral and fruitful families." The Civil Code has reinforced this odious distinction in making a large family the dread and penalty of the small husbandman, and in fostering that *stérilité systématique* constantly alluded to in the work before us. Physicians (for example, Bergeret) have borne concurrent testimony with M. Jannet's as to the direct connection between the laws of succession and the deliberate suppression of offspring, and consequent stationariness of the French population. Among those who protest most energetically against this feature of the Civil Code are the newly annexed Savoyards, accustomed to testamentary liberty, and who see their brethren across the Alps under a law (Italian Civil Code of 1866) which leaves one-half of a man's property at his absolute disposal, whatever the number of his children. Such was the liberty also of the people of Nice, who, under the old Sardinian constitutions, could boast of a law, repealed only in 1848, which exempted all Sardinian subjects having twelve legitimate children from all public taxes and burdens, even to customs duties on goods and provisions necessary to the support of their families, during their entire lives. In all the Departments under M. Jannet's consideration, population is shown to be either stationary or retrograde; and as the *partage forcé* is carried to the greatest extent, for obvious reasons, in the most fertile districts, so systematic sterility and its attendant vices there flourish most.

We must forbear discussion of other topics which offer themselves only too freely, simply pointing out the fact that industrial as well as agricultural continuity is hindered by the law of succession. Thus the *partage forcé* is rigorously enforced at Marseilles, and "houses being no longer able to perpetuate themselves under the same firm, the heads of families liquidate early in order to enjoy their income, and leave their sons without guidance or traditions—a great waste of productive energy." In 1865, 130 eminent Paris merchants petitioned the Senate for some relief from this hardship, and most of the manufacturers' complaints of free trade have made mention of testamentary liberty as one of the chief causes of the superiority of English industries, and the ground of protection for the French. Unhappily for the cause of free trade, its application has brought the vast agriculture of Hungary and Russia into competition with the disorganized and hand-to-mouth cultivation of France, and naturally the French mind has looked to barring out the intruder rather than to improving what is defective in the native system.

It cannot be denied that if all this has much to teach us concerning the hidden causes of French decadence, it has also more than one moral which we may take home to ourselves. We see in it an act of special legislation, properly so-called in its inception, involving a thousand consequences never imagined by its authors—enfeeblement of the "spirit of devotion and discipline, of patriotism and social stability, of race-fecundity and colonizing expansion, of agricultural [and industrial] prosperity": an act in the interest of civil equality bearing most heavily upon the humbler and poorer classes; or, in the interest of human equality, debasing the woman without elevating the man: an act to prevent unnatural treatment of children by their parents, producing equally unnatural treatment of parents by their children; and, to promote family attachment, producing only selfishness and dispersion: an act to keep the rich from getting richer, only serving to make the poor poorer, and destroying the provincial nobility without substituting for it corresponding virtues and traditions: a well-meaning act, whose dreadful consequences have lain concealed for nearly three-quarters of a century. We cannot help, too, comparing one of these consequences—the transformation of the *famille souche* into the *famille instable*—with a like process that has been going on under our own eyes. With us it is a healthy development instead of an organic decay; yet we cannot but regret the gradual disappearance of those foci of our early civilization which once made New England blossom like the rose, which bred the men of the Revolution, and which, maintained in the same line from generation to generation while still sending forth the pioneers of Western settlement and discovery, have one by one succumbed to the railroad, the telegraph, and the power-loom.

THE MAGAZINES FOR OCTOBER.

"THE Buccaneer," the best known though not the best poem of Mr. Richard Henry Dana's, is brought to the knowledge of this generation of American readers by the October *Harper's*, in which it is republished with illustrations. We hope it may send its admirers to Mr. Dana's modest volume of prose and verse, full of genuine sentiment, thoughtful reflection, and, now and again, poetical imaginativeness, which the occasional quaintness of external dress cannot conceal. Indeed, this occasional quaintness, as of bygone fashion, while it will strike the casual reader of Mr. Dana's works more readily than his solidly valuable qualities of sense, delicate sensibility, masculine vigor, and cultivated restraint, is very much more than overbalanced by these qualities. The newspapers and modern poets are making worse prose-writers and verse-writers and worse men and women than if the poem of "The Beach Bird," and that upon the Chamber called Peace, and the criticism on Kean's acting, were familiar to the students of Swinburne, Buchanan, and Miller, the magazines and the campaign press. We have not at hand any edition of "The Buccaneer" later than that of 1833, and it may have been earlier than this summer that Mr. Dana has made in the poem some changes which we have noted as we re-read it. They are all comparatively slight, and all seem to us to be improvements. Apart from its intrinsic merits, "The Buccaneer" and its companion pieces are worth the attention of their new readers as forming a literary monument of interest. Mr. Dana, born in 1785, is almost the Nestor of American literature, and was among the earliest of our poets to make a reputation which has proved worthy to endure. One smiles a little to see how Miss Edgeworth, and Cowper, and Crabbe, and Wordsworth, and Coleridge, and Monk Lewis, perhaps, and Byron, had their effect on these productions, with their heroes and heroines of sentiments so just and elegant, or of a gloom of soul so maddening, but in either case of conversational habits so overpowering; and no doubt "The Buccaneer" might have been different—the spectre horse not weird in just this way, nor the poem in such jeopardy from the bathetic as now it sometimes appears to be—had "Peter Bell" and "The Ancient Mariner" not been written. But, on the other hand, the author's style shows that his studies had not been confined to contemporary English, great geniuses as were Mr. Southey and Lord Jeffrey; and he does not long leave the reader without proof of his individual independence, while the native powers of his mind and the qualities of his heart secure for him his reader's respect and

liking, and for the reader a certain and sensible profit. The essay on domestic life, for instance, cannot be read without giving real pleasure, nor without inspiring a kindness and esteem for the author.

Hawthorne is another of our old-time authors who appear in this month's *Harper's;* but it is not so much in his own person that he appears as in reminiscences of him by another, and still more in biographical details, which are well enough known to make a skipping reader the best reader of the article. There is, however, part of a letter or two of Hawthorne's. In one of them he advises the writer, who is seeking a place in the New York Custom-house, to exercise on the Washington politicians his power of hard drinking, as they all guzzle brandy in great quantities, but tells him that he must by no means "let them see you corned." He remarks, too, "when applying for an office, if you are conscious of any deficiencies (moral, intellectual, or educational, or whatever else), keep them to yourself, and let those find them out whose business it may be." This was jocosely meant, no doubt; but, morality and self-respect apart, it was not bad advice as things went in Pierce's day. After all, the former days were not so much better than these.

The Hawthorne article, like "The Buccaneer," is illustrated—the former by a portrait which will make the original turn in his grave; and there are, besides these, two or three other articles with pictures, one being descriptive of the New York Harbor Police, and another of a trip down the Danube. Following these are chapters of fiction by Miss Thackeray, Mr. Wilkie Collins, Mr. Charles Reade, Mr. Justin McCarthy, and a lively person who writes "A Short Story for Gentlemen." Mr. Reade is not shining with great lustre in this first portion of his "Simpleton." The evils of tight lacing are his theme so far; and he shows in the usual degree his well-known and unrivalled power of nudging the reader in the ribs and turning the female heart inside out and back again while the reader is saying Jack Robinson. We do not know what writer should be at the same time more exasperating and more amusing to women of sense, or indeed to the other kind of women. Mr. Collins's story is to be about a woman of ill repute who wishes to get back into good standing, and who to that end takes upon herself the name, clothes, and "antecedents" of a lady whom she sees killed before her eyes on a battle-field of Eastern France. The lady is not killed, however, but only wounded in some impossible manner, and is cured by one of the miraculous German surgeons who perform the impossible sort of cures. "It will be seen," the advertisements say, "that the story will be one of thrilling interest." For the rest, *Harper's* contains the third part of the "Recollections of an Old Stager," who gives us some anecdotes about Webster, John Quincy Adams, and the forgotten George Evans of Maine; the fifth part of Señor Castelar's account of "The Republican Movement in Europe"; and some poetry, among which is an "improvisation" by Mr. Bayard Taylor:

> "Fondle me, Lalage!
> Girl of the soft white hand,
> Girl of the low white brow
> And the roseate bosom band;
> Bloom from an orchard bough
> Less downy soft than thou,
> Lalage!"

There are two other stanzas, each as good as this one.

Mr. Hjalmar Hjorth Boyesen, a Norwegian gentleman now resident in this country, contributes to the *Atlantic* a translation of another Norwegian lyric as pleasing as its predecessor, which he gave to the magazine two or three months ago. This "Thoralf Synnöv" is plainly not an "improvisation," though it may well be imagined that it has been made without difficulty, as certainly it can be read with ease and with delight. Our young friends Lalage and Synnöv differ somewhat as regards lissomeness, or, as one might say, as regards wooden stiffness:

> "Then it was last St. John's Eve—I remember it so well,
> And we had lit a bonfire in a grass-grown little dell,
> And all the lads and maidens were seated in a ring,
> And some were telling stories and the rest were listening.
>
> "Till up sprang little Synnöv, and she sang a stave as clear
> As the skylark's earliest greeting in the morning of the year;
> And I—I hardly knew myself, but up they saw me dart,
> For every note of Synnöv's went straight into my heart.
>
> "And like the rushing torrents that from the glaciers flow,
> And down into the sunny bays their icy waters throw,
> So streamed my heavy bass-notes through the forests far and wide,
> And Synnöv's treble rocked like a feather on the tide.
>
> "'And little Synnöv,' sang I, 'thou art good and very fair,'
> 'And little Thoralf,' sang she, 'of what you say beware,'" etc., etc.

Surely a natural sweetness and freshness and sincerity like this of Thoralf and Synnöv might well be sought in exchange for all the art about which we hear so much talk from various manufacturers of verses. Usually it is as if an automaton-maker should lecture us from among his wood and leather about sculpturing or child-bearing. It is but a poor escape from the "materialism of American life" that leads us to an "art" which holds us off from all the realities of existence and tries to content us with a carved toy, surface polished and meaningless, except that it is so far from being "utilitarian" that it is utterly inutile for any and every human purpose. That we should be much engrossed by ledgers and newspapers and politics may be bad or may be good; on the other hand, to go with Mr. Boker and call "trade" "hell's minion," and make "Lalages," and call the making of them anything worth doing, is beyond peradventure bad. Fighting for "art" and "culture" with weapons like that very much resembles the course of the unarmed Arab when he suddenly meets a lion; it is said that, being unarmed, the friend of culture talks nonsense to the beast in a temperate voice, as empty of feeling as his words are empty of sense, until by-and-by the lion, his surprise overcome, eats the improvisator, and waits for his own defeat and death to come from some more sensible and forcible quarter.

Mr. Parton's "Jefferson" continues to be as readable as ever, though as was to have been expected, it is the writing of a partisan, and of a very intrepid propounder of *obiter dicta.* Here for instance are two or three sentences remarkable for what they assert, and perhaps more remarkable for what they omit to say; but Mr. Parton rattles them off as glibly as if there had been no long and difficult and splendidly successful *Alabama* diplomacy carried on abroad between 1861 and 1865; as if there could have been a more favorable set of circumstances for acquiring temporary distinction than surrounded Mr. Washburne during the Franco-German war; or as if it were Franklin's stockings that determined the action of France against England during our Revolution. "We have had, however," says Mr. Parton, "besides a large number of respectable ministers in the ordinary way, those whose opportunity was at once immense and unique—Franklin, Jefferson, and Washburne—and each of these proved equal to his opportunity." Mr. Washburne certainly behaved with commendable industry, energy, and hospitality on the conspicuous stage of Paris besieged; but it will be a singular historian of those times who shall speak of him as having advanced the credit of American diplomacy. It is such slapdash talk as this of Mr. Parton's that confounds solid merit and real services with merit far less solid or even with stupid demerit, and makes it harder for real fame to make head against flashy notoriety.

Other contents of the *Atlantic* are, "L'Ore, the Slave of a Siamese Queen," by Mrs. Leonowens, which is another leaf from that lady's chronicle of the harem, and very striking it is; Mrs. Agassiz describes a glacier in the Straits of Magellan, discovered when the *Hassler* was in those waters with her exploring party; "Guest's Confession," by Mr. Harry James, begins; "The Poet at the Breakfast Table" goes on, with its usual fine, full boarding-house flavor, and some remarks which will lead the unarboricultural reader to suppose white pine to be better timber than pitch pine; "The Comedy of Terrors" is dull as ever; there is poetry by Marian Douglas, Lucy Larcom, and Bayard Taylor, and there is a full allowance of literary and other criticism. As for the latter, we find something graceful in the art-critic's retirement from the discussion of Ward's Shakespeare statue, though he leaves us in doubt whether he still holds that there were in Elizabethan times two Shakespeares, a "real" and an "ideal," the former of whom Mr. Ward has represented; and whether he thinks there is great advantage in raising statues to the "real" Shakespeare, of whom we know next to nothing, rather than to the "ideal" Shakespeare, the poet, of whom we may say we know everything. We are pleased, too, at the writer's new interest in ethnology and the muscular system of savages. We have little time for conning our own former expressions, and it is pleasant to be reminded that our notions of Indian structure are the same to-day that they were when "The Indian Hunter" was first exhibited, though we may have made progress since then in the matter of exacting accuracy about such things in works of art. It may be worth while to point out to the writer that had he found more essential discrepancy than he did when he avoided the main issue and fell to collating our criticisms of five or six years ago with those of last month, he would still have been engaged in a profitless sort of argumentation.

The literary critic's quotation from Sainte-Beuve of a remark that no one makes a real book nowadays, suggests a question which it might be profitable to investigate, namely, How many of the really great and influential books of the world's literature have been designed and written as "books," in the sense in which men of letters and literary artists use the term? Shakespeare deliberately made "books" in the favorite fashion of the court, and predicted immortality for his "sugred sonnets," while the works which gave his comrades their bread and meat, and himself his, and his immortality, went to probable oblivion almost utterly unregarded by him. No literary artist working as such made the books of the Hebrew Scriptures; nor the books of the Iliad and Odyssey; nor those of the Koran. The books made not as books, but as a means to an end, and an end not intrinsically literary, might probably be proved to be

in the majority of those which have exercised supreme literary influence, literary and otherwise. The subject becomes a close and practical one when we either seek a measure for the value of literary performances or a guide to the best means of accomplishing the best results in literature.

Of the *Atlantic's* poetry, other than Mr. Boyesen's, there is need only of saying that Miss Lucy Larcom, who did well in her early poem of "Hannah at the Window," and who, since then, has produced nothing above a rather common level, has in this month's poem of "Phœbe" nearly or quite equalled her former self. "Phœbe" has not the pathos of the other poem, but it is very engaging and pretty; it is completely and definitely conceived, and it is well finished. "Penn Calvin" is one of those "liberal" grapplings with "creeds" which, twenty years ago, would have rolled up the eyes of the sewing circles, and made the author suspected of "deism"; nowadays the sages and pundits of the lecture-platform have so accustomed the Dorcas Societies to advanced thought of the profoundest kind, that the philosopher who says that God is good; that babes in arms do not go to hell; that there is good in human nature as well as a saving power in grace, is safe anywhere, and may be tolerant to any extent; while everybody of a certain age will admit his depth, nobody will seek his life. Indeed, we expect to see the thing so well understood in two or three years' time that no one will seek even his biography.

The most interesting article in the *Galaxy* is by Mr. Albert Stickney, who hits hard at Mr. Jeremiah Black and Mr. David Dudley Field, having the fear of neither of those gentlemen before his eyes, as indeed we do not know why he should. Both of them Mr. Stickney charges with perversion of the truth, and as one story is good till another is told, and sometimes after the other is told, we shall wait till Mr. Field and Mr. Black attempt reply before disbelieving that Mr. Stickney has left his antagonists in a position which nothing but custom and practice could make agreeable.

"Our Consul at Jerusalem," by Mr. Albert Rhodes, is not about any particular consul there, nor indeed is it very much about anything or anybody else, but it may be read. "The Fellowship of Music," by Dr. T. M. Coan, is a clever essay, showing widely cultivated tastes, tracing as it does with particularity the interdependence of the various arts, and particularly the relationship which music bears to each of them and to the human mind. "Royal Exiles and Imperial Parvenus" is by an English lady who, before she was in a manner banished to this country, was familiar in noble and royal circles, and who fairly well avails herself of her opportunity to make articles having interest. As much can also be said for the writer of the paper on the late Mr. Hackett, the actor, who appears in a very good light indeed, though what is said is but fragmentary. Mr. Trollope's "Eustace Diamonds" appears to be no nearer conclusion than at any time within three months, and we suspect the hero and heroines may be getting ready to be drawn, like Lily Dale and John Eames, through several more novels.

Bismarck's attack upon the German Jesuits takes up sixteen pages of this month's *Catholic World*. The writer says he cannot help laughing when he hears Bismarck protesting, "as a Protestant and an Evangelical Christian," against the pretensions of the Pope. The height of solemn farce, he thought to himself, when he read the protest, had now been reached, and the words reminded him of "one Oliver Cromwell, who, in common with a well-known kinsman of his, had a knack of citing Scripture for his purpose" —the kinsman in question being the devil, no doubt. But why so atrocious a man as Bismarck should not almost as a matter of course be so atrocious a thing as an Evangelical Protestant, the writer does not make plain. What else was to have been expected of his inborn villany and hatred of truth than that they should inevitably make of him a Protestant and an Evangelical? No one would suppose, to read the *Catholic World*, that Bismarck found the Jesuits and the Alt-Katholik party in a savage fight, and was in a manner compelled to take a hand in it. The fact is, the Jesuits are in the van of the uncompromising Roman Catholic Church party; they act upon the theory which other Catholics, with more or less sensible illogicality, do not and will not act upon, and endeavor to secure for "God" the absolute control of this world—government, education, what not. As most men are willing that God should rule the world, but define the term "God" in a way different from that of the followers of Loyola, the latter once in so often come to grief. Their fight with the German Reichstag is not the first instance in which too much logic and various forms of energetic action have brought them in contact with "the world," and it will, no doubt, not be the last. The Society of Jesus we are not done with yet, we may depend.

Scribner's has a "Letter to a Young Journalist, whose Education has been Neglected," a person who is getting a good deal of attention just now, and perhaps this advice of "W. P. A.'s" is as likely to be of service as most that is said to him. "What you may or may not have lost by not going to college," says "W. P. A.," "is this—direct contact with the powerful and well-trained mind of a competent living teacher, one who has both a perfect grasp and a living interest in his subject." But this is not all; nor half; nor a third. Doubtless there are as able men out of college as in it, and some of the ablest men in this country, as elsewhere, have been men self-trained, or rather trained by some exacting profession, liberal or other. But for the average man the average college does very much in many ways—by letting him come under the influence of several able men; make the acquaintance of the most favored of his contemporaries; learn how much they know; learn something of his own limitations; get a fair view of what there is to be known in the various fields of knowledge; and perhaps learn the great lesson of how to study. The tone of this letter, as regards the opponent and adversary, smacks not so much of the ideal young journalist whose education has been neglected, as of the actual young journalist, we fear. "Pigheaded doctrinaire," "knavish demagogue," "pretentious twaddler," are hardly the terms to which the tender journalist should be accustomed by his preceptors, even when abstract persons and not persons in the flesh get the benefit of them. The mere show and imitation of blood rouses the young lion.

"Ernst of Edelsheim" is some verses by Mr. John Hay, with a clever turn to them at the last; "Mr. Beecher as a Social Force" seems to us a good magazine article; and there are many other papers which keep *Scribner's* for October, like its brethren, of an even goodness without much that shows above the general surface as excellent.

A well illustrated article, entitled "From Lake Superior to Puget Sound," opens *Lippincott's*, with some pages which are sufficiently readable, we dare say—though we will confess for our own part that while we cannot be said to abhor the very thought of reading sketches of travel in America, we are not so fond of them either that we read any of them when we can help it. We speak of sketches of travel in America written by Americans; written by the foreigner they are another thing. Though for that matter, we are becoming so respectable, and populous, and so much bigger than any other people that the charm of the foreign tourist's volume is rapidly disappearing. The late Mr. Tuckerman collected his volume of the British traveller's abuse and the Gaul's philosophy not a moment too soon. "The Strange Adventures of a Phaeton" widens the breach between Miss Bell and Mr. Arthur, who in these last chapters continues his misbehavior, and of whom we suppose most of Mr. Black's male readers are not now so jealous as they are of the young German—or Dutchman, as the term of reproach goes. "Mr. Twitchell's Inventions" is an amusing enough story of a kind that we should like to see commoner in the magazines; the writer on the art galleries of Philadelphia speaks this month of Mr. Henry C. Carey's Maclises, Stanfields, Pynes, Leslies, Eastlakes, and Morlands; Lady Blanche Murphy writes about her picture gallery, the article consisting of some photographic remarks upon noted persons of whom she has seen something—Czartoryskis, Stuarts of the exiled line, the late Lord Derby; an old Etonian writes about Eton and his school days there; and besides these articles there are half a dozen more of the usual kind, which certainly is a good kind, as American and English monthly magazines go, and with a distinctive flavor not possessed by all our magazines.

RECENT NOVELS.*

A NOVEL in which almost everybody is moral, the heroine an Ultramontane Catholic with some of the instincts of a saint, and the hero a free-thinker, converted through love, is a curious thing to get from a man who afterwards wrote "Camors." It is an interesting story, nevertheless, skilfully told, and put into very readable English by its present translator. Sybille herself is a unique creation—not because she is either lifelike or possible, for we imagine her to be neither, but because M. Feuillet seems to have tried his hand at making in her an incipient saint. To be a saint he has understood that one loves God exclusively; and in his effort to combine an exclusive love for God with an absorbing passion for a man, he has produced a character which throws a good deal of light upon his own motives and mental processes, but which has no consistency nor possibility. On its face it is a very simple, pretty, religious little tale, but it has a taint of insin-

* "The Story of Sybille. By Octave Feuillet, author of 'The Romance of a Poor Young Man.' Translated from the French by M. H. T." Boston: J. R. Osgood & Co. 1872.

"A Waiting Race. By Edmund Yates." New York: D. Appleton & Co. 1872.

"The End of the World. A Love Story. By Edward Eggleston, author of 'The Hoosier Schoolmaster.' With thirty-two illustrations." New York: Orange Judd & Co. 1872.

"Olive Varcoe. By Francis Derrick." Loring: Boston.

"Clara Vaughan. By R. D. Blackmore. 2 vols." Berlin: A. Asher & Co. Philadelphia: J. B. Lippincott & Co. 1872.

"Ebb-Tide and Other Stories. By Christian Reid." New York: D. Appleton & Co. 1872.

"Ethel Mildmay's Follies. By the author of 'Petite's Romance.'" Boston: James R. Osgood & Co. 1872.

"Love and Valor. By Tom Hood." Boston: James R. Osgood & Co. 1872.

"Glitter and Gold. By Horace Field, B.A., author of 'Heroism,' etc." Philadelphia: J. B. Lippincott & Co. 1872.

cerity throughout which would be as perceptible were the novel an anonymous one as it is when it bears the name of M. Feuillet.

"A Waiting Race," by Mr. Edmund Yates, has been republished by the Messrs. Appleton, and will have a greater run than it deserves. This it is safe to say, because it ought to have no run at all. The story is an extremely unpleasant one, told in a jaunty way about lords and ladies, and exposing the hideous plagues that rage beneath a gorgeous exterior. Society is taken severely to task, and it is so fully proved that fashionable women will run away from their husbands, and that blue blood is probably bad blood, that the heart of the true republican beats with pride as he reads so searching an exposure of the aristocracy of England. There is nothing more than this in the novel, absolutely nothing. It simply reminds us of what one might imagine to be the work of a chastened "Ouida," who is not quivering with passion or appetite, but simply giving us full information about the ways and manners of her betters. That such books should be written and read enables one to understand the grounds old-fashioned people take against the reading of fiction, and, indeed, seems to remind one that time rolls on, and that one is rapidly getting to be old-fashioned one's self.

It is a pleasure to turn from such a novel to so simple-minded and innocent a story as Mr. Eggleston's "End of the World," which is announced on the title-page to be a love story, but which is much more and much better in its way than that. There are the young man and the young woman who are persecuted and separated by heartless parents; they also add to their sufferings by misunderstanding one another; there is the fever, which is epidemic with heroes, although in this case it is not the consequence of a fall from a horse in front of the heroine's house; and finally, of course, they are married. This is all told pleasantly enough, and in a way which every one will be glad to see in a story which does not pretend to any deep searching of the human heart, but which will, we have no doubt, be very popular among people who do not read most of the best and a multitude of the worst novels every year. But better than that, to our thinking, is the greater novelty of the scene to which the author introduces us, and the amusing people—Second Adventists, Western Methodist exhorters, confidence-men, and so forth—whom he has sketched in a very lifelike way. The plot of the story is certainly hackneyed, but there is considerable freshness in the telling of it, and, above all, the author deserves praise for the good-nature and cheerfulness, and the lack of false sentiment, which together make the story better than would its literary merits alone.

"Olive Varcoe," on the other hand, takes us back into the familiar paths of fiction, only they are in this case a trifle more winding than usual. How far it may be taken as a picture of life, and as conveying a moral to a docile world, we can judge from this outline: Olive Varcoe, the heroine, who is the daughter of an Eastern merchant and a favorite slave whom he had married, is the second cousin of two brothers, one of whom is engaged to an English girl of the ordinary type. Olive, with her mixed blood, used to indulge in "inventions, Eastern fashion, with an adroitness and skill that oftentimes amused her English opponents." These amusing inventions, however, were not a supplementary volume of the "Arabian Nights," but falsehoods which "did not disgust, as they were mostly so un-English, so removed from mere vulgar lying, having in them a keen jest, a spice of romance, or a touch of Eastern malice." She also smokes, flirts violently, and shows a bad temper, and when a murder happens to be committed, and that, too, of an odious rival, suspicion naturally falls on her rather than on the others; but the moral is a condemnation of hasty judgments. Of course we shall not betray the author's secret—the name of the real murderer—in which lies really all the interest that the story has.

Those whose thirst for blood is aroused by this tale may perhaps allay it by reading Mr. Blackmore's "Clara Vaughan," a revised edition of a story that he wrote about twenty years ago. Why it should not have been left to rest in its grave does not to us clearly appear. It is the story of a young woman who was insane during her childhood, and who devotes those years that most of her sex spend in frivolous amusement, self-adornment, and the pursuit of pleasure, to the cultivation of a surly temper and the search of her father's murderer. As most girls' fathers die natural deaths, this book will probably have but little influence either for good or bad, and even if all fathers perished beneath assassins' knives, we can hardly expect to have our police force, whatever may be its efficiency, replaced by the young women who now are preparing for this winter's parties. It is a dull story; one of the most amusing things about it is the careful and tolerably accurate imitation of a young woman's literary style—a task of which, whatever the difficulty, the praise need not be exorbitant, we suppose.

In spite of one little flash of horror in one of the shorter tales, Miss Reid, the author of "Ebb Tide," deals with nothing more deadly than the flash of beauteous eyes. Her novel is decidedly a "novel of society," and is very readable as such novels go. She has certainly the merit of making her men and women talk like people of good breeding, although it must be said that they all lack the cool composure which is supposed to belong exclusively to the worldling; but then it is only beneath the mighty impulse of the tender passion that they ever speak at all. The longer novel from which the volume takes its name is, perhaps, the best; but there is no one of the shorter tales that is without merit. If this author would look to something higher than the flirtations on hotel p'azzas, there would seem to be no reason why she should not write something much better, something of more real interest. She has the merit of avoiding many of the mistakes that are made by the majority of novelists upon such themes, and, apparently, she is capable of seeing and describing much more genuine passion than the rather trivial manifestations of it which form the only subjects of this volume. At any rate, one is justified in hoping for something better, for this is good of its kind.

"Ethel Mildmay's Follies" were very much like the follies of a good many other young women, inasmuch as she insisted on flirting with the wrong man against the advice of all her family. By-and-by, however, the right man comes along, Miss Ethel sees the error of her ways, and with rare wisdom takes up with what we may call the Original Jacobs, or true genuine hero. It certainly is not a story that it is absolutely essential for any one to read who is struggling to get an education, but for a rainy day, an idle hour, it may serve to pass away the time.

"Love and Valor" is another novel of about the same merit. It is put together without much naturalness, there are scenes of college life, of service in the army, of the work of a clergyman, etc., but there is no real interest in the story—it simply belongs to a never-ending sort of novel, and is quite as good as most of its kind.

Mr. Field says in his preface, and says it in a way that well enough illustrates his manner of writing throughout his work: "The imperial crown I could not help weaving for Christ with the busy fingers of both day and night, seemed but a weeping tribute if I could not twine amid its sprays emblems of an outer as well as of an inner power; and in the search for the social leaves of an eternal green I needed, no course appeared so full of promise and so attractive as to follow the imaginary history of a seeker after God planted amid our social conditions, and observe whither he was led." If any reader finds this passage stilted in expression and doubtful in meaning, we can only advise him not to attempt following Mr. Field through the cumbrous pages of the novel in which he tries to unfold his social and religious theories. He believes in co-operation as a remedy for most social evils, and seems to have strong Swedenborgian tendencies—his faith in himself is above all things staunch and unwavering. But he is a most tedious novelist, whether it is the invention of machines that occupies him or the prayerful love-making of his hero and heroine. Ernest and Grace are assuredly prigs of the first water, and even the latter's bedridden condition fails to reconcile us to her. When Ernest stoops over her couch of pain and imprints his first kiss upon her lips—a long kiss, Mr. Field says, which satisfied Grace thoroughly—and then after a moment's silence tells her that he "feels moved to prayer," and getting down on his knees buries his head in her gown, and extemporizes a prayer in Mr. Field's best style, to which Grace responds at short intervals with the "Agnus Dei," we confess to emotions which are not sympathetic. Mr. Field may possibly be capable of writing "dear little books"—an "American Metaphysician" whose opinion of him is printed with that of others on the fly-leaves of his present novel says so—but this is not a dear little book.

Man in the Past, Present, and Future. A Popular Account of the Results of Recent Scientific Research. From the German of Dr. L. Büchner, by W. S. Dallas, F.L.S. (Philadelphia: J. B. Lippincott & Co. 1872. 8vo, pp. 363.)—Dr. Büchner, owing to his zealous propaganda of materialism, has, we believe, become the bugaboo of many a pious German household. Having read nothing of his since the earlier editions of "Kraft und Stoff," which displayed, if we remember aright, a certain crudity and violence of anti-theologic fervor, we confess that the calm and sober, not to say dull, tone of this last treatise has rather disappointed us. There is one set of comic verses upon the Kantian *Ding an sich*, and Christianity gets an occasional passing sneer, but, on the whole, the book contains little but facts and reasonings, and is a good example of German doughtiness and intellectual conscientiousness in a rather unimaginative mind. The first part, "Our Origin," treats of the late discoveries in human archæology. The second, "What are we?" has for its object to fill up the chasm between us and the brutes, physically and mentally. They are good and readable compilations, showing abundant familiarity with the authorities. The third part, "Where are we Going?" is more original, and awakens more our curiosity. Poor theology stands to-day so inoffensive, that for a man purely and simply to hate her argues a certain hardness of heart or suggests intellectual anachronism—

"survival" from those earlier generations when she wore teeth and claws and carried fagots, and when Voltaire could with reason retort upon some one who complained that his polemic was too purely negative: "Quoi! je vous délivre d'une bête féroce, et vous me demandez par quoi je la remplace!" Now that it seems certain that an era of positivism or pure naturalism is before us, to endure no one can say how long, and to absorb no one can say how many of the most honest minds and generous hearts; and while so many of these are at this moment dropping their hands and submitting to it, though they find no cheer in it, when we see a writer who behaves as if it were a sort of gospel, it is natural to turn and enquire of him how he *feels* about it—what sort of an emotional synthesis the new conception of the world yields him, to take the place of the old notion of an absolute better or worse, and of that good purpose in things to believe in which may practically reconcile us to the evil by which it is being bought. Such a writer as Mr. John Morley has a very strong dose of what we may call positivistic emotion, and can kindle it in the reader. But Dr. Büchner, sharing the same general set of opinions, urges them with a more drily logical energy:

"'A perfectly purposeless co-operation of causes' has led to the birth of man. He has therefore no one to thank for his existence, and must seek its purpose only in himself and in his own welfare. . . . Existence is everywhere and in every condition or moment of its happening *its own object*. Man is here, simply *to be here!* . . . If we wish to find the true destiny of man, we must turn away from the general notion implied in the word 'destiny,' . . . and seek the purpose of his existence in himself and in his relations to his surroundings, just in the same way that existence *in general* also cannot be conceived with reference to any purpose lying outside of it, but is merely existence for its own sake, and therefore at every moment fulfils its destiny or purpose—if we choose to make use of the essentially unphilosophic notion of destiny or purpose at all."

The only Providence for man is thus man himself, and philanthropy becomes his ideal motive and pursuit. "His natural destiny can never be attained by him so long as he, like the animals, feels only as an individual being, and carries on his struggle for existence upon his own account alone, and guided by mere personal or egotistic motives. . . . The individual is all that he can be only in and with humanity at large, or by its means, and his endeavors after personal happiness are therefore most intimately connected with the striving of mankind in general after prosperity and progress." The feeling of dignity which this consciousness of his sole responsibility carries with it is the only sentimental resource of positivism as against theism; while its declaration that man's *sympathies* are concerned solely with what is human, and that the universe at large may be regarded as a strictly foreign and ever-hostile nature with which, *in itself*, he has no concern, may be considered to offer something of the cosy distinctness of the older faiths to those minds who find something dreary in the spaciousness of pantheistic modes of feeling.

Our author does not dwell much on these sentimental generalities, but proceeds to their practical application. Of course, where there seems a conflict of things desirable, his philosophy decides in favor of the more obvious material and immediate good. And herein we see its danger. Historical students who reflect on the subtle and roundabout ways by which the things we most prize have been developed for our use, mistrust schemes for renovating society which are too simply rational. Clear-sightedness may be short-sightedness. And any theory which, like positivism, makes the mere mitigation of all suffering as such its paramount end, runs the risk of missing those noblest outgrowths of the mind which, as they have been conditioned upon suffering in the past, may be expected in the future to retain the same incomprehensible relations with it. This objection would of course only apply to Dr. Büchner's practical faith if it were a reigning doctrine. As an *influence* in the body social, we believe it to have the highest value. His final preferences evidently are towards communism. Meanwhile, his watchword is the equalization of every one's chances at the outset of life; and its corollaries are republicanism, abolition of land tenure, abridgment of right to bequeathe, state education instead of family education, adoption by society of all incapables, legal restriction of hours of labor, abolition of artificial hindrances to female activity, encouragement of marriage, freedom of divorce, and extinction of supernatural religion. These topics are discussed in a sober enough style, but much too superficially to render the work of any value except perhaps that of exciting some one's interest in them. While the rather ponderous Teutonism of the style considerably diminishes the chances of this, as far as English readers are concerned, the translator's task has not been very delicately performed; and a certain uncouthness in the whole work forbids us to predict for it that wide effect among half-educated but hard-headed proletarians which a finer and abler treatment would surely have procured for it.

The Chandler Elements of Drawing. Introductory to Drawing, Art, and Taste. By John S. Woodman, Dartmouth College, Chand. Sci. Dept. (Boston: Ginn Bros.)—We turn over with gloomy fears the pages of this little drawing-book, notwithstanding the alleviating fact that its author is no more, and therefore powerless as an operative leader. It is because his labors were in their time "faithful and most successful," and are "highly appreciated by many classes of pupils," that we apprehend mischief. We admit the advantage of system in every kind of teaching, and are ready to own that even Raphael's disciples and Rubens's disciples would have done more if they had labored under military drill. But it is refining upon refinement, as we think, to adjust whole classes to the swing of the pendulum or the sound of music, set them to drawing imperceptible lines with imaginary pencils in concert, and in these exercises accustom them to use the left hand as well as the right. Such is the beginning of Professor Woodman's method; but a real implement is soon put into the disciple's hand, the one specially favored being a wooden rod, sharpened like a lead pencil, and dipped into ink; with this, or some other tool of a nobly primitive kind, the class may, in due time, make out the figures of vases and other objects by arranging little dots and crosses in those shapes, on the principle on which the celestial birds and roses are built up of angels in the vision of the *Commedia*. This rather Dantean revel may be celebrated as it proceeds with a chorus or pæan sung by the master and his pupils. "The teacher asks the question, '*What are you trying to learn?*' repeating it aloud every ten measures in an abbreviated form—'Trying to learn?' The class respond distinctly and aloud in concert." While still concerned in these elemental gymnastics, the children are trained in their poetical powers. They spend "two or three minutes" every day in drawing outlines of some "ennobling ideal," such as "the lily, the vase, George Washington, the Christian maiden or matron" (she is pressing her hands to her cheek, and in the copy, owing to the limitations of the engraver's art, suggests nothing more ennobling than toothache). These three-minute flights into the realm of fancy may be carried out with pencil, chalk, or more romantically "in the sand," and their practice is "equivalent, in art or taste, to the daily repetition of the words of some noble maxim." To think of this system as in active operation under the roofs of schools and colleges is to contemplate a pitiful era of futile slavery. It is only fair to judge the trainer by his fruits. We shall look with hopefulness upon the Woodman method when we begin to see throngs of flashing-eyed youths moving forth from Dartmouth to execute pictures with both hands simultaneously, and witch the world with the practice of art and music together. We cherish our doubt, because in our experience of schools we have never known fruitful results obtained in any such way. Practitioners who reach success are evidently those who use incessant application, but who enslave themselves to ideas, not to gymnastics. Order and system, it is true, ought to be enforced in schools, and in classes of idlers who prosecute art as an accomplishment; but the teacher should not forget, in his pedagogic yearning for class-manœuvre, that the notable art-schools are simply battle-grounds, where order wins the day, and the weak and lazy go under. Elaborate forcing systems cannot prevent the ultimate survival of the fittest, and it is a wrong direction taken when we try to impel the incompetent by entangling them in a monstrous machine. Even in industrial art, which is the great need of an infant manufacturing country like ours, and towards which Professor Woodman's method seems to point, we think success will be gained when the scholar is allowed to choose freely among splendid, attractive, and ample sets of models. The stimulus of a pupil's taste, and the development of his idiosyncrasy, must be allied with his studious application and his bondage to fundamental principles. To reach this awakening point, it will help him but little that he has been trying to make himself ambidextrous. It is only a miserable sight to watch professors beating their brains and coming out with violently original methods, then to see pupils chaining themselves to these wild inventions, and drawing pictures in dumb-show to piano-music amid the ecstasy of visiting committees.

GINN BROTHERS,

BOSTON AND CHICAGO.

LATIN.

ALLEN & GREENOUGH'S LATIN GRAMMAR. Founded on Comparative Grammar. By J. H. Allen, Cambridge, and J. B. Greenough, Instructor in Latin in Harvard College, and Lecturer on Comparative Philology in the University Course. Pp. 268. $1 56.

"A complete Latin Grammar, to be used from the beginning of the study of Latin till the end of the college course." The forms of the language and the constructions of syntax are fully illustrated by classical examples, and by comparison with parallel forms of kindred languages.

N. B.—As the numbering of sections is the same as in Allen's "Manual," text-books referring to the Manual, including Hanson's Prose Course, Chase and Stuart's Series, and Searing's Virgil, can be used in connection with it without inconvenience.

LEIGHTON'S LATIN LESSONS. Prepared to accompany Allen & Greenough's Latin Grammar. By R. F. Leighton, Melrose High School. $1 25.

Allen's Latin Lessons, Lexicon, Primer, Composition, Grammar. Each $1 25.
Allen's Latin Reader. $2 50.
Allen's Latin Selections. $1 56.
Madvig's Latin Grammar. $3.
White's Junior Student's Complete Latin-English Lexicon. Morocco back, $3; sheep, $3 50.
White's College Latin-English Lexicon (intermediate size). Morocco back, $7; sheep, $7 50.
White and Riddle's Large Latin-English Lexicon. Sheep, 2 vols., $19.

ENGLISH.

Craik's English of Shakespeare. Cloth, $1 75.
Hudson's Family Shakespeare. 4 vols. cloth, $9.
Hudson's Life, Art, and Character of Shakespeare. $5.
Hudson's School Shakespeare. $2 50.
Hudson's School Shakespeare, 2d Series. $2 50.
The Merchant of Venice, Julius Cæsar, Hamlet, The Tempest, Macbeth. In paper covers, each 40 cents.
The Living Word; or, Bible Truths and Lessons. $1 25.
Our World, No. 1; or, First Lessons in Geography. 94 cents.
Our World, No. 2; or, Second Series of Lessons in Geography. $2.
Peirce's Tables of Logarithms. 75 cents.
The Atlantic Primary Arithmetic. 50 cents.
Primary or First Music Reader. 30 cents.
Intermediate Music Reader. 62 cents.
Fourth Music Reader. In press.
Second Music Reader. 38 cents.
Third Music Reader. 38 cents.
The National Music Charts. Four Series, each Series $10.
The National Music Teacher. 60 cents.
Woodman's System of Drawing. $1.

HON. MURRAY HOFFMAN'S ECCLESIASTICAL Law Books.

THE RITUAL LAW OF THE CHURCH. With its Application to the Communion and Baptismal Service, to which is added Notes upon Orders and the Articles. By the Hon. Murray Hoffman, author of "Law of the Church." 8vo, cloth, $4; law sheep, $4 50.

"If the American Church has another man equally fitted to do precisely this work, he has not yet come to the Church's notice."—Churchman.

"We may thank the venerable author for his care and labor in collecting much curious learning, which, scattered through many books, has hitherto been hardly accessible to ordinary readers."—Church and World.

"We are proud to see an American law book on Ritual of the respectable character and authority which we have no doubt will be accorded to this work"—Church Journal.

ECCLESIASTICAL LAW. By the Hon. Murray Hoffman. 8vo, cloth, $2 50; sheep, $3.

"Such a book from such a source will be most acceptable to the Church at large. And as the work contains expositions of ecclesiastical law as applicable to all the different bodies of Christians, its usefulness will be confined to no one body."

This work contains information which not only every clergyman but every layman who attempts to take part in the management of a parish should be acquainted with. It contains also historical notices of all the churches and religious societies that existed in our Province before the Revolution.

Post free on receipt of price.

TO TEACHERS.

Cambridge, Mass., September, 1872.

It is proposed to publish, early in December, a volume of about 300 pages 8vo, which shall contain a large amount of information concerning the colleges and prominent higher schools of the country.

It is designed to present lists of the officers of all such institutions, and as clear an idea as is possible of the general policy pursued, of the courses of study, of the expenses, and of special advantages offered by each to the student.

It is felt by many teachers that such a book will be of particular value to parents in their search for trustworthy and condensed information with regard to schools and colleges.

Your aid to the work of the editors is earnestly solicited. Catalogues will be gratefully received; and special written information will be felt to be of the highest value. pecimens of recent examination papers for admission to colleges are also very desirable.

PUBLISHER OF THE "NATION."

The Nation.

NEW YORK, THURSDAY, OCTOBER 10, 1872.

The Week.

As we go to press we have but imperfect returns of the elections in Pennsylvania, Ohio, Indiana, and Nebraska, but enough is known to warrant us in saying that in each of them the Republicans have beaten the coalition candidates, carried the State ticket, and held their own, if not more than held their own, in the election of Congressmen. Nebraska was loudly promised for the Liberal Republican nominees by Senator Tipton, who after a queer fashion has been a leader, a sort of Baratarian governor, in the Liberal ranks; but Greeleyism seems to have no appreciable hold in that region, though Nebraska is in "the West" where Mr. Greeley was to be so strong. Indiana appears to have been handsomely carried, and was probably harder fought than even Pennsylvania itself, the people being more mobile, and this year having been very warmly interested in the contest, their two principal leaders, Morton and Hendricks, regarding it as almost a fight for life. The struggle began as long ago as last February, and neither side left a stone unturned. In Ohio there appears to have been inefficient management and some German defection, but the State is secure in November for an old-fashioned majority against the combination candidates. Pennsylvania has, we suppose, never been really doubtful, though it may well have looked so to outsiders and to some Pennsylvanians. As the result goes, we have one more proof of a fact which this campaign has abundantly proved by many instances, that no matter how great a war governor you may be, or how high-toned a senator, or how powerful an organ, it is mainly as the governor and senator and organ of your party, and not of yourself, that you are really influential. Mr. Curtin, for example, and Mr. Forney, are notable exemplifications of this truth, and in a month every State in the Union will be full of similar illustrations.

These October elections are, beyond doubt, ruinous to the Greeley movement. There is a present probability that Greeley and Brown will get no more electoral votes than were given four years ago to Seymour and Blair. Various reasons will be found for this; we see that already they begin to appear in the Liberal and Democratic journals. One or two reasons there are which we do not see given, but which it will be well to bear in mind for use in future political contests and discussions, and one of these is that the American people are not fond of fraudulent abandonment of political principle, and that Mr. Blair's and Mr. Fenton's and Mr. Hoffman's and Mr. Greeley's transaction at Cincinnati and Baltimore was an impudent attempt to cheat the public, and an invitation to all the rest of us to confess ourselves either fools or rogues; another is that the public does not think Mr. Greeley a trustworthy person when the trust is such as the Presidential office; another is that the people are determined that the South shall not come back to its old, fifty-year-long ascendancy till it gives proof of fitness; another, and not a small one, is that it is determined that the abuse, some of it filthy, some of it cowardly, some of it false, all of it stupidly wholesale, which has been heaped on our public men, and especially upon General Grant, shall not have its sanction. We think the country is to be heartily congratulated on the thorough destruction of the hopes of as greedy and false pretenders to the name of reformers and reconcilers as ever undertook to wear those names. We think too the country is heartily to be congratulated on the fact that the Republican party has had something of a scare, and has been warned by the closeness of the contest that the people will expect somewhat better behavior from it in future, or else it has already achieved one of its very last victories.

A new device has been employed this year for making known the election returns as fast as received, and it will undoubtedly find much favor, and supersede, to a great extent, the old way of announcement by bulletin-boards at the newspaper offices and by the reading of telegrams to an audience in a hall. The new plan was tried last night in Madison Square before a large crowd collected in front of the Fifth Avenue Hotel and along the northerly pavement of Twenty-third Street. Upon a curtain was thrown, by means of a magnifying lens and a strong light, an illuminated disk about twelve feet in diameter, upon which appeared in black letters plainly legible the words of the telegraphic despatches as fast as they were received. They were received pretty fast too; but when the crowd had to wait more than two or three minutes, illuminated adjurations were addressed to it: "Patience! We give you the returns the second they are received," was one of these. Another was, "Patience! Ohio always is late." Another resource of the spectators was reading the advertisements and looking at the pictures which alternated with the despatches. Thus, after the announcement, received with great applause, that Pennsylvania had gone for Hartranft by a majority of more than 20,000; or that Ohio had given 13,000 majority; or that there was a Republican gain in Berks, the figure would be shown of a youthful colored person whose countenance wore a knowing smile, to which the crowd never failed to respond by laughing and applause. Or perhaps it would be a grotesque picture of Le Roi Carotte, which would provoke cheers and advice to him to "go West." The advertisers also availed themselves of this opportunity, and among the announcements that "Our friends in Philadelphia have stopped counting majorities," and that "Miles and miles of streets in Philadelphia are filled with people," and that "Parsons is elected," and that "Julian's own township gives a Republican majority," and that "The Republicans claim Indiana by ten thousand majority," there were invitations to the public to buy Messrs. Devlin & Company's ready-made clothes; to remember Mr. James Anthony Froude, who comes lecturing; to take a trip to Niagara with a return-ticket cheap; and to buy shirts of a pattern patented by a citizen of this city. It was curious, by the way, to observe the applause given to a not very American-looking eagle, who, however, had the flag in charge; and also the respectful applause given at each of its appearances to a portrait of Washington, certainly not by Stuart. Clearly, the political managers will be compelled to continue the illuminated returns.

For a man who can write very plain language, Mr. O'Conor receives an extraordinary number of letters enquiring what it was exactly that he meant to say in other letters of his. His latest correspondent is Judge James Lyons of Richmond, Virginia, the President of the Louisville Convention, and a Democrat of the truest stamp, who finds himself unable to believe that Mr. O'Conor could have called Mr. Greeley a man "of transcendent ability," and also unable to tell whether Mr. O'Conor would serve as President if elected. Mr. O'Conor, replying, says in substance that for a candidate to say that he will be a candidate, or to say that if elected he will consent to serve, is "one mode of soliciting votes," and that if his countrymen wait until he so solicits them to vote for him, "they will never vote" for him. As to the remark concerning Mr. Greeley which Mr. Lyons thought a misprint, Mr. O'Conor, making free with the functions of history we should say, rather sharply replies that if the Southern people do not know that to Mr. Greeley's unequalled energy and transcendent ability they owe the desolation of which they complain, they must be slow of comprehension. "The long and disastrous war," he says, "that filled his 'bloody chasm' with fratricidal slaughter, and involved the whole country in debt and demoralization, is due to the unequalled energy combined with the folly of this one exceedingly able, exceedingly amiable, and exceedingly mischievous man." So hard it is for even able Democ to see in the war between the South and the North

anything more than the bad judgment and excessive zeal of Democrats too Democratic and agitators not Democratic enough. As for the real ability of a man who can be described as Mr. O'Conor describes Mr. Greeley, our readers are free to form their own opinion, despite the deference due Mr. O'Conor. He goes on to say that the possibility of Mr. Greeley's election he regards "with inexpressible aversion." We beg Colonel Charles Spencer, Colonel Ethan Allen, General Frank Blair, Governor John T. Hoffman, Senator Reuben E. Fenton, General N. P. Banks, and other sincere souls, who put no trust in political fraud and pretence, to give their attention to the closing words of Mr. O'Conor—the words of a man of honor and courage: "If the ideas of heathen times prevailed, I would cheerfully surrender my person as a sacrifice on the altar of that deity whose controlling will might thus be propitiated and induced to save my country from the impending evil." There is a fervor about this which will seem ridiculous to some of the gentlemen above mentioned; still, as such heats cause a man to be respected and admired in his age, and also come as near carrying the October and November elections as trickery and cheating do, there is something to be said for them nevertheless.

So much has been said for so many years about the intimidation of negro voters in Southern elections that what is charged by the Georgia Republicans in reference to last week's election will not get much of anybody's attention. But it is just as well to recollect that the Republican voter in the State of Georgia, be he black or white, is pretty certain nine times in ten to undergo much that is disagreeable on election day, and may or may not be able to get to the polls and cast his vote; indeed, may or may not be killed in attempting to cast it. It is a wearisome tale, told till everybody is sick of hearing it; but wearisome or not, it is nevertheless true that Southern white men do sincerely hate the sight of a negro voting, and that a certain proportion of the whites of any given Southern community very willingly whip or shoot the colored voter, and swell Democratic majorities. There seems no reason to doubt that more or less intimidation was practised in Georgia. "Slight rioting at Macon," the *Tribune* says; and "begun by the negroes," other Democratic papers say. As of the fifty shots that were fired a majority of those that were effective were lodged in the bodies of negroes, it will be seen that there can be no doubt of the negro's having, after his usual Associated Press fashion, fallen violently on an unarmed and law-abiding body of peaceable white citizens. On the other hand, we see among the names of Republican leaders who certify that there was systematic intimidation of the colored voters all over the State, some names of persons whom we would very greatly hesitate to believe, sworn or unsworn; and one colored orator, who has been loud in this canvass, was never better placed than when he was in a New York penitentiary for rape. All this, however, as we suppose and fully believe, need not lead anybody to think that the colored Republican saw anything like fair play in Georgia last week. The law of itself threw as many difficulties in his way as it could, just as it most certainly did in North Carolina after the Democrats got hold of that State; and lawlessness threw a great many more.

In South Carolina, the canvass is tolerably active, and the result not plainly indicated. The white population, who have cried carpet-bagger so bitterly, if not piteously, do not give sufficient indication that they are willing to work out their salvation by the help of Republican bolters. At all events, their newspaper press misrepresents and betrays them if they are intending to attempt the defeat of Moses. They have this much of excuse, and undeniably it is a good deal in the way of excuse, that among the bolters is Bowen, a native Southerner, and—like many another Southern office-holder since the war—as big a rascal as any so-called carpet-bagger; Whittemore, the Massachusetts chaplain and cadet-broker; Whipper, a native colored man and notorious in evil, and others like them. Further excuse they have, too, in the fact that in the days of military rule, and of reconstruction in the early days of Scott, Mr. Tomlinson, the Bolters' candidate for Governor, was a part of the State government. That he was indeed a part of a semi-military government is certain; but, then, we did have a war; and it had certain consequences which may be too soon forgotten indeed, but which also may be too long remembered. Mr. Tomlinson's connection with the Scott people was long before Scott and Parker and the rest had matured and come to full blossom; and he, like them, had he been like-minded with them, might be rich and in office, instead of seeking office in the interest of honest administration. Some of the things which can be related of the recent rulers of South Carolina are so nearly incredible as to make it all but incredible that American men could be found who would not use any means open to them to rid their State of such a gang. As we have said, however, there is some excuse for South Carolinians who distrust the proffered relief, and whose failure to work against Moses will mean something different from mere hatred of Yankees, though of this latter there is too much. One would have supposed that the dividing of the negro vote would alone seem a political good of such magnitude as to ensure the political activity of the whites; but perhaps the temptation to sullen and despairing indifference has too long been enormous.

While public attention in general has been concentrated on the State elections, the attention of our New York politicians, who care as much for national politics as Fenton does, or as they care for the conversion of the Parsees, has been concentrated on the nominations for the various city offices, legislative, judicial, and executive. These, we suppose, were never before so far from being within the control of any one man or set of men as they are this year. It would be a wise man who should undertake to say what will be the result of the action of Tammany Hall, Apollo Hall, the Committee of Seventy, the Bar Association, the Custom-house Republicans, the Liberal Republicans, the German Reform Association, and the various other committees and organizations which, since the fall of Tweed and his one-man power, have struggled for the government of the city. Tammany appears to be to some extent divided in its own counsels, being unused to freedom of late years, and some of the members of the general committee charge certain others with showing too much of Tweed's disposition to make a "slate" and arbitrarily insist on its adoption. This difference is most manifest in the disposal of the judicial offices. But the principal concern of the world outside the politicians is the case of Mr. Jimmy O'Brien, who wishes to be mayor. Even it is not improbable that we may as reformers be helping him next month to the gratification of his ambition, as he a year ago was helping us to reform the city. We believe it is well understood that in making his canvass for a senatorship last autumn he had the assistance of money from the very men whom he was professing to attack. However, though this may be a mere picturesque and interesting aspect of his case, there is no aspect of it which ought not to make the idea of the Republican managers' being allowed to give him any aid an utter impossibility. He is in no essential respect different from Connolly, who is said to have helped to pay his election expenses, or Tweed, or Hall. It would be infinitely better that Mr. Kernan should beat General Dix in the State than that the spectacle should be presented of Mr. James O'Brien's being made mayor by reform votes, or by reform support of a third candidate against so respectable a man as Mr. A. R. Lawrence, for example, who is talked of for the place, as well as for the Supreme Court judgeship. For the latter office there are, however, a greater number of available candidates than for the former, and we should be glad to hear that Mr. Lawrence was to concentrate all the elements of opposition to "the poor man's friend."

The stringency in Wall Street, which lasted with little or no intermission up to Saturday, is at this writing slowly relaxing. But the "operators" have been at their old tricks through the week, some "locking up" greenbacks, and others holding back certified checks, so as to compel the banks to lock greenbacks up. During

the last few days these checks have begun to appear; the condition of the banks has improved, and the return of the money tide from the West has begun to make itself felt, showing that the worst is over. But the severity of the strain may be estimated from the fact that the bank deposits in this city fell off $52,000,000 in eleven weeks. Moreover, the Treasury has again interfered in the character of the American Jupiter, and, having bought $2,000,000 on Wednesday week, is this week keeping up the good work. On Monday morning Wall Street was thrown into confusion by the announcement that the Treasury would this week buy five millions in bonds, and there were of course the usual charges that the knowledge of this was communicated to the Secretary's friends last week. These charges, of course, must be expected to circulate and find credence as long as the present discreditable system of finance is maintained. Anything worse, both for the morals and business of the community, than a system which enables one man to come suddenly into a great commercial capital and run money down one-eighth or one-half per cent., and send stocks up five or ten per cent., by his mere fiat, could hardly be imagined. It is a system worthy only of Ispahan or Constantinople. The present scandal is aggravated by the rumor that the Secretary means to exercise discretionary power, which he supposes himself to possess, to issue $44,000,000 new greenbacks, but which many very intelligent men deny he possesses, and which most people are agreed he ought not to possess or exercise. We want specie payments, and if we had them the money market would take care of itself. If the banks had to redeem their paper in gold they might be left to issue, and would issue, as much of it as the country required, and Mr. Boutwell would be relegated to his proper business of collecting the revenue and applying it to the purposes designated by law.

The second trial of the notorious Mrs. Laura D. Fair for the murder of A. P. Crittenden ended on the last day of last month in a verdict of acquittal. The theory of temporary insanity put forward with all art by her counsel, and confirmed by a show of expert medical testimony, was accepted by the jury, which had been selected from a panel of upwards of seven hundred persons, by the well-known process of sifting out those possessed of intelligence. Perhaps the only novelty in the now familiar plea by which this extraordinary acquittal was brought about was the attempt to connect Mrs. Fair's insanity with a trouble peculiar to her sex—the same which Mme. Goëzman offered as an excuse for revoking part of her testimony in her suit with Beaumarchais, and of the convenience of which, in all suits to which women are parties, there can be no doubt. To this we may ascribe some of the interest manifested by the ladies in the court-room, who, when the verdict had been announced, and "two thin, white, chalk-like wrists were clasped around Mr. Curtis's neck, and a wealth of golden hair lay streaming on his breast, and the little black figure lay in the arms of the strong man as senseless as a corpse," rushed up and tendered their assistance. The public, nevertheless, particularly the California public, persists in being shocked at the result, and talks for the hundredth time of the necessity of amending or abolishing trial by jury altogether. The rules which now govern it are certainly not adapted to the condition of society in which we live, and, if the institution is worth saving, the sooner they are overhauled the better. It may not be long before we shall come to the conclusion reached by some of the Italians, in view of the impossibility in the Romagna and in other parts of Southern Italy of obtaining conviction by jury for crimes of violence, that the jury-trial should be restricted to the class of offences known as political. A few more cases like Macfarland's and Mrs. Fair's will help give a practical shape to the present discontent with "the palladium of British liberty." A flatter and more monstrous perversion of justice than this instance the country has never seen, and the twelve men who allowed themselves to set free this murdering prostitute—and indeed she is far worse than a professional prostitute—ought to feel the effects of public opinion.

Yesterday was the anniversary of the Chicago fire, which, to borrow the summary of one of the papers of that city, travelling with an average velocity of 65 acres per hour, devastated 1,688 acres, mostly solidly built up; and consuming property at the rate of $125,000 per minute, swallowed up the worth of $200,000,000. Everybody whom business or pleasure has lately called to Chicago has been struck with the enormous progress made towards a complete restoration, and the scale on which the buildings have been renewed. To imagine it, we must recall the fact that the burnt area was equal to half the size of New York City, from the Battery to the Central Park; and then picture it already covered by more than a thousand buildings, among which those of the first-class alone are valued at $40,000,000, and they are so numerous that the average appearance of the streets falls little if at all short of that of the best parts of Broadway. In place of the wooden sidewalks of old, the sidewalks in front of the completed business blocks are laid with a broad flagging, and in most other respects regard has been had in the reconstruction to protection against fire. The rapidity with which all this has taken place has, of course, not been favorable to the best workmanship beyond the requirements of the fire-laws and the vigilant supervision of the Board of Public Works. Neither of these controlled the architectural designs externally, and the amusing confusion of "orders" and schools in the new Chicago has not escaped comment. But this was simply inevitable, and it does not prevent the revival of the city from being, what we said a year ago it promised to be, more startling than its original growth.

The London *Economist*, commenting on the extraordinary fact that money is at this moment dear in Germany in spite of the enormous influx of capital from France, and that applications for loans from Germany have helped to send up the rate of discount at the Bank of England, explains that money in the hands of the Government is not in Germany necessarily available to meet the demands of commerce. The German Government does not keep a bank account, it hoards in its own treasury, and only lets the money out to the public very slowly and cautiously. Nevertheless, the supplies it has drawn from France have been so enormous that they have, in spite of all care and caution, affected not only the German money market but the German mind, and produced the usual result of monetary plethora—a fever of speculation. The advances and discounts of the Prussian banks were, on the 15th of August last, $157,045,000; a month later they increased by more than $30,000,000. The rate in the Bank of Prussia and the Bank of Frankfort being 5 per cent., the Bank of England could not, at their very doors, as the *Economist* points out, content itself with anything less.

The Jewish question has taken an almost amusing turn in Roumania. As we have several times explained in these columns, the Jews of that region, not over 200,000 in all, are almost the sole traders and bankers, and in short form the only approach to a middle class the country possesses. They are consequently nearly everybody's creditor, and the Roumanians delight in being debtors, so that to the traditional hatred of the Jew by the Christian is added the animosity of the average man towards people who lend him money and want it back when he cannot pay it. The result is the persecutions and outrages of which we have been hearing so much for the last two or three years. But now Mr. Poixotto has proposed the emigration of the Jews of Roumania to the United States, and the Roumanian Government has taken up the scheme with almost frantic delight; and has issued a circular giving the Jews full leave to go, and many private persons offer subscriptions in aid of the enterprise. There is not much chance that the Christians will be gratified by any such exodus, but if it took place it would have an effect on Roumania not unlike the emigration of the Huguenots from France or of the Moors from Spain; indeed worse, for they would leave behind them nothing but an ignorant peasantry and an idle and licentious aristocracy. Usury would probably come to an end, but so would industry.

THE CHORPENNING CLAIM.

IT becomes apparent that the chief iniquity of this business rests upon Congress. The two legislative bodies enacted a law which in substance said to the Postmaster-General: We require you immediately to adjust and settle this claim. The facts upon which it rests are supposed to be set forth in a mass of rubbish on the files of Congress, which we have never read, and of which we know nothing save what the petitioner tells us. Nevertheless, we limit your examination to this, and forbid you to base your award on any other evidence. We know that we are confining you to *ex-parte* affidavits procured by the petitioner at his convenience from a number of unknown and irresponsible witnesses who were never subjected to cross-examination; yet, such is our confidence in him that we require you to take his own statement of his own case, and, estimating from it alone, award to him all he asks. We do not limit you to any amount; you may make your award millions, if the *ex-parte* affidavits swear to so much. The petitioner may appear before you with counsel, but you will seek no legal advice on behalf of the Government. Some of the affidavits may appear to you false and others spurious, but we assume to be the judges of their verity, and send them to you simply that you, from their statements, may compute amounts and estimate damages. The files of your own department may contain documents which will wholly dispose of this claim or greatly reduce its amount, but that is of no consequence. So soon as your award is made, you will send it to the Treasury to be immediately paid out of any moneys not otherwise appropriated.

The Congressional apology that has been put forth for the law is substantially this: We are not knaves, but merely an assemblage of dupes, with the exception of our brother, the Honorable Mr. Cessna, who is a knave and not a fool. We are too much engaged in managing the Executive department of the Government to be able to read the laws that we enact, and are in the habit of daily not knowing what we do. There are thousands of honest claims preferred by injured citizens that we never act upon, which, through our inaction, never cost the Treasury a dollar. The system in Congress for many years has been such that no claim is certain of ever being reached, but that anything may be pushed through in the last days of the session. But we were incompetent to amend it, and were not elected for any such purpose. The last days of the session are days of great excitement, haste, and turmoil; and as they always have been such, we infer that they always should be. Besides, the attorney of the petitioner was formerly the assistant secretary of Mr. Creswell, and it is probable that he resigned on purpose to push this claim; and if that was the case, it is probable that Mr. Creswell knew all about it. The blame and the infamy and all that sort of thing clearly belong to him and not to us.

Taking this apology for all that it is worth, and conceding that the majority of the members who passed the act suspected no fraud, we insist that such a bill—unqualified, unlimited, referring in terms to the most suspicious of testimony, and risking the liability of the Government expressly upon it alone—was a bill that carried with it its own refutation, and to be defeated needed only to be read.

But apart from the objections to such an act which are stamped on the face of it, there was a warning in the history of this claim which every member of Congress was bound to see. It was not a new claim, and the adjustment which was ordered was not a first adjustment, as every member who voted for it well knew. In 1857, Mr. Chorpenning had carried through Congress his first statute for his own "relief," and, like this, in the last days of the session. Its object was threefold: first, it directed the settlement of his claims for "additional" mail services; that is, for services outside of a former mail-transportation contract; second, it also directed a settlement of his claims for damages caused by the "annulment or suspension" of his contract; third, it increased the compensation of the expired contract from $26,500 a year to $30,000. In a legal sense, the first and second provisions were measures looking towards the legislative administration of justice; the third was a mere gratuity.

In his method for administering this legislative justice, Mr. Chorpenning had hit on a remedy which served his purposes so well at the time, that after fourteen years of reflection he did not venture in his second attempt on any improvement. He first referred the matter to the Postmaster-General, which, as he was head of the department having charge of such transactions, was seemly, right, and proper. He next provided that the Postmaster-General "be required to adjust and settle the claim," which implied that the head of the postal department was to exercise usual discretion and vigilance, so as to do justice to the petitioner on the one hand and guard the Government from imposition on the other. Then came the controlling words of Mr. Chorpenning's law, carefully set forth at the end of the first section and cautiously repeated at the end of the second —"*as shown by the affidavits and proofs on file in the House of Representatives.*"

It is evident from the action of Postmaster-General Brown that he was not friendly to the claim; that he construed the statute as much as he could against the claimant; that he probably strained it against him more than he should have done; but it is due to Mr. Creswell to say that the former Postmaster-General found his hands tied by the first statute, precisely as the present Postmaster-General asserts he has found his tied by the last. In his official report for 1857, Postmaster-General Brown said: "The settlement of this claim has not been made without considerable embarrassment. The act of Congress was peremptory to adjust and settle, not according to the proofs that might be taken before the final action, but as shown by the proofs and affidavits on file in the House of Representatives. These were to be the sole guides in the settlement, and neither the records of the department nor any contradictory or explanatory testimony could be taken by the Government to assist in attaining what might be considered exact justice in the case."

The political moralist may here note that the Congress which pushed through in the last days of its last session Mr. Chorpenning's first bill, was the infamous Democratic Congress which expelled Matteson and two other members, and has a part of its history written in the *Congressional Globe* under the ominous title, "*Corruption of Members of Congress*"; while the Congress which pushed through the second bill, at precisely the same time, and in almost exactly the same manner, was the Forty-first (Republican) Congress, whose members prated so loudly of the virtues of their party, and of the grateful support which the people of the United States were in duty bound to give to it. The party responsible for the first bill was old, corrupted by long success, debased by successive surrenders to the slave-power, and doing its best to conduct the country to a shameful voluntary dissolution. The party responsible for the second bill was the reverse of all this—young, tried by reverses fresh in the memory of all its members, elevated by a struggle which had tasked the sternest virtues of a people, and successful in bringing the country from the brink of voluntary dissolution to the apparent certainty of new national life. There was every reason to expect from the Republican party in Congress a pure legislative administration of the affairs of the nation. But unfortunately the legislative system of the country had not been reformed with the changes that had taken place, and it was the old corrupt and corrupting system which has always enabled the bad to overcome the good, and the unscrupulous to ride down the conscientious. It is true that Matteson and his ring had been more outspoken and more general and effective in their operations. They openly avowed that they acted as the paid counsel of petitions, persuading with one breath as agents, and voting with the next as legislators. Whether Cessna was bought or bribed, or paid under the euphemism of "counsel," or rendered his aid through "motives of political friendship," does not much concern the country. It is enough to know that the responsible Republican party retained the old way of doing things, and allowed one of the old things to be done anew.

This method of getting money out of the Treasury, by a reference to some officer to "settle and adjust" a claim, did not begin with and has not been confined to the Chorpenning claims, though

theirs, we believe, is the only case where the petitioner has succeeded in making Congress tie the hands of the arbitrator, and legislatively compel him to decide the case in one way. The system of references is one of the most dangerous which claimants have devised; for it relieves Congress from the direct scrutiny of the public, and enables the legislative power to shift the direct responsibility of what it does to other shoulders. It is a specious as well as a false system. Nothing can sound fairer than the phrases in which some of its chief rascalities have been couched. To enact that the Postmaster-General, or the Secretary of War, or some other high officer of the Government, shall "settle and adjust the claim on principles of justice and equity," reads most commendably. Nothing to the common mind can seem fairer; but it is the precise language employed in a score of private acts passed for the solution of cases no better than the Chorpenning.

When such references are ordered, they are private and *ex-parte*. The claimant brings in his witnesses and proofs, and proofs and witnesses, until the unfortunate or friendly arbitrator cries enough. No counsel appears for the Government to cross-examine witnesses, sift testimony, and produce rebutting proofs. If the award does not suit the claimant, he insists on a revision, and brings in more proofs, or procures a certificate from his friends on the committee of Congress (as was done in the Chorpenning case), saying that the arbitrator has not construed the private act in the liberal way that Congress intended it should be. When the award is made, it is immediately carried to the Treasury, audited, and paid "out of moneys not otherwise appropriated." The first publication of the transaction is in the documents accompanying the annual report of the Secretary of the Treasury, and the item there that so much was paid on an award made under such a private act is practically the entire record of the case. In three cases—those of De Groot, Gordon, and Chorpenning—a subsequent Congress has repealed the private act before the money awarded has left the Treasury; but in no case, we believe, has Congress repealed one of its own private acts. The first of those cases, after a very large amount had been awarded by Secretary Floyd, was sent to the courts, where it dwindled down to nothing, and was abandoned by its owner (5 Wallace Reports, p. 419). The second illustrates, almost ludicrously, all that has been said against the system of *ex-parte* arbitration (7 Wallace Reports, p. 188).

In 1813, it seems, the United States troops destroyed some property of a man named Fisher, in Florida. Mr. Fisher applied to Congress for reimbursement, but, of course, nothing was done until he had long been dead and buried. Then, in 1848—thirty-five years after the injury—a private act was passed, directing the Second Auditor to examine and adjust his claims "on principles of equity and justice." The Auditor proceeded to do so, and, when receiving the proofs, rejected a number of affidavits because they were not properly authenticated. This rejection of unauthenticated, *ex-parte* affidavits turned out to be a mine of wealth to Mr. Fisher's legal representatives. In the award which was, however, made, the Auditor found that the property had been destroyed by both troops and Indians. As losses by the Indians were excluded by the terms of the act, the Auditor apportioned the damage equally, and allowed, as the value of half the property destroyed, $8,873. So soon as they had obtained this decision, Mr. Fisher's representatives took the money, and proceeded to retry the case. The Auditor next allowed $100 for an error in his previous award, and $8,997 94 for interest from the time the claim was first presented to Congress. The representatives promptly took this money, and then proceeded to try the case a third time. The Auditor carried his allowance of interest back to 1813, and awarded them $10,004 more. Thus, under adroit *ex-parte* manipulation, combined with "pressure" and "influence," the judgment of the arbitrator swelled from $8,873 to $27,974 94.

As this vein seemed to be exhausted, the representatives went back to Congress. A supplemental act was passed, directing the Auditor to re-examine the case, and allowing the claimants to present their rejected affidavits, if properly authenticated. Apparently this scheme did not work well, and nothing came of it; but, four years later, Secretary Floyd had come upon the stage, and been found a valuable actor in the character of arbitrator, and to him Congress confided the matter, kindly directing him to proceed *de novo* to execute the original and supplemental acts "according to their plain and obvious meaning," which seems to be a legislative-judicial rap on the knuckles of the too scrupulous Auditor. Secretary Floyd proved to be the right man in the right place, and he soon found that all of the property had been destroyed by the troops, and none by the Indians, and he awarded the claimants $39,217 50 more.

The claimants of course took this money, and immediately went back to Congress for another private act. Congress having come to know and like them did what they requested, and slipped into the act a little judicial decision somewhat like Mr. Chorpenning's remedy, viz., that the Secretary should give effect "to all the testimony filed, including the depositions formerly rejected." Secretary Floyd did so, and lo! his conclusion was that the representatives of Mr. Fisher ought "in equity and justice" to recover $66,519 85 more! Thus the original recovery of $8,873 grew to $133,712 29, and the people of the United States never heard a word about it, save that it was all "in equity and justice."

The reformation of Congress is a reform that must sooner or later engage public attention. If the unconstitutional assumption of judicial and executive powers resulted in a public good, people might be long willing to let the matter rest. But the fact is that the modern Congressman is doing everything but legislate, and the work of national legislation is stamped by ignorance, idleness, and inattention. Nothing can be more absurd than the present fact, that when two districts elect Congressmen they do not elect two legislators, but a superintendent of a printing establishment and a chief gardener to overlook the Government green-houses.

To those candidates for Congress who, during the present canvass, are overflowing with the future welfare of their country, we would suggest that they will do well to answer in their speeches, distinctly and unequivocally, some such questions as these: Will you give your attention exclusively to the work of legislation, leaving to the judicial and executive departments the duties and responsibilities assigned to them by the Constitution? Will you really strive to stop the Congressional abuse known as the "franking privilege," not by a dishonest and dishonorable bill such as heretofore has been rushed through the House for the purpose of being defeated in the Senate, but by such a measure as the Postmaster-General has prepared and recommended? Will you endeavor to introduce into our system of legislation those improvements which may be found in the modern legislative systems of other countries, so that every petitioner having wrongs which should be redressed by the direct action of Congress shall be secured, in his turn, a hearing, and the necessary legislative action, and so that improper acts cannot be hurried through both Houses without publicity and deliberation, nor all sorts of laws be manufactured in the guise of provisions to appropriation bills, nor private acts affecting the Treasury be passed in the last days of the session?

LINE AND COLUMN.

THE European papers—or, at least, the English and German papers—are full, at this season of the year, of accounts of what are called "The Autumn Manœuvres," or, in other words, of the movements of armies engaged in mimic war, for the purpose of exercising the officers in strategy and tactics and the men in marching and encamping and doing outpost duty. The practice was begun by the Prussians some years ago, but has, within the last three, come into general use all over Europe. Before they introduced it, "manœuvres" were little else than formal and meaningless marches to and fro over a small area on a bare plain. "Sham fights," too, when resorted to, were mere theatrical engagements, intended to amuse the spectators. About six years ago it was discovered that

the Prussians had changed all this, and were engaged every year in a game which only needed killing and wounding to make it real war. That is to say, every fall their armies poured out into the country—and the more difficult the country, the better—and, under the command of two opposing generals, contended, under the rules of strategy and in the presence of umpires, for the possession of towns, rivers, and fortresses. The result was shown in the campaigns of 1866 and 1870. It then appeared that no experience of real warfare, except the facing of death, was new to the Prussian officer or soldier. He had all the tricks and devices of his trade at his finger-ends. Reconnoitring, patrolling, watching, marching, encamping, skirmishing, assaulting—all was familiar to him. In fact, "levying contributions" was the only duty of active war he had to learn, and this soon came very easy. There was hardly an incident of the campaign in France which seemed to take the Prussian army unprepared; and we all remember with what surprise, admiration, and apprehension Europe watched the all but faultless working of that tremendous instrument of force. Since then, every nation in Europe has been engaged diligently in copying the methods by which those marvellous results were attained. The parade-grounds in Italy, England, and Russia are abandoned every fall for the open country, and villages are assaulted and carried, fords and bridges seized, woods "searched," and positions "turned," and lines of communication cut, with all the fatigue and painstaking and almost all the hardship of real hostilities.

But of all this there have come certain changes in the art of war which are not unlikely to exercise, as all such changes have hitherto done, an important influence not only on the constitution of armies but on the politics of the civilized world. It was Prussia, through the great Frederic, which discovered and put into practice the principle which the genius of the great Napoleon afterwards turned to such wonderful account—that in war everything should be sacrificed to being strongest at the point of attack. It was Prussia, too, which introduced that apparently trifling but important improvement in firearms—the iron ramrod, which contributed so much to the rapidity and destructiveness of infantry fire. It was Prussia, too, which first brought to perfection the art of moving men in solid masses by means of minute and painstaking drill, thus enormously increasing the control of the officer over the rank and file, and diminishing the risk of confusion under fire or in retreat. She too, among European powers, first put the breech-loader into the hands of the infantry soldier, in spite of the general belief of the military critics of other countries that it would prove too complicated for practical use, and was amply repaid for her confidence on the field of Sadowa. In the late campaign in France she made one other discovery, which she probably would have made in 1866 had the war lasted longer, and which she is now turning to practical account in the training of her forces—we mean the discovery that the introduction of breech-loaders has made henceforward impossible the use of those close formations, whether in line or column, in which it has been the custom of armies to attack each other ever since armies were first organized.

All the Continental nations have adhered till now to the custom of attacking in column—that is, of forming the attacking body with a narrow front and long files, and attempting to crush the enemy at the point of contact by mere momentum; while in the English service, and in our own, the line two or three deep has been adhered to as giving freer play to the fire of musketry, and affording less mark to the enemy. Continental officers have never denied the superiority of the line to the column either for attack or defence, but they have said, and said truly, that in order to use it your men must possess either greater intelligence or greater steadiness and self-reliance than are usually to be found among Continental troops. It was useless, they said, to try to convert the Russian or German peasant into a soldier who, with only one man behind him and one on each side of him, would either wait resolutely the approach of a dense oblong mass ten men broad and two hundred men deep, or move boldly towards it, in the full confidence of dissipating it with the converging fire of the line. It was useless, too, the French officers said, to ask the French soldier, with his liability to panic, and to great demoralization after a reverse, to stand so nearly alone, in moments of trial, as he would have to stand if the column were abandoned. General Trochu, in his late work on the French army, reproduces one of Marshal Bugeaud's interesting reminiscences of the Peninsular war, in which he describes the almost uniform failure of the French column when directed against the British line; but it appears from his story as if no other formation would have suited the French character. He recalls with emphasis the flutter and excitement which ran through the French ranks as they moved against the long, thin "red wall"; the apprehension excited by the English silence and refusal to fire till the column was very close, and the demoralizing effects of the fire when it came, and the dissolution of discipline produced by the English advance with the bayonet, which always followed two or three withering volleys. In the United States, also, the national temperament and the character of the social organization have made the line the favorite formation.

But both line and column are now to be numbered amongst the things that were. The "column of attack," indeed, which has played so famous a part in modern military history, may be said to belong to the past as completely as the Macedonian phalanx or the wooden line-of-battle ships. We shall never again witness great spectacular feats like the advance of the English column at Fontenoy, or Macdonald's charge across the plain at Wagram. When the Prussian Guard in column attacked the French line at Mars-la-Tour, in August, 1870, and lost six thousand men in ten minutes, the days of close formation came to an end. It is now acknowledged on all hands that it will not do to send men into action in any formation in which they touch elbows or present a continuous front to the enemy's fire. In other words, a total revolution is taking place in tactics, which will inevitably greatly diminish the officer's control over the soldier during the progress of the engagement, and render necessary on the part of the latter an amount of intelligence, self-respect, and fidelity which the soldiers of no nation have, as a class, as yet displayed. The Prussians are now practising a system which opens an engagement by a heavy fire of artillery, and then attacks neither in line nor column, but with great clouds of skirmishers, to whom it is only possible to indicate their objective point, and who reach it as best they can—advancing across the country by twos, or threes, or singly, carefully avoiding any kind of formation, taking advantage of every hollow in the ground, tree, fence, house, or wall to conceal themselves, running here at the top of their speed, there crawling on their bellies, and only firing when they can take steady aim. We believe a column, it is true, comes after them, but only as a sort of reserve to feed the skirmishing horde with fresh men, and hold its conquests.

It can be readily seen that under this system the superintendence of the officer must at best be slight. He can never have the men "well in hand," to use a military phrase; he must trust during the greater part of the day to their own sense of honor, to their courage, and to the opinion of their comrades to prevent skulking; and it is only at the last moment, when the final rush has to be made, that he can, in the strict sense of the term, put himself at their head. In short, the tactics which carried Frederic through the Seven Years' War, and Wellington through the Peninsula and Waterloo, are vanishing from the camp, and in lieu of them comes, of all things in the world, the old Indian bushwhacking under which Braddock's files went down over a century ago at the fords of the Monongahela.

What is most interesting in all this to civilians is, that it furnishes a striking illustration of the steadiness with which mind in all fields of human activity retains its supremacy over either brute force or animal excitement, and of the certainty with which we may count on the over-cultivation of the art of destruction producing its own antidote. When new and more effective instruments of destruction are invented, we find that the whole population has to be raised in the mental and social scale in order to provide soldiers com-

petent to use them; and more than this, we find that after the soldier has been trained to the utmost point, he is of little use to you unless you have kindled in him a great deal of intelligence and self-respect. The degraded and stupid peasant who used to take his daily allowance of the stick or cat at the hands of the drill-sergeant, was not a man whom there would be any use in sending out skirmishing with a breech-loader. He would get into a ditch as soon as the officer's eye was off him, and stay there. Moreover, the new discoveries are changing the military type of character all over the world. The soldier of the historian, as well as of the poet and novelist—the gay, dashing, restless youth, who danced with and made love to the women, and duelled and gambled with men from post to post, and went under fire with an oath or a song on his lips, who used to be the ideal "militaire," has vanished or is vanishing from the earth. His successor is a grave gentleman with spectacles, whose uniform smells of the lamp, whose dreams are of strategy and tactics, and whose laborious days are passed, not on "toys or lust or wine," but over figures and diagrams and among books; to whom the "pomp and pride and circumstance" of war are nothing, and its use as a naked, unadorned, savage, but potent instrument of the national will everything. It may seem to some that there are the seeds of tremendous evil in this entrance of educated ability into the service of destruction. But if the experience of the past teaches us anything, it teaches us that we cannot press the mind even into the service of destruction without exalting it, and diffusing and deepening the popular reverence for it; and we cannot do this without helping to make war detestable. No one can sincerely respect the mental endowments or acquirements of a Moltke without feeling within him a growing sense of the absurdity and wastefulness and barbarism of the military mode of settling disputes.

A SINGING CAMPAIGN.

IT may be considered more than doubtful if this country has ever seen a Presidential campaign which could be called a hard-cider campaign, or a singing campaign, in the sense in which these terms are used by such of our fellow-citizens as would like to see campaigns of hard cider and log-cabins, and song and dance; and that such a campaign will not be seen in our day, nor in any future day, may be considered certain. Those of us who were in our nonage when General Harrison beat Mr. Van Buren, and to whom Presidential campaigns were seasons of exuberant shouting and of staying out at night later than was feasible in ordinary years, and, in general, of enthusiasm and much noise, may have been accustomed to believe that one hard-cider campaign, at least, we and our older countrymen had carried on; but it is a belief, however pleasant, unwarranted by facts. The *Golden Age* itself, now that the first frost is at hand, and the white hat of May and June sheds a coolness which forbids effervescence of the brain, will be willing to admit that the notion of carrying elections by choruses is now but a dream, a fancy, an eidolon and fond delusion of youthful trustfulness, and not any longer credited by capable politicians. As we say, we think it more than doubtful if such a notion was not always chimerical; as much a delusion in 1840 as now in 1872. In 1840, General Harrison, the son of an ex-Governor of Virginia, a victorious general against the English and the Indians in the days when the Indian's name was a name of fear in all our Western borders; a successful Congressman and a highly successful and popular Governor of more than one of our Mississippi Valley Territories; a candidate who had made no bad fight in 1836 against the candidate backed by General Jackson himself, was elected President over a competitor who, rightly or wrongly, was held responsible for a period of financial disaster never before or since paralleled in the history of the country. As Mr. Greeley remarks in his famous partnership letter to Mr. Weed and Mr. Seward, "cider suckers" were plentiful in Washington City just after Gen. Harrison's election, demanding offices as the reward of their services during the campaign; but despite these gentlemen and kindred enthusiasts, it was not lyric song and choral dance or sacred enthusiasm that beat Mr. Van Buren in that campaign; something rather more prosaic was what brought "the news from Maine" and gave us Mr. John Tyler.

In fact, the American people, like the English, is a people in whose heart are deep springs of poetry; the materialism of which we hear so much, the hard grip on realities which is giving to men of our blood dominion over the earth, inconsistent as they may seem with a fast belief in things which are beyond, and much as they may deceive some observers, are nevertheless consistent with more faith in the ideal than is possessed by most races of men. But certainly the genuine American is not a being who is tremulously susceptible to the lighter or more fraudulent manifestations of the poetic, and to get him embarked on a tidal wave of song when he has politics to attend to, is not an easy job at all. To use one of his own phrases, he is not lyrical "worth a cent" under circumstances which would send a *Golden Age* American, for example, head over heels with excitement, and cause him to make the welkin ring with clamor.

The "campaign poetry," then, would best be treated of, one would say, as the snakes in Iceland are treated of in the Dutch traveller's work on that country; and indeed it would be true to write that poetry in this campaign there is none. But there are some horrible and awful imitations of poetry which began to appear soon after the Liberal journals informed us that what the Grantites feared was that "this campaign was to be a singing campaign like that of 1840," and which, now that the October elections are past, have probably come to an end. Of these productions, the most important is one which would have had no possible importance but for the admitted fact that there was actually paid for it a sum of money, which, estimating "Paradise Losts" at their usual market price, and allowing for the difference in values in 1667 and 1872, would have purchased about three "Paradise Losts" and a third of another one. The singing idea was no sooner broached by the friends of the white hat than a zealous but unsagacious Grant man, being determined that the enemy should have no advantages that money and talent could wrest from them, advertised in the *Times* that five hundred dollars would be paid to the man who should produce the best song concerning "the Greeley pill," and invited all poets to compete and leave their productions with the editor of the *Times* of this city. How many gentlemen competed we do not know, or what judges made the award; but an award was made, and two weeks ago at one of the Cooper Institute meetings the song was sung:

> There was an old doctor that wore a white hat;
> He made pills of Free Love and Free Farm, and all that;
> Patent pills of pig-iron and copper and wool,
> And expected to cure Free-trade with 'em, the fool.
> And, first to be seen, like a quack at a fair,
> This Chappaquack mounted an editor's chair,
> With one pant in one boot, and he sung but one tune:
> That the pill for all ill was his daily *Tribune*.
> Oh, the *Tribune* old pill!
> Oh, the Greeley old pill!

Every man values his life, and the author of this gem is spending his five hundred dollars anonymously. It is not Greeley men, however, that would be most anxious to slay him.

Nearly all the phases of the contest get some attention from the verse-makers, the principal topics being the alleged corrupt and tyrannical practices of General Grant, from his receipt of young bull-dogs to his decapitation of Senator Sumner; Mr. Greeley's apostasy, vagaries, and personal appearance; the traitorous character of the Democracy; the bolting of the Liberal Republicans; Mr. Schurz's and Mr. Sumner's opposition to the Republican party; the services of Grant in time of war; the oddity of the *Tribune's* course; the confusion of mind into which the confirmed Copperheads were thrown by the nomination of Greeley; the disadvantages of "boiled crow"; the determination of the Republican party to "secure the results of the war"; the political intentions of the negroes; the desire for "reconciliation." All these find expression in the songs and other verses of the canvass, the topic treated of most voluminously being perhaps the charges against the President. His most virulent enemies went early and vigorously into the manufacture of these attacks upon him, and almost every morning since the first day of May has seen one or more copies of verses denouncing him for drunkenness, idleness, present-taking, nepotism, and other of his transgressions. These productions have shown marked facility, but none of them has been of merit, and none, we suppose, of any effect as songs. Indeed, there has been no new song which has come at all into competition with those of the war; and such enthusiasm as has been expressed in singing has, as formerly, found vent in "Rally Round the Flag," "The Star-Spangled Banner," and "John Brown's Body lies Mouldering in the Grave." One or two stanzas will serve as a sample of the numberless assaults cleverly adapted to well-known tunes, which the *Sun* and its friends have poured out:

> Forty-one of 'em
> (Keep the run of 'em),
> Suckers all—the State needs none of 'em;
> Avoirdupois, there's more than three ton of 'em—
> Humbugs, every son of a gun of 'em.
> Old Daddy Grant,
> The Boss Cormorant,
> Feathers his nest in the Covington Post-office,
> Orville L. G.
> (Hunky boy on a spree)
> Draws on his pal in an Illinois coast office;
> Half the connections of 'Lysses can boast office—
> Corbins and Dents,
> Cramers and Bents,
> Sharpes, and Roots, and Caseys, and Pattons:
> But the Dents take the lead
> Of the whole blessed breed,
> For when places were going they went in for the fat 'uns.

Another sample is as follows, the air being "The Battle Cry of Freedom":

Hiram had a little lamb,
T—m M——y was his name,
Shouting the battle-cry of plunder;
And every time the master robbed,
The Lamb would do the same,
Shouting the battle-cry of plunder.

CHORUS—Greeley for ever! Hurrah, boys, hurrah!
Pack off Ulysses to dwell with his pa.
We'll rally round our flag, boys,
We'll rally round our flag,
Shouting for Greeley and the Union!

If the reader will imagine nearly every secular and sacred tune known to him married to immortal verse similar in spirit to these two specimens, he will have some idea of the sort of poetical and political warfare which has been waged on the faults and shortcomings of the President and his Administration.

On the other hand, the Administration party, if not so industrious as the Greeleyite sons of song, have not neglected to express the astonishment of the Old Farmer, the Old Squire, and the Boy in Blue that any one should seek a better President than the man who brought us safely through the war, and whose Administration has been so successful. One veteran thus addresses another:

"It seems to me, Jim, very strange,
The turn some things are taking;
It may be right, this cry for 'change'
That folks just now are making.
'Change,' for the *better*, here below
Is what we always want,
But, till I know it *will be so*,
For one, I go for Grant!"

And this is what the Old Farmer says to the Grant man:

"It may be luck; it may be fate,
Sometimes I ask myself, 'What wuz it?'
The only thing I know is that
The critter duz it.

"The Britishers are paying up;
The rebs have well-nigh quit contrivin';
Our debt is growing less and less,
And things are thrivin'.

"The Injun smokes his pipe in peace;
The nigger sings his lond hosanner;
And, as the boys say down the town,
'That's what ails Hanner.'

"And so, I've 'bout made up my mind
That things can't easily be mended;
That, take it all in all, the farm
Is darn'd well tended."

And another agriculturist thus talks to the young politician when the latter offers him the Liberal platform and candidate:

"No, sir! I'm for Grant. Call him dumb if ye will,
But he talks in a way that suits me;
He has steered the old ship with considerable skill,
And he never a traitor 'll be.

"What! Greeley to take the place o' Grant!
Good God! is the country daft?
Have they swallowed the 'Sage of Chappaqua's' cant,
And embarked in that treacherous craft?"

Of equally pronounced views is another citizen who also regards the election of Mr. Greeley as the triumph of the South over the North, and who thus sets forth his opinion. As will be seen, this citizen professes to be of Irish descent; we would not, however, for our own part, make affidavit that he ever saw Cove or the Hill of Howth:

The Ku-klux Klan
Don't like our man,
And to bate him they
Will plot and plan.
But Ku-klux Klan
May rave and rant;
Beat Grant they can't,
They can't beat Grant.

Mr. Sumner comes in for many raps; but he is by no means without plaudits too, his gigantic mind striking great awe into some of the bards, while others devote themselves to the Brooks affair and the Senator's other "services to the cause of liberty." More effectually than in these rôles we find him in a certain Hebrew Melody, entitled "The Destruction of U. Sennacherib Grant," figuring as the angel of the Lord destroying an Assyrian host of collectors and postmasters:

And there lay his horses—as useless as he—
And the bull-pups that gambolled all sportive and free;
For the voice of Charles Sumner spread death on the gale,
And the cheeks of the robbers grew livid and pale.

Mr. Schurz gets rather less of the attention of his poetical enemies and friends than his Liberal Republican friend and colleague, but now and again we meet him. The pronunciation of his name perhaps baffles the campaign muse, who is not a very erudite maid; once, for example, we have this rather uncivil but otherwise gratifying couplet:

We don't have much charity for Trumbull or for Schurz,
They stand around the party gate a pair of snarling curs.

It is in "The Child's Enquiry," however, that Mr. Schurz is exposed in his true colors, the artless but penetrating enquiries of his little son revealing to him and to us the blackness of his treason:

Carl Schurz sat down one evening late
To rest his weary head,
When his little son came into the room,
And looking at him said:

"Who is this Horace Greeley, pa,
That people call so wise?
Is he some giant tall enough
To reach unto the skies?"

"Oh! no, my child, about as large
As I, or Governor Brown;
'Twas not his stature made him great,
Or won him his renown.

"But he it is who nobly bailed
Jeff Davis from his cell,
And now we want for President
The man who did so well."

The young Schurz then enquires if Greeley, being made President, would not at once bail out every rogue in the whole country, and thus expose us to the incursions of the criminal classes. To this the father replies, "Oh! no, my child," and goes on to show that Jefferson Davis was an enemy in war, but that he who bails common rogues becomes the abhorrence of all his neighbors. The son promptly decides that when he becomes of age sufficient to steal horses, he will steal not one but a hundred or more, and thus becoming a great and renowned villain, Mr. Greeley, or some follower of Mr. Greeley's, would go on his bail-bond. The Senator dissuades him from this course:

"Oh! no, my child, the Gospel says
That you should always do
To every person as you would
That they should do to you."

But thus the child nails him:

"But, pa, did Horace Greeley think
That in some future day
He would want bail when *he* should try
His country to betray?"

This is the last question, and it brings on the last resort of domestic tyranny:

The Senator could say no more—
So, turning quickly, said:
"It's nine o'clock, my little boy;
'Tis time you were in bed."

Nothing that is worth remarking upon is said or sung about Mr. Greeley's dress and personal appearance and personal habits. The tucking of his trowser-legs into the legs of his boots, his white hat and white coat, his farming at Chappaqua, his woodchopping performances—or garden parties, as the *Saturday Review* calls them—get about equal notice from his opponents and his advocates, but what is said is all old enough to be dull even if it were not dull for other reasons. In his character of "boiled crow," however, he has been rather more amusing to the poets. One of them speaks as follows of that "noisome victual":

There is a dish no cook-book names,
And which no patriot cares to know,
Which none but starving men will taste,
A noisome victual called boiled crow;
This, Democratic leaders eat.

Some of the "Democratic leaders" are fond of this dish, as, for instance, Mr. G. F. Cookerly, of Terre Haute:

"My bowels yearn immensely
Toward the precious crow;
I love the bird intensely—
How much, you'll never know.

"Quail keeps my stomach quiet,
Just for a meal or so;
But, for a reg'lar diet,
I can't dispense with crow."

But Mr. Voorhees does not like it:

"I only eat enough to save
Myself from that dark, hopeless grave
Where every Bourbon's sure to go
Who will not eat the hated crow."

However, he and Mr. Hendricks, joining hands with Mr. Bayless W. Hanna and Mr. Cookerly, finally sing this stave to the tune of "Home, Sweet Home":

"In the dark lanes of politics,
Where'er we go,
Be it ever so sable,
There's no meat like crow.
Crow, crow, lovely crow,
Be it ever so sable,
There's no meat like crow."

Probably the reader by this time has nearly enough of these efforts, but there is one more from which we will quote, because of its noble rebuke of "H. G." and Mr. Theodore Tilton, who have "gone back" on Woman. In fact, but for the habit of years, "H. G." would not even so much as spell it with a capital W. "You and I both know Woman Suffrage means Free

Love—H. G."—is what Mr. Greeley once wrote to Mr. Tilton, and this is the "Song of the Women" which was elicited, as we say in our profession, by the remarks of our distinguished contemporary. Or, rather, this is part of it. Looking with scorn and contempt on the Woman Movement, no merely earthly power could make us publish more than the first and last stanza:

"Insulter of all Womanhood,
Apostate from our holy faith
That dares to aspire to broader good—
Lured by ambition's spectral wraith,
He turns from freedom's battling van,
To break the rod of guardian laws,
And lead the bloody Ku-klux Klan—
Last hope of Treason's long-lost cause!

. . . . .

"Go! fallen from your starry arch,
Uncheered by loyal hearts, alone
Tread backward your apostate march
To shameful loss or shameless throne!
No woman's hope or woman's prayer
Speed forth your allies' evil throng!
No woman's voice impulse the air
With stirring word or rallying song!"

Some bad men will not see the awfulness of this punishment. They should wait, however, till they see how they could get on if the air they breathe were suddenly to cease being impulsed by feminine songs, campaign and otherwise.

ENGLAND.

LONDON, September 19, 1872.

THERE is a matter which just now occupies the papers, and of which the Conservatives are endeavoring to make capital against the government. The Ballot Bill has come into operation in two constituencies. Whatever else it has done, it is plain that it has not hitherto altered the balance of parties. No body of voters, hitherto held in awe by landlords and capitalists, has suddenly transferred itself from one camp to the other beneath the cover of darkness now provided. At Pontefract, Mr. Childers, a very active member of the Government, was re-elected by a small majority against a weak opponent. I believe, however, that the real difficulty in his case was caused by some of the agitators against the Contagious Diseases Acts, who identified him with the support of the obnoxious measures. At Preston, a Conservative was elected by a considerable majority, the borough having been for three years in Conservative hands. It is difficult to make out from the conflicting statements of various election agents how far the result was influenced by various local and secondary influences; nor does it very much matter. The Conservatives, having carried their candidate, have no doubt a *prima-facie* right to the exultation which they express; but a rather angry controversy has been excited by the mode in which they went to work. The indignation expressed by some of the Liberal papers at their device for neutralizing the ballot strikes me as rather ludicrous. The party has contrived an ingenious piece of political machinery, carefully provided with all the newest inventions, and it turns out that it will not secure their object. Thereupon they bitterly complain of their antagonists for not working the machine in the spirit in which it was designed. Surely the merest tyro in politics should be aware that no political machinery ever was or ever will be worked in the spirit of the designer; and that legislation which assumes that everybody is ready to do without compulsion just what the legislator wants, is apt to be utterly futile. In the case of the Ballot Bill, the introducers of the measure were racking their inventions during the whole session to avoid an awkward dilemma. Unless they made secrecy compulsory up to a certain point, the ballot would be useless; but it was doubtful whether secrecy could be enforced sufficiently to secure their object without the most tyrannical regulations. It was provided that no one should be asked in the polling-book how he had voted, but it was impossible to provide that he should never have that question put to him by anybody outside. The Conservatives, therefore, adopted a very simple device. They had an office just outside each of the booths, and requested each of their voters to hand in a card stating which way he had voted. The consequence was that they were able to form a very accurate estimate of the progress of the election, and at the close of the poll gave the numbers so closely that their estimate of their own numbers differed from the official statement by only nine votes in over 4,000. It is plain, therefore, that the votes were known in Preston almost as clearly as though there had been no arrangements for securing secrecy; probably a man who had refused to state which way he voted would have been subject to a very strong pressure of public opinion; though it is true that he might still escape by lying, it can hardly be considered as a recommendation of any political machinery that it gives additional motives and security to treachery.

It is plain, therefore, that when the general sentiment is opposed to secrecy, the protection afforded by the present bill is not of any great value, and the Liberal journals are already beginning to cry out for the addition of some more stringent clauses. If the example of Preston should be followed, as is highly probable, the ballot will either fall into disrepute or some attempt will have to be made to patch it up by fresh legislation. If any more time is wasted on this particular nostrum of the old-fashioned radical school it will be a matter of sincere regret; but I confess that I am not sorry to see that there is so strong an objection in the average voter to avail himself of the privilege of concealing his opinions. It is undeniable that there are occasionally cases of intimidation where one would be glad to see almost any remedy adopted; but it is amazing to me that any genuine Liberal should regard a general disposition to vote in secret as a healthy sign of public spirit. As a defence against oppression the plan might be justifiable; but the less people condescend to use cloaks of darkness, the more satisfactory must be the state of the political atmosphere.

A matter of far greater real interest than any of these little dodges for tricking people into virtue and public spirit is the progress of the war between labor and capital. Just at present labor seems to be winning victories all along the line. The last battle that has been fought out is in the baking trade. The whole of London, it was threatened, was to be deprived of bread from next Saturday until the masters and men could settle their differences. It seems, however, though the matter is not quite decided, that the men are to have everything their own way. The masters have yielded nearly every point; and it is probable that *they* will have to give up the last upon which they were holding out. The great activity of trade and speculation has given the advantage to the men in all the recent attempts to secure a larger share of the profits. We are already, however, beginning to feel something of the other side of the question. The rise in the price of necessaries is becoming very serious, especially for the large and unlucky class with small, fixed incomes; but it will also be felt by the laborers, whose agitation is partly the cause. Owing chiefly to the success of the miners in limiting the production of coal, the price has been rising in the most startling fashion. The poor in London will next winter have to pay at least half as much again for their fuel as they have been in the habit of doing. The prices of food again will probably be excessive. We have generally a bad harvest; we are threatened in many districts with something like a second potato famine; and the cattle disease is so widely spread that the price of meat cannot be expected to decline. Of the three things which Pope declares to be all that is necessary for man, "meat, clothes, and fire," two at least are becoming dearer every day. The consequence is that we are practically exemplifying a strange paradox, and growing poorer daily because we are getting rich so fast. The national prosperity, as Mr. Gladstone tells us, is advancing by leaps and bounds—the advance being measured, that is, by the increased production and trade; but however satisfactory this may be to rich capitalists, and in some degree to the laboring population, which receives steadier employment and an increased rate of wages, it is nevertheless true that it does little good to very large masses of the population. Though their wages have risen, for example, it is doubtful whether the agricultural laborers can get more for their money than they could a few years ago; and there are great numbers of persons, such as clerks in Government offices, who find it steadily more difficult to make both ends meet. I will not attempt to philosophize upon a process which is not peculiar by any means to England; but just at the present time it is being very forcibly impressed upon us that a rise in the imports and exports, and a singular buoyancy in the revenue, are quite compatible with an increased difficulty of living for a very large part of the population. The very thought of coals in particular is becoming unpleasant to a father of a family, and we are being inundated with all kinds of suggestions—no doubt excellent—for saving fuel by all manner of volunteer philanthropists. I suspect that the love of our old extravagant system of fires is too deeply rooted in the British heart to be easily extirpated, but otherwise we might expect to see the London atmosphere become perceptibly freer from smoke in the approaching winter, and even our fogs to degenerate to the consistency of pea-soup.

It would be scarcely right in sending a letter to America at this time to preserve complete silence upon the Geneva arbitration. And yet there is very little to be said which is not so obvious as to be scarcely worth saying. That every sensible man must, on the whole, regard the conclusion of the controversy with satisfaction is as plain as that any very warm outbreak of enthusiasm is hardly to be expected. After all, the payment of fifteen million dollars is disagreeable at the time, even though it is probable that our next surplus will more than cover the amount; and though we may consider that we are receiving a sufficient equivalent for our money, our satisfaction is naturally of a calm and temperate kind. The bloom was taken off the affair by the unfortunate dispute about the indirect damages; and there is a good deal of that subdued grumbling which generally accompanies the action of putting one's hand in one's pocket. The Conservatives are naturally doing their best to pick holes in the achievement of which Mr. Gladstone's government

has good right to boast, and insinuate that we need have paid nothing if we had shown a bolder front. And yet substantially, I think that most people are as well pleased with the result as can be expected. Without supposing that a precedent has been set which will lead to the speedy abolition of war, as some sanguine persons at the Social Science Association seem to expect, we hold that it is a real step, if not a very long step, in advance.

Notes.

F. W. CHRISTERN announces "American Breech-Loading Small-Arms; being a complete history and description of the leading inventions," by Chas. B. Norton, Brevet Brig.-Gen. U. S. V.——A "Life of Captain Marryat," in two volumes; Wey's "Rome," folio, illustrated; and Figuier's "Human Race," will be published by D. Appleton & Co.——Sheldon & Co. announce a "Life of Maj.-Gen. Philip Schuyler," in two volumes, by Benson J. Lossing; "Modern Leaders," as described by Justin McCarthy in a series of biographical sketches; a new and revised edition of Mr. Grant White's "Words and their Uses"; and "The Ordeal for Wives," by Mrs. Annie Edwards.——Dr. W. S. Plumer's "Commentary on the Epistle of Paul to the Hebrews"; and Edward Cone Bissell's "Historic Origin of the Bible," are among the announcements of A. D. F. Randolph & Co.

—Mr. William F. Poole's Fifth Annual Report of the condition of the Cincinnati Public Library, under his charge, furnishes additional evidence of what may now be called a general law, viz., that about three-quarters of the books taken out of our public libraries fall under the head of fiction (adult and juvenile). The exact percentage for 1871-72 in Cincinnati was 74·8, against 80 per cent. in the town of X., whose experience was lately described in the *Nation*, and 76·36, 78·4, and 77·2 per cent. in successive years in Boston. Mr. Poole says that this is a better showing than the English free libraries can make, although, for his part, he does not specially regret the demand for fiction, nor care to apologize for it. To be sure, he would be glad to see Mrs. Southworth, Mrs. Stephens, and Mrs. Hentz suppressed, and he thus virtually concedes the propriety of exercising such a censorship as that practised at X., where Mrs. Southworth, for example, is excluded from the library. The Cincinnati library has been opened on Sunday for upwards of a year and a half, and Mr. Poole's testimony as to the working of this innovation will have great weight with doubting trustees and directors in other cities. In 1871, the average daily attendance on Sunday rose from 213 for the first eight months to 397 in December, and during the first five months of this present year varied as follows: 755, 802, 706, 577, 261. On September 27, the librarian informs us, there were issued 337 books and periodicals, against 110 on the corresponding Sunday last year; and on September 15, 305 against 199. The issues since June 22, the date of the annual report, have been 3,980, against 2,392 during the same period of 1871—or an increase of 66 per cent. Those who fear that the Sunday library will draw off attendance from church, will be encouraged to learn that the Cincinnati library is much more frequented in the afternoon and evening than in the morning. "On the other hand," says Mr. Poole, "it is a noticeable fact that many of that class of young men who have strolled about the streets on Sunday, and spent the day in a less profitable manner, are habitually frequenting the rooms, and spending a portion of the day in reading. The department of readers on Sunday has been unexceptionable, and the rooms have been as still and orderly as on secular days. While some readers have called for religious books, the other classes of reading sought for have, in the main, been instructive and profitable." The same account comes back from England in response to Mr. Poole's report, which has been widely copied from.

—Some few months ago an exposure was made of a very dubious project for publishing the lives of "distinguished Americans," the subjects being drawn from that class of our citizens who were willing to pay for the gratification of appearing in print. At that time the headquarters of the enterprise was in Hartford. During the past month, Bostonians have been largely favored with the circulars of this or a similar speculation, entitled "American Biography. Portraits on steel by fine Engravers, with Sketches by Eminent Authors." It is to be, says the prospectus, "a splendid work, folio and quarto size, 500 or more pages." It appears that one volume of the series has been issued under the title of "Men of Mark," and that one volume will contain "Sketches of Bostonians." These circulars are accompanied by a written request for a portrait and biographical sketch of the person addressed, and the recipient is advised to purchase a volume of the series already issued as a guide in preparing his contribution. No price is named, and no intimation given that the selected "representative man of Boston" is to pay for this flattering distinction; but this is unnecessary. The circulars and letters are signed "Genealogical Society, 175 Fifth Avenue, between Twenty-second and Twenty-third Streets, near Fifth Avenue Hotel," and the assumption of this name calls for a prompt and earnest protest. The New England Historico-Genealogical Society of Boston is an old, respectable, active, and flourishing society, attending faithfully to the purposes for which it was chartered. It is commonly known as *the* Genealogical Society, and many people might be led to suppose that this scheme was in some way connected with it. Again, here, in New York, there is a highly respectable association, duly incorporated in 1869 as the "New York Genealogical and Biographical Society." It has rooms in the Mott Memorial Hall, in Madison Avenue, and it publishes a quarterly magazine of much interest. It is therefore a scandalous thing for any individual or firm to take the style of "Genealogical Society" in Boston or New York, and justly creates a suspicion against the enterprise. It is a curious fact that this circular of the so-called "Genealogical Society" is headed with an engraved armorial seal, and has, at its close, the advertisement of "one of the most practical Heralds in America." These occur also in the published circulars of a concern formerly called the "Genealogical Registry for the United States," of 67 University Place, N. Y., which were calculated to rouse the pity of persons acquainted with the subject of genealogy, as setting forth the visionary and impossible scheme of an enthusiast. They seemed to be the work of one man possessed apparently of considerable learning, but without method or judgment. It is unnecessary to go into the absurdities of the scheme, which, having first adopted the ambitious title of "The Doomsday Book," dwindled into "an incorporation, under the laws of New York," with a capital of $5,000, "to print and publish books, to obtain, preserve, and record the genealogies of the people of the United States," under the name above-mentioned. The letters accompanying these circulars were signed by Wm. Coventry H. Waddell, President, and it is probably no injustice to attribute to him the entire management of the matter. His amiable delusion did not call for public censure; but the case in hand is very different. Anonymous letters and circulars do not inspire confidence, and names which are colorable imitations of well-known societies are not usually adopted for the advancement of honest and honorable undertakings.

—Baron Steuben died on the 28th of November, 1794, on the wild land granted him by the State of New York six years previously, in Oneida County. He was buried under a hemlock tree in the midst of the forest, where his remains rested obscurely but undisturbed till the beginning of the present century. Then, in the laying out of roads, his grave was rudely desecrated; one-third of it was cut off, and, "as if Indians had dug up the place, for a while the coffin was exposed to storm and rain." The only honor which the neighborhood could pay to the hero's memory was to divide the old military cloak in which the body was wrapped for relics. An end was put to this disgrace by Benjamin Walker, the Baron's aid-de-camp, who removed the remains to another part of the same grove, and made an arrangement with a Welsh Baptist Society for keeping these five acres of natural forest fenced and uncleared for ever. In 1824, the inhabitants of the county erected a monument over the grave—a limestone tablet, supported on four piers of loose stones, and simply inscribed with the Baron's name in full. The piers in time crumbled into a heap beneath the slab, and much in this condition the memorial has remained for the past fifteen years. In 1857, an apparently earnest effort was made by Germans in all parts of the country to erect a suitable monument to Steuben, and several thousand dollars were subscribed, but to no purpose. At last, on the 30th of last month, the Steuben Monument Association celebrated at the grave the completion of a new and massive stone structure, adorned with cannon and round-shot contributed by the General Government, and calculated to endure for all time. A great company assembled at Remsen, some twelve miles north of Utica, and marched in procession to the monument, where the principal address was delivered by Governor Seymour to an audience composed chiefly of Welsh people. An address in German was also delivered. Whether the Association, consisting of citizens of Utica and New York, has any funds in hand over and above the $2,000 necessary to the execution of the work, we are not informed. If it has, it could in no way employ them so well as in printing a new and popular edition of the literary monument to Steuben reared in 1859 by Mr. Friedrich Kapp, but for which, perhaps, the Association would not have been spurred to the performance of its pious duty. We refer, of course, to his "Life of Steuben," of which Mason Brothers were the original publishers.

—We do our English cousins the civility to inform them that Mr. John Camden Hotten the publisher, though a Londoner by residence and a British subject, we suppose, by adoption and naturalization, is, nevertheless, by

birth an American. The *Saturday Review* might have known that nobody but a Yankee would have practised sinful games such as Mr. Hotten has been recently practising, and not for the first time either. Mr. Samuel L. Clemens ("Mark Twain") writes to the *Spectator* a letter which we assure that journal contains jokes, and is not meant to influence the Presidential election, but which, for all that, states a grievance for which Mr. Clemens should have redress. Mr. Hotten (says Mr. Clemens) has, of his own individual motion, republished several of Mr. Clemens's books in England. Against this no protest is made, because, as Mr. Clemens is aware, publishers are not accountable to the laws of heaven or earth in any country of his acquaintance. But not content with republishing the books as they were written, Mr. Hotten changes the title to "Eye Openers and Screamers," and adds to the contents half a dozen chapters of his own composition. Mr. Clemens enquires of the editor of the *Spectator* what he would feel like in case such treatment had been inflicted upon him. "Would not the world seem cold and hollow to you?" he asks. "Would you not feel that you wanted to die and be at rest? Little the world knows of true suffering." He suggests that a proper pictorial device for the new title-page would be a picture of a man with his hand in another man's pocket, and the legend, "All Rights Reserved"; for, of course, Mr. Hotten does not make the mistake of paying over to Mr. Clemens any moneys accruing from this little piece of piracy. "Messrs. George Routledge & Sons," adds Mr. Clemens, "are the only English publishers who pay me any copyright, and therefore, if my books are to disseminate suffering or crime among readers of our language, I would ever so much rather they did it through that house." We may say here that our opening remark in regard to the birthplace of Mr. Hotten is not advancing a claim on behalf of the United States to the championship in rascality. A writer in the *Anglo-American Times*, of the same date as the *Spectator*, has a word to say of English swindling, and of the habitual course of the London *Times* in regard to such transactions: "In London," says the writer, "they point to New York and say there is the greatest scandal. But unfortunately for New Yorkers, they are comparatively ignorant of what goes on in London, and in their innocence accept the charge as true. The reason that London knows more of investment in New York than New York knows of investment in London, is because Englishmen employ their money in America, but Americans do not employ money in England. The American system, too, is to make such a noise over every defalcation that the attention of the world is attracted, while the scandal is, comparatively speaking, hushed up in London. The same column of the *Times* which has been unsparingly devoted to the exposure of every fraud in the United States was used for covering up the Qverend-Gurney affair, the Joint-Stock Discount Business, and the getting out of jail the only man sent there for the most gigantic fraud of the age." Both the *Anglo-American Times* and the *Spectator* have recently been giving battle to the *Times* on the subject of the goodness of American securities, but the Georgia repudiationists have greatly weakened our friends and strengthened the *Times*.

—"Writer's cramp" is an affliction not unknown in this country, although it is perhaps to be called "a most rare and interesting disorder," as Dr. G. V. Poore calls it in a communication to the London *Practitioner* for September. The case he describes—that of a very active accountant—was, when it came under his treatment, of nine years' standing. The right and then the left hand had been disabled for all writing, and a few weeks before Dr. Poore was applied to, the patient's right arm "had become liable to sudden spasms even when not called upon to perform any act. . . . It was always jerking about, and at times would bounce out of the side pocket of his coat as he was walking in the streets." As these spasms grew doubly severe when the patient was conscious that they attracted attention, Dr. Poore found in this circumstance an analogy with stammering, and regulated his treatment accordingly. "Every stammerer," he remarks, "that I have ever met can sing. They are all capable of a rhythmical use of the voice, and every stammerer has, I believe, his cure within his own grasp, if he persevere in the orderly and rhythmical exercise of his vocal powers. I determined to apply the above principles to the treatment of the stammering right arm." This he did in connection with the galvanic current with the most gratifying success, as is shown in the fac-similes of the patient's handwriting which accompany the paper in the *Practitioner*. Dr. Poore does not hint at any other cause of the disorder than what is implied in the word "cramp." The only cases which have come within our experience have been ascribed to the use of the steel pen, producing we know not what electrical effect on the muscles; and they have been helped, apparently, by a resort to quills. Such, we believe, was the opinion and practice of the late President Felton of Harvard.

—Some idea of the interest taken in the new University of Strassburg may be had from the fact that gifts have been made to it already from 15,000 donors, and from 400 different localities, and that new ones are daily arriving. Among those lately opened are 650 magnificently bound volumes presented by the University of Oxford, each volume containing the dedication: "Presented to the Library of the University of Strassburg, by the University of Oxford, Jan., 1872." On the outside of each volume are the arms in gold of the University, with the inscription: "Academia Oxoniensis," and the motto: "Deus illuminatio mea." The librarian exhibited these works (which are all from the Clarendon press) to the public, on which occasion Max Müller delivered a discourse on the University of Oxford. In the course of his remarks he said, "I have been often asked how the University of Oxford is constituted. It is hard to tell how. Much in its constitution is abnormal. It is entirely devoid of system. The fact is, Oxford *grew*; what was good in its growth being retained, but without any reference to system. The Government has nothing to do with it, nor it with the Government. The Prime Minister alone has the right to nominate to a few chairs created by the crown." According to Max Müller, the professors at Oxford attend to their business a great deal better than they used to do ten years ago. He estimates the income of the colleges at Oxford at £300,000 sterling. He seems to be of the opinion that the fellowships ought to be abolished, and calls them "bladders," insinuating that were it not for them some of the fellows, left to their unaided ability, might possibly sink. Oxford he calls "a living bit cut from the body of the Middle Ages, and handed down to the nineteenth century." "A mere glance at the buildings carries you back two centuries. . . . When Frederic William the Fourth was at Oxford, and saw its old buildings and the noisy joyous life of the scholars within; when he saw where Charles I. held his parliament, where Cromwell had bombarded it, where Wolsey had built the beautiful tower of Magdalen College, where bishops had been burned, whence Shelley had been expelled, where Pusey had preached, and Arnold discoursed, he said, 'Here everything new seems old, and everything old new.'" "Thus it is at Oxford," says Müller, "and thus it should be; the old should continue to live in the new, and the new should repose on the old; for a real life is a continual transition, an eternal progress without break or interruption."

—Towards the end of the last century, says *O Novo Mundo*, the Royal Academy of Sciences at Lisbon began publishing the dictionary *par excellence* of the Portuguese language, with every prospect of making it equal in all respects to similar works in other countries. For some reason, however, never clearly ascertained, the enterprise was abandoned in the second letter of the alphabet, leaving a volume of 750 pages. Fresh attempts were made by two bodies of littérateurs in 1822 and 1844, the first breaking down with the letter D, and the second being not yet completed, if indeed it is ever meant to be. It remained for the Brazilian Antonio de Moraes Silva to compose the best Portuguese dictionary now in use, though it leaves much to be desired. For definitions Constancio's is valuable, but it is full of Gallicisms and is disagreeably dogmatic in tone. Edward de Faria's, with notes by Sr. Lacerda, is barely passable. Finally, there is the "Grande Diccionario Portuguez, ou Thesouro da Lingua Portugeza" of Dr. Fr. Domingos Vieira, now appearing in parts, of which the sixtieth has been reached, making two volumes of some 2,400 pages, and carrying the work as far as the end of the letter C. Not much is known of the author or of his capacity for his undertaking.

BABYDOM IN DESIGN.*

AMONGST the English art-critics of to-day, Mr. Colvin stands unquestionably first in special knowledge, in erudition as to the historical relation of the art of different artists to schools, and in that susceptibility to the finer, and to most critics imperceptible, characteristics of true art which confer authority over opinion more even than the most original critical insight into theories and generalities. In the general lapse of all principles of preference, and contempt of the acquirements which serve as bases of judgment in art, that mark most contemporary art criticism, in the midst of vacuous effusion of personal likings and ignorant preferences which answers the purpose of art bewilderment rather than of art education, it is a pleasure to find something that is the result of sincere study, genuine appreciation, and positive knowledge of data, and which, in the measure of ordinary use of human intelligence, exhausts its theme, as does this book on Babydom in art, with its illustrations (in carbon photography) from Luca della Robbia, Marc Antonio, Correggio, Blake, Stothard, and Flaxman.

There was scarcely room to say anything new of the great Italians, especially of the ecstatic schools (though something might have been said of the Venetian, or at least of Veronese's treatment), after Rio and some other Continental specialists, but in the chapters treating of the great

* "Children in Italian and English Design. By Sidney Colvin, M.A.," etc. London: Seeley, Jackson & Halliday.

English designers Colvin is almost alone, certainly, so far as we know, pre-eminent, and the studies on Blake and Flaxman are amongst the most charming art-essays of the day. And it is still true, that whatever position they may attain in the properly artistic or plastic qualities, the English painters stand amongst the best designers the world has produced. In them, almost without exception, the purely intellectual tendencies of art have commanded all others—abandon to the purely artistic exists in scarcely a single instance, and whatever other excellence exists, it is absolutely subordinate to the meaning, the intellectual intention of the work. It is not as painters that one must judge them primarily, but as thinkers and seers; and in reference to the theme of our present notice, Mr. Colvin is clearly right in asserting as he does the superiority of the English designers.

With regard to the branches of his theme, we believe that the general judgment will coincide more nearly with his praises of Flaxman and Stothard than of Blake, but our own feeling is, as his own appears to be, more appreciative of Blake than any other of his subjects. Blake was in his power of design of the Buonarotti type, and while in some of his loftier flights of imagination one finds motives quite of the sternest and grandest which human hand has ever embodied, nothing can be more tender and lovely than the little dreams in which he seems to have found his habitual life. The "Songs of Innocence" are well known as songs, but in the running accompaniment of design with which they came, there are passages which quite justify Mr. Colvin in all his enthusiasm:

"And the line which his fancy takes, the note which his hand and voice strike, are of a charm and freshness indescribable. All his life long the visions of Blake (and visions were his only models) came to him, whether they were of glee or terror, like the dreams of a child. . . . . In the book of 'Innocence' it is one of his own kindred who prompts him to the task:

> 'Piping down the valleys wild,
> Piping songs of pleasant glee,
> On a cloud I saw a child,
> And he laughing said to me,
> Pipe a song about a Lamb.'

And so the sweet verses are encircled with a delicate tinted pattern, and surmounted with a little picture, wherein we see the flocks grazing steadily arow, with something of that strong and composed regularity in the lines of them which Blake will hardly miss even in his slightest sketches—with the lights upon their wool touched in gold, and with a stripling in close-fitting blue piping in front of them, and glancing upwards at the child that rides upon a cloud close over his head. . . . The whole book of 'Innocence' is like an inspired perpetuation, unknown and unattempted before, of all the wondering beauty and radiance of the childish consciousness, without any of its bane or calamity."

As compared with the other two of the English designers noted, Blake is of that superiority which spontaneity has over artifice—of that greater genius which creates the hitherto unconceived rather than that talent which cleverly combines. Stothard was a facile plagiarist, and, where original, of a weak and nerveless type of design. Flaxman, whom the general estimation of his countrymen has placed almost amongst the great Greeks, was a mistake of artifice for art; as devoid of anything spontaneous in motive or treatment as Blake was free from imitation, the sculptor was as vague and senseless a repeater of old and once living phrases of art as the designer was a prophet and seer of new.

Mr. Colvin, indeed, says of Flaxman as little praise as his countrymen are likely to express. "We have spoken of the Greek vein in Flaxman, and to call him a Greek in spirit was a commonplace of compliment in his own time, and is so still. Our increased knowledge shows us that his critical insight into things Hellenic was the insight of his time, very imperfect or even erroneous; we may even account him least Greek when he meant to be most so, in his heroic compositions; . . . most essentially Greek when he would least have suspected it, in his sketches taken from hour to hour in the family circle or the public thoroughfare." But even here he speaks faint praise, for that reflected spirit of Greek art which may be allowed to Flaxman appears only when he caught a motive direct from nature, and where, as Mr. Colvin says, he least suspected he was doing anything in conformity with his avowed ideal. The spirit of Greek art is that of *all pure* art—unconscious and free; the spirit of Flaxman was a conscious and fettered emulation of art, only inspired by nature's self when she by chance put on the forms of a Greek rendering of the universal ideal. But Mr. Colvin has, in perhaps a wiser spirit than ours, chosen to make the best of both Flaxman and Stothard—if he can in so doing give Blake his due pre-eminence, or art its true standard, is at least open to doubt—and has said of them what no one else has so well said, and what, measuring from another relative standard, might not have been amiss.

Not by far the least interesting of the passages of this book are those in which the author recognizes the larger relations of British art—that of Blake to his time and Hogarth to his after-time, only saying enough to show that he has touched these considerations and weighed them, and then adds: "And if the place gave us ever so much scope, these large general views about art, its revolutions and its mission, are at all times more fascinating than they are fruitful to discuss."

There is one passage in Mr. Colvin's last chapter which is so true in itself and so peculiarly applicable to our own art, as well as so illustrative of that consummate culture which furnishes a writer with an almost universal exposition for every phenomenon he encounters, that we shall quote it in closing: "The work of schools in either state (of growth or decline) will be imperfect, but with a widely different imperfection: attractive in the growing school, distressing in the declining one. The imperfection of growth means simplicity, greater attention to the end than the means, a single desire of conveying the given impression, though the mode of its conveyance be conventionally rough and ready; the imperfection of decline means sophistication, pride of dexterity and flourish of means, the sense that you are cleverer than you need be for your purpose."

A TARIFF OF ABSOLUTION.*

THE Rev. Dr. Gibbings has rendered a service to the student of church history by this reprint, accompanied with his learned introduction. The Papal Penitentiary was a branch of the Papal Chancery, entrusted with the issuing of letters of dispensation and absolution; and the text of this little volume consists of a reprint of the prices charged for these desirable commodities. We all know the infamous traffic carried on in indulgences by the Papal agents throughout Europe for several centuries prior to the Reformation. This is not disputed by the most orthodox defenders of the Papal system; but the enormity of the offence has been glossed over by the assertion that it was an unauthorized abuse, by unworthy hands, of the church's liberal distribution of her inexhaustible treasures of salvation. That an official list should have been published to the faithful of the prices at which they could purchase pardon for every possible variety of infraction of morals or discipline would, therefore, be an admission of apostolic venality not readily made by the devout, however eagerly asserted by the scoffer; and it is, therefore, not a matter of surprise that the existence of such a tariff of sin should have long been the subject of keen dispute between Catholic and Protestant. This controversy Dr. Gibbings traces up in his preface with all the zest of a practical bibliographer and all the ardor of a polemic, bringing together from the most various sources a vast amount of curious and instructive matter, well worthy the attention of scholars.

All the authorized editions of the *Taxæ*, which were issued for more than a century after the introduction of printing in Italy, are now of the most extreme rarity. They have presumably been zealously destroyed since the modification of the system which they illustrated, and Dr. Gibbings states that he has been able to procure but four copies during an active search for forty years. The numerous Protestant reprints for controversial purposes are by no means so scarce, but their authenticity has always been stoutly denied, and Dr. G. seeks to put an end to the doubts expressed concerning their genuineness by a verbatim reprint of two editions issued before the spread of Protestantism, together with references to public libraries in which originals may be consulted. With all deference, however, to the opinions of a gentleman who has shown himself so thoroughly familiar with this department of history, not only in this but in numerous other learned publications, we cannot agree wholly with him in the assumption that the *Taxæ* were a simple price-current of pardons. At times, and to a certain extent, they may have been so, for the system was a shocking one in itself, and fatally liable to abuse. The venality of Rome in those ages was more flagrant and cynical than any other venality, and under the best of pontiffs the men in charge of the "Penitentiary" were always likely to abuse their powers, even as Tetzel did; while, under Popes such as Innocent VIII. or Borgia, doubtless any peddling of tickets to heaven which would enrich the treasury was encouraged. Still, a very superficial examination of this curious fee-bill is sufficient to show that it was not by any means all that was required of the penitent sinner to obtain pardon of his sins. The sums set down in it were evidently only a portion of the penalty imposed, and to us it bears internal evidence of being merely a list of the fees which the officials were authorized to charge for expediting the letters which recorded the pardon previously granted or sold.

It would certainly seem that the absolute selling of pardons in the Holy City was by far too delicate and profitable a business to be entrusted to simple clerks with a printed schedule. The humble priest or monk might be treated with little ceremony, and allowed to transact his business with a celerity and economy that would attract further custom; but we may be

* "The Taxes of the Apostolic Penitentiary; or, The Prices of Sins in the Church of Rome. (Reprinted from the Roman edition of 1510 and the Parisian edition of 1520.) With a Preface by Richard Gibbings, D.D." 1 vol. 12mo. Dublin, 1872.

assured that the incumbent of a rich benefice, a powerful feudal magnate, or a prince-bishop of Germany, would find that his soul was valuable in proportion to the length of his purse, and that his absolution was not a matter to be despatched by an underling for a few *grossi*. Even more convincing, however, is a comparison of the prices set down in the *Taxæ*. If they were the absolute sums required for the absolution or dispensation sought, they would vary with the atrocity of the crime or the importance of the infraction of discipline. No such correspondence can be traced in these tables. If we consider, for instance, how unforgivable an offence, during ages of violence, was any personal assault upon an ecclesiastic, especially if such an assault culminated in murder, and how successive councils exhausted their ingenuity in framing laws which should protect the lives and persons of unarmed clergy amid brutal and lawless populations, we should naturally expect to see such a crime rated at the highest figure. Yet the sum set down for the absolution of a layman, seeking it in Rome, for the homicide of any ecclesiastic beneath the rank of a bishop, is only seven, eight, or nine *grossi*—equivalent in purchasing power, according to the highest estimate given in the tables of Dr. Gibbings, to from $4 62 to $5 84 in greenbacks, at the present price of gold. [Surely no powerful baron who had indulged himself in killing his neighbor the abbot, would be let off for so trifling a contribution to the Papal coffers. Moreover, comparing this with the absolution for assault and battery, we find that when the penitent is personally present the price is the same as the highest for murder, viz., nine *grossi*, and this whether the aggrieved person was layman or ecclesiastic. It is true that for murder the layman had to present himself at Rome, unless unavoidably prevented; while for simple assault, even aggravated, he could obtain absolution *in absentia* for seventeen *grossi*.

It would be easy, if space permitted, to follow this out, and show how complete is the absence of any classification of crime. Thus, absolution for usury is set down at six *grossi*, and for simple concubinage on the part of a layman it is seven *grossi*; while for incest, committed with a mother or sister, it is only five *grossi*, and for parricide only five or six. It is with hesitation that we dissent from one so familiar with the subject as Dr. Gibbings, and yet we cannot but regard these figures as the office-fees for issuing letters of absolution, the variations being dependent upon the formula employed rather than on the nature of the offence condoned. It is true that this, perhaps, will not explain all the sums set down in the *Taxæ*, especially in the schedules of dispensations; but a complete elucidation of all the details contained in this interesting little book would require an accurate acquaintance with the internal machinery of the Curia of the fifteenth and sixteenth centuries which is probably not possessed by any living scholar.

THE NETHER CLASSES.*

MR. BRACE and Mr. Crapsey both call attention to the latest phases of the ever-open question, How to make men, especially ignorant and wicked men, somewhat less ignorant and wicked than they are. In view of the present increase of illiteracy in this country, an increase plainly set forth in the reports of the census for 1870, and in view of the constant growth of poverty in England, it may well be doubted whether we Anglo-Saxons have discovered any radically correct method of dealing with ignorance and crime. The title of Mr. Brace's book intimates the seriousness of this unsolved problem. After speaking of the Paris Communists of 1871, he adds:

"In the judgment of one who has been familiar with our 'dangerous classes' for twenty years, there are just the same explosive elements beneath the surface of New York as of Paris. . . . Let but the law lift its hand from them for a season, or let the civilizing influences of American life fail to reach them, and, if the opportunity offered, we should see an explosion from this class which might leave this city in ashes and blood. To those incredulous of this, we would recall the scenes in our streets during the riots in 1863. . . . No one doubted then, or during the Orange riot of 1871, the existence of 'dangerous classes' in New York."

These classes, mainly composed of neglected or homeless children, are developed in time into adult ruffianism. With their younger years Mr. Brace has long been familiar; of their maturity, as professional or casual criminals, as gamblers, paupers, prostitutes, Mr. Crapsey has made a tolerably careful study in the papers he has here gathered together. He tells us that the number of professional criminals is about 3,000, of public prostitutes about 5,000, of grogshops about 7,000, and of gambling establishments about 600—a better showing, by the way, than that which is made by common rumor —and 15,000 "casual" criminals are yearly arrested on the streets of this city. If Mr. Brace draws the picture of intelligent and active efforts made on behalf of the dangerous classes, Mr. Crapsey shows that whatever percentage of its young life may be turned away from vicious living, the unreclaimed portion is sufficiently large to cost the taxpayers of the city four millions of dollars annually for its management.

"The *prolétaires* of New York," says Mr. Brace, "are not so numerous as those of London, but they are more dangerous. They rifle a bank, where English thieves pick a pocket; they murder, where European *prolétaires* cudgel or fight with fists. They are mainly American-born, but the children of Irish and German immigrants. They are far more brutal than the peasantry from whom they descend. . . . New York has never experienced the full effect of the nurture of these youthful ruffians as she will one day." Meanwhile, the depredations of these classes represent an immense deduction from the total prosperity of the city. In the amount of theft and of swindling, in the amount of energy required to keep them even partially under control, and in the misuse of the offenders' talents, a great sum of wasted force is represented. What means of reclaiming these activities do we employ? Mr. Crapsey describes the methods which express the average wisdom of society upon the subject: the machinery of arrest, trial, imprisonment; the methods which, as not thinking men only, but the most superficial readers of statistics perceive, exercise at the best a merely restraining influence upon the criminal, and have hardly less tendency to teach crime to the young offenders than to check it in the adult. Mr. Brace describes a method which is based upon the intelligence of a minority, upon the convictions of those thoughtful persons who believe that the problem of human improvement is to be attacked in the school-room. Of the method which the church proposes, little is said in either of these volumes. These three methods—the methods of law, of philanthropy, and of religion—have at least had a tolerably fair trial; and it is not too much to say that their results, so far as they are described in the volumes before us, are not a little discouraging. Between the two first-mentioned the balance of effectiveness is certainly with the educational method. Mr. Brace has attained gratifying results in a large number of individual cases; and the waifs and strays that have been reclaimed by the agency of the Children's Aid Society, and developed into good men and women by its educating care, form a fair argument for the value of this method. Nor is too much credit likely to be given to Mr. Brace for his patient and intelligent work in behalf of "juvenile delinquents." Aside from the novelty of the work done by the Aid Society, there is a pleasant tone of reality about his writing of it, an absence of affectation, of any overrating of the means employed, which indicate the author's unbiassed intelligence. His book is written in a thoroughly healthy and genuine tone, and represents genuine work.

But when we enquire what the method of education has done, or is likely to do, for the final reclamation of the dangerous classes, we feel that we approach one of the "great questions" upon which, in Mr. J. S. Mill's phrase, "much remains to be said." Law and the church have done their best for many centuries with these classes; for many generations philanthropy, charity, and education have been brought to bear upon them by the best wisdom and by the kindest wills of modern times. What is the result?—in this country, as Mr. Brace tells us in so many words, that New York is liable to be sacked and burned on almost any day. Of the riots of 1863 he says: "It will be recalled, too, how much women figured in those horrible scenes, as they did in the Communistic outbreak in Paris. It was evident to all careful observers then, that had another day of license been given to the crowd, the attack would have been directed at the apparent wealth of the city—the banks, jewellers' shops, and rich private houses" (p. 30). In New York, he adds, "there are more than 60,000 persons above ten years of age who cannot write their names. This would seem to be a sufficient comment upon the essential failure of reformatory schemes hitherto, not in redeeming individuals, but in making the classes to which they belong less formidable."

There remains, after compulsory education, another solution of the difficulty, which we may call the European, and which exists in the restriction of imprudent marriages, and in the consequent limitation of the number of neglected and outcast children that are thrown upon the world. In America and in England the average family may be said to be formed and to grow without forethought. In Germany and in France, on the contrary, there is a species of sumptuary legislation in respect to marriage, and it is not customary, or indeed legal, as with us, to marry without evident means of supporting a family. This ordinance does not, indeed, wholly prevent the idle, the incompetent, the profligate members of society from perpetuating their sort; but it puts a check upon the transmission of evil qualities, and favors the preservation of the better human elements by fostering marriage among the thrifty and able. On the other hand there is, we must allow, the certainty that as we hinder marriage we encourage prostitution—an evil more insidious, more apt to involve the innocent with the guilty, and more difficult

* "The Dangerous Classes of New York. By Charles Loring Brace." New York: Wynkoop & Hallenbeck. 1872. 12mo, pp. 448.
"The Nether Side of New York. By Edward Crapsey." New York: Sheldon & Co. 1872. 8vo, pp. 185.

to deal with than simple pauperism or violence. But the secret of reform is not so likely to be found in curing the dangerous classes as in managing to prevent their existence.

FLINT'S NERVOUS SYSTEM.*

THAT the present series will form the most thorough and trustworthy physiological treatise in the English language may be saying a good deal, in view of the excellent works of Carpenter, Dalton, Marshall, and others; but it is not saying too much. For, aside from the author's special qualifications as either investigator or compiler, this work has been prepared and issued upon a plan heretofore adopted only on the Continent, namely, as a series of volumes, each complete in itself, and large enough to include many details of experiment, observation, argument, and history, which are unavoidably omitted from any treatise aiming to present in a single volume, of manageable size, "the existing state of physiological science as applied to the functions of the human body." Moreover, while we miss the capital figures and almost diagrammatic descriptions which will long render Dalton's "Human Physiology" a favorite text-book, yet for the physician and the original enquirer the loss is more than compensated by the full and impartial presentation of conflicting views, and particularly by the copious references to authorities, all of which, by the way, for the present volume at least, have been consulted in the original.

The first volume, published in 1866, treated of the blood, circulation, and respiration; the second volume, which appeared in the following year, was upon the subjects of alimentation, digestion, absorption, and the lymph and chyle; the third was published in 1870, and embraced secretion, excretion, ductless glands, nutrition, animal heat, movements, bone, and speech. In passing, we must here admit feeling some disappointment at the meagreness of space, 54 pages, allotted to movements, including the general structure and properties of the osseous and muscular systems. "The reader is referred (p. 489) to works upon anatomy for a history of the action of the muscles. In some works upon physiology will be found descriptions of the acts of walking, running, leaping, swimming, etc.; but we have thought it better to omit these subjects, rather than to enter as minutely as would be necessary into anatomical details, and to give elaborate descriptions of movements so simple and familiar." But mastication is certainly one of the most familiar acts, yet in the previous volume it occupied 16 pages; and we are unwilling to admit that all movements are "simple," or sufficiently explained in anatomical works. Indeed, the mere sequence of action in ordinary locomotion is still under investigation, both in Germany and America, while the many and varied combinations of muscular action to effect these and other movements, especially those of the hand, are not to be compared with the mere function of a single muscular organ, any more than the bare statement of the origin and distribution of the pneumogastric nerve would be accepted as an equivalent for our author's minute and accurate account of its complex influence upon many and widely-separated organs. We hope, therefore, that upon the completion of the forthcoming volume upon generation, our author may undertake a sixth upon prehension and locomotion in all their modifications.

We have enumerated the volumes in the order of their appearance, but although the author refers to Vol. III. in a note at foot of page 15 in the present volume, there are no such numbers upon the books themselves.

In reading the preface to the "Nervous System," we note the absence of any claim to originality such as is made respecting several subjects presented in previous volumes; yet this by no means implies that our author has taken everything upon the statement of others; on the contrary, he has repeatedly and carefully tested the correctness of recorded experiments and observations, and has frequently improved upon the methods of his predecessors. The section upon the cranial nerves affords an admirable instance of the skill in experimentation, the accuracy in observation, the logic of deduction, and, above all, the caution in acceptance, which are now required of him who would add to our positive knowledge of the human body. How unlike, for example, are the sweeping assertions of the "professional phrenologist" respecting the correlation of the mental faculties with the different parts of the brain, and the guarded admission upon page 350 that "there is no point in the physiology of the brain more exactly determined than that the faculty of speech is located in a well-defined and restricted portion of the anterior lobes"; which, in the large majority of cases, appears to be upon the left side only (p. 357). But in general, as stated in the preface, our author has "touched but slightly upon psychology, which has long been considered a science by itself." What little he does say upon this (to the general reader) most interesting subject is rather unsatisfactory, because the conflict between "positive" ratiocinations and what he calls "the effects of early impressions made by faulty education" (p. 326) seems to us to lead him into some verbal and logical inaccuracies and inconsistencies. Our space will not permit a discussion of this matter; but we would refer to the pages already cited in contrast with pages 342 and 452, where the mind is in turn denied an independent existence and mentioned as a distinct entity.

This is not the place for an extended account of the facts and ideas presented in this volume, and we therefore confine ourselves to such as command a general interest. "No one at the present day pretends that the nerve-force has been demonstrated to be identical with any form of electricity" (p. 98). "Although the cerebral hemispheres are themselves insensible, yet galvanization in different parts produced movements restricted to particular sets of muscles; the centre for the muscles of the neck was located in the middle of the frontal convolution" (p. 323). The much and long debated problem as to the function of the cerebellum is dismissed more satisfactorily than some others; "the only view that has any positive experimental or pathological basis is that it presides over equilibration and the co-ordination of certain muscular movements, and is in some way connected with the generative function" (p. 392). Sleep is regarded as well proved to be associated with a decrease rather than an increase of blood in the brain, but some other conditions seem to favor its production (p. 461). A very instructive table is given (p. 345) of the weight of the brains of forty-six persons of different ranks and occupations. James Fisk, jr., and Ruloff follow Cuvier and Abercrombie, and precede Spurzheim, Webster, and many eminent men; but on the other hand, between the two last named come an idiot and a laborer, while a celebrated mineralogist is found low down in the list, among idiots and criminals; the whole going to show that, although a general ratio prevails between brain mass and mental capacity, yet considerable allowance must be made for the *quality* of the brain, and perhaps, also, for those psychical attributes of which our author questions the existence.

A very pleasant feature of this whole series is the absence of personal controversy and the evidence of a sincere desire to do justice to all. Yet this does not preclude sharp criticism, as of one author, that "his views are only entitled to consideration in so far as they confirm previous observations" (p. 33). Nor does Dr. Flint hesitate to question Bell's title to the discovery of the functions of spinal nerves (p. 71), or that of Marshall Hall to the discovery of reflex action (p. 301); nor the remarkable conclusions of Voit respecting the regeneration of the brain after removal (pp. 64 and 337), and those of Brown-Séquard himself (p. 409), when their "experiments are extraordinary," and their "results diametrically opposed to those of all other observers."

The Insect World: Being a Popular Account of the Orders of Insects, etc. By Louis Figuier. A New Edition, Revised and Corrected by P. Martin Duncan, F.R.S. With 579 Illustrations. (New York: D. Appleton & Co. 1872.)—Though this work was written by a Frenchman for a French public, the success of the English translation was nevertheless assured by the author's happy faculty of exposition, and it is well to present it, in spite of some faults of detail, to American readers. Entomologists will find little that is new in it, but its effect on the young may easily be valuable. If out of the hundreds of readers of the "Insect World" one mind may be induced to devote thorough and conscientious study to the structure, habits, and development even of a single species, the result would be most happy for science in this country, where the tendency is to spread over too large a surface. Our author's facts have mostly been the common property of naturalists for over a century, being largely copied, even with the illustrations, from Réaumur, that fountain-head of insect lore. One may here read pleasant stories about the locust, the cochineal insect, the silk-worm, bees, ants, flies, bugs, and beetles; but he will fail to find a single fresh observation of the author's indicating any special acquaintance with the subject. Indeed, the facts are all second-hand, and in many cases nothing is lost in the telling of them. Moreover, the author has drawn his information mostly from French sources. Like many of his countrymen, he ignores English and German writers, and sometimes to his disadvantage, as in the account of the bot-flies, which he takes mostly from Joly's account, published in 1846, though Brauer, of Vienna, has lately published a work on this subject rich in biological facts not to be found in the "Insect World." Space is wanting to point out many errors in this book, the results of a compiler's haste and ignorance. They are no more glaring, however, than those of the English editor, whose style of composition is not calculated to win readers. The less said about the science of the original work the better; the scientific spirit of modern zoölogy does not pervade it. It was scarcely necessary for the editor to add a special chapter on the Thysanoptera, which he regards as a "special order," when they are recognized by many of our best writers as an aberrant group of bugs (Hemiptera), in the account of which his chapter

* "The Physiology of Man. By Austin Flint, Jr., M.D. [Vol. IV.] Nervous System." N. Y.: D. Appleton & Co. 1872. pp. 470.

might have formed a paragraph. He also says that they are nearest allied to the Orthoptera (grasshoppers, cockroaches, etc.) Why, then, are they not placed next to them, and not nearly a hundred pages away, where they rest uncomfortably between the bees and the white ants? The fringes on the wings of these little insects by no means "characterize the order" (p. 400), though they may give their name to it. Moreover, the metamorphoses of these insects are better known than might be inferred from the editor's language. Other errors and infelicities of expression might be pointed out in this chapter of a single page. In short, the work of the editor, imperfect and slight as it has been, is not rendered in lucid or always correct language, and it is, perhaps, as well that the original text has been so little interfered with, though the work still needs revision.

French Exercises for Advanced Pupils, containing the principal rules of French Syntax, numerous French and English exercises of Rules and Idioms, and a dictionary of nearly four thousand idiomatical verbs and sentences, familiar phrases, and proverbs. By C. A. Chardenal, Bachelier-ès-lettres de l'Université de France, French Master in the University of Glasgow. A new edition. (University Bookstore. Cambridge: C. W. Sever. 1873.)—Among the very many textbooks of the French language which are continually appearing, we are able to mention as specially deserving of praise this volume, compiled by M. Chardenal, of which the title gives a very good account of the contents. The rules are simple, well-expressed, and explained by numerous examples; the exercises upon the application of the rules are full, and elucidated when necessary by note; but perhaps the especial merit of the book consists in the full list of idiomatic verbs and sentences, and in the exercises by means of which they are taught to the student. This part has been prepared with much care, and there are few French scholars, even the most practised, who might not very easily find, by a careful examination, that there were still many points in the language of which they were more ignorant than they had imagined. The book, too, if intelligently used, will be of great service in the school-room.

Fine Arts.

THE MUSICAL PROSPECT FOR THE WINTER.

THE taste for music is so far developed among us, and the willingness to pay for whatever is really excellent is so well known, that there probably will never again be a time when we shall not have on this side the ocean our fair proportion of the foremost representatives of the art. It is mainly with artists a question of money and a dread of the perils of the sea. The first our managers are more than ever willing to guaranty since the immense results of the Nilsson and Parepa seasons; and the splendid vessels that are from year to year added to the Atlantic fleet make the passage only a pleasure excursion. The present season is probably a very fair example of what we may look forward to in the future, and a survey of the musical field with its present attractions and its promises for the ensuing winter months will doubtless have its interest for such of our readers as are musically inclined. And since by common consent the opera holds the first rank among musical compositions, let that have precedence in our review.

There will be no English opera this winter. That must perhaps await the return of the enterprising Rosa and his wife, who have gone down into Egypt, and will minister at Cairo to the pleasure of the Khedive and his subjects But we already have the Italian Opera, and the French and German are soon to come. The company that Maretzek controls at the Academy is essentially a new one, Miss Kellogg and M. Jamet being the only prominent members of it with whom the public are familiar. It is not a very strong company, in spite of the protestations of the managers. No one who has once heard the fine operatic orchestras and well-drilled choruses at Covent Garden, Drury Lane, or the Grand Opera at Vienna and Paris, need be told that ours are but indifferent affairs. As for the scenery, its shabbiness is sufficiently conspicuous by contrast with that of most of our own theatres. The tenors are of that class of singers who keep their audiences in a constant state of nervous apprehension lest at the next moment they should break down. To struggle through an opera without an absolute collapse is not the most satisfactory way of disposing of the music. As to Madame Lucca, there is evidently a division of sentiment, and this arises, we believe, not from the fact that she is not a great artist, but because she is great in a different direction from that in which the public had looked. She reverses all the old traditions of the characters she assumes, and presents her own distinct and strongly-marked conceptions of them. It takes a little time to adapt ourselves to this new point of view and to enable us to see the characters as Lucca sees them. But she will carry the day. Just now we have recent memories of a voice of singular sweetness in our minds, and that of Madame Lucca may seem a little harsh by contrast; but her fire, enthusiasm, and unquestionable gifts, dramatic and vocal, will win her a constantly increasing admiration.

The present season consists of forty performances, ten of which are to be matinées, and it will last until the 12th of December. Various suggestions of new operas to be brought out have been made, but nothing is more uncertain than promises of this nature. From the performances already given we may safely infer that such operas as are produced will receive a creditable but by no means an unusually fine rendering, except so far as Madame Lucca is concerned. Mr. Maretzek has some very good artists, but his chorus is as bad as usual, his orchestra insufficient, and his scenery ineffective.

The French opera begins its season on Monday evening at the Olympic Theatre. Mlle. Aimée is the prima donna, and a better one in opéra bouffe we have not had. The remainder of the company, with the exception of Gabel, who made himself famous by his personation of the gendarme in *Geneviève de Brabant*, are new to the public. Offenbach is of course the composer whose operas will be principally performed, and, in a large community like ours, there is always a large class with whom his musical buffooneries find acceptance. Later in the season—in February—the Tamberlik opera troupe will visit us. They are now at the Tacon Theatre at Havana. The tenor is the chief point of attraction in this company, but whether he retains the *ut sharp* to which he partly owes his fame, we do not know. The other names mentioned in connection with the troupe are, with a few exceptions, unfamiliar, and those exceptions do not lead us to look for the best results.

In the matter of concerts, we already have those of Rubinstein and of the Patti and Mario company, and Theodore Thomas is to give a series of six symphony soirées with his admirably trained orchestra, the first of which will take place on the 9th of November. There will be, of course, the usual series of concerts and public rehearsals by the time-honored Philharmonic Society; while we may look to the Madrigal Club, known as the New York Vocal Society, to give us the best purely vocal music that will be heard this winter in our city. Under Mr. Mosenthal's leadership this society has attained a degree of skill that makes it a rival to any similar organization, either in this country or in England, of which we have any knowledge. They will undertake works of a larger scope than that heretofore given; among them, Schumann's Mass, which will be given with orchestral accompaniment. We can give no more candid or disinterested advice to those who love vocal music in its highest and purest forms than that they should become subscribers to the concerts of this society.

Among all the artists whom the present season gives us, there is none whose name stands so high on the roll as that of Rubinstein. All things considered, he is the greatest man in his profession who has ever visited this country. He is not only the greatest living pianoforte player, but he is also a composer of extraordinary genius. His performances are a new revelation of the resources of the pianoforte as developed, not by a mere executant, but by a true poet of the highest rank. Moreover, Rubinstein is a man who despises all the shams with which managers seek to make capital for their artists. He will have no bouquets nor laurel wreaths; he refuses to yield to the foolish habit of accepting *encores*. He declines to pander to a low order of intelligence by playing poor music. He is, in fact, the instructor of the public taste, and not its servant. In Herr Wieniawski, Rubinstein has an able coadjutor. There have been players who have manifested deeper feeling, but few who have had such absolute command over the difficulties of the violin. To hear Wieniawski play a *staccato* descending chromatic scale is to receive a new sensation. His octave playing is also something wonderful. But beyond this he is a man of fine sentiment, as none can doubt who heard him play the great Kreutzer Sonata with Rubinstein; the true artist shone out then unmistakably. Mr. Grau has been exceedingly unfortunate in his vocalists. The two ladies who sing at the Rubinstein concerts are a positive drawback to the pleasure of the evening. Why need he have gone to Europe for poor singers, when good ones are here on every hand?

The Patti and Mario concerts do not add greatly to the musical attractions of the season. Carlotta Patti is undoubtedly a woman of certain rare gifts of execution; but, in a strictly musical sense, there is but little pleasure to be received from her singing; and as for Signor Mario, we hear him twenty years too late.

MACMILLAN & CO.'S LIST

OF STANDARD BOOKS.

BY THOMAS HUGHES, M.P.

Tom Brown's School Days. Illustrated.....$1 75
Tom Brown at Oxford. Illustrated 1 75
Alfred the Great. Illustrated..... 1 75
Or three volumes in box, price $5.

BY THE REV. CHARLES KINGSLEY, M.A.,
Rector of Eversley, Canon of Chester.

Westward, Ho!..... .....$1 75
Two Years Ago..... 1 75
Hypatia..... 1 75
Hereward the Wake..... 1 75
Yeast..... 1 50
Alton Locke—Tailor and Poet..... 1 50
The Water Babies. Illustrated..... 1 75
The Hermits. Illustrated..... 1 75
Or eight volumes in box, price $13 50.

Illustrated Edition of

MISS CHARLOTTE M. YONGE'S NOVELS.

The Heir of Redclyffe $1 75
Heartsease; or, The Brother's Wife..... 1 75
The Daisy Chain..... 1 75
The Trial; or More Links to the Daisy Chain..... 1 75
The Chaplet of Pearls; or, The White and Black Ribaumont..... 1 75
The Dove in the Eagle's Nest 1 75
Dynevor Terrace..... 1 75
Hopes and Fears..... 1 75
The Young Stepmother..... 1 75
The Clever Woman of the Family..... 1 75
The Caged Lion..... 1 75
Or eleven volumes in box, price $19 25.

MACMILLAN'S POPULAR EDITIONS OF STANDARD WORKS.

Uniform in Printing and Binding. Price $1 25 each vol.

A Son of the Soil. By Mrs. Oliphant.....$1 25
Old Sir Douglas. By the Hon. Mrs. Morton 1 25
The Countess Gisela. By E. Marlitt..... 1 25
Janet's Home. By Miss Keary..... 1 25
Clemency Franklin. By Miss Keary..... 1 25
Sketches of Contemporary Biography. By Harriet Martineau..... 1 25

MACMILLAN'S GLOBE LIBRARY.

Elegantly printed and bound in extra cloth, with gilt side and edges, price $2 each volume, or in plain cloth, $1 50; also in a variety of calf and morocco bindings at moderate prices.

"'The Globe Editions' are admirable for their Scholarly editing, their typographical excellence, their compendious forms and their cheapness."—Saturday Review.

The following are now ready:

SHAKESPEARE'S COMPLETE WORKS. Edited by W. G. Clark, M.A., and W. Aldis Wright, M.A. With Glossary. Ninety-seventh Thousand.

MORTE D'ARTHUR. Sir Thomas Mallory's Book of King Arthur, and of his Noble Knights of the Round Table. The Edition of Caxton Revised for Modern Use. With Introductive Notes and Glossary by Sir Edward Strachey.

BURNS'S COMPLETE WORKS. Edited by Alexander Smith.

ROBINSON CRUSOE. Edited after the Original Editions, with Biographical Introduction by Henry Kingsley.

SCOTT'S POETICAL WORKS. Edited by Francis T. Palgrave.

GOLDSMITH'S MISCELLANEOUS WORKS. Edited by Prof. Masson.

SPENSER'S COMPLETE WORKS. Edited by R. Morris, with Life by J. W. Hales.

POPE'S POETICAL WORKS. Edited by Prof. A. W. Ward.

DRYDEN'S POETICAL WORKS. Edited by W. D. Christie, M.A.

COWPER'S POETICAL WORKS. Edited by W. Benham, M.A.

VIRGIL'S WORKS. Rendered into English Prose. With Introduction, Analysis, etc., by James Lonsdale, M.A., and Samuel Lee, M.A.

A YEAR'S JOURNEY THROUGH CENTRAL AND EASTERN ARABIA in 1862-3. By W. Gifford Palgrave, author of "Hermann Agha." Sixth and Cheaper Edition, crown 8vo, $2 50.

"As amusing as a tale of the Arabian Nights."—Spectator.

THE ALBERT N'YANZA GREAT BASIN OF THE NILE and Exploration of the Nile Sources. By Sir S. W. Baker, F.R.G.S. New and Cheaper Edition. Crown 8vo, with Maps and Illustrations, $3.

"Charmingly written, full of incident, and free from the wearisome reiteration of useless facts which is the drawback to almost all books of African travel."—Spectator.

THE NILE TRIBUTARIES OF ABYSSINIA, and the Sword Hunters of the Hamram Arabs. By Sir S. W. Baker. New and Cheaper Edition. Crown 8vo, with Map and Illustrations, $2 50.

"The best book of sporting adventure it was ever our lot to read."—Spectator.

AT LAST: A CHRISTMAS IN THE WEST INDIES. By Charles Kingsley, Rector of Eversley, Canon of Chester. New and Cheaper Edition, with numerous Illustrations. Crown 8vo, $1 75.

"Better than a novel, even when it comes from such a masterly hand as Mr. Kingsley's, is this fresh and vigorous description of life, the life of nature and of man."—Spectator.

MEMOIR of CHARLES MAYNE YOUNG, Tragedian. With Extracts from his Son's Journal. By Julian Charles Young, A.M., Rector of Ilmington. New and Cheaper Edition. Crown 8vo, $2 25.

"In this budget of anecdotes, fables, gossip old and new, relative to Scott, Moore, Coleridge, Wordsworth, Mathews, Bowles, Wellington, Peel, Louis Napoleon, Dickens, Thackeray, and others, the reader must be hard indeed to please who cannot find entertainment."—Pall Mall Gazette.

WORKS BY THE REV. HUGH MACMILLAN.

FOOTNOTES FROM THE PAGE OF NATURE; or, First Forms of Vegetation. With Illustrations. Fcp. 8vo, $1 50.

BIBLE TEACHINGS IN NATURE. Sixth Edition. Globe. 8vo, $2.

HOLIDAYS IN HIGH LANDS; or, Rambles and Incidents in Search of Alpine Plants. Globe 8vo, $2.

THE TRUE VINE; or, The Analogies of Our Lord's Allegory. Globe 8vo, $2.

THE MINISTRY OF NATURE. Globe 8vo, $2.

Complete Collected Edition.

CHARLES KINGSLEY'S POEMS. Containing "The Saint's Tragedy," "Andromeda," Songs and Ballads. New edition, extra fcap. 8vo, $2.

POEMS AND PROSE REMAINS OF ARTHUR HUGH CLOUGH. Edited by his Wife, with a selection from his Letters and a Memoir. 2 vols. crown 8vo, with steel engravings. $6.

CLOUGH'S POETICAL WORKS, Third Edition, with a new Memoir. Extra fcap. 8vo, $2.

THE COMPLETE POETICAL WORKS OF MATTHEW ARNOLD.
Vol. I. Narrative and Elegiac Poems.
Vol. II. Dramatic and Lyric Poems.
Extra fcap. 8vo. Price $1 75 each.

LYRICAL POEMS. By Francis Turner Palgrave, M.A. Extra fcap. 8vo, $1 75.

MACMILLAN & CO., 38 BLEECKER STREET, NEW YORK.

An Important Work for Manufacturers, Chemists, and Students.

A HAND-BOOK OF

CHEMICAL TECHNOLOGY.

By RUDOLF WAGNER, Ph.D.,
Professor of Chemical Technology at the University of Wurtzburg.

Translated and edited from the eighth German edition, with extensive Additions, by William Crookes, F.R.S. With 336 Illustrations. 1 vol. 8vo, 761 pages. Price $5.

The several editions of Professor Rudolf Wagner's "Handbuch der Chemischen Technologie" have succeeded each other so rapidly that no apology is needed in offering a translation to the public.

Under the head of Metallurgic Chemistry, the latest methods of preparing Iron, Cobalt, Nickel, Copper, Copper Salts, Lead and Tin and their Salts, Bismuth, Zinc, Zinc Salts, Cadmium, Antimony, Arsenic, Mercury, Platinum, Silver, Gold, Manganates, Aluminum, and Magnesium, are described. The various applications of the Voltaic Current to Electro-Metallurgy follow under this division. The preparation of Potash and Soda Salts, the Manufacture of Sulphuric Acid, and the Recovery of Sulphur from Soda-Waste, of course occupy prominent places in the consideration of chemical manufactures. It is difficult to overestimate the mercantile value of Mond's process, as well as the many new and important applications of Bisulphide of Carbon. The manufacture of Soap will be found to include much detail. The Technology of Glass, Stoneware, Limes, and Mortars, will present much of interest to the Builder and Engineer. The Technology of Vegetable Fibres has been considered to include the preparation of Flax, Hemp, Cotton, as well as Paper-making; while the applications of Vegetable Products will be found to include Sugar-boiling, Wine and Beer Brewing, the Distillation of Spirits, the Baking of Bread, the Preparation of Vinegar, the Preservation of Wood, etc.

Dr. Wagner gives much information in reference to the production of Potash from Sugar-residues. The use of Baryta Salts is also fully described, as well as the preparation of Sugar from Beet-roots. Tanning, the Preservation of Meat, Milk, etc., the Preparation of Phosphorus and Animal Charcoal, are considered as belonging to the Technology of Animal Products. The Preparation of the Materials for Dyeing has necessarily required much space; while the final sections of the book have been devoted to the Technology of Heating and Illumination.

D. APPLETON & CO.,
Publishers,
549 and 551 Broadway, N. Y.

The above, when not to be had in Bookstores, sent post-paid by mail to any part of the United States, on receipt of the price.

JUST PUBLISHED.

ISOLINA;
OR,
THE ACTOR'S DAUGHTER.
A ROMANCE.
By E. O. S.
12mo, extra cloth, $2.

A book remarkably elevated and natural in tone and sentiment, full of refined and healthy thought, and exhibiting an intimate and accurate knowledge of aristocratic society in England.

MY BROTHER'S KEEPER.

A Novel. By the author of "Dollars and Cents," "Say and Seal," etc. New edition. 12mo, extra cloth, $1 50.

THE HILLS OF SHATEMUC.

A Novel. By the author of "The Wide, Wide World," "Queechy," "Daisy," etc. New edition. 12mo, extra cloth, $1 75.

The two preceding volumes, by the Warner sisters, whose graceful and felicitous delineations of life and manners are so well known to the public, present marked excellences in point both of plot and style.

For sale by Booksellers generally, or will be sent by mail, post-paid, upon receipt of the price by the Publishers,

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

The Nation.

NEW YORK, THURSDAY, OCTOBER 17, 1872.

The Week.

THE amended returns of the October elections are, if anything, more favorable than the information which we had last week. Mr. Hendricks, indeed, is elected in Indiana, but the Republican majority in the Legislature is thirteen on joint ballot against eight Democratic majority in the last Senate and House, and this secures the election of a Republican as State senator, and gives the districting of the State to that party. Mr. Hendricks's election as Governor was to have secured him the senatorship, but his astute opponent, Morton, appears to have permitted him the barren triumph of a personal victory, and to have made the Legislature safe for himself. As for the Congressmen, Mr. Voorhees, as it would seem, succeeded in disgusting the Democracy of his district, and, failing to poll the party strength, has defeat as a reward for his conspicuous whiffling and want of principle. The delegation stands ten Republicans to three Democrats; before (the total number of members being eleven instead of thirteen as now) it stood six to five; so here we have a decided Republican gain. And here we are glad to say that Mr. P. P. C. Shanks is probably defeated. He is a Republican who has openly said, in substance, that reforming the civil service is the notion of a fool or a hypocrite.

In Ohio the majority is about 16,000, the strongest Republican region, the Western Reserve, where Greeley and the *Weekly Tribune* were to do wonders among the old abolitionists, having come out very strongly on the other side, and more than compensated for the dissatisfaction in Cincinnati. In that city, however, two Republicans lost their seats, and there were no balancing gains in the rest of the State, though the Democratic General Morgan, an incompetent and feeble politician, was beaten. On the last apportionment, Ohio gained one Congressman, and the new delegation is composed of thirteen Republicans to seven Democrats, instead of fourteen Republicans to five Democrats.

In Pennsylvania, Hartranft's majority stands as we write at more than 36,000, and is in part due, says Colonel McClure, to the fact that Democrats would not come out, and that there was fraudulent counting. Doubtless there was, and doubtless he arranged for the doing of some of it; but much of the talk about fraud is mere idle talk. Not so idle, though, is what is said about the enormous registration in Philadelphia. The vote was not very heavy, but the preparation for a vote as heavy as might be needed clearly seems to have been made, and apparently this Philadelphia registry of more voters than even Tweed ever registered here marks high-water in the villany of Pennsylvania politicians. And the worst of it is that really the choice offered the Philadelphian is whether he will have fraud meditated and practised by Republicans with their general aims, or by Democrats with theirs. No one suggested a remedy, except the notable remedy suggested by the Georgians the other day, and by the Liberal journals, of electing Greeley and Brown. As, however, there is such a thing as comparison of evils, and a working majority of the people are not fools, the suggested remedy meets with small acceptance. As regards the need for tampering with the vote in this election, there appears to have been little. Hartranft's own county, a Democratic stronghold, gave him a majority. We need not remind such of our readers as wish to make up their minds about General Hartranft that the presumption is always against the charges, even the reiterated and circumstantial charges, printed in Greeley journals. In Congressmen the Republicans gain heavily; here as in Indiana Congressmen-at-large running and getting the benefit of the full party vote. The delegation, as it will be next winter, stands 23 Republicans to 4 Democrats. In the last Congress it stood 13 to 11. This is a result that points to something besides "fraud." It means a disgusted Democracy, an alarmed business community, and a very slight defection from the full Republican strength of a Presidential year.

In these three great October States and Nebraska (which went heavily for the Grant side) the Republicans have thus made sure of 69 electoral votes, and have secured no less than 47 Congressmen out of 61—a gain of 20; the majority of last Congress having been but 13, whereas it is now 33, or at the lowest 32; and there is a prospect of successfully contesting in several cases. Among the remoter results of their victories is the filling of a Massachusets senatorship, and rumor makes Butler a prominent candidate, either now for the four years remaining of Mr. Wilson's term, or two years from now when Mr. Sumner's successor is to be chosen, and when it is supposed Mr. Sumner is to be relieved. Much happens, however, in almost any given two years, and we should advise Mr. Butler to see to it that he gets the unexpired term; and we dare say, for the matter of that, that Mr. Butler's emissaries will bear watching in the November town-meetings. Mr. Dawes is also spoken of as a candidate, and so is Mr. Boutwell, who it is asserted has the best chance of success. To get Mr. Boutwell out of the Treasury, Mr. Wilson respectfully shelved, Mr. Banks promoted into the Washington lobby, which he is so fitted to adorn, Mr. Butler once more beaten in the attempt to get a place too good for him, Mr. E. R. Hoar back into politics, Mr. Bird's little clique broken up, and several other equally sanitary things done in Massachusetts politics, would be a pleasing and profitable year's work. We wish we may be going to see it all, as we have already seen some of it. Mr. Sumner's place, by the way, has not been filled; there is actually no candidate for the governorship opposing Mr. Washburne.

The Greeley papers take the October defeat, as might be expected, with various degrees of despondency. They are nearly all agreed that it was largely due to Democratic defection—though they differ as to the part played in it by corruption. The *World* calls for "a retreat in good order with lines unbroken" to a "position where the reserves may be brought up." It acknowledges that "the prospect of gaining the Presidency" is "dark," but thinks the maintenance of the fight will array a powerful opposition to the Administration which will eventually kill the Republican party. *Wilkes's Spirit of the Times* calls the idea that the corrupt use of money wrought the defeat "puerile" and "absurd." The Springfield *Republican* calls on the brethren to "steady the column and push sternly ahead," and "make of this reverse an incentive to harder work"; but it freely admits that "the probabilities are not in favor of their taking the reverse in this way," and thinks it will "impair their morale" and "cool their zeal." The Louisville *Courier-Journal* predicts "general despondency along the Liberal lines," and says that "thoughtful men" will recognize in the work of Tuesday week "a great and serious danger to free institutions," and will conclude that "in a manner it implies the failure of universal suffrage." The Boston *Post* thinks that with Indiana saved and the contest kept up vigorously, the Liberal cause is "by no means desperate"; but concedes that even in this view "it is a very close chance for it." The New York *Express* ridicules the rumor that Greeley will "decline," and says that he will only "decline" as "the sun and moon decline." It declares that the "Old Democratic Guard" will now be "more zealous than ever," and warns its friends not to corrupt the Grantites with money or offices. The Chicago *Tribune* proposes to fight on to the last, on grounds of principle and for the benefit of humanity, and thinks the result in Indiana foreshadows the result in Illinois. The Washington *Patriot* compares the Liberals to "militia" and the Grantites to "regulars," and the October defeats to a "Bull Run," to be retrieved by future training and organization. The Cincinnati *Enquirer* predicts a great triumph in Ohio in November for Greeley, but acknowledges

that "thousands of Democrats did not vote at the State election." All the articles are full of imagery drawn from the military art. The Liberal voters are all "forces," "columns," and "lines;" Greeley is their "general." They are now "closing their ranks," "pushing on the column," or else "retreating in good order"; and one paper calls for a fresh "chorus of war bugles." The fondness of politicians for military parlance is in part due to the fact that blind obedience is the highest military virtue, and reasoning on one's orders a serious military offence. If, therefore, they can get a voter to look on himself even vaguely as a soldier, instead of a sober citizen engaged in managing the affairs of his country, they can of course drag him into any folly and keep him in it for an indefinite period. Meantime, difficulty of procuring the "sinews of war" for their hosts has become insuperable, and it is probable that not another dollar can be raised for purposes of national campaigning, though of course in the Congressional districts the contest will continue.

It was all but universally conceded before the last New York Legislature had closed its sessions that it was, though elected under the influence of the movement of 1870 against the Ring, in all respects as corrupt and unprincipled a body as its predecessor, which had delivered the city, bound hand and foot, to Tweed and his confederates. It passed no measure of reform whatever, except after long delays and under the terrors of popular excitement. It refused to undo the Erie frauds of the previous year until the Erie Ring had been overthrown by other agencies, and, in fact, helped all the corrupt elements in State politics as much as it dared, though its real character was in some degree concealed from the public by the practice pursued by the press of calling it the "Reform Legislature." It is now acknowledged on all hands that unless the Legislature can be reformed there can be no real reform in the city. Accordingly, Messrs. Charles O'Conor, James Emott, W. H. Peckham, and Joseph H. Choate, all leading members of the New York bar, and three of them of counsel chosen by the Attorney-General to conduct the prosecutions against the Ring thieves, have issued an address to the electors of the State, offering their services as a committee to assist in procuring the election of honest and capable Members of Assembly. They propose to examine the qualifications of the candidates in each district—and (1) where the candidates in any district are morally unexceptionable, to offer no observation; (2) where some are objectionable, to recommend the others for support; (3) where all are objectionable, to recommend the electors to nominate others. As the signers of the address are divided between the two parties themselves, their recommendations will be free from all suspicion of partisanship, and will and ought to carry great weight. For the information of readers in other States, we may mention that the term "objectionable" applied to a candidate for the New York Legislature has much the same sense that it would have if applied to a coachman or waiter; that is, it means that he drinks or steals or embezzles.

Attorney-General Barlow was "exposed" in the *Tribune* on Monday morning for improperly taking a fee of $12,000 from the Erie Railroad for "professional services," for doing his official duty; for rendering service, in return for it, of an "illegitimate, unprofessional, and possibly corrupt character," or, in other words, using part of the money to "influence the Legislature," and bribe Mr. Henry Smith, the Speaker of the Assembly. In Tuesday's *Times*, General Barlow shows all this to be "a Greeley lie," and "nails it to the counter." He took $12,000 from the Erie Railroad to pay the expenses of a suit brought by him in the name of the State, but at the request of the stockholders, against the Erie Ring; but of this he paid $8,692 81 as counsel fees and incidental expenses, and the balance of $3,307 19 he returned to General Sickles as the representative of the stockholders. He retained Mr. Smith, the Speaker, as counsel, in pursuance of a determination reached in December before his election, because he (Smith) had been the leading counsel in the Albany and Susquehanna suits against the Ring, and did so at the request and with the advice of the firm of Messrs. Evarts, Southmayd & Choate, the counsel of the English stockholders, but never consulted or employed Mr. Smith on legislative business; nor did Mr. Smith ever appear in the litigation, as the proceedings were rendered unnecessary by the Sickles *coup d'état*. Moreover, Mr. Southmayd writes a letter showing that the stockholders wished to pay General Barlow for his services, but he declined to receive and did not receive a single cent. We advise the "organs" on both sides to employ extra men in getting up "charges" during the remainder of the campaign. There are now only seventeen working days left, as Sunday "exposures" do not count. The Barlow "exposure" has been perhaps the most wretched failure of the canvass, except the attack on Mr. R. H. Dana, jr., and the Russell Jones land "charge," where Grant was first bribed by a free gift of real estate, the proof being the nominal consideration in the deed; but on its being shown that he paid full value for it, he was accused of having returned the money, the cunning rogue. He was thus fairly caught whichever way he turned.

Mr. Seward goes to his grave amid the kind remembrance and regrets of almost all, if not of all, his countrymen. The general verdict upon him is that if he was less than a great statesman, he was yet a statesman, and not merely a politician, but that he knew and used many of the politician's arts, and, before the close of his career, had lost something of the elevation of principle which, on the whole, marked, though not always very strongly and plainly, his best years. He was, in fact, a man whose feet, so to speak, were always on the ground, and whose head was never in the air. He always had in his eye some near advantage to be gained, and perhaps it was unjust to accuse him of not having a single eye to the principles which his action certainly tended to promote. He would never have undertaken, nor even for a moment approved, nor perhaps readily understood, such a movement as that of the John Brown movement; but he could see that there was "a higher law" (he invented or at least stamped the phrase) which was beginning to be a calculable force in State politics, and "an irrepressible conflict" in which he could see where he intended to take his place. Whatever his motives of action, this is certain, that he always kept near enough to the body of the people to be a most useful leader. The phrase we have just quoted was of great service, used when it was and by whom it was, in reconciling a great many minds to the idea and the fact of the contest which so soon after came. When it did come, it perhaps found Mr. Seward unprepared; or perhaps his "ninety-day" prophecies were a bit of diplomacy. Probably not, however; he was not of a nature to apprehend the fierceness and intensity of feeling which animated the Southern leaders; he knew his own feeling, but it may be doubted if he ever knew theirs. They were not the products of a civilization in which compromise caucuses and "good enough Morgans till after election" played any great part, and he misunderstood them just in the same way as afterwards he misunderstood them again and also the temper of the Northern people. Parchment vows and Andrew Johnson were no cure for their wounds then any more than speeches about the Sermon on the Mount can fill the bloody chasm now. But between these two periods in Mr. Seward's life, to which we have referred, he did the country inestimable service; and the Seward of our foreign diplomacy between the beginning of the Rebellion and the withdrawal of the French from Mexico, the companion of Lincoln in his labors and almost in his death, will always have a high place in American history as a patriotic, well-trained, and well-tried public servant.

Whoever has the care of Mr. Froude's interests and Mr. Yates's while they are in this country, will show respect and consideration for them by shielding them from such an indignity as was put upon them in this city last Saturday evening, at Mr. Froude's reception by the members of one of our clubs. It is not fair to him, nor is it fair treatment of that portion of the community which values its good name, to invite a distinguished stranger to an entertainment where a principal figure is Mr. A. Oakey Hall; and Mr. Hall, not in his official character of mayor, which under some circum-

stances constrains sufferance for him and the forms of respect, but Mr. Hall in his private capacity, in which he would not be held to be "a clubbable man" by any large number of respectable people in any respectable city, American or European. We hope the press will do its duty in this matter, for Mr. Tyndall and Mr. George Macdonald are still to be welcomed by Mr. Hall and his associates. Mr. Hall escaped formal expulsion from the Union Club by immediate resignation, this penalty having been inflicted on him as an acomplice of the City Hall thieves, which everybody of intelligence in this city believes him to be; and he behaved with such scandalous indecency when taking his departure, that most members of the Club regretted very much having allowed him to withdraw, instead of turning him out summarily. The charge of complicity with the Ring frauds he has never dared to meet, and has avoided trial on it by taking advantage of a technicality. Were the public sentiment of the community in a healthier condition, the man would not venture to show his face on the streets; but even if he has brass enough for that, it is due to distinguished strangers to prevent his intrusion into their society.

A deficit of nearly $18,000,000 appears in the French revenue returns for the first half of the present year, and, what is worse, the yield of nearly all the taxes has fallen considerably below the estimates. The tobacco tax has produced $400,000 less; the post-office, $2,000,000. Considering the capacity for recovery exhibited by France, there is nothing very alarming in this; but it shows that the endless multiplication of taxes tells, and tells severely, on the national activity in all fields. The new commercial treaty with England, which is to be substituted for the one now in existence, and to furnish French manufactures with compensation for the burdens imposed on them by the internal revenue, is still under discussion, but with a fair prospect of a successful issue. The English are held back by the fear of giving any countenance to the theory of protection; sooner than do this, they are prepared to abandon the negotiations and let France do as she pleases; M. Thiers, however, is said to be prepared to meet this objection by solemnly repudiating all protectionist motives; and it is proposed to make the new treaty annullable by single articles, so that no subsequent disagreement with regard to any one item shall endanger the whole instrument. In the meantime, the course of things in the political world seems smooth enough. M. Thiers has quietly, and without asking leave, carried the Government offices back to Paris, and the probabilities are that, when the Assembly meets, it will be compelled to follow him. He has won over the Republicans, plainly, by the promise of a "republic," and has quieted the Conservatives by the promise that it shall be "conservative."

The Old Catholics have held a Congress at Cologne, at which representatives not only of the Old Catholic Church in Germany, but of the Old Catholics of Holland, who revolted in the seventeenth century, during the Jansenist controversy, and have never since submitted to Papal authority, as well as of the Anglican and Russian Church, were present. There was, however, a real confusion of tongues, the addresses having been delivered in English, French, German, Dutch, and Latin. There was one delegate from this country, Dr. Rose of New York, who professed to speak for many German Catholics in the United States. Professor Bluntschli, who is best known as a writer on international law, attended the closing session as a representative of the German Protestants, and declared that, while a union with the Old Catholics on the ground of dogma was impossible, or in fact a formal reunion of any kind, nevertheless, if the Catholic Church would give up her claim to the possession of "absolute truth," cordial feeling between all divisions of Christians would be possible. Two important committees were appointed—one to take measures for the election of a bishop, and the other to consider the means to be adopted for bringing about a union between the Old Catholics and other Christian denominations. The latter made a report, which was rather vague in terms, and declared that what was needed was a common understanding as to the grounds of the Christian faith, while nothing like uniformity need be attempted. The committee are now engaged in negotiations with the other churches. The most important members of this committee are Dr. Döllinger and the Abbé Michaud.

It ought to be added, however, that in the opinion of some of the best observers the Old Catholic movement *quâ* Catholic is a failure. As a mere secession from the Roman Church, which was to be simply Catholic without the Papacy, it took no great hold of the public mind, and after waiting a year the chiefs took decided steps towards Protestantism, Döllinger going so far as to eulogize Luther. The late Congress went still further, proposing to get rid of auricular confession, celibacy of the clergy, and what not, and go back to that ill-defined haven, the doctrine and discipline of "the Primitive Church." All is now in great confusion. Nobody knows what the beliefs of the new church are, or are to be, or what the new bishops' duties are to be, and if all the elements which are taking part in the movement from all parts of the world can be brought to a common understanding, it will be little short of a miracle. Professor Bluntschli, who addressed the Congress in the character of chairman of the "Protestant Association," which was established for the maintenance of a high standard of morality as the true and only mark of a religious life, warned the Old Catholics that the Protestants could not unite with them on any doctrinal ground, and that such a union was "altogether superfluous." The champions of the Papacy in the meantime are in high glee, and think the schismatics are ruined, and indeed it looks as if they were not going to be very formidable as an organization.

The Greek Church, which has watched this schism with the greatest interest, was represented at Cologne by an arch-priest, who addressed the convention; and the hopes which it entertains of drawing over to itself the Old Catholics are expressed in a pamphlet just published in Berlin by a layman of the Russo-Orthodox Church. He entreats Döllinger to become in truth an *Old* Catholic, and for that purpose invites him to go much further back than the promulgation of the Infallibility dogma—say a thousand years or so *(in die Tiefe der Zeiten)*—and let his logic land him in the arms of the church which is most ancient, and which is eager to receive him. The layman, however, puts forward the condition of union which Bluntschli deprecates—an acknowledgment that the Orthodox Church is the truth, without the slightest admixture of error, and incapable of making any compromise with heresy. He also speaks of the "slippery path of Protestantism," and warns Döllinger off in a way to leave it to be inferred that any attempt on his part towards unity in that direction would disqualify him from becoming an Old Catholic in the Eastern sense of the word. This shows a bad outlook for the High-Church party in England, which has for many years coquetted with the Russian Church; and equally bad for dissenting Protestantism, which, after all its willingness to become reconciled with the anti-Papal schismatics, must still expect to differ with them as to the proper relations of church and state. The Old Catholics do not quarrel with the existing connection; they only claim the right to supplant the Infallibilists in the recognition and support of the Government. It is very doubtful whether, if they could once dispossess their rivals, they would endorse the legal arguments with which Bismarck has sought to convict the Bishop of Ermeland of violating the law by his excommunications.

The Prussian Minister of the Interior has published a warning against the abuse of the liberty of combination *(Coalitionsfreiheit)*, which only uses strikes as a means of agitation for other purposes, and to intimidate the individual workman. He calls upon workingmen to preserve their personal liberty and their privilege of union against such dangerous and tyrannical perversions; and cites laws, the penalties of which shall be promptly and directly inflicted upon all illegal agitators. This order, following so close upon the meeting of the three Emperors, is by some regarded as a fruit of their consultations upon the "International" movement.

THE LESSONS OF THE CAMPAIGN.

WE presume the most ardent promoter of the "beneficent revolution" admits by this time that it has been indefinitely postponed—or, in other words, that "the Greeley movement" has virtually come to an end. The bawling and vituperation of the campaign will doubtless be carried on a fortnight longer by the more zealous and irrepressible of the disciples, but they all know perfectly well that the game is up, and that the Sage will have to remain in the private station in which he has won the admiration of so many honest people, and in which he has rendered his country so much real service. It is, therefore, we presume, not a bit too soon to ask the various "independent journalists," "thoughtful Democrats," and "Christian politicians" who have been "working" for Greeley, to sit down for a few minutes for sober, profitable, though it may be bitter reflection.

The first thing that must strike them as singular and disheartening in the present situation is that now that the Greeley movement has come to an end, it leaves absolutely nothing behind it. With the disappearance of the candidate the whole organization vanishes into thin air. Not an idea, principle, doctrine, maxim, or hope does it drop in the political arena. What we see, after the combatants have retired, is simply several hundred yards of blackguard newspaper articles, and the prostrate forms of several seriously-injured politicians who will probably not be fit for duty for several months, and some of whom we sincerely respect and tried in vain to keep out of this wretched scrimmage.

This is of course, however, as every one now sees and as every one might months ago have foreseen, the natural consequence of the conversion of the reform movement into a mere personal assault on General Grant. Mr. Schurz never said a truer thing in his life than when he warned the Cincinnati Convention that if it took up the cry, "Anything to beat Grant," it were better it had never met. In doing so it lost at one blow the support of a large portion of those silent but sympathetic spectators throughout the country who were looking eagerly to it for something in the nature of a political revolution. But even if it be admitted that all the charges Messrs. Sumner and Schurz have made against Grant were true, and that it was desirable to replace him by somebody else, and that a campaign having for its object his expulsion from the Presidential chair, and nothing else, was legitimate, the first condition of success in such a campaign was the selection of a candidate who would bear scrutiny from all sides, and bear it well, and whom the Democrats might have rallied to without patent baseness and trickery on their part, and without time-serving or tergiversation on his. As there has to be a President, it was clear enough that people would not turn Grant out without a very careful consideration of what they were to put in his place. In other words, there was no use in Sumner's or Schurz's or Trumbull's going about the country denouncing Grant simply. These denunciations by themselves produced little or no impression. Few if any would form any judgment on them until they heard what had to be said about the man who it was proposed should succeed Grant; for the faults of one candidate and the merits of the other form in the voter's mind one idea, complex it may be, but still one. To abuse Grant, therefore, and keep silent about Greeley, as many Liberal orators did, was a political absurdity of the first order. To win in a personal contest, not only has your antagonist to be a feeble man, but you have to be a stronger man than he.

What was most injurious to Mr. Greeley was, however, not Mr. Greeley's own record, bad as that was in many places, but his alliance with the Democracy. If it be asked why Democratic support should have proved more injurious to him than to any other possible or probable Liberal candidate—Mr. Adams, for instance—the answer is very simple. Mr. Greeley's whole career down to 1871 was of a kind that made any reconciliation or common action between him and the Democrats impossible without such a serious modification of opinions on his part as would shake all confidence either in his honesty or his sagacity; and, for the purposes of the Presidency, it made little difference in the popular eye whether he was a knave or a fool. He may have been right in his language or opinions during the last twenty years; but, if he was, his sudden change on receiving his nomination was sure to destroy confidence in his virtue; if he was not right, his failure to find it out till this late period was fatal to his reputation for wisdom. Moreover, he was one of the few men whom the Democrats could not take up without exciting disgust. Their transaction with Greeley was not one that could be hidden from the public gaze. Everybody saw the whole of it, and it was marked throughout by the suppression or repudiation of everything which served the Democratic organization as a reason for existing. What it had to surrender, in order to take Greeley, left no excuse for its maintenance except naked greed for office. The country would not swallow such a combination. There were men in the Republican ranks, or possessing Republican sympathies, whose general ideas on the subject of reconstruction, taxation, State rights, and general governmental policy, made it possible for the Democrats to support them without any other abandonment of principle than what hard facts had made plainly necessary: but Greeley was not one of these men, and the Cincinnati Convention refused to nominate any of them.

Moreover, the attempt to make Greeley the apostle of reconciliation was not only a failure, but the most ludicrous failure of all. Reconciliation is a process partly mental and partly moral. Enemies are reconciled by the mutual determination to forget past differences, and by the springing up of a mutual liking. In the absence of these facts there is no reconciliation. Whenever they exist between the North and the South, the North and South will be reconciled, no matter who is President; as long as they do not exist, they will not be reconciled, no matter who is President. To talk of reconciliation through the election of a particular man, without reference to the state of public sentiment, is absurd. Indeed, the oddest thing in the Greeley canvass was the determination of many of his newspapers to treat everybody who denied his fitness for the Presidency as a fosterer of discord; that is, they would only hear of one mode of reconciling North and South, and this was by making President a man whom three-fourths of the voters believed, on various grounds, to be unfit for the position, and who had played a larger part than any one living in precipitating the conflict which made reconciliation necessary. Ex-President Mahan's sermons, showing Greeleyism to be a sort of double-extract of Christianity, were perhaps as odd freaks as were ever perpetrated in the name of religion. "We want you to be good friends," said the Greeley apostles, "evermore; but we insist that the only way to become good friends is to stand on your heads for five minutes; anybody who says you can be reconciled in any other way than this is a man of blood."

The last point in the lesson which our Greeleyite friends may learn from the campaign is perhaps the most profitable and important one of all. It is that the American people, though an enthusiastic people, are a business people—that is, in spite of their great toleration of mere talkers, they have a strong liking and admiration for *doers*, or men who have displayed capacity in the conduct of important affairs. The Cincinnati Greeleyites underrated the weight of this peculiarity enormously, and are now suffering for it; but when they began of late to ridicule Grant for not making speeches, they showed that they had not then found out what was the matter with them. The truth is, that a man who has won battles may remain silent till the end of his life, and smoke twenty cigars a day, without losing the popular confidence. General Grant has successfully transacted some of the most important business which falls to the lot of man—business which every one feels in his heart tasks human powers to their utmost capacity. To shake the hold which this gives him on the popular mind, you have not only to prove his shortcomings, but to put up against him another man who also has displayed talent for great affairs, or, at all events, talent of the kind which produces tangible and striking results. Instead of this, the Greeleyites put up a man who

had never displayed any capacity for affairs, and never figured in any great transaction, and who had won his influence and reputation by mere preaching without responsibility, and without exposure to any tests or checks beyond those created by newspaper "sales" and "subscriptions." No doubt it is a great thing to have established the New York *Tribune;* but you cannot get people to believe that it is an exploit indicative of fitness for any other business in life, or put the man who performs it on a level with a great commander or great financier. Of course, too, whatever absurdity in Mr. Greeley's nomination was created by his personal character and antecedents was aggravated by the attempt to get up a "singing campaign" in his honor. No man can be sung into the Presidency who has not some trace of the hero in his composition. He must in some way strike the imagination. The Greeley candidate was nothing if not ludicrous. His best friends smiled when they spoke of him. His odd clothes, odd gait, odd expression, and bad manners might have stimulated enthusiasm if they had belonged to one who had turned the tide of battle on famous fields, or directed the fortunes of a great campaign, or shaped and embodied in legislation great lines of policy. But in his case there was nothing behind them in the way of achievement but a mound of slipshod and abusive "editorials," and a few hasty, crude books on subjects he had only half-mastered. The campaign will now pass into history as the most comical and yet the most instructive episode in American politics.

SIR ALEXANDER COCKBURN'S "DISSENT."

THE publication of Sir Alexander Cockburn's reasons for dissenting from the conclusions of his colleagues on the Board of Arbitration, in the middle of "the dull season," has been a godsend to the English newspapers, and has vigorously revived the discussion of the *Alabama* affair in all its branches. But the general verdict seems to be against the Lord Chief-Justice, both as regards the timeliness and utility of his argument. He has undoubtedly produced the ablest and most brilliant defence of the conduct of Great Britain during the rebellion which has yet appeared, but it has come unfortunately from the pen of one of the arbitrators, and that one the representative of Great Britain herself; and it enters into a variety of matters wholly foreign to the legal controversy, such as the justifiability of English sympathy with the rebellion, and the propriety of Lord Russell's conduct in his general discharge of his official duties. He, moreover, takes up and rebukes what the English counsel, both in their counter-case and their arguments, creditably and prudently passed over in silence—the abusive tone of the American pleadings; and in one or two places he administers a smart snub to the Continental members of the Board for inaccuracy or want of perspicacity.

The main points in his objections to the decision of the Arbitrators may be summed up very briefly somewhat in this way: He cannot reconcile himself to giving the three rules a retrospective effect. The arrangement is to his mind, as an old lawyer of the common-law bar, utterly absurd and unjust; and it is made all the more so by the quasi-criminal character given to the proceedings by the American pleadings. If the question of England's "guilt"—or, in other words, of her insincerity or bad faith—was to be tried by the Tribunal, it was monstrous to try it under a code which did not exist when the alleged offences were committed. The British Commissioners, he points out, offered at Washington, as Mr. Seward had offered at an earlier period, to submit the whole matter to arbitration just as it stood, without rules or restrictions. Had this offer been accepted, undoubtedly the moral as well as legal responsibility of Great Britain would have been tested by the standards then in force, which were different from the standards created by the Treaty, as is proved by the agreement of the Americans to adopt them and induce other nations to adopt them—a pledge which would have been entirely unnecessary if they had already formed a part of the existing code of international law. But since Great Britain, for the sake of peace and harmony, agreed to adopt them and give them retroactive effect, it is highly unfair to give them the same effect in estimating the extent of her delinquency as if she had during the war been consciously acting under them. Thus, in considering what constitutes "due diligence," he holds that the standards to be used are those created by the old law and not those created by the new rules. "I will agree to be judged by the new law," says England, "but in judging me you must not bear as hard on me as if, at the time I was committing the acts complained of, the new law was known to me as the measure of my obligations." In short, if she is to be condemned, it ought to be with what French juries call "attenuating circumstances."

It is, however, on the points of what constitutes "due diligence" that Sir Alexander Cockburn shows the widest divergence from his colleagues, and his argument on this point possesses the highest interest for Americans as well as for Englishmen, because the objections it raises to the measure of obligation laid down by the Board are such as will, in all probability, be raised in this country the first time that we are charged with failure in the discharge of the duties of a neutral, and are, in fact, very like those which were raised on behalf of the Government when the French-Arms Affair was under discussion last winter. They are objections, too, which are not likely to occur to anybody but Americans or Englishmen, inasmuch as they are the natural product of the relations between the government and the people which are peculiar to the United States and Great Britain, and which most continental Europeans find all but incomprehensible. Sir Alexander Cockburn holds, as an American lawyer would be apt to hold, that what a neutral government ought to do in discharge of its neutral obligations, must be regulated by the spirit and tenor of the national institutions, and must be done by means of procedure in harmony with those institutions. For instance, in a country like England, in which the Government seldom takes the initiative in anything, in which its conduct is as much restrained by law as that of any individual, and in which any meddling with private property renders its officers responsible before the courts, and in which the margin of discretion left to the executive is exceedingly small, the test of "due diligence" must be very different from that used in determining the obligations of a government like that of France or Prussia, where the executive is all-powerful, and takes the initiative in everything, and private rights count for little when standing in the way of State necessities; that, in short, while it might be reasonable to expect M. Thiers or Prince Bismarck to act on very slight suspicion, it would not be reasonable to ask Earl Granville to act without the production of such proof as would support a *prima-facie* case before a magistrate—without, in short, what the common law calls "probable cause."

Now the majority of the arbitrators being Continental men, used to the prompt and arbitrary procedure of Continental governments, refused to take this view. They showed that they considered the doubts and hesitations of the English Ministers, and their craving for legal advice, almost ridiculous. They have laid it down very plainly that the obligations of a neutral are to be measured by the physical ability of an arbitrary government, or, in other words, if their ruling is to be taken as law hereafter, every neutral must be prepared to use, to fulfil its obligations, without delay, and on the smallest suspicion, the whole force of the state, without other restrictions or conditions than would surround the action of an entirely free agent; that is, neither the custom of a country, nor the spirit of its institutions, nor the state of its municipal law, is hereafter to be a good plea against a belligerent's complaints of want of promptitude or vigor. Nor is this all; they lay it down that the nature of the precautions ought to be determined by the magnitude of the risk which the belligerent is likely to run, and ought to be such as the neutral would take were it itself exposed to a similar risk from a similar cause. England ought, therefore, not only to have done what M. Thiers might do to prevent the sailing of the *Alabama*, but what Thiers would probably do if he found that the *Alabama* was going to commit depredations on French shipping.

This, it will be seen, will be a hard rule for us as well as for the British, and it is of the highest importance that we should know it

and note it, the more particularly as all Tribunals of Arbitration are likely to contain a majority of Continental Europeans; that is, of men bred under systems of jurisprudence entirely different from our own. At the same time, as we remarked when the news of the decision first reached this country, the precedents established by the Tribunal in the condemnation of particular vessels impose no hardship on anybody.

THE EMPERORS AT BERLIN.

PARIS, September 30.

IT is perhaps idle to make any conjectures on the results of the interview of the three Emperors in Berlin; and it is a remarkable fact that so far nothing has transpired of the conversations held between the three sovereigns and their ministers. The secret has been so well kept that journalists have been thrown back on their imagination and their instinct. This instinct has generally led the French papers, and I may add also the English, to believe that there was absolutely nothing in the interview, that there was no state secret hidden under all this pomp and circumstance. The German press has affected an ominous silence, or has talked, as it were, against time. As for the Russian press, it is so completely controlled by the Government that its utterances have remained in that region of diplomatic insignificance where words seem to lose all their sense.

In our time, even diplomats and kings are obliged to govern themselves in accordance with the national aspirations. A man like Cavour, like Bismarck, like Gortchakoff, may still have an immense influence, but this influence is precisely drawn from a fine comprehension of the necessities of the time. For the present day, it may be said that the moral director and ruler of European politics, the arbiter of our Continent, is Prince Bismarck. Whatever was done and said at Berlin was said and done under his influence and under his control. The key of the interview of the three Emperors must, therefore, be sought in the character and opinions of Prince Bismarck himself. Whoever has followed him from the beginning, and read not only his official despatches, but the part of his private correspondence which has already been published, will have, I believe, no difficulty in summing up his political *credo*. Bismarck represents a double idea; he represents, first, the political unity of Germany, a unity to be accomplished not by revolution—he is essentially an enemy of what the French Jacobins call the *Revolution* (and which they always write with a capital R, as one used in old days to write the King)—but a unity to be accomplished in the name of historical rights; and among the various forms of right Bismarck does not hesitate to place the right of conquest. But it is not enough for Bismarck that Germany should be a great federative Empire, strong enough to resist the aggressions of her enemy, no longer divided into petty and rival kingdoms, but organized by a sort of modern feudalism. He represents also the predominance of the German race and culture over the Latins on one side, the Slavic races on the other. His vast programme is not yet accomplished; but how much has already been accomplished! The French mind is not yet reconciled to the idea of German unity. Many statesmen are still deceived on this subject; they attach an undue importance, even now, to the fancies of the young King of Bavaria, to the agitation of the Catholic bishops. They still hope that Austria may become the nucleus of the South of Germany against the North. We owe to these deplorable illusions the loss of Alsace and Lorraine. I remember the time when it was a political heresy to believe in German unity; when the line of the Main was considered a wall which the influence of Bismarck could not climb. Most Frenchmen still believe that the defeat of France has been resented as a misfortune by Austria; but the German provinces of Austria have, on the contrary, triumphed almost more loudly than Prussia over Sedan. The Emperor of Austria, who remembers Sadowa, remembered also Solferino, and whatever may have been his private feelings, he could not have become an ally of Napoleon III. against Germany. If Prussia had been conquered, he could then have appeared as an arbiter. He would have been in a position to say to Germany, "You have dismissed me from the Bund. I come now to save you. I come to protect you and to take my place again at the head of Germany." But Prussia was not conquered, and if Francis Joseph had attempted to stay Germany on the path of victory, he would simply have given the signal for a revolution.

Bismarck, who knows all the forces of the times, had secured many allies in the press of Vienna. Some of the leading papers of the Austrian capital are more Prussian than the papers of Berlin. The Jews, who are very numerous in Vienna, and very influential, are all his allies, as Bismarck represents in their eyes the cause of religious freedom. By a singular chance, Bismarck has also the Hungarians on his side, and the Hungarians are now the real rulers of the Empire. The battle of Sadowa brought them into power. Count Andrássy does not represent revolutionary Hungary, Kossuth's Hungary, beaten, persecuted, deprived of rights, but a powerful and loyal kingdom, which upholds in the valley of the Danube the flag of Maria-Theresa. Andrássy became an ally of Prussia. He understood perfectly that if Austria became again too German, owing to a defeat of Bismarck's policy, the golden days of Hungary would be gone. Francis Joseph is naturally enough inclined to remember the days of the old Empire and of the Bund, broken in 1866. The Hungarians are perfectly satisfied with the new order of things. In the dualistic system which is now prevailing they are one of the two pillars of the state. Bismarck well understood that this dualism gave him practically the alliance of the Germans as well as of the Hungarians. The Germans, in order to protect themselves against the pride and the ambition of the Magyars, are obliged to use the prestige of the German Fatherland, of the German victories over France. The Hungarians desire the *status quo*, and are unwilling that Austria should again become the leader of Germany. The German Chancellor has no interest in breaking up the somewhat artificial system which is now prevailing in Austria; he shows good-will and sympathy to the new Empire which calls itself Austro-Hungary. But how can he calm the German passions, all ready to seize upon the German provinces of Austria? In the very name of what the Augsburg *Gazette* calls Gross-Deutschland, he is obliged to declare Austria the representative of German interests in the valley of the Danube. If Austria fulfils her mission; if she can, with the help of the Hungarians, check the advance of the Slavic races, why should Prussia destroy her power, which has practically become her instrument?

Everything tends, therefore, to form an alliance between Prussia and Austria at the present moment. But how will Russia be drawn into such an alliance? The Emperor Alexander has been an enemy of France ever since his visit to Paris, during the reign of Napoleon III. His life had been threatened in the Bois de Boulogne by a Pole; and his assassin had simply been condemned by a French jury to penal servitude. When he visited the Sainte Chapelle and the Palais de Justice, young barristers insulted him with cries of "Vive la Pologne." He returned to Russia disgusted with France, with the Imperial Court. The disaster of Sedan he hailed with joy. He was shooting with some friends when he received the news of it, in a small estate where he likes to live like a private gentleman. The evening of that day he drank the health of his uncle, the King of Prussia, broke his glass, and told his guests to do likewise. All the pieces of glass were collected and remelted into the form of a cup, on which is engraved the word *Sedan*, and which is now on the chimney of his bedroom.

Those among the French who hope for a Russian alliance against Germany are ignorant of these facts, and that Alexander has the greatest veneration for his uncle, the Emperor of New Germany. Those who are better informed insist on the French proclivities of the Czarevitch; but, first of all, the Emperor Alexander is still young, and the Czarevitch has no power for the present. All the higher ranks of the Russian administration, of the army, of the various ministries, of the universities, are filled up with Germans. Russia is one of the great outlets of Germany, and though the old Moscovite party is hostile to German influence, it cannot help feeling it. A war between Russia and Germany would be a very portentous event; it would be a war of races; but on both sides it is felt that it would be a great calamity. Germany has no desire to extend herself in the Russian Empire. Russia knows that she can hardly annex any part of Germany, and her ambition is only directed for the present towards the Black Sea. Time is working for Russia. She need not draw the sword from the scabbard; she has, without shedding any blood, obtained the partial revision of the Treaty of Paris, and obliged England to submit to it. The gigantic changes which have taken place in Russia since the Crimean war will some day find their subjective expression. Not only have sixty millions of slaves become men, but the whole system of government, the administration of justice, public education, the army, everything has been changed. These reforms are still in progress. The network of the Russian railways has still to be finished. Coal-fields as large as kingdoms are still sterile. Russia wants no conquests; she has her own soil to conquer first. She cannot refuse her moral support to the Christian populations of the East, but she is much more sincere than many believe when she says that she has no actual desire to seize Constantinople. The more she is inspired with the ideas of occidental civilizations, the more she develops herself, the more also, without running the risks of war, she will be considered as a Providence by the many races which are still under the nominal rule of the Great Sultan. The policy of Russia is now, and will probably for a long time to come, remain pacific.

Looking at the subject from this point of view, I cannot help considering the interview at Berlin as a manifestation in favor of European peace. It is certainly rather curious that such a demonstration should be made by

monarchs in uniforms, surrounded by a host of generals and marshals, and in the form of a succession of military reviews. But such are the fashions of monarchy, especially in Germany and Prussia. It was once said that the best definition of a woman was, "an animal which keeps dressing and undressing." The same is appropriately applied to all German princes. It is not likely that any formal action was decided on between the three Emperors and their ministers, but the mere fact of their meeting was an indication that France had nothing to expect from any Austrian or Russian alliance; that the verdict of victory had been accepted by Europe. I will not go so far as to assert that the meeting was a demonstration against the establishment of a Republic in France. Bismarck has been very careful to avoid any expression of opinion on French internal politics. During the war, he was only looking for somebody, whoever it might be, with whom he could treat. Now, France still owes money to Germany, and he treats the French Government of the day like a debtor whose credit he wishes not to endanger. Even the name of Republic has nothing offeusive to him. No statesman in Europe has been more desirous of securing the sympathies of America. The Russian Emperor is a sort of natural ally of the American Republic. But the American Republic is a political power, the force and direction of which is known; it has a tradition, it has a diplomacy, it has rules, it has a Constitution. The French Republic is not in the same circumstances. It is, so far, only the Republic of a man, of M. Thiers. Conservative to-day, it may to-morrow become Radical, socialist, propagandist, warlike. Everything hangs on the thin thread of a single life, and the French Republic, without any constitution, is nothing better than what Tacitus called a *principatus*. M. Thiers is the *princeps*, the Republican Prince. What disturbs the statesman of Europe is not so much the actual appellation of the French Government, not so much the revolutionary passion which was shown under the Commune, as the passivity of a whole nation, its ready acceptance of any rule, provided it is a personal rule. It becomes too evident that the higher classes, those who call themselves conservative and liberal, will always accept any government, whether it is the product of violence or of duplicity. The political questions are not fairly brought before the people, discussed and resolved, as they are in a true Republic. The great principle of the obedience of the minority to the majority is not understood. Under such circumstances, the future of France is open to all sorts of accidents; and it is not to be wondered at if the great European powers are drawn together by a sort of conservative feeling.

ITALY'S WEANING FROM FRANCE.

FLORENCE, Sept. 16.

CONSIDERABLE excitement is still prevailing in Italy in consequence of the military engineering works undertaken by the French Government at the opening of the Mont-Cenis tunnel near Modane. To the eyes of the Italians the mines digged there by the engineers of the French army were looked upon not only as a symptom of distrust, which was disagreeable to them, but also as an eventuality that the costly work, one of which our century, and Italy in particular, has a right to be most proud, would, if ever it came to a war between the two countries, be in great part destroyed, and at any rate put out of service for some time to come, whilst the digging of the ground was going on. It seemed to them that a few pieces of artillery placed at the mouth of the tunnel would be quite sufficient to defend it in case of war, and that it was a gratuitous vandalism to threaten with destruction so admirable a work. Moreover, the Minister of Foreign Affairs, M. Visconti-Venosta, immediately demanded an explanation at Versailles, and was assured that the engineering works bore no hostile character whatever towards Italy, and were simply the result of experience during the late war of the utter insufficiency of improvised mines. M. Visconti-Venosta then proposed that the tunnel should be neutralized in time of war as a work belonging to the world at large, rather than to Italy; but to that M. Thiers would not consent. The only thing he did consent to was to suspend the work and defer it until the day when Italy herself should begin similar works of defence on her own side of the tunnel, in order that the railway service might not suffer a fresh interruption. There is some hope even that both governments will agree upon constructing a *tête de pont* on each side of the tunnel, to preserve this eighth marvel of the world.

This whole matter is in itself of small importance. There can be no doubt whatever that France has a full right to take all such military precautions as she may think necessary on her side, and the Italians, who themselves commenced constructing new fortifications along the Alps and the Mediterranean as early as the winter of 1870-71, are the last who ought to complain of any such proceeding. Nevertheless the dispute, out of which the papers have made considerably more than it really deserved, because of the "dull season," is an outward symptom of the feelings and relations subsisting between France and Italy and their daily inclination to cool. It is brought into connection with other facts of the same character; such as the termination—*de facto* if not *in forma*—of the treaty of commerce concluded in 1863 for a term of twelve years. This treaty was framed on the principle of free trade, then in favor with the French Government, now repudiated by it. It was similar to those concluded with Belgium, England, and Germany, and Italy had derived great advantage from it, as well as France herself, if we are to believe her most distinguished economists. Then there is a petty sum of 500,000 francs which France owes to Italy, and which—under the pretext of paying pensions to the secularized monks of the county of Nice, which became French in 1860—she refuses to pay. There is, moreover, the eternal presence of the *Orénoque* at Civita Vecchia, a French frigate waiting for the Pope's commands in that Italian harbor, and which has already had more than one bone to pick with the Royal authorities. Finally, M. Fournier, the French Minister in Rome, is said to have loudly remonstrated against the putting up of a commemorative stone in honor of Galileo on the walls of Villa Medici. Now, Villa Medici belongs undoubtedly to France, which has established therein her *Ecole de Rome* for painters and sculptors; but is that a reason, the Italians ask, for not allowing an inscription to remind the passer-by that in this house Galileo maintained that the earth turned "round the sun"? It appears, however, that the tacit sarcasm of these simple words wounded the feelings of an "august personage," and that M. Thiers thought it his duty to advise a less inconsiderate conduct on the part of the Italian Government.

All this would suffice to persuade the excitable Italians that the French Government wants to pick a quarrel with them; besides, every menace in a French newspaper assumes the proportions of an official advertisement, and even of a diplomatic event, in the eyes of this most distrustful people. The French clerical press is exceedingly indignant in advance about the bill, said to be prepared and proposed by Signor Sella, combated by Signor Visconti-Venosta, on ecclesiastical property in Rome. Upon this, public opinion at once takes alarm, being convinced that M. de Rémusat, the French Minister of Foreign Affairs, has remonstrated, and that the Italian Foreign Office, headed by a weak and timid man, has, in consequence of these remonstrances, tried to prevent the presentation of the bill. I am not initiated into the secrets of French diplomacy; but however disposed it may be to interfere when the new law is about to be submitted to the Italian Parliament, I strongly doubt if it would take so provoking an attitude on the strength of a mere report. Signor Visconti-Venosta, it is true, constantly and on every occasion referring, as he does, to the weakness of the kingdom, and to its moral obligations towards the Catholic powers, cannot fail to draw down upon himself disagreeable observations of this kind, and it would be highly desirable, if not for the safety, at any rate for the dignity of the nation, that a less humble servant of the Great Powers should be placed at the head of the Foreign Office.

Be this, however, as it may, one thing is certain: the Moderate Liberal party in Italy, French enough in its sympathies but a few years ago, is rapidly shifting to the other side. Till now the Radicals alone looked upon Germany as Italy's ally, at first because she was the enemy of their *bête noire*, Napoleon III., and then because she opened fire upon the Catholic Church. But even on their side it was a logically calculated friendship, no natural sympathy; for they never can forget that the real native land of their radical ideas is France, not Germany. As for the Moderates, they never disguised their antipathy for Prussia and Germany, and overcame with difficulty these feelings, which, however natural and explicable they might be, were in direct opposition to their interests. Belonging to a generation which was wholly under the spell of the French liberal ideas of 1830; believing in constitutional monarchy, as it was embodied in the Orleans dynasty, as the last word of political wisdom; having lived for the greater part as exiles or emigrants in France; speaking the French language as well as their own; having a far better acquaintance with French literature than with their own; receiving from Paris not only their fashions, but also their philosophical, political, and literary ideas; seeing, in short, in the French civilization the *nec plus ultra* of modern culture, in France the representative of modern Europe—it was but natural that they should look up to her admiringly. Germany was in their eyes quite the reverse. They were able to understand neither her language, nor her ideas, nor her political situation, all of which seemed dim and obscure to them, and inspired them with the instinctive awe with which darkness is wont to inspire children. Add to this the reactionary policy which prevailed in Germany so long, the historical traditions of the "Roman Emperors of German nation" who used to invade Italy with their armies; above all, the presence of the Austrians (who were the real personification of the *Tedeschi* in their eyes) in Lombardy and Venetia, their influence at Naples and Florence, the persecutions they all had had to suffer at their hands, and it becomes clear enough that they could not like Germany. Then came Napoleon III.'s redeeming intervention in 1859; and gratitude

united with natural affinity and community of education. After the victory, and when the party of action wished to go still further and attack not only Rome but the Roman Church itself, the Moderates, who at the bottom are all good Catholic believers, however opposed they may be to the temporal power of the Pope—the Moderates, I say, saw in France the natural defenders of the Catholic faith, to whom double court was to be paid, first as an ally of their enemy, the Pope-King, secondly as their own future ally against the Radical unbelievers. And all these reflections and considerations won a still greater value by reason of their firmly established trust in the invincibility of France.

All this began to change in 1866, when the strength of the Prussian army became known, when it became clear that Prussia was following the same road which had guided Piedmont towards the unification of Italy, and when finally Prussia bestowed upon Italy the last province still occupied by foreigners—Venetia. The change, however, was almost imperceptible, and even 1870, which witnessed unheard-of proofs of German strength and French weakness, and allowed Italy to reach her so long and so ardently longed-for capital, Rome—not even 1870 broke the spell, nor entirely converted the Gallomaniac Italian Moderates. They were full of pity for the downfall of their friend Napoleon, they were stunned by the breakdown of their idol; they dreaded German haughtiness and thirst for conquest; the faithful among them distrusted Prussian free thought; the more advanced trembled for the champion of modern society, revolutionary France. The French Government, the French press, French public opinion, had to wound Italian pride and dignity by a thousand needless stings, in order to rouse them to full consciousness. All the proofs the German Empire gave of pacific intentions, all its assurances of support to Italy when Prince Umberto went to Berlin, on one side; and on the other, the insane fury of New Italy's worst enemies, the priests, against Germany, and their avowed sympathy for the French Republic, which they expected would take revenge of its defeats on the weaker neighbor, were wanted to open the eyes of the Italians finally. Absolute evidence, evidence as clear as broad daylight, of the solidarity of the two countries of Europe last unified, and of the identity of Italian and German interests against their two common enemies, France and the Jesuits, were needed to convince these modern Thomases and draw them into the arms of Germany. And even now it is with distrust that they turn towards her; they are fully aware that self-interest at present makes the powerful monarch who received two Emperors and twenty sovereign princes in his palace last week, their safest ally; but they are still suspicious, like all southerners, nor do they yield entirely. Another generation will have to grow up to overcome this distrust, if indeed it ever will be overcome. Certain it is that the generation born between 1840 and 1850 is quite as anxious now to acquire and assimilate the German language and civilization, as the men born between 1810 and 1830 were to acquaint themselves with the French; but even this will not suffice to overcome the inborn antipathy and reluctance of race. Happily for the world, however, there are such things as material interests far stronger than ideas and antipathies, and these promise to render the policy of Germany and Italy mutually solidary, if not identical, for many years to come.

Correspondence.

MR. PESHINE SMITH.

To the Editor of the Nation:

Sir: The large and influential parish of your readers in this city were much pained to find, in your issue of October 3, an attack on the character of one of their best esteemed associates, in an article entitled "The Japanese Experience of our Civil Service." As their representative, and on behalf of one who is too far distant to make timely response, I rise to a question of privilege in vindication of the gentleman so roughly assailed. The "subordinate of the State Department," as you characterize him, is well known, at least in this city of his education and residence, if not in the State at large, to be Mr. E. Peshine Smith, late reporter of the Court of Appeals. He is a gentleman of the highest social position here—a general favorite with our more refined circles—of a broad and generous culture, of singularly encyclopædic information, a vigorous and acute thinker, and an accomplished advocate. Of such a man it is conspicuously unjust to say that he was foisted upon the State Department "through the favoritism of a former secretary"; for it is within my personal knowledge that Mr. Seward solicited his acceptance of a confidential position in that department as a favor to himself, and because he knew how signally serviceable the peculiar talent of Mr. Smith would prove to the nation at the time of this appointment. The wisdom of the choice soon became manifest, and Mr. Fish considered himself fortunate in securing a continuance of service which had proved to be so intelligent and so efficient. It was the information acquired at the State Department as to his abilities that induced his selection by the Japanese Government for the position he now fills. To this office of counsel to the Japanese Foreign Office, Mr. Smith brought all those qualities which you rightly deem essential to his mission. "Learned in international and civil law, skilled in the foreign policy of the United States and other nations, and a guardian of the Empire from international difficulties," all these, your own expressions, catalogue his qualifications; but they do not tell of the integrity, zeal, purity of purpose, and entire absence of self-seeking with which he has devoted himself to the delicate and responsible duties devolved upon him. All these must some time come out in history, but as yet they are known to but a few of his more intimate friends.

Were there space, I could point out the causes and sources of the inculpatory stories as to this mission and its incumbent; but I am aware that a personal explanation must not assume the proportions of a biography, and that it is nothing if not short, and I "rest."

Fred. A. Whittlesey.

Rochester, October 5, 1872.

[We can only say that our statements about Mr. Smith were based on strong and, we believed, perfectly trustworthy evidence as to his character and standing in Washington before he went to Japan; and the scandals about his career in Japan are, unhappily, a matter of public notoriety. But we nevertheless very cheerfully give space to what Mr. Whittlesey has to say about Mr. Smith's intellectual qualifications for the place, and about his standing in his own city; it is certainly entitled to great weight, and we trust will have it, with those who may have read our article.—Ed. Nation.]

THE CRUISE OF THE SHENANDOAH.

To the Editor of the Nation:

Sir: In your editorial article upon "The Verdict at Geneva" in the *Nation* of September 19, is a passage about the *Shenandoah*, which contains several inaccuracies. These I beg leave to correct.

The paragraph alluded to reads as follows:

"The *Shenandoah* got away from Liverpool through similar obstinate blindness and indifference on the part of Earl Russell, and connivance on the part of the local authorities; took in her armament at the Madeira Islands, plundered and burnt vessels all the way round Cape Horn to Australia, and was received at Melbourne with welcome and rejoicings which it is no exaggeration to call wild. The Governor held that he was bound to treat her as a lawful belligerent vessel, allowed her to be repaired and refitted on the Government slip, and to take on board fresh supplies of coal, and men, and provisions, while the law officers treated the remonstrances of the American Consul with the grossest insolence."

The *Shenandoah* never "got away from Liverpool," but the *Sea King* (afterwards the *Shenandoah*) sailed from London. Nor do I think it is proper to say that there was "obstinate blindness, indifference, and connivance on the part of Earl Russell and the local authorities." The unanimous decision of the Board of Arbitrators expressly negatives this statement, damages having been awarded in the case of the *Shenandoah* only from the time of leaving Melbourne, as do the facts of the case, about which I presume there can be no dispute. The *Sea King* was manned and officered by British seamen, and sailed on a two years' cruise to Bombay and other East India ports. The captain had a power of attorney to sell, which is usually given in case of a long cruise to distant ports and was not calculated to excite any suspicions. No one on board doubted that the vessel was going on the cruise described in the shipping articles; no one suspected for a moment her true destination, save only the purser, who was a Confederate naval officer (afterwards first lieutenant of the *Shenandoah*), sent on board at the last moment under an assumed name. The *Laurel* sailed from Liverpool at the same time, and here also the greatest caution and secresy were observed, the officers themselves who were to go on the *Shenandoah* having no idea of their destination or of the sailing of the *Sea King* from London. They went on board the *Laurel* at midnight, and she sailed at 3 o'clock in the morning, clearing for Nassau. All baggage had been previously sent on board boxed as freight. The transfer of guns, etc., took place, not at the Madeira Islands, but near the Desertos—barren, uninhabited rocks some distance from Madeira. Nor did the *Shenandoah* go "all the way round Cape Horn to Australia." She went round the Cape of Good Hope and across the Indian Ocean, that being the nearest way by several thousands of miles, and the prevailing winds in those latitudes being from the westward.

There is no Government slip at Melbourne, if I recollect rightly, or if there is one the *Shenandoah* never went on it, but repaired the fracture of

her sleeve (which rendered her unseaworthy) on the slip of a private individual at Williamsport, and while there was seized by the authorities, or rather the slip was seized, which was of course a virtual seizure of the vessel, at the instance of the American Consul, and a proclamation warned all British subjects to leave work on the vessel and to give her no further assistance. The reason given for this seizure was an alleged violation of the foreign enlistment act in shipping "one Chorley" on board the *Shenandoah*. This mythical personage was not found, and it was only when the captain threatened to abandon the vessel and leave her on the hands of the Colonial authorities that she was allowed to be launched. The citizens of Melbourne certainly treated the *Shenandoah* with marked kindness, and extended to her crew and officers the most generous hospitality, but the authorities were churlish in the extreme, and so far from "treating the remonstrances of the American Consul with the grossest insolence," they lent a willing ear to his loosest statements and most improbable stories, with the hope of finding a pretext to detain the vessel. Having been an officer on the *Shenandoah* during the whole of her cruise, I speak from personal knowledge. Very respectfully, J. T. M.

Baltimore, October 7, 1872.

[It is true that the *Shenandoah* sailed from London instead of Liverpool, and it is true that she was called the *Sea King* when she did so, and we suppose it is true, since "J. T. M." states it, that she went round the Cape of Good Hope, although the American Case says she went round Cape Horn. But these are trifling matters. It is also true, unfortunately, that it was perfectly well known at Liverpool, and was chuckled over on 'Change, in spite of all the "secresy," that the *Laurel* was going to sail from that port with the armament of some Confederate war vessel on board, and she did so sail without interference from the authorities, though there was abundant reason for suspecting her. The reason why the Geneva Tribunal did not find Great Britain responsible for what happened at Liverpool was that the Consul, Mr. Dudley, did not make any complaint to the local authorities, but contented himself with forwarding the facts to Mr. Adams, his previous experience having satisfied him that complaint would be useless. We think we are, therefore, justified in saying that the *Shenandoah* did escape through negligence, indifference, and blindness similar in character to that displayed in the case of the *Alabama*. The slip in which the *Shenandoah* was repaired at Melbourne was called "the Government slip," and was built and owned by the Government, though leased to private parties, and the Governor's permission for the repairs to be made was asked and obtained. Moreover, the Governor expressly decided, in answer to the remonstrances of the American Consul, "that whatever might have been the previous history of the *Shenandoah*, the Government of the Colony was bound to treat her as a ship of war belonging to a belligerent power," and did so treat her. It is true that he forbade British subjects taking part in repairing her on the 13th and 14th of February, 1865, in consequence of a charge that British subjects had taken service on board of her; but it is also true that the captain resisted an attempt of the police to search her, threatened the Governor with the indignation of "the Richmond Government," and that on the 15th, either one or two days later, the prohibition was withdrawn, and the repairs fully and effectually completed. We ought to add, that the Geneva Tribunal has found that the Captain deliberately lied to the Governor "on his word of honor." As to the manner in which the American Consul's complaints were received, there is evidence that when the Consul went to the Crown Solicitor with his charges and affidavits, and was introduced by a Mr. Lord, who describes the interview, the Solicitor, without noticing the Consul, "said very tartly that he was going to dinner and could not be detained"; and on receiving the Consul's protest replied: "I don't care; I want my dinner, and I'm going to have it. There are plenty of magistrates round town: go to them." He then went off, and when outside the gate turned round and "hallooed out"—it is to be presumed unofficially—"My dinner, my dinner, Lord, that's what I want." If "J. T. M." "speaks from personal knowledge" of all this, he must have odd notions about "insolence."—Ed. Nation.]

ANGLO-SAXON AND OLD ENGLISH.

To the Editor of the Nation:

Sir: In your notice (September 5, 1872) of Dr. Richard Morris's "Historical Accidence," you say:

"One very serious defect runs through the whole book—the dropping of the word Anglo-Saxon, and every other special name for that language, and confounding all the obsolete speech of our ancestors, from Beda downwards, under the name of Old English."

Dr. Morris's treatment has been so strongly insisted upon by some of the best English scholars that I should be glad for you to point out wherein consists this "serious defect." He has purposely dropped the term Anglo-Saxon, etc., because, as he says, "by not regarding the earlier stages of our language as *English*, all the necessary helps to a rational treatment of its grammatical forms and idioms have been cast aside."

Prof. Earle, in his "Philology of the English Tongue," while retaining the old nomenclature, admits its "literary impropriety, because the Saxons called their own language *Englise*."

Again, Dr. Freeman, who has made good his right to be heard on all questions touching early English history and literature, says: "When I wish pointedly to distinguish the men, the language, or the institutions of the time before 1066 from those of any time after 1066, I speak distinctively of *Old English* as our kinsmen speak of *Alt-Deutsch*" ("Hist. Norman Conquest," vol. i., App. A).

The whole of this Appendix A, from which I have quoted above, is devoted, as you doubtless remember, to proving that "the obsolete speech of our ancestors" is not only "confounded," but misrepresented, by those who discard the term Old English.

In view of all this, and much more which could be cited from some who are reckoned among the most critical writers on the subject, will you kindly state, after pointing out the defect of Dr. Morris's treatment, what are the true scientific divisions of what he calls Old English?

I am, Sir, A Student of English.

Petersburg, Virginia.

[Our correspondent writes as though the remark which he quotes had been shot out of a pistol. But we hope most of our readers will remember that we had before stated the position taken by the little band of English authors to whom he refers, and that reasons as plenty as blackberries are given in the passage from which he quotes. These authors—among whom, however, Prof. Earle is not to be counted—have done good work in this field, and deserve the most courteous attention; but it should not be forgotten that they by no means have the weight of authority with them. The word Anglo-Saxon came into use with the first revival of the study of the manuscripts. Its need and fitness were the only reasons for its use. The scholars who took it up were not inferior in learning to their present successors. It has now been used for many generations. There is a library of books, and a host of great names, associated with it. There have been many books in which it is freely used, published by eminent scholars in England and Germany, since attention was drawn to these objections; but we believe Dr. Morris's is the first philological work of any importance which has discarded it.

Three questions arise: Is the so-called Anglo-Saxon language distinguished from our English by important peculiarities? Should it have a name? Is *Anglo-Saxon* a good name? As to the first question, there is no difference of opinion. The peculiarities set forth in our article certainly exist, and they are among the most important which philologists recognize among the Indo-European tongues. Dr. Morris himself divides his Old English into four periods, of which the first corresponds to Anglo-Saxon; and we should have had no occasion for the gravest of our censures if he had always indicated his Anglo-Saxon citations as *Old English, first period*. We made no objection to his divisions.

Any one who reads a philological book upon English will see the great convenience of a special name for this period. We specified concisely, but sufficiently, Dr. Morris's defects in this regard. Let our student of English turn to a book written before *Anglo-Saxon* was established in use—Verstegan's Restitution, for example. Verstegan rides the same hobby as Dr. Morris. His book is written to identify the Old English of Alfred with the New of Elizabeth. Yet the convenience of discussion leads him to speak continually of *Saxon* and *English Saxon*.

Anglo-Saxon has superseded *English Saxon*, and from the historical point of view seems to be a good word. *Anglisc, Englisc, Englaland* were used from the introduction of Christianity as general names of the German tribes in Britain and the regions they occupied. It seems to have been an ecclesiastical naming. But the names of the tribes are of perpetual recurrence. Alfred styles himself, in his laws and elsewhere, king of the West-Saxons. In Beda's history, where the Latin reads *historiam gentis Anglorum*, Alfred translates by *Angel theôde and Seaxum*. After the fusion of the old race with the Normans, *English* was used as the general name of the new people and language. Writers wanted often to speak of the two races who made up the English, and since the word *English* was appropriated, it was a matter of course that the Teutons should be called Saxons when distinguished from the Normans.

> "Of the Normans beth heye men that beth of Engelonde,
> And the lowe men of Saxons, as ich understonde,"

says old Robert of Gloucester; and the word seems every way fit. Their most prominent tribes were called so. They were all called so by the old Britons—the Welsh and Scots—with whom they were in contact. Their nearest kindred on the Continent were called so. When the prefix *Anglo-* is added, the Anglo-Saxons are classified with, and discriminated from, the Old Saxons.

After this mode of speech was established for the divisions of modern English, it was a matter of course that it should be carried back to the earlier periods; and it may be further said that the so-called Anglo-Saxon literary remains are really in the dialect of the West-Saxons, while the scanty relics of the Angles go by the name of the Northumbrian dialect.

Mr. Freeman proposes to substitute *Old English* for *Anglo-Saxon*. This probably would trouble very few readers, so far as its application to the race and their manners and customs is concerned. Our Anglo-Saxon ancestors have been the theme of so much wholesale eulogy that most readers are ready for any identification with them, and no more think of seriously objecting to their admirers' calling them Old English, than to an entomologist's calling caterpillars old butterflies, or to an enthusiastic Darwinian's calling his favorite Simian the old man. To us, however, the Anglo-Saxon does not seem an undeveloped Englishman, but rather one of his parents, of whom the Norman is the other—and the son no commonplace chip of the old block, but a genius. A new breed came on the planet from the cross. The Frenchman does not differ so much from the Gaul, the Italian nothing near so much from the old Roman, as the Englishman from the Saxon. Surely one good half of the illustrious men and women of England have had their strain of Norman blood. It is a barbaric way of keeping pedigree to note and name only the Saxon dam and slur the Norman sire.

When it comes to discussing the language, a new difficulty starts up. Dr. Morris has made up his mind to call Anglo-Saxon Old English, but there is a great deal more Old English. Chaucer is Old English, and so are all the intervening generations. *Old English* is not with him, as it is with Mr. Freeman, a substitute for *Anglo-Saxon*, but it includes, and we must say confounds, Anglo-Saxon with three other most widely different stages and kinds of speech. In analyzing our present speech, he calls the Saxon elements *English*, and the Norman *foreign*. His reasons seem to be sentimental rather than scientific. He would magnify the antiquity and simplicity of our language. He thinks that an outcry against the old nomenclature, and the use of *English* in his fashion, will lead to more study of the ancient stage of the language. He speaks as though investigators of the grammatical forms and idioms of our language are so befooled by the word Anglo-Saxon that they never think of going to that language for help. Some of them, he says, have dared to go back as far as Chaucer's time; "others, not so bold, have deemed it quite sufficient to date the rise of the English language from the time of the greatest of Elizabethan writers." If Mr. Morris is not playing the humorist, if such be really the pitch of linguistic investigation in England, and if this be the reason for wiping out the Anglo-Saxons, we may be thankful that we live in America, where we have philology of another sort, and may still make bold to speak of both races of our ancestors under the old names which have so long resounded in our commencement and Fourth-of-July orations.—Ed. Nation.]

Notes.

Estes & Lauriat, a newly-established publishing firm in Boston, and the agents of Appleton & Co., will continue the publication of Lee & Shepard's series known as "Half-Hour Recreations in Popular Science," and join with it another to be called "Half-Hour Recreations in Natural History." They also announce as in preparation "Spectrum Analysis Explained"; "The New Physics; an Essay on the Unity of Natural Phenomena," by Prof. T. F. Moses, of Urbana University; the two articles on Electric Phenomena, and Mildew and Fermentation, which compose the second number of the *German Quarterly Magazine* (we hope after a thorough revision of the execrable English of the translator); "Guizot's History of France," in six volumes octavo; "Queens," an American novel by Miss E. B. Emery; and, by arrangement with Holt & Williams, Tylor's "Early History of Mankind" and "Primitive Culture."——Besides the two works just named, Holt & Williams will publish shortly "Thoughts for the Times," by Rev. H. W. Haweis; Freeman's "Historical Course for Schools," in its several parts; "The Sakuntala," from the Sanskrit of Kalidasa, with an introduction by Prof. Whitney; "Scintillations," by Heine; Coleridge's "Biographia Literaria"—centenary library edition; "Incidents of My Life," first and second series, by D. D. Home, the famous Spiritualist; Goethe's "Elective Affinities"; and the following foreign novels: Droz's "Babolain," Cherbuliez's "Joseph Noirel's Revenge," and Turgenef's "Liza."——J. B. Lippincott & Co. have in press "A Journey to Egypt and the Holy Land in 1869-70," by Prof. Henry M. Harman, D.D.; a new edition of Æsop's Fables, edited by Edward Garrett, and profusely illustrated; "Dickens as a Reader," by Charles Kent; the second volume of Forster's Life of Dickens; Rev. J. H. Blunt's "Companion to the Old Testament"; "Parables and Tales," by Thomas Gordon Hake; "La Grammaire en Action," by Prof. B. Maurice of the U. S. Naval Academy; Alexander Strahan's "Memoir of Dr. Norman Macleod"; "Memoirs of a Maryland Volunteer in the War with Mexico," by John R. Kenly; and a number of novels and medical works.——L. W. Schmidt, 24 Barclay Street, has received a few copies of the second edition of Prof. Max Müller's lecture on the "Results of Comparative Philology" ("Ueber die Resultate der Sprachwissenschaft"), delivered at the University of Strassburg on the 23d of May last—the first of his course. The author's German is as eloquent and perspicuous as his English, and his general survey of the field, the methods, and the value to kindred sciences, of comparative philology, is made very readable by the numerous etymological illustrations—some old and some new—which accompany it. About a quarter of the not long discourse is occupied with congratulations on the change in his fatherland which has permitted the lecturer to realize one of the ambitions of his early life—to be a professor in a German university.

—Mr. James Anthony Froude, the historian, last evening, gave the first of five lectures which are to be given in the Hall of the Young Men's Christian Association on Wednesday and Friday evenings of this week and next. His subject is the "Relations between England and Ireland," as our advertising columns have shown, and he cannot fail to be interesting, for he has not only new information quarried by himself from state-papers not hitherto known, but he also has very decided views and opinions as to Ireland and the Irish, and England's treatment of the sister kingdom.

—The "big trees" of California have seldom been so instructively talked about as in Dr. Asa Gray's address on "The Sequoia and its History" before the American Association for the Advancement of Science last August, at Dubuque. This address has been printed in the *American Naturalist* for October, and also in a separate form at Salem. It is an attempt to connect the apparently isolated Sequoia with its ancestors in past ages of the world and its kindred in the present, and there need be little hesitation in following so learned a guide. We have room here merely to state his conclusion, viz., that "the Sequoias, now remarkable for their restricted station and numbers, as well as for their extraordinary size, are of an ancient stock; their ancestors and kindred formed a large part of the forests which flourished throughout the polar regions, now desolate and ice-clad, and which extended into low latitudes in Europe. On this continent one species, at least, had reached to the vicinity of its present habitat before the glaciation of the region." The nearest of kin to the redwoods are the bald cypress (Taxodium), inhabiting the swamps of the Atlantic coast from Maryland to Mexico, and one of

the largest trees of that forest district; and the Glyptostrobus, a sort of modified Taxodium, which has its habitat in China. These two species and more than one Sequoia coexisted in Europe during the tertiary period, as geological botany has discovered, while now they are as widely separated as possible. The difference, botanically speaking, between the Atlantic and Pacific coasts is forcibly set forth in the following passage:

"California has no Magnolia nor tulip trees, nor star-anise tree; no so-called Papaw (Asimina); no barberry of the single-leaved sort; no Podophyllum or other of the peculiar associated genera; no Nelumbo nor white water-lily; no prickly ash nor sumach; no loblolly-bay nor Stuartia; no basswood nor linden trees; neither locust, honey-locust, coffee trees (Gymnocladus), nor yellow-wood (Cladastris); nothing answering to Hydrangea or witch-hazel, to gum-trees (Nyssa and Liquidambar), Viburnum or Diervilla; it has few asters and golden-rods; no lobelias; no huckleberries and hardly any blueberries; no Epigæa, charm of our earliest Eastern spring, tempering an icy April wind with a delicious wild fragrance; no Kalmia nor Clethra, nor holly nor persimmon; no Catalpa tree nor trumpet-creeper (Tecoma); nothing answering to sassafras, nor to benzoin-tree, nor to hickory; neither mulberry nor elm; no beech, true chestnut, hornbeam, nor ironwood, nor a proper birch tree; and the enumeration might be continued very much further by naming herbaceous plants and others familiar only to botanists."

—Mrs. Sara Payson Parton, wife of Mr. James Parton, and known to the public by her pseudonym of "Fanny Fern," died last week in this city, in her sixty-second year. Mrs. Parton's essays have been familiar to the readers of the periodical press, and had a deserved popularity among such readers for their sprightliness and usually sensible treatment of such topics as interested her. Left a widow about twenty-two years ago, by the death of her first husband, a Mr. Eldridge, she attempted to make a livelihood by teaching, but soon effected an entrance into the newspaper world. We believe the late Colonel Halpine (Miles O'Reilly) and Mr. B. P. Shillaber, of Boston ("Mrs. Partington") paid Mrs. Parton the first money she ever earned by her pen, they being then the managers of a comic paper called *The Carpet Bag*. Her success came quickly, and she retained till her death the reputation which she made at first, though she has never written anything that will remain in memory. Of her more pretentious works, neither will be recollected, and it is as well that one of them is already forgotten, it being a novel in which, with what is called questionable taste, she gave a harsh portraiture of a near relative. No less than seventy-five thousand copies of this work were sold. She was a sort of leader among a certain number of women whose names are more or less conspicuous as connected with the monthly or weekly press of this city.

—The death of Doctor Lieber, on the afternoon of the 2d inst., at the age of seventy-two years, was the close of a checkered as well as a distinguished career. He witnessed the humiliation of his country at Jena, and helped to revenge her in the Hundred Days, and he saw her completed triumph over the hated enemy at Metz and Sedan. Born in 1800, he was at the age of fifteen a soldier of the German army of invasion, and was wounded at Namur. He used to relate an anecdote of the field of Waterloo, which illustrates his strong sense, his pugnacity, and his dogged self-reliance. Seeing, as the time for engaging the enemy came on, that some of his companions superstitiously threw away their packs of cards, and being angered at this weakness, he, though no card-player, picked up one of the packs and put it into his knapsack. A youth like this may be supposed to have had views of rights and duties not precisely in accord with those of the Holy Alliance, and we find him under arrest before he was twenty-one years old as suspected of sedition. Disgusted, he sought Greece and the revolution, reaching his goal by taking certain liberties with his passports, and having on his arrival hardly a farthing in his pocket. No fighting, no glory or money, was then obtainable. Young Lieber soon made his way back as far as Italy, where Niebuhr, then Ambassador to the Vatican, and the Chevalier Bunsen befriended him and made him a friend. He has pleasantly recorded his recollection of the great historian, in a work published later, in this country. From Italy he went to Germany again; thence, being again "suspect," to England, where he taught private pupils and wrote for German periodical publications; thence, at the age of twenty-seven, to this country. Here he made friends, lectured, taught school, gave instruction in swimming, for he believed in physical education also; made an "Encyclopædia Americana" (based upon Brockhaus's "Conversations-Lexicon"), which was of very good service; wrote many volumes on numerous social subjects and matters of jurisprudence, and law, and political philosophy; became a professor in the South Carolina College; lost that place on account of his loyalty, which was unflinching, and, finally, was appointed to a professorship in Columbia Law School in this city. This position, which he received in 1858, he held at the hour of his death.

—The subject to which Dr. Lieber's writings were chiefly devoted—a knowledge of the principles or universal rules which ought to prevail in government, general law, and politics—is a department of knowledge associated with the names of Aristotle, Plato, and Montesquieu. It is one for which the writer must have not only an especial aptitude, but which, at the present day, demands a vast extent of knowledge and years of laborious application before anything can be produced to which the world will attach a permanent value. The writers in this department have been many. Those who have attained distinction have been few, and Dr. Lieber may fairly be considered one of the number. The volumes upon which his reputation as a publicist will chiefly rest are his "Manual of Political Ethics," "Legal and Political Hermeneutics; or, The Principles of Interpretation and Construction in Law and Politics"; and his "Civil Liberty and Self-Government"; in addition to which he has written numerous tracts, such as "The Origin and Development of the First Constituents of Civilization," essays upon "Property and Labor," "The Laws of Property," "Penal Laws," "Penitentiary Systems," "Prison Discipline," "The Relation between Education and Crime," "The Pardoning Power," "The Regulation of Armies," "International Copyright," "Nationality and Internationality," etc., etc., etc. It would be impossible within our limits to speak adequately of works embracing so wide a range, and upon subjects so important. Among them, his "Manual of Political Ethics," a work in two volumes, is one of the most remarkable and valuable. It is a storehouse of political wisdom, embracing a great variety of topics upon which the conclusions of the writer are given, and is distinguished for its profoundness, originality, and its exhaustive treatment of one of the most difficult of subjects. Chancellor Kent commends it for its erudition and the excellence of its doctrines; Judge Story for its sound common sense, varied learning, and profound views of government. By English critics it was compared favorably with the great work of Montesquieu, and regarded as pre-eminent among works on political science. Professor Greenleaf, a very competent judge, speaks of "The Legal and Political Hermeneutics" as a most lucid exposition of the principles and admirable illustration of the science of interpretation and construction, and says in respect to Lieber's writings generally, that he always leaps into the deepest water, and always comes up like a good swimmer—an observation borne out by the remark of Chancellor Kent, that when he read Lieber's books he always felt that he had a sure pilot on board, however dangerous the navigation. There was something more in this than mere compliment, for many of the topics discussed in the "Political Ethics" were at the time new, doubtful, and difficult; and Lieber lived to find conclusions which he had arrived at, and was the first to express thirty years ago, referred to by writers of the present day as familiar political truths, without perhaps any conception on the part of the writer of the source whence they were derived. His "Civil Liberty and Self-Government" was written to complete that portion of his "Political Ethics" which treats of liberty as a political right, the security of which depends upon civil institutions, or, as he denominates it, "institutional liberty." This is perhaps the best-known of his productions, and has received the highest commendation not only in this country, where his reputation never stood sufficiently high, although the war made his name and his patriotism known to his countrymen, but in Europe also. Professor Creasy of London, author of "The Rise and Progress of the British Constitution," calls it a great work, and publicists on the Continent like Von Mohl and Mittermaier confirm that judgment. One other foreign judgment of him as a publicist may be added, that of Garelli, the eminent Italian jurist, author of "La Pace," who calls Lieber's pamphlet on "Nationality" *l'aureo opuscolo*—the Golden Tractate. A writer upon such weighty topics can scarcely hope to be appreciated during his life. He must be content to abide the slow judgment of posterity, and Lieber, who, from his childhood, was of a sensitive organization, felt this want of appreciation, especially in his old age, and particularly in this country, to the exposition of whose institutions the chief labor of his life may be said to have been devoted. He could not, and would not if he could, write a brilliant, superficial, and attractive work like De Tocqueville's "Democracy in America," for the aim of his writings was not speculative thought but utility. In the treatment of his subjects he was eminently practical. With his strong common sense and conscientious honesty, he was enabled to dispel the visionary dreams of many previous political writers, and to reach political truths which rest upon a sure and solid foundation. He had great breadth and comprehensiveness, and, as a writer, was lucid and axiomatic, but lacked constructiveness, or the power of judiciously arranging and treating a subject, and treating of it in its appropriate parts. This may account for the fact that his "Political Ethics" has attracted so little attention in the United States, for it is only those who have carefully perused and studied it who can duly appreciate the extent of his erudition, or the value and importance of his views. He was not very successful in definitions. His power as a writer lay in making things plain by illustrations, and, throughout his volumes, what was new and obscure, or difficult, is made at once palpable by some homely image, or by a felicitous

reference to some historical anecdote or incident. His value to us was the greater, as he was one of the few publicists who believed in republican government; who had an equally clear insight into its merits and its defects; who, for forty-three years, had been a keen observer of its practical working in this country; and who was able to write upon it with a breadth of view and an extent of knowledge that commanded attention and respect. His rank as a writer will be that of a political moralist of weight and authority, and as an expounder alike of the true nature of political liberty and of the way to secure it; and it is gratifying to be able to say that his life was throughout in consonance with his teachings.

—The *Revue des Deux Mondes* for May 15 has an article by M. Coulanges, on the Germanic Invasion of the fifth century, which he maintains was no invasion at all, but a political and military revolution. Germans, he says, had been introduced into the empire as *coloni*, to cultivate the deserted plantations, and as soldiers, under their own chiefs, to serve in the armies of the Empire. Such chiefs were Alaric and Clovis; and the conquests of Clovis were not over Gaul or the Gauls, but over the rival chiefs, Syagrius and the kings of the Burgundians and Visigoths. The article makes many good points, particularly in applying the doctrine of the permanence of the Empire, which Mr. Bryce has recently made familiar. The relation to the Empire of the *læti* or *fœderati* is likewise put very perspicuously. But when he comes to the fact that the barbarians had a *wehrgeld* double that of the native Gauls, his theory that there was no national conquest rather fails him, and his argument becomes somewhat lame. We cannot think that he has made out this point; but he certainly has described the events with great spirit, if with not a little *animus;* and has proved many points of detail, if his general view is prejudiced and exaggerated. The same number contains an article by M. Albert Réville, on the "Old Catholics of Holland" —a body of some 6,000, who have kept up the traditions and organization of their national church, though cut off from Rome and excommunicated at the time of the Jansenist controversies. They have an Archbishop of Utrecht, and Bishops of Haarlem and Deventer; they were represented and warmly received in the Old Catholic Convention at Munich, and their Archbishops —representing an unbroken and unblemished line of Episcopal succession—is the highest ecclesiastical dignitary in this movement, giving to it, what it so much required, a regularly ordained episcopate. The mass of the Catholics of Holland, by the way, left their old church and followed the Jesuits into the Ultramontane fold.

—A writer in the *Revue Bibliographique Universelle* (September) takes M. Octave Feuillet severely to task for some expressions in his novel called "Julie de Trécœur," which it pronounces extraordinary in an academician. Some of these are a departure from usage, like "*combler* une fantaisie"; or a perversion of meaning, as "Les visites *s'espaçaient* de plus en plus," that is, grew longer and longer, whereas M. Feuillet meant to say grew more and more infrequent; or a bold invention, like "juponnée," petticoated; while others are downright Anglicisms, conscious or unconscious, as "une profonde antipathie *pour* son mari," and "Après l'avoir *informé que* sa démarche était extraordinaire." This last is so shocking to the reviewer's nerves that he thinks Feuillet would do well to hang himself—"après avoir écrit cela, il ne reste plus à un académicien qu'une seule ressource, celle de se pendre."

RECENT POETRY.*

I.

ALMOST all of our poets have been busy during the past few months, but none has produced anything calling for much remark. All readers of Longfellow know the ease and grace of his poetical narrative style, and all of them have doubtless felt his want of force when working in some other fields; so his latest volume has nothing new to say to the admirers of the schoolmaster of Killingworth, who pleaded for the birds in a hostile town meeting, nor to those who were sorry that the poet should have attempted tragedy outside of translations in which a heavier hand bore him up. The new series of tales dated at the Sudbury tavern are as pleasing as the old; and Judas Maccabæus fares as well, or about as well, in Mr. Longfellow's hands as Governor Endicott and his stern counsellors—worthy successors of the victors over Nicanor and Antiochus. To be sure, the poet is, in appearance, more at home among the New England Hebrews and on Corey's Hill than among the Jewish patriots at the profaned walls of Jerusalem.

Mr. Whittier's audience have seldom heard him with more satisfaction and gratitude than they have got from this "Pennsylvania Pilgrim," which is as benign and benevolent as all his later productions; and it has a historical interest that comes not amiss even to the readers who never tire of listening to the cheerful creed from which their assent was never withheld, and as to the need of preaching which they may have been too sceptical. Francis Daniel Pastorius, the German mystic and philanthropist who settled Germantown, is the pilgrim whose meekness and piety are Mr. Whittier's principal theme in this little volume. The rest of it is made up of verses which have all been printed in the magazines, and thence copied into most of the newspapers, and which are no doubt familiar to most of our readers. They are familiar with better poetry, and they are familiar with much poetry that is not so good, for while there is nothing to delight in these verses, there is much that is elevating and that engenders justice and mercy, and nothing that does not make for good. As regards literary finish, we doubt if any of Mr. Whittier's works are of an excellence equal to that attained in these poems; the independence of forms and rules, euphonic and other, which the Inner Light confers upon its followers, and of which Mr. Whittier has in times past furnished many examples to our unwilling ears, he seldom exhibits to any worse extent than in the first of these triplets that follow:

> "His social life wore no ascetic form,
> He loved all beauty, without fear of harm,
> And in his veins his Teuton blood ran warm.
>
> "Strict to himself, of other men no spy,
> He made his own no circuit-judge to try
> The freer conscience of his neighbors by.
>
> "With love rebuking, by his life alone,
> Gracious and sweet, the better way was shown,
> The joy of one, who, seeking not his own,
>
> "And faithful to all scruples, finds at last
> The thorns and shards of duty overpast,
> And daily life, beyond his hope's forecast,
>
> "Pleasant and beautiful with sight and sound,
> And flowers upspringing in its narrow round,
> And all his days with quiet gladness crowned."

The duty of rhyming well when rhyming is a part of one's business is as much a duty as any other, but poets who put sentiments so good as these into rhyme no worse will be only too easily forgiven. We can promise a sober pleasure to the readers of "The Pennsylvania Pilgrim."

We do not promise much pleasure to the judicious readers of "The Marble Prophecy," though we admit "right here," as they say upon the stump, that it is moral in tone, and no one can pretend that it threatens the purity of the family circle or is subversive of any of the foundations of society. Indeed, how very highly proper it is appears from the following stanzas which close the question, "Where Shall Baby's Dimple Be?":

> "Silent the mother sat, and dwelt
> Long in the sweet delay of choice;
> And then by her baby's side she knelt,
> And sang with pleasant voice:
>
> "'Not on the limb, O angel dear!
> For the charm with its youth will disappear;
> Not on the cheek shall the dimple be,
> For the harboring smile will fade and flee;
> But touch thou the chin with an impress deep,
> And my baby the angel's seal shall keep.'"

This lady with the baby with the limb is the same lady who would not take out her false teeth because there were a number of old *Christian Observers* in the room. The verses in which this ridiculous performance occurs are pretty fairly illustrative of Doctor Holland's usual quality and manner. They have some natural feeling, and very good feeling, and will properly please nine mothers in ten by their natural piety and their piousness. In the same way the poems that profess to be thoughtful will suit most people. The line separating truisms from truths worth stating in print has never been drawn with precision, and indeed never can be so drawn. Young ladies and gentlemen who are to be progenitors of heroes, and who perhaps are themselves to be in their own persons saints and sages, are to-day weeping over an inability to perceive that five and eight are thirteen, little as Doctor Holland and we would think that truth worth insisting upon if we should happen to meet each other. It is, then, beyond doubt, we suppose, that there are numbers of people for whom it is well that our author should make his "Marble Prophecy," and it is only our superiority which is to blame when we find the poem a fatiguing collection of time-worn doctrine from which one is glad to escape. It remains true, however, that beggars are numerous in Rome, and indeed in a great many superstitious cities; that the Pope has an armed guard to defend him, which is more than St. Peter ever had or can be shown to have desired; that Roman Catholics are unwise enough to kiss the feet of a certain image; that the Pope's choir looks smug and disagreeable, and that women, as being impure, are not allowed among

* "Three Books of Song. By H. W. Longfellow." Boston: James R. Osgood & Co. 1872.
"The Pennsylvania Pilgrim, and other Poems. By John Greenleaf Whittier." Boston: James R. Osgood & Co. 1872.
"The Marble Prophecy, and other Poems. By J. G. Holland." New York: Scribner, Armstrong & Co. 1872.
"Fables and Legends of Many Countries. Rendered in Rhyme by John Godfrey Saxe." Boston: James R. Osgood & Co. 1872.

the singers; that "one does not like to smutch his trousers kneeling to a man"; that there is poverty, dirt, and blind ignorance among the Italians, and lack of the best religious privileges; that St. Peter's chair is said by Papists to have been brought from Antioch, while the belief among Protestants is that it was brought from almost any place in the world but that city; that God dwells not alone in temples made with hands; that man is erring and fallible; that the Laocoon may, if any one so chooses, be held to represent "Adam and his offspring in the toils of the twin serpents, Sin and Suffering." This last truth is the one which the "Marble Prophecy" was written to insist upon, and it insists upon it. A point which the author omits is the singular resemblance of the youths in the group to their father, the old Adam. That they look less like children and offspring than like little old Adams themselves, is a point that we should think might have its value in Dr. Holland's system.

It is not often, as we have indicated, that we can praise anything of Dr. Holland's, but the verses entitled "Daniel Gray" have all of our author's verity, and, in addition, a freshness of their own which makes them quite taking. We copy a part of them, and wish their author was always so fortunate in his subjects:

"Old Daniel Gray was not a man who lifted
On ready words his freight of gratitude,
Nor was he called among the gifted,
In the prayer-meetings of his neighborhood.

"He had a few old-fashioned words and phrases,
Linked in with sacred texts and Sunday rhymes;
And I suppose that in his prayers and graces,
I've heard them all at least a thousand times.

"I see him now—his form, his face, his motions,
His homespun habit, and his silver hair—
And hear the language of his trite devotions,
Rising behind the straight-backed kitchen chair.

"I can remember how the sentence sounded—
'He p us, O Lord, to pray and not to faint!'
And how the 'conquering-and-to-conquer' rounded
The loftier aspirations of the saint.

"He had some notions that did not improve him,
He never kissed his children—so they say;
And finest scenes and fairest flowers would move him
Less than a horse-shoe picked up in the way.

"He had a hearty hatred of oppression,
And righteous words for sin of every kind;
Alas, that the transgressor and transgression
Were linked so closely in his honest mind!"

Mr. Saxe, having in mind the wants of his "three little daughters," as the dedication informs us, has made a book which these young ladies will find a very agreeable present, and which we are glad to recommend to the parents of other children. Its title describes it very well. The pieces contained in it are some of them perhaps original, but most deal with stories which have long been well known to such moralists as have had children to instruct in the conduct of life. Those who listen with credulity to the whispers of fancy, as Dr. Johnson says, and pursue with eagerness the phantoms of hope; and those who expect that age will perform the promises of youth, or that the deficiencies of the present day will be supplied by the morrow; and those, we may add, who will attend to the history of Rasselas, Prince of Abyssinia, may expect perfection in the matter of books for children as in other matters, but probably most readers will find some fault with Mr. Saxe's performance of the task, and point out some things which they would have had different. For our own part, we shall say no more than that we think the work should have had pictures. It deserves popularity, and probably will have it, and be much read by boys and girls. Illustrated, it would be a very suitable book for the holidays and present-making.

HENRY WARD BEECHER ON PREACHING.*

THAT Mr. Beecher is the most eminent preacher in America few, if any, will deny. Many regard him as the most eminent preacher America has known. By some he is considered the most popular and capable preacher in the world. It is generally admitted, too, that his success is deserved, though the popular explanations of it are not satisfactory. The unthinking ascribe it mainly to his wit, drollery, and good nature. The thoughtful discover sufficient reasons for it in his great natural gifts, the wealth of his mental resources, the breadth of his human sympathy, his poetic temperament, and his large common sense. He is looked on as a very admirable specimen of the natural man—sturdy, independent, spontaneous, fluent, facile; a man who spreads himself and lies promiscuously about, with boundless powers of reception and absorption; a vast elemental person, open in all directions, taking in and distributing great seas of elemental force; no scholar, no systematic thinker, no student of books or systems, no intellectual toiler or drudge, but a capacious and full man, who can never run dry however drawn on, who can edit a paper, run a church, write a novel, lecture, produce a life of Christ, with perfect facility, one as easily as another, and all without a drop of brain sweat; who prepares his sermons an hour or two before preaching them, and could, if he chose, preach a sermon or two daily without exhaustion.

That Mr. Beecher possesses extraordinary natural powers, and that these do account substantially for his influence, must be admitted. But the reader of this little volume will learn a good many things about him that touch more nearly the secret of his success. There are ten lectures, or rather ten familiar talks, in which the great preacher lets a company of young men into the very heart of his personal experiences. They treat of the personal elements which bear an important relation to preaching, and of course they allow, if they do not demand, a full account of private methods. Subsequent lectures, to fill two annual courses, will consider the social and religious machinery that is associated with preaching, and the method of using Christian doctrines in their relations to individual dispositions and to the wants of communities. Those will, no doubt, be interesting to students of divinity, but less interesting to the general public than these, which not only interpret the preacher's office from the inside, but interpret a remarkable man. From this volume we learn that Mr. Beecher has fairly earned his position by labor. With charming frankness, he tells of his small beginnings and slow upward steps, of his doubts and despairs, his experiments, devices, and defeats. He has seen life in all its aspects. His first meeting-house held from two hundred and fifty to three hundred people; it had nineteen female members and one male whom he wished out all the time he was there. The congregation could raise with difficulty two hundred and fifty or three hundred dollars. He tells how he did menial drudgery, swept the meeting-house, made the fires, filled and lighted the lamps, begged money for his hymn-books, made himself all things to all men, bore insult from brutal people, and underwent severe humiliations in order to gain souls; how he studied hard, preached hard, worked hard at pastoral and missionary labor, plying every faculty and testing every expedient to serve the ends of his ministry. For three years he was drilled incessantly in posturing, gesture, and voice culture. He practised public speaking from the time of his sophomore year in college, delivering temperance lectures, holding conference meetings, neglecting no opportunity of speaking and thinking on his feet. He made a close study of theology, trained himself severely in the interpretation of the New Testament, compelling himself to give weekly lectures in it. He was a great reader of the old sermonizers, South and Barrow and Howe and Sherlock and Butler and Edwards, and, as he read, tried their methods on his own congregation. In a word, he learned his work experimentally and thoroughly, omitting nothing in bodily, mental, or spiritual training that might avail him in his ministry.

There is nothing new in Mr. Beecher's theory of preaching. Its prime object, he says to the young men, "is to bring Jesus Christ home to men, so that he shall be to them what he is to you." "The business you have in hand is not making sermons or preaching sermons; it is *saving men*." "No man is to preach for the sake of 'the truth,' nor for the sake of any 'system of truth,' but for the sake of the hearts and lives of the men who listen to his words." To effect this one object of bringing men to Christ, they must spare nothing of preparation; they must be themselves "little Christs." They must digest truth and make it personal. "Manhood is the best sermon." "Religion is harmonized human nature." "The true call to the ministry is the possession of those qualities that make a good minister: good sense, good nature, good health, and downright moral earnestness." They "must slam the door of possibility in no man's face." He charges them "not to run in the old grooves of Christian doctrine; not to hold the same generic ideas concerning men." If they do not make their theological systems conform to facts as they are, the time will not be far distant when the pulpit will be like the voice crying in the wilderness. They must be conversant with the strength and deeds of noble minds of all ages of the world. They ought to know what is done in the barn, in the cellar, in the vineyard, and everywhere. Regular study and continued observation are indispensable. They must study facts scientifically; they must make a study of the human soul and body from beginning to end. They must become acquainted with the works of such men as Bain and Spencer. They must go outside of the Bible, feel ashamed of themselves if they are not wiser than the apostles were in their day, preach Christianity as the wisest teachers of the past would preach it were they alive. They must cultivate a feeling of enthusiasm, and if it fails them, they had better simulate it for the moment for the sake of the effect on the audience. The past history of preaching Christianity is not to be their model; they must find a better mode. John Calvin lacked heart.

* "Yale Lectures on Preaching. By Henry Ward Beecher." New York: J. B. Ford & Co.

Jonathan Edwards "was unconsciously under the grossly materializing theological habits of the mediæval schools."

This is brave talking, and that it is as sincere as it is brave is proved not so much by the simplicity in which the words are spoken, as by the example of the speaker himself. The divinity students in the most orthodox of schools might profit by this advice of a live minister. It cannot make them great, for it will not give them great souls; but it will help them to make the most of such souls as they have.

Frequent expressions in these pages indicate that the speaker is fully aware of the changed attitude of the preacher in modern cities, and that he is conscious that new measures are needed to meet new needs. No one better than he estimates the competitions of journalism, the rivalry of literature, the antagonism of trained intelligence, and the opposition of science. He is not afraid of these, for the business of saving souls is apart, independent, and superior. "There is one fact," he says, "that is not going to be overturned by science; and that is, the necessity of human development, and the capacity there is in man of being opened up and improved." And this is true, a very commonplace truth indeed. But literature, journalism, and general intelligence, or even science as popularly apprehended, are not the preacher's most formidable foes. A graver peril menaces his calling from the opinion that it is obsolete; that the business of "saving souls," of "bringing men to Christ," of "transforming man's nature through the Divine Spirit," as Mr. Beecher puts it, is a business that honest and enlightened men will not henceforth engage in as being reasonable or profitable. Should that opinion spread and prevail, the preacher's office, according to Mr. Beecher's interpretation of it, will lose its significance. True, a body of earnest men, trained in his manly school, would arrest the tendency to scepticism, perhaps throw it aside, or materially modify its cast. In any event, society will always have a place of use, influence, and respect for such educators of character, even though scientific methods of education shall supersede theological systems, and scientific views of human nature shall remand sentimental theories to a subordinate place.

Minority or Proportional Representation. Its Nature, Aims, History, Processes, and Practical Operation. By Salem Dutcher. (New York: U. S. Publishing Co.)—Mr. Dutcher's original contribution to the subject of this work is to be found in the first chapter of thirty-five pages. In reviewing the defects of the present electoral system, he shows by a number of computations from State and national elections, that "fifty-eight (58) per cent. of the voters secure all the representation, and forty-two (42) per cent. have none. Out of every 100 men who approach the polls, 60 make their suffrage count, and 40 might as well not vote at all; or, to reduce it to its last analysis, our present electoral system disfranchises 2 men out of 5." From this he derives a rule of universal application: "Given any general or extended election of representatives, and two-fifths of those voting at such election will not elect a single representative." On page 24 he gives a table of the actual and proportional representation in three Congresses—1866-71; and whoever studies it will understand how a great party so nearly equal in numbers to its rival as the Democratic, felt obliged either to abdicate (*i.e.*, adopt the "passive policy") or to sell itself (as at Baltimore). In the XLth Congress (House) there were only 49 Democrats to 142 Republicans, whereas, according to the total vote in the elections, the proportion should have stood 84 to 107 respectively. In the XLIst Congress: 83 Democrats and 159 Republicans, instead of 115 and 127. In the XLIId Congress: 106 Democrats and 136 Republicans, instead of 119 and 123. This disparity is also forcibly indicated in the table subjoined, which we reproduce entire (from p. 25):

	Vote.		Percentage.			
			Of Votes.		Of Members.	
	Republican.	Democratic.	R.	D.	R.	D.
XLth Congress, - -	2,179,645	1,825,928	·54	·46	·74	·26
XLIst Congress, - -	3,177,245	2,899,168	·52	·48	·67	·33
XLIId Congress, - -	2,786,547	2,726,500	·51	·49	·56	·44

And finally, here is the number of votes required to elect a Representative in the

XLth Congress, - - - Republican, 16,350, Democratic, 37,263
XLIst Congress, - - - " 19,982, " 34,930
XLIId Congress, - - - " 20,489, " 25,722

Facts like these speak to the most unlettered and dullest minds, and make us wish that this portion of Mr. Dutcher's volume could be printed separately and scattered broadcast as a tract; or used as a preface to any scheme of reformed representation that may be hereafter urged. The four succeeding chapters are occupied with the history of the movement down to the present year, and are fuller, especially for this country, than any similar compilation with which we are familiar. Mr. Dutcher has made, by the way, abundant use of Prof. W. R. Ware's article in the *Law Review* for January, but seems to have remained ignorant of its authorship to the last. For want of a better method, he has involved himself in a good deal of repetition of a not helpful sort. He is chronological at the expense of consecutiveness of narration, so that we skip from England to America, and back to Norway and Denmark, and again to Switzerland, in a way likely to mix our ideas sadly, and to prevent us from obtaining a *coup d'œil* of any one field. Nevertheless, all the principal devices for proportional representation are intelligently described, and a valuable amount of testimony, for and against, cited in connection with them. Our author is, perhaps, not quite so neutral as he would be thought, and does undoubtedly advocate the new reform; but he is perfectly fair, and allows his readers to look at both sides of the question, without appearing to be the partisan of any particular measure. His immediate purpose would have been better served if he had clearly summarized, State by State, the really substantial progress already made in this country towards a choice of methods by experiment. We think there are few readers who will not be surprised by the account of it here given in a disconnected way. It encourages us to believe that it will yet be possible to effect a revolution, going backwards in our democratic traditions and legislation, but forwards in the path of electoral purification, by which the basis of suffrage shall be intelligence and not "manhood" merely. For if the schemes of proportional representation secure a greater value for the individual vote, they also exact more of the individual voter. There is scarcely one of them, for example, but requires his signature to his ballot; and this, we trust, may be the least of the requirements of the future.

Window Gardening. Devoted specially to the Culture of Flowers and Ornamental Plants for In-door Use and Parlor Decoration. Edited by Henry T. Williams. (New York: Henry T. Williams. 1872).—If the literary workmanship of this book were of a higher order than it is, it might be recommended almost without reserve, as containing all needful information concerning the selection and care of house plants, and also—beyond what its title implies—concerning floriculture in general. Its abundant and well-chosen illustrations would often permit the text to be dispensed with; and a hasty turning of the leaves would suggest to the eye a great variety of modes of cultivating flowers adapted for all tastes, if not always, or generally, for small means. The numerous repetitions which increase the size of this volume without adding to its clearness as a guide, are the greatest fault with which we shall reproach the editor, who, in the borrowings which he frankly acknowledges, has sometimes used the scissors more freely than the pen. This fault, which occasionally involves apparent contradictions, is most visible in the general instructions. For example, we read (p. 26): "Plants require regular care. They cannot be watered and cared for once a week, and the rest of the time left to themselves, but they demand a daily amount of time to be spent upon them. Every morning, when house-cleaning is in order, the plants must be watered and cleaned." And on p. 39: "Great attention must be paid to general cleanliness. . . . Be sure and attend to the weekly washing; it is quite as essential to your plants as to your household cleanliness." Again, on p. 28; "A toy watering-pot, such as is used for children, is very useful for window gardening. If oil-cloth is laid under the stand, it can be used without much if any injury to the carpet or furniture." And on p. 37: "A small toy watering-pot, such as are sold for children's use, is of the greatest assistance; it will sprinkle the surface of tiny pots without wetting either stands or window glass. A piece of oil-cloth is an excellent protection to carpets, and should always be placed under every window and plant stand." The Lantana is treated of at length on p. 205, and more briefly, but still by itself, on p. 241. Chapter xxvi., on the decoration of parlors and living rooms, overlaps many of those which have preceded. Nor is the English of "Window Gardening" above criticism, though one example must suffice (p. 91): "Hanging baskets . . . . need very little care, their demands are not very exacting, and the chances of failure are very much less than plants of more sensitive nature, fit only for careful pot culture."

However, as we have intimated, if there is a want of system and of good writing in this volume, its fulness will probably satisfy most purchasers.

PYGMALION AT WALLACK'S.

THE attempt to revive, in Mr. Gilbert's new piece at Wallack's, some form at least of the classic fable of Pygmalion and Galatea, is not only novel and interesting, but laudable for its spirit, and, to some extent, for the ability with which it has been carried out. The new drama is not so good as we could wish it, but it is too good to be slighted. For some years the very name of a mythic personage in a play-bill has suggested nothing better than burlesque and brutality, auburn wigs, and doubtful puns. The author who comes before us with anything resembling an appreciative version of a beautiful old myth like the one in question, deserves at least kindly welcome and respectful consideration. It may not be waste of time to spend a moment in enquiring how far he has failed, how far succeeded, and in either case the how and why.

Using just so much of the legend as suited his purpose, Mr. Gilbert has made *Pygmalion* not a king of Cyprus, but an Athenian sculptor, who loves his wife *Cynisca*, and, artist-like, has reproduced her form and features not only in countless other works, but, last and best, in his newly finished statue which he has christened *Galatea*. During his wife's temporary absence his impatience at the tantalizing perfection, yet imperfection, of his work, breaks out in complaints against the gods, when, to his amazement, the statue steps down, warm and lifelike, from its pedestal, and does him homage as its —or her—creator and master. Her reverential devotion rouses a corresponding affection in his own soul, which he tries to stifle by sending her away to the care of his sister *Myrine*, but *Galatea* resists, and by her indiscreet professions of regard rouses the wrath of the wife, now returned from her journey. *Cynisca*, formerly a nymph of Artemis, had married with the agreement, approved and confirmed by the gods, that whichever of the two should hereafter prove untrue should, on the prayer of the injured partner, be struck with blindness. This power she now uses, and on her imprecation *Pygmalion* is smitten by a flash of celestial lightning, and led off by his weeping sister. But *Galatea* repairs the mischief she has done. Speaking to the blind sculptor under the guise of his wife, she forgives him and condemns herself, and by so doing moves *Cynisca*, who has overheard her, to a like pity and forgiveness. *Pygmalion*, restored to sight by this wifely condonation, at first turns with horror from *Galatea*, the cause of all their woe, but repents his harshness on hearing the part she has played; and *Galatea*, saddened with her brief, unlucky venture in this troublous world, returns to her pedestal and insensibility.

The comic element of the piece is supplied by the loves of *Myrine* and *Leucippe*, interrupted by the ignorance of *Galatea*, who convinces the girl that her lover is a murderer for having killed a fawn; and by the humors of *Chrysos*, a would-be patron of art, who, coming to buy the statue, coquets with the woman, and comes to grief at the hands of his wife, *Daphne*, in consequence.

The piece, as thus outlined, evidently offers the elements of a very effective drama. The main theme of the story, apart from its traditional value, is in itself poetically beautiful and dramatically good, and Mr. Gilbert has judiciously developed the material supplied in the legend by neglecting the traditional ending—the marriage of *Galatea* and *Pygmalion* —and substituting the pathetic catastrophe we have indicated. So far all is well. If to his skill in mere dramatic construction the author had added a little more of lofty poetic inspiration, of more penetrative imagination, and a finer sense of artistic proprieties, he would have produced a drama which, whether successful in actual representation or no, would at least have deserved to be, and which, as a reading piece—a work of art —would have been, altogether graceful and complete. But the problem, apart from all question of practical stage requirements, and the demands of popular taste, is in itself a difficult one. To paint a woman, just now a statue, stepping at one stroke into a world of which in its material relations she knows nothing, but in which, by passionate intensity and innate sensitiveness, she is prepared to play her womanly part, is no easy matter, and calls for a large measure of the acuteness of the psychologist with the subtle discretion and fine taste of the poet and artist. With all thankful recognition of what Mr. Gilbert has achieved, we must take excuse for thinking that he has not been altogether at the height, as a Frenchman would say, of his task. The scene, for example, where *Galatea*, stepping down from the pedestal, declares her love for *Pygmalion*, affords a magnificent occasion for the display of such qualities as we have indicated. The very abnormal character of the position—the dawning of intelligence in the mind of the marble woman, warmed and permeated by a passion already full-blown—the surprise and confusion of *Pygmalion*, his self-struggle with the first symptoms of reciprocal passion, and his remorse at his own infidelity to *Cynisca*—the external incongruity, yet inherent and essential interest and beauty of the situation—all this should have stimulated the dramatist to his finest effort. The resultant scene might have been, for delicate fencing of word and play of thought, for subtle imagination and truth of analysis, an achievement in itself alone, and constituted the main feature of the drama. Though it would be injustice to the author to say that he has not done any of these things, he has not made the best use of his uncommonly good material. A better theme for imaginative treatment is rarely offered, or one in which lyric inspiration and emotional intensity might find fuller play. In reading Mr. Gilbert's scene, an exacting taste will be apt to think that it comes somewhat coldly off, and to take exception to some traits of awkward or mechanical construction, of deficient feeling, of triviality and incongruity, which might have been avoided.

But the most radical criticism on the whole piece is that the author—as the title shows—has made it a comedy, and not, as it should have been, a drama or an idyl. The whole story is in character ideally graceful, and in its catastrophe deeply pathetic. It needed serious but delicate and imaginative handling; not humor and farcical breadth. The very first touch of comedy will, to many tastes, spoil the whole picture, for in its coarse realism it stands out sharp against the airy background of the work, contrasts with its tender sentiment, and deprives it of probability. With such a subject there is but one step from the poem to the burlesque; and the author, having elected to write the first, should have kept to his choice. Thus, for instance, our sympathetic interest in the new and beautiful creature just born from the marble is shaken by the absurdity of her blunder about the fawn, and utterly destroyed by the school-girl readiness of her coquetry with *Chrysos*, which, however true, if the reader please, to realism, is offensive and false to art. The pompous vulgarity yet pusillanimity of the henpecked *Chrysos*, and the virago temper of *Daphne* would be droll in a farce, but are, or should be, as much out of place in an ideal work like the present as a group by Teniers or Hogarth on the tender and sweet simplicity of a background by Hamon or Sain.

Mr. Gilbert's verse is generally smooth, clear, and melodious, always expressive, and frequently rising to a very respectable grade of lyric warmth and color. The dialogue is terse, and often epigrammatic, if not brilliant, but sprinkled here and there with trivialities or commonplace, in thought or expression, which jar on a sensitive taste. A few downright vulgarisms have crept in, and not a few faulty lines, which even the imperfection of a cheap theatrical edition will hardly explain. It would have been well, too, if the author had made up his mind frankly at the outset whether to consider *Pygmalion* as a trisyllable or quadrisyllable, instead of bothering actor and auditor at once with the awkward juxtaposition of the two throughout the piece.

Of the acting of the drama at Wallack's, it only remains to be said, in brief, that it is not, on the whole, well calculated to bring out the merits of the work or gloss over its faults. Miss Rogers brings to the part of *Galatea* the experience of two hundred nights or more in its representation in London. She is a well-trained and judicious actress, and her deficiency, if such there be, lies in a certain lack of delicacy and subtlety of method, due less to imperfect intelligence than temperament. Mrs. Foster, in her ungrateful rôle of *Myrine*, is, as usual, graceful, simple, and pleasing. Mr. Stoddard is broadly funny as *Chrysos*, but it may be doubted whether his own gain is not the drama's loss. For the reasons given above, we are inclined to feel that the funnier he becomes, the more sharply and unpleasantly he sets off against what should be the dignified and poetic background of the play. Mme. Ponisi makes a conscientious but conventional *Daphne*, and Miss Challis, Mr. Boniface, and Mr. Polk display varying degrees of incompetence for their work.

The setting of *Pygmalion* is tasteful, rich, and measurably true to historic fact. The sculptor's house in the second act especially, with the fountain and cistern in the centre, the distant view of Athens, and the like, is beautifully mounted, if rather on the Roman than on the Grecian plan. Archæologic record will hardly justify an *impluvium* with the rear side open to the landscape, and we do not remember in plan or photograph any trace of the odd monstrosity, aqueduct or colonnade, or what not, which the artist has set up on the Acropolis. In the first regard, however, the necessities of scenic effect must, we suppose, take precedence of archæology; and, in the second, the scene-painter has at least the comfort of knowing that only a pragmatic few among his audience will be likely to refute him. The statue is excellently managed, and the gradual fading of *Galatea's* figure in the finale is a really admirable bit of applied science and artistic taste.

MACMILLAN & CO.'S

RECENT PUBLICATIONS.

GOETHE AND MENDELSSOHN. From the German of Dr. Karl Mendelssohn, son of the Composer. By M. E. Von Glehn. With two new Portraits, Facsimiles and Appendix of Twenty Letters hitherto unpublished. Crown 8vo, $2.

"It will be read with equal interest and pleasure by the admirers both of the poet and the composer."—Examiner.

THE GROWTH OF THE ENGLISH CONSTITUTION. From the Earliest Times. By Edward A. Freeman, M.A., Hon. D.C.L. Oxon. Crown 8vo, $2.

"No book could possibly be more useful to students of our constitutional history, or a more pleasant means of conveying information about it to the public at large."

THE UNITY OF HISTORY. The "Rede" Lecture, 1872. By Edward A. Freeman, M.A., Hon. D.C.L. Oxon. Crown 8vo, $1.

ESSAYS AND LECTURES ON POLITICAL AND SOCIAL SUBJECTS. By Henry Fawcett, M.P., Professor of Political Economy in the University of Cambridge, England, and Millicent Garrett Fawcett. 8vo, $3 50.

"The volume before us contains the application of the most radical doctrines of political economy to the great social and economical problems of the day, and it adds sensibly to its value as a contribution to this discussion that it is written in full and equal partnership by the Professor and his wife. So far as this fact goes, it tells powerfully in favor of female equality, for Mrs. Fawcett's papers are fully worthy to stand in the series with her husband's."—The Nation.

EDWIN WILKINS' FIELD. A Memorial Sketch. By Thomas Sadler, Ph.D. With a Portrait. Crown 8vo, $1 75.

The late Mr. Field was one of the literary executors of Henry Crabb Robinson, and is frequently mentioned in his "Diary and Reminiscences."

EXPERIENCES OF A DIPLOMATIST. Being Recollections of Germany, founded on Diaries kept during the years 1840-1870. By John Ward, C.B., late Her Majesty's Minister Resident to the Hanse Towns. 8vo, $3 50.

"There is no more valuable commentary upon history than the memoirs of politicians and diplomatists who, from their position, have been enabled to see some one aspect of events with perfect clearness, and even to go somewhat below the surface of things."—The Nation.

LESSONS ON HEALTH. By J. Berners. 18mo, cloth limp, 50 cents.

Contents: Fresh Air—Food and Drink—Warmth—Cleanliness—Light—Exercise—Rest.

A BIBLE READING FOR SCHOOLS. The Great Prophecy of Israel's Restoration. (Isaiah, chapters 40-66). Arranged and edited for Young Learners. By Matthew Arnold, D.C.L., formerly Professor of Poetry in the University of Oxford. 18mo, cloth limp, 50 cents.

HISTORICAL OUTLINES OF ENGLISH ACCIDENCE. Comprising Chapters on the History and Development of the Language and on Word Formation. By the Rev. Richard Morris, LL.D., Member of the Council of the Philological Society. Extra fcap. 8vo, $1 75.

LONGER ENGLISH POEMS, for Use in Schools. With Notes Philological and Explanatory, and an Introductory Essay on the Teaching of English. Edited by J. W. Hales, M.A., Lecturer on English Literature and Classical Composition at King's College School, London, etc. Extra fcap. 8vo, $1 75.

This work is intended as an aid to the Critical study of English Literature, and contains one or more of the larger poems, each complete, of prominent English authors from Spenser to Shelley, including Burns's "Cottar's Saturday Night" and "Twa Dogs." In all cases the original spelling and the texts of the best editions have been given; only in one or more poems has it been deemed necessary to make slight omissions and changes. The latter half of the volume is occupied with copious notes, critical, etymological, and explanatory, and calculated to give the learner much insight into the structure and connection of the English Tongue. An Index to the Notes is appended.

Albany, N. Y.

COPPEE'S ENGLISH LITERATURE

ENGLISH LITERATURE
Considered as the Interpreter of
ENGLISH HISTORY.

DESIGNED AS A MANUAL OF INSTRUCTION.

By Henry Coppee, LL.D., President of the Lehigh University. 1 vol. demy 8vo, half-morocco, $2 25.

*** The merits claimed for the work as a text-book are, that it is simple in plan, condensed in matter, and philosophical in conclusions. It is sufficiently full in statistics to give a just idea of the scope of English Literature, and will thus serve as a useful guide-book to those who desire to make extensive researches amongst its varied and voluminous treasures.

PRESENT ISSUES;

or, Facts Observable in the Consciousness of the Age. By Rev. Robert Withers Memminger, Author of "What is Religion?" 1 vol. 12mo, cloth, price $1 50.

IN imperial 8vo, double columns, price $8, handsomely printed in a new, clear, old-faced type,

A DICTIONARY OF ENGLISH ETYMOLOGY.

BY HENSLEIGH WEDGWOOD.

Second Edition, thoroughly revised and corrected by the Author, and extended to the Classical Roots of the Language (with the assistance of the Rev. J. C. ATKINSON, Author of the Glossary of the Cleveland Dialect).

With an Introduction on the Formation of Language.

In preparing this Edition the Author has had the benefit of the learned and very judicious annotations of Mr. George P. Marsh in the American Edition of the First Volume of the Dictionary, which have in many cases led to the adoption of his views. Attention has also been given to the criticisms in the Etymological Dictionary of G. Müller (Köthen, 1865-7), and to the scattered suggestions on the derivations of words which occur in various periodicals. Wherever the etymology of the First Edition has been materially altered, the word is marked with an asterisk. In deference to the judgment of respected friends, the etymology of words of classic derivation, which in general were omitted in the First Edition, has been concisely inserted in the present work.

Copies will be sent to any address, on receipt of the price ($8), by

MACMILLAN & CO., Publishers,

LIFE AND LETTERS OF CAPTAIN JOHN Brown. Edited by Richard D. Webb. The best ever written. With photograph showing the face without the beard. Price $1 50. Address, Publisher of THE NATION, Box 6732, N. Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 24, 1872.

The Week.

THE managers of Greeley papers get an extraordinary amount of comfort—we hope they do at all events—by saying to themselves and each other, "We have one hundred and twenty-five votes sure if the South goes solid for Greeley, and as we shall carry New York and New Jersey, we shall only need to carry Indiana to elect our candidates." And then come exhortations to be Firm, to Stand Steadfast, to Listen to the Ringing this or that—sometimes a rubbishing proclamation, sometimes some Noble Words of Cheer from some badly demoralized Greeley editor, who, in his own office, is doing nothing more Ringing than heartily cursing his candidate, himself, and the Cincinnati Convention for saddling the Sacred Cause with a preposterous Greeley and a nearly as preposterous Brown. The reader who has not access to a number of Greeley journals would not believe that grown men could be childish enough to do the amount of whistling in a graveyard that is performed by our brethren. There is a forty fog-horn power in the blast, and the music is about as indicative of cheerfulness and unperplexity. What we were about to say, however, was, that the Greeleyites are just as certain to carry the South solid as they were of carrying Pennsylvania. There is no sound reason that we know of why South Carolina, Louisiana, Mississippi, and North Carolina may not be counted for the Republicans, and Virginia and Alabama are reported as at the least doubtful. As for New York, we have as little doubt that it will go for Grant, and by a very good majority, as we have that the vote will be polled; and no well-informed Republican or Democrat would say that New Jersey is not very much more likely to go Republican than Democratic. But we suppose puerile falsehood must continue to the end of the campaign. Doubtless we are not alone in mourning the absence at this crisis of the famous "arithmetic man" of the *World*. A more entertaining pencil never moved among the mazes of election returns. Were he still in the field he might not perhaps be able to prove that Pennsylvania had gone for Greeley, but he would produce a "table" which, for neatness, and simplicity, and lucidity would far surpass any of those now in circulation.

A very entertaining illustration of the straits to which the Liberals are reduced appeared in the *Tribune* of Tuesday week. It was there announced that the collector of the port at Philadelphia had been arrested, on a charge of having "attempted to bribe an election judge"—that is, had been *accused* of doing so. It then adds solemnly: "The United States collector *thus punished*, etc., is a brother-in-law of Simon Cameron"! What does the Springfield *Republican* think of this mode of carrying out the Sermon on the Mount? Is the "essence" or "basis" of this sort of thing to be found in the Christian religion, or does it know of any Old Gentleman to whose little game it bears a painful resemblance?

We do not believe that there is in this city—Mr. Murphy, Mr. O'Brien, Mr. Jackson S. Schultz, Mr. Brennan, Mr. John Kelly, and Mr. Havemeyer included—any one who can tell precisely what will be the issue of the municipal contest, for we doubt if it is known for a certainty by everybody concerned whether the Custom-house people have or have not "sold" O'Brien, and, that point being settled, we doubt if it is known to all concerned what O'Brien will do, or what, being willing, he can do in the premises. Have the decent men in the party determined that Murphy may personally keep his alleged bargain with O'Brien, but that the latter shall not be allowed to "run him out of the boxes" on election day? Does O'Brien know this, and will he take a sufficient revenge? Having discovered it, is he trying to bargain with Brennan to give everything else but the mayoralty to Tammany if Tammany will throw over Lawrence? These and many similar questions will be settled before very many days, or hours, and there will be a better probability of calculating the chances of the triangular contest and its bearing upon the issue in the State at large. The story goes that there was a bargain; that under pressure from the respectable Republicans, backed by the successes in October, it had to be broken; and that O'Brien, to save his future and some of his prestige, will bargain with Tammany rather than be beaten, as without the help of the Grant men he must be.

The Judiciary nominations have been of good character, a great gain having been the defeat in Tammany of City Judge Bedford and District Attorney Garvin. Bedford, however, may, it is thought, get the Apollo Hall nomination, and perhaps be elected, and again make the administration of justice farcical. We must say we think all this muddle is a good comment on the Morton-Conkling way of running a great party. Does anybody suppose that but for their rule-or-ruin policy the Republican party in unbroken harmony would have found it necessary to place reliance on such men and such tactics as have guided its course in Pennsylvania, Indiana, and here? We do not in the least believe it. An Indianapolis journal is severe upon us for our attacks upon Morton, and defends his energy, which is notorious, and his ability, which we never questioned—unless, indeed, it is questioning his ability to say that in proposing his repudiation scheme, and urging it because he mistakenly supposed "the people" wanted it, his course smacked of the needlessly cunning and blundering demagogue. That, perhaps, is questioning his ability, if one comes to think of what constitutes true ability in a senator and political leader, but it leaves him, we dare say, all the ability which his Indianapolis friend would assert to be his. That he did carry Indiana after a fashion is to be admitted; and he did, too, as we fully believe, make it so hard as it was to carry Indiana at all. We only wish there were enough Indiana legislators of our way of thinking to keep him out of the Senate for this next term. It is not by such management as his that Republicanism is to be kept prosperous, or we are very much mistaken. And much the same thing may be said of Mr. Conkling, whose policy, had it not been eked out by Mr. Weed's—who is indeed a political leader—would in all probability have cost the party New York, whereas General Dix's nomination has helped the general canvass here and elsewhere very decidedly. Because Pennsylvania was carried by 35,000 majority, the fact does not disappear that many thousands of Republicans the country through were thoroughly disgusted with the ascendancy of the counsels that have governed General Grant to his great injury during the past two years.

The South Carolina election has had one good result, and that was the adoption of an amendment to the constitution which would go far towards pleasing Mr. O'Conor, as it forbids the legislature's contracting any debt without submitting the proposed contract to the people at a popular election. For this amendment both parties voted with great unanimity. Moses, the Ring candidate for the governorship, was successful, but by a majority which has not been reported, as returns come in very slowly. So far as we can make out, Mr. Tomlinson secured a part of the colored vote, but apparently the white vote was very imperfectly called out. Thus, at Bennettsville, which is the county town of Marlborough District, we read that "about one-third of the white vote was polled," and that "no tickets were furnish by the Bolters, so that voters who were for that side had to prepare their own tickets." This, we suppose, points

less to a lack of means on the part of the opposition, though they had too little money for the legitimate expenses of the campaign, than to the presence of trickery. All sorts of things are done with tickets in South Carolina as well as elsewhere. From Sumter District, which lies near the centre of the State, beside the District in which the city of Columbia is situated, we hear that "neither ticket received the support of the whole voters; a full vote was not polled—say about 1,200 in the town of Sumter." In Kingstree, in Williamsburg District, in the southeastern part of the State, "very few Conservatives voted, and no interest was felt in the election." In the northwestern part of the State, among the hills and the smaller farmers, "there is a general feeling of encouragement among the whites as to the result of the election, on account of the independence shown by the colored voters," many of them voting the Bolters' ticket; but in general the whites staid from the polls, and everything went by default. Apparently, then, the Ring is to have control for the next four years; but nothing is eternal; and we advise all widows and orphans who hold South Carolina bonds to look out for the opposition when once it does come into power. The Georgia Democrats had not half the temptation to repudiate which the Republican rascals have given the South Carolinians, but they made short work of repudiating.

The *Tribune* publishes a "confidential" circular, signed by A. B. Cornell, the Surveyor of this port, as Chairman of the Republican Committee in this city, and addressed to a "Bank President"—we presume Mr. Williams of the Metropolitan, who is the only bank president we have heard of in this part of the world who supports Mr. Greeley—soliciting contributions towards the expenses of the campaign. There is one passage in it which we should like very much to have *Harper's Weekly* explain. It is this: "The Committee has determined not to make assessments upon Federal and State officers, as has been usual heretofore, and therefore we have to rely on such voluntary contributions as they, together with other friends of the cause, may be pleased to make." Now, we were under the impression that assessments on office-holders had been absolutely prohibited. According to Mr. Cornell and his brethren, however, it is optional with the political committee to levy them or not, which, if true, makes the reform a mockery. How is it? Is Mr. Cornell deceiving the faithful by making a virtue of necessity, or could he really levy "assessments" if he pleased? In other words, have we no guarantee that this detestable practice has been abolished beyond the forbearance and self-restraint of the high-minded body of citizens who "manage" the Grant business at the Fifth Avenue Hotel?

Mr. Sumner having declined to be tremendously beaten in his own State, the Democratic and Liberal Republican State Committees have met and designated Mr. F. W. Bird as their candidate for the Governorship, and Mr. Bird has accepted the nomination. We should suppose that Liberal Republicans who were in favor of Mr. Charles Francis Adams's nomination, and who knew that Mr. Bird, Mr. Sumner's next friend, went out to Cincinnati and did his all, be it much or little, to defeat Mr. Adams, might now feel like visiting on Mr. Bird's head his action at that time. And we should suppose that Democrats whom Mr. Bird helped to deprive of so good a candidate, and upon whom he was instrumental in laying so delightful a candidate as the one they have got, might also be willing that he should poll the smallest vote ever yet cast for a Democratic candidate in Massachusetts. Mr. Bird's contribution to the canvass thus far has been a speech, which was a sort of compilation and synopsis of old letters written by Mr. Sumner to Mr. Bird. What effect was to be expected of it we do not see, unless it was to show that in 1856, when Mr. Sumner lay sick after what he describes as "my assassination," the monster Henry Wilson "fraternized" with Mr. Sumner's enemies at Washington. Other Massachusetts news of significance is that rumor—

"Tam ficti pravique tenax quam nuntia veri"—

asserts Butler to be giving underhand aid to Banks—a fine pair, and calculated to be useful to one another, but not likely, we fancy, to assist each other effectually this time.

We gave, two weeks ago, an account of the "pleasing picture" of American society which some of our metropolitan papers had been presenting to an astonished world during the present canvass. A few touches which we overlooked or which have been added to it since then, greatly heighten its effect. It appears that the editors of one of our leading journals have been committing theft or other criminal offences at the house of a prominent member of the New York bar, who in his turn—in order to recoup his losses, we suppose—has been cheating a great railroad corporation of which he was director out of the sum of $30,000, although he is a very rich man. The Attorney-General of the State of New York, too, has been bribing the Speaker of the Assembly to procure legislation for the beggarly sum of $1,500, and he did this in complicity with two of the foremost lawyers in America, the partners of the leading American counsel before the Geneva Tribunal. The editor of another metropolitan paper, who, it appears, is a "professional libeller"—that is, makes a living by slandering people for hire—declares that the President and some prominent members of the United States Senate were probably instrumental in having the office of a hostile newspaper in North Carolina blown up with gunpowder, and we learn on the same authority that the foremost American magazine, the *Atlantic Monthly*, employs as a writer on politics a person who is at once a "witling," a "gosling," and a "crétin"—that is, an incurable idiot with a huge tumor growing on the side of his neck. One, at least, of the editors of the *Evening Post* is a "roaring idiot," and the editor of the *Times* is deterred from discussing the sufferings of emigrants on board ship by his "harrowing recollections" of his own sufferings as a steerage passenger, and the editor of the *Tribune* has "forged" the name of the Speaker of the House of Representatives for the purpose of convicting him of gross corruption.

It is quite plain that the machinery is being put in motion for the issue of at least $44,000,000 more greenbacks. It was hinted at vaguely a few weeks ago, during the monetary "squeeze," as a thing the Secretary of the Treasury possibly might do; then came a money article in the New York *Times*, showing how beneficial the effects of the Secretary's late action in selling gold and buying bonds had been in "making money easy"; mentioning casually, as it were, that many of our leading financiers were of the opinion that the business of the country had "outgrown" the present volume of the currency, and that a little addition to it is just what we need; and now comes the news that "several delegations of business men will be in Washington from the West" next week, to urge the Secretary to issue $44,000,000 more greenbacks. "Meetings," too, in support of the same scheme begin to be heard from in various parts of the country. Indeed, the harmonious working of the whole arrangement cannot but excite admiration. But one can hardly wonder, when one sees this sort of thing, that the Labor Reform Conventions call on the Government to supply unlimited greenbacks to workingmen also. It is right to add, that many cynical and evil-minded persons look on the whole movement as a gigantic attempt by the national "bulls" to aid in raising the price of a few useful commodities, of which, singularly enough, they have about this time considerable quantities to sell.

The annexed provinces of Alsace and Lorraine are at last fairly German, the process of making their "option" having been gone through by the population, and something is now known of

the result. By the terms of the treaty, any resident in ceded territory had the privilege any time before the 1st of October in this year of filing a declaration before a magistrate of his intention to remain a Frenchman, and by so doing he retained his old nationality. The popular impression was, however, that this might be done without any change of residence, but the German authorities dispelled this illusion very speedily by announcing that all persons who retained their French nationality would have to make a change of domicile, or, in other words, quit German soil. The consequence is that only those who are so well off that it makes no material difference to them where they live, or that they can afford to make some sacrifice to patriotism, have retained their French citizenship—that is, about 200,000 in all, or about ten per cent. of the population, mostly inhabitants of the towns. The peasantry all stay where they are, and indeed seem to care very little about the change, and will probably be tolerably good Germans in a few years. But large numbers of the young men have enlisted in the French army, knowing that they would have to serve in the German army if they stayed at home, and naturally preferring the one to which Alsace has for a century at least furnished its best soldiers. The effect of the emigration in the towns is said to be very sad, but the wailings of Frenchmen over it are rather ill-timed. The time for mourning and lamentation was in June, 1870. When a people goes to war of its own accord, it ought to meet the ordinary results of war manfully and without whimpering; and that war is very apt to result in the transfer of territory is a fact with which Frenchmen were as familiar in 1870 as they are now.

The agitation for the Disestablishment of the English Church, to which our London correspondent refers, has begun in good earnest by the holding of a conference in Birmingham, at which Mr. Miall, the great Dissenter, was the leading figure, but which was attended by members of all branches of Radicalism. This agitation has taken its present threatening dimensions under the influence of the discontent excited by the working of the Education Act, which we described some time ago, but it is stimulated by other, many of them smaller, agencies. For instance, all over England, except in a few of the large cities, the burial places are literally churchyards—that is, consecrated ground attached to the parish churches, and under the control of the Episcopal ministers, many of whom outrage the feelings of Nonconformist parents, as well as of others, by refusing to bury unbaptized infants, and, in some cases, persons of whose opinions and ways of life they do not approve. Moreover, the consecration of burying-ground carries with it in England certain legal consequences, one of which is that nobody has a right to perform funeral services on such ground without a license from the Bishop, and there thus results in many of the cemeteries a line of demarcation between the consecrated and the unconsecrated ground; and in the country districts the feelings of Dissenters are constantly outraged by their inability to have their friends buried under the ministration of their own pastors. But more powerful than all these influences is the growing restlessness under the exaltation of one denomination over another—a phenomenon which the spread of rationalistic views of government and society renders every day more odious even to those who care nothing for the religious objections to the Establishment.

The "pact of Bordeaux," or truce between the Radicals and Conservatives in France, seems to have come to an end. The Conservative story is that M. Gambetta, who has never displayed any talents except those of a stump-orator, after supporting M. Thiers for many months in the Assembly, has, to use the phrase of our own politicians, "gone back" on him, by denouncing the Assembly and all its belongings very fiercely in a speech at Grenoble, which he has been repeating in substance at several other places. He has been very silent ever since January, and was gradually acquiring in the eyes of his audiences the reputation of a shrewd, moderate man, who, as long as the Republic was safe, would give no trouble, and even help to heal old discords. But the rôle of a silent Moderate has become insupportable to him, so he has come out as savagely against the Conservatives, and in fact all that portion of the French people who do not agree with him, as in the days when M. Thiers called him a "fou furieux." As a measure of conciliation, Thiers had left the mayors appointed by Gambetta in office; but since the Grenoble speech it is said he has determined to remove them all, particularly as they have been giving Gambetta enthusiastic "receptions" on his travels. In the meantime, the speech is exciting an amount of alarm and rage among the Conservatives which seems extraordinary to us who are not accustomed, as the French are, to see blatherskite harangues followed by fighting. To read some of the articles in the French papers one would imagine Gambetta was already in arms against "society." M. de Mazade has written an article in the last *Revue des Deux Mondes* on the ex-Dictator's "strategy," when he was down on the Loire during the war, based on the information furnished by the various French and German reports published since the peace, which is both melancholy and instructive. M. de Mazade describes the antics which the orator was going through in his new rôle of a "Minister of War," when Prince Frederic Charles came down on him and crushed him like an egg-shell.

Gambetta and his friends, however, allege in defence of his declaration of war that the "reaction" is again at work, and has to be warned that the eye of the people is upon it; that it is deceiving M. Thiers, whose best friend Gambetta is; that the Assembly dreads dissolution, and are laying their plans, as they cannot have a monarchy, to set up a kind of republic that will keep them in power; that their programme proposes the restriction of the suffrage, the establishment of a second chamber, and the election of the President by the two chambers for five years, making the princes of the royal and imperial houses ineligible, but only for ten years, by which time they hope the long-sought "fusion" between the two Bourbon branches will have been effected. In other words, the Conservatives are charged with only accepting the republic as a temporary measure, and with trying to arrange matters in such fashion that it shall only be temporary, and it is in prevention of this scheme that Gambetta is rousing the provinces.

There is a curious little "movement" showing itself in England about the Geneva award, having for its object the unfortunate Mr. Laird, the builder of the *Alabama*. A Conservative member of Parliament suggested two or three weeks ago on the stump that this gentleman should be made to pay a portion at least of "the lump sum," and the idea has proved quite taking, and letters begin to crop out in the newspapers supporting it warmly. One writer in the London *Times* compliments Mr. Laird on "the ardor of his disinterested sympathy for the gallant struggle" of the South, but takes it for granted that now that his own country has suffered through his exertions, he will be only too anxious to help to pay the bill, and suggests his heading a subscription list with something like $100,000 or $150,000. A good many other people ought in honor, however, to back him up—all those, for instance who cheered him in the House of Commons when he said he would "sooner have built the *Alabama* than have made all Bright's speeches." The same correspondent makes one other excellent suggestion, viz., that all shipbuilders should be made personally liable for depredations committed by vessels built and illegally fitted out in their yards for participation in foreign wars. This would not only ensure caution, but procure for the police early and reliable information of what was going on. If Mr. Laird had been liable for the doings of the *Alabama*, we may depend upon it neither the American Consul in Liverpool nor Mr. Adams would have had any difficulty in getting evidence about her. He would have had all the news from headquarters, whatever the effect on "struggling nationalities," and Mr. Laird would have passed through the crisis as "a business man" simply, and have eschewed all sentimental leanings towards either North or South.

A STUDY IN MUNICIPAL POLITICS.

WE are just approaching another interesting crisis in the government of this city which will well repay the attention of political observers in all parts of the world, certainly in all parts of this country. Our readers may remember that the reform movement of last year fell far short of its goal, and greatly disappointed its principal supporters. It was confidently expected by them that not only would the plunderers of the Treasury be driven from office, but that the system under which they got into office would be changed, and the recurrence of the set of phenomena known as the "Ring thefts" be thus effectually and permanently prevented. Accordingly, for some time after the November election their attention was devoted almost exclusively to the work of framing a new charter, and during this process there was a good deal of valuable and instructive discussion about the bases of municipal government. The conclusion at which they arrived was that any change in the composition of the constituency or any limitation of its powers being hopeless, the only thing to be done was so to rearrange the legislative and administrative machinery as to make corrupt combinations more difficult than they had been, and to give the minority a representation; and a charter framed under this theory was submitted to the Legislature, under the impression that that body was bent on radical reform. But it was soon found that the Legislature was not by any means in a reforming mood; that the evil influences which have reigned at Albany for some years back had lost little of their power. The new charter was, moreover, vetoed by the Governor, on the ground, among others, that the minority representation clause was unconstitutional. The city was thus thrown back on the old charter, which undoubtedly has its defects, but it does not restrain the expression of the popular will, and the reforming spirit has had full room and liberty to work upon the voters during the past year. We are now about to witness the result of the conflict between this spirit and the old agencies, and shall be able to form some idea of the power of the former to hold its own, or make progress in ordinary times, and after the excitement caused by the discovery of the Ring frauds has died out. The Presidential election has, it is true, introduced a disturbing element into the municipal experiment which will deprive it of a good deal of its value for the moment; but then we must remember that Presidential elections there must be, and one of the signs of a good municipal system in America is its ability to resist the strain which these elections impose on it, or, in other words, to resist their influence in turning the municipal vote away from its legitimate object—the efficiency of the city government.

One of the first things deserving note in the present situation is this, that the union between reformers which brought about the victory of last year has not lasted. They are now divided into two camps, one calling itself a "Reformed Tammany," and the other Republican, and they have nominated two separate tickets, both for the administrative and judicial offices—that of the Republicans very good, that of the Democrats simply not bad. That is, the Republicans, who may be said in a rough way to represent in this city the well-to-do classes, have put up well-known men of positive excellence. Their candidate for the mayoralty, Mr. Havemeyer, though a Democrat in politics, is a person of the highest character, of long experience in affairs, who has already filled the mayoral chair, and who bore perhaps the most prominent part in the break-up of the Ring last year. Their two judicial candidates, Mr. Noah Davis and Mr. Van Vorst, are men also of the best standing in their own profession and in the community. Turning to Tammany, we find in every one of their nominations the result of a sort of compromise between the respectable leaders like Mr. Tilden and the "roughs" who compose the rank and file. In such of the discussions of the nominations as have been made public, we find that the rank and file are still attached to the leaders of the old stamp, and only restrained from putting them forward by the prudent admonitions of the managers as to the danger they would cause the ticket. The nominees are accordingly all second-rate, little-known men, who, though no positive "charges" can be made against them, are nevertheless persons whose career does not entitle them to public confidence in the full sense of the word; that is, they are about as respectable as the captains of hundreds and captains of fifties who bring the Tammany voters to the polls, would permit the head men to put forward.

But now we come to the most interesting feature in the situation. Those of our readers who can recall our own contributions to the discussion of municipal government last year, may remember that we held to the theory that, as long as the character of the electoral body was not changed either by depriving municipalities of their political character and converting them into quasi-commercial associations, or by bringing the pecuniary burdens of municipal government home by direct taxation to all voters, none of the dangerous tendencies of our city politics would disappear; or, in other words, that as long as the soil on which Tweed grew remained, Tweeds would continue to reappear; that you might shut one "Boss" up in jail, but another Boss would speedily occupy the vacant place. If 20,000 or 30,000 or 40,000 citizens demand a "Boss," how are they to be hindered from having him? is, in fact, the great question of New York politics. That that number of our citizens do demand a Boss is, we think, a fair deduction from the vote for the Ring at the last election. It numbered over 50,000, and this with the frauds before them, and the decent men of the community frenzied with indignation. Many people do not like to contemplate facts of this kind—they are unpleasant, and seem to cast much discredit on popular government; but it is only by the resolute facing of facts that popular government can last anywhere, so let us look at them manfully. How much has the reform movement done to make "Bosses" impossible, and is there a "Boss" now in the field?

To the first of these questions the election will be the best answer, and it is because it will answer it that we pronounce the present crisis so interesting. To the second we reply that there *is* a Boss in the field, and that his career is a very instructive subject of study. His name is James O'Brien. He is a young Irishman, who, we believe, has never followed any regular calling, and whose public career began as a ward politician of the class so powerful a few years ago under the appellation of "shoulder-hitters." While filling this position he was indicted certainly, and his enemies say served a term in the penitentiary, as a rioter. He is grossly ignorant and illiterate. Whether he can read at all is questioned by some, but all admit that if he can read he only learned to do so after the age of twenty. Over his ability to write there is a fierce controversy. His enemies deny that he can write a line, but we understand that one of his supporters declares that he has seen him write several notes, although nobody claims for him anything beyond a slight acquaintance with either of these arts. As we have said, he has been in "politics" from his boyhood, speedily became a prominent member of Tammany, and finally became Sheriff under the "Ring." He filled this office as all offices were filled at that period, and when he went out of office made a claim against the confederation, which was undoubtedly fraudulent, for $104,000, which they foolishly refused to pay. Whereupon he carried their secret accounts to the *Times*, and appeared as a "reformer of municipal corruption." He is tall, muscular, good-looking, strictly temperate, luxurious in his dress and equipages, and, by careful cultivation of the very arts by which Tweed won the Seventh Ward—that is, the distribution of largesses among the captains of hundreds, the donation of large quantities of coal to the poor in winter, the furnishing of employment on city works to the idle, the protection of criminals from the pursuit of the District Attorney—he is now possessed of a following in voters which he estimates at 30,000, and which obeys him as an army obeys the general, and he "runs" a political organization of his own called the "Apollo Hall Organization," which has just nominated him for the mayoralty. What his real strength is will appear on election day; but the way in which he uses it certainly is calculated to make him a formidable person. How formidable he is, is best shown by the

fact, for fact it is, that in case Greeley had carried two of the three October States, the Republican managers at the very least seriously contemplated offering him the nomination for the mayoralty as the best means of securing this State for Grant. O'Brien is a perfectly frank "modern man," and he brought the subject under the prayerful consideration of these gentlemen, by informing them that he would cast his 30,000 votes for any party which helped to put him at the head of the municipal government. O'Brien's career will now repay the careful watching of all students of politics.

THE "OLD CATHOLIC MOVEMENT."

THE secession from the Church of Rome in Germany and elsewhere which has taken the above name, and is now exciting so much attention, has a number of things in its favor which prevent the great body of Protestants, both in this and other countries, from forming candid and rational opinions about its real weight and importance. There is, of course, first and foremost, the strong hold on the Protestant imagination of all signs, however insignificant, of the internal decay of the Papal organization. This has been the subject of so much preaching and prophecy, and the object of so much prayer, that the slightest promise of it is seized upon by the more devout members of the heretic world with a faith that treats all attempts to disabuse it as almost blasphemous. Indeed, with the greater portion of orthodox Protestant believers, to doubt that the "great whore of Babylon" is near her ruin is almost like doubting the truths of Revelation. This force is in constant operation, makes a hero of the most insignificant convert, and elevates the most trifling schism into the rank of a new and final Reformation. It made, indeed, nearly as much of the Ronge movement as it is making of the Döllinger movement, and is in no wise diminished or abated by any number of disappointments.

The Protestant world, too, has been for fifteen or twenty years somewhat puzzled by the decline of the anti-Papal zeal which once raged in all Protestant countries, and by the disappearance of nearly all interest in the Roman Catholic controversy. The crusade against Popery which was set on foot by the section of the Protestant church known as "Evangelical" immediately after the restoration of peace in 1815, and which once promised such great results, has confessedly proved a total failure. Few people of intelligence can now be got to read a book or listen to a lecture proving the Pope to be the "Man of Sin." The line which separated Catholic from Protestant territory has in no part of the world been seriously disturbed. If social philosophers have not ceased to ascribe the misery or happiness of this or that community to its religious opinions, they have ceased to talk of wholesale conversion to "Bible Christianity" as a good means of social or political regeneration. The thoughts of reformers are now turned in a far different direction, and Evangelical Christians see looming up before them a very different danger. Moreover, it must be admitted that the political decline of the Papacy has contributed a good deal to the diminution of the odium which once surrounded it in Protestant eyes. The traditions of the days when the Pope undertook to dethrone monarchs and transfer kingdoms have died out. His emissaries no longer lurk in disguise in Protestant cellars, and his armies no longer march forth to the conquest of heathendom. Fifty years of Austrian and French protectorate had, indeed, made him from a political point of view almost contemptible as well as powerless, even before the Italians had stripped him of the insignia of sovereignty. These changes had made all the ordinary modes of assaulting the Papacy useless, and had given it a sort of porcupine's impregnability; and zealous Protestants were sorely puzzled what to do next, when the new secession showed itself, and showed itself in a most attractive form, headed by theologians of high standing, and caused by the operation of that very tendency to tyranny against which Protestants had so long declaimed.

This movement comes, too, at a moment when the temporal power in the leading European countries is greatly interested in promoting it. The Syllabus was a declaration of war against the principles on which the government of every civilized society is now based; and it was especially hostile to the new political organizations set up in Italy and Germany. Its adoption by the Council of the Vatican made it all the more troublesome, if not formidable, and gave the politicians of those two countries a strong motive for fostering the tendency to revolt against the decrees of the Council. Moreover, the newly bestowed powers of the Pope promised to furnish him with weapons, not of offence, but of serious annoyance, and with which the secular power could not, under the most favorable circumstances, contend, except at a disadvantage. We have no idea that Bismarck would now relish or looks for a religious revolution among German Catholics; but he is undoubtedly very glad to be able to say that respectable Catholic theologians are on his side, and that it is not brute force simply which has driven out the Jesuits, and which is pursuing the Bishop of Ermeland.

Though last, not least, this revolt derives more or less support from the anxiety of a considerable portion of the Anglican Church to escape from its purely national and insular position, and enter into formal relations with one or more of the ecclesiastical bodies of continental Europe. The hankering after this of the High-Church and Ritualistic parties in England has grown stronger as their restlessness under the yoke of the state has increased, and has shown itself in a very marked flirtation with the Greek Church. The Old Catholic movement, inasmuch as it resembles what many English churchmen would fain believe the origin of their own church to have been —a great act of adhesion to the form of sound doctrine abandoned by the popes—has appealed both to their imagination and their interests. Accordingly, we find both extremes of their opinion represented in the Cologne Congress.

When, however, we come to enquire what is likely to be the result of all this, we find ourselves in the presence of a great deal of extravagant and unreasonable expectation. That it will result in releasing a considerable number of persons from their allegiance to the Church of Rome, and that it will weaken the faith of a great many more, we do not doubt; but what justification there is for the hope that it will add anything to the strength of organized Protestantism, or to the power of any existing creed, it is hard to see. If a common creed, or, in other words, a doctrinal platform, be necessary to the strength or even the existence of any organization that can be called a church, as we believe it is, the chances of the new movement must be considered rather dismal, for, as we remarked last week, it would almost need a miracle to produce a form of belief concerning life, and death, and judgment, to which the schismatics who met at Cologne a month ago could give in their hearty adhesion. However little effect the discussions of the last twenty years may have had in shaking men loose from their old creeds, it has made the formation of new ones a terribly difficult undertaking. In our time, we find men often devotedly attached to the religious ideas in which they have been bred, but to find a man greatly attached to religious ideas which he has consciously constructed for himself, is rare indeed; and the passage of a considerable body of Catholics into the ranks of orthodox Protestantism is something which the intellectual history of the past century almost justifies us in pronouncing impossible. Catholics pass out of Catholicism into Deism in great numbers; but, as the history of Unitarianism in this country has pretty well proved, you cannot build a church upon Deism unless, like Judaism, it is surrounded by great political and social traditions.

The notion that a parallel can be found between this movement and the Reformation is one which can only be likened for absurdity to Gambetta's belief that he was able to reproduce in 1870 the storm which in 1792 had swept the Prussian invaders from French soil. The times have changed since Luther defied the Pope and wrestled with the Devil, and men have changed too. Luther led out from the church, which then contained the only key the age had at its command for the solution of any social or religious problem, a body of men to whom belief was as necessary as the air they breathed, and who approached none of the world's mysteries

except from the theological side; they could not do without a new church, and they possessed an absolutely new light—indeed to them a new revelation—the Bible, to help them to build it up. Their expectations as to the character of the church they were to construct were of the most extravagant kind. We of this age, with our three hundred years of experience, know how fallacious these hopes were. We know that the Bible may be in every man's hand, and any general agreement about the truth be still as far off as ever. We know that all Christendom might forsake the Pope, and yet all the dark things of life remain dark as ever. We know that priests may marry, and impurity continue. We see churches rise and decline, interpretations multiply, creeds change, and yet the way of salvation continue to the great mass of men even harder to find and harder to follow than it was when Tetzel sold his indulgences. To suppose that this experience, deep and sad as much of it is, has been lost on the world, and that men can again be led into the wilderness in a great army to search for the promised land of certainty and repose, is to cherish a chimera. The great strength of the Church of Rome lies now in the fact that he who quits her knows not whither he is going, and can find no man to tell him. It is this which leads thousands to cling to her, to whom she has ceased to be a nursing mother.

THE ENGLISH LECTURERS.

MR. FROUDE.

MR. FROUDE announced that his object in coming to America was to enlighten the American public as to the true nature of Irish discontent, in such manner that American opinion, acting on Irish opinion, would reconcile the Irish to the English connection, and turn their attention to practical remedies for whatever was wrong in their condition—American opinion being now in Irish eyes the court of last resort in all political controversies. It is casting no reflection on the historical or literary value of his lectures to say that Mr. Froude, in proposing to himself any such undertaking, fell into error as to the kind of audience he was likely to command, and as to the nature of the impression he was likely to make. The class of persons who listen to him is one of great intelligence and respectability, but it is a class to which the Irish are not in the habit of listening, and which has already formed as unfavorable opinions about the political character of the Irish as Mr. Froude could wish. He will be surrounded during his whole tour by a public to whose utterances the Irish pay no more attention than to the preachings of Mr. Newdegate or Mr. Whalley, and who have long ago reached from their observation of the influence of the Irish immigration on American politics the very conclusions for which Mr. Froude proposes to furnish historical justification. In short, he is addressing people who have either already made up their minds, or whose minds have no value for the purposes of his mission.

On the other hand, he will not reach at all the political class which panders to Irish hatred of England, and, if he does reach it, he will produce no effect on it. Not one speech the less will be uttered, or article the less written, in encouragement of Fenianism in consequence of anything he may say. Indeed, the idea that the Bankses will be more careful in their Congressional reports, or the Coxes or Mortons in their political harangues, either after or before election, in consequence of Mr. Froude's demonstration of the groundlessness of Fenian complaints, is one which to "the men inside politics" must be very amusing.

We think, however, we can safely go a little further than this, and say that however much light he may throw on the troubled waters of Irish history, his deductions will not find a ready acceptance among thinking Americans. The men who will heartily agree with him in believing that the Irish have, on the whole, only received their due, are not as a rule fair exponents of the national temper or of the tendencies of the national mind. Those who listened on Friday night last to his picturesque account of the Elizabethan and Cromwellian attempts to pacify Ireland, must have felt in their bones that—in spite of the cheers which greeted some of his more eloquent and some of his bolder passages, and in particular his dauntless way of dealing with the Drogheda Massacre—his political philosophy was not one which the average American could be got to carry home with him and ponder and embrace. Mr. Froude, it must in justice to him be said, by no means throws all the responsibility of Irish misery on Ireland. He deals out a considerable share of this responsibility to England, but then his mode of apportioning it is one which is completely opposed to most of the fundamental notions of American politics. For instance, his whole treatment of Irish history is permeated by an idea which, whatever marks it may have left on American practice in dealing with the Indians, has no place now in American political philosophy—we mean what is called in English politics "the imperial idea"—the idea, that is, that a strong, bold, and courageous race has a sort of "natural right" to invade the territory of weak, semi-civilized, and distracted races, and undertake the task of governing them by such methods as seem best, and at such cost of life as may be necessary. This idea is a necessary product of English history; it is not likely to disappear in England as long as she possesses such a school for soldiers and statesmen as is furnished by India. Indeed, she could not stay in India without some such theory to support her troops, but it is not one which will find a ready acceptance here. American opinion has, within the last twenty years, run into the very opposite extreme, and now maintains with some tenacity the right even of barbarous communities to be let alone and allowed to work out their own salvation or damnation in their own way. There is little or no faith left in this country in the value of superimposed civilization, or of "superior minds," or of higher organization, while there is a deep suspicion of, or we might say there is deep hostility towards, all claims to rule based on alleged superiority of race, or creed, or class. We doubt if Mr. Froude could have hit on a more unpalatable mode, or a mode more likely to clash with the prevailing tendencies of American opinion, of defending English rule in Ireland than the argument, that, Englishmen being stronger and wiser than Irishmen, Irishmen ought to submit to have themselves governed on English ideas whether they like it or not. He has produced this argument already in England, and it has elicited there a considerable amount of indignant protest. We are forced to say of it here that it is likely to do great mischief, over and above the total defeat of Mr. Froude's object in coming to this country. The Irish in America are more likely to be exasperated by it than the Irish at home, and we feel sure that no native American will ever venture to use it to an Irish audience.

There is one other point to which Mr. Froude's attention ought to be called, as likely seriously to diminish the political weight of his exposition of the causes of Irish discontent. The sole justification of a conquest, even of a conquest achieved over barbarians by a civilized people, is that it supplies good government—that is, protection for life and property. Unless it does this, no picture, however dark, of the discords and disorder and savagery of the conquered can set the conqueror right at the bar of civilized opinion. Therefore, the shocking and carefully darkened pictures of the social and political degradation of the native Irish in the fifteenth, sixteenth, and seventeenth centuries with which Mr. Froude is furnishing us, are available for English vindication only on the supposition that the invasion, even if it destroyed liberty, brought with it law and order. But according to Mr. Froude's eloquent confession, it brought nothing of the kind. Queen Elizabeth made the first serious attempt to subjugate Ireland, but she did it, Mr. Froude tells us, with only a handful of English soldiers—who acted as auxiliaries to Irish clans engaged on the Queen's instigation in mutual massacre. After three years of this sort of thing, the whole southern portion of the island was reduced, to use Mr. Froude's words, "to a smoking wilderness," men, women, and children having been remorselessly slaughtered; but no attempt whatever was then made to establish either courts or police, or any civil rule of any kind. Society was left in a worse condition than before. Why was this? Because, says Mr. Froude, the English Constitution made no provision for the maintenance of a standing army for any such purpose.

The second attempt was made by Cromwell. He slaughtered the garrisons of Drogheda and Wexford, and scattered the armies of the various Irish factions, but he made no more attempt to police the island than Elizabeth. The only mode of establishing order resorted to by the Commonwealth was the wholesale confiscation of the land, and its distribution among the officers and soldiers of the army, the natives of all ages and sexes being driven into Connaught. The "policing" was then left to be done by the new settlers, each man with the strong hand on his own account. The third attempt was made by William III., who also followed the Cromwellian plan, and left the island to be governed during the following century by the military adventurers who had entered into possession of the soil. The excuse for not endeavoring to set up an honest and efficient government remained the same in all three cases: the absence of an army, or occupation elsewhere. In other words, the conquest from first to last wanted the only justification any conquest can have. England found the Irish much in the same stage of social and political progress in which Cæsar found the Gauls, destitute of nearly all the elements of political organization; but instead of founding a political system, and maintaining it, she interfered for century after century only to subjugate and lay waste and set the natives by the ears. Mr. Froude's answer to this is, that if the Irish had been better men they could easily have driven the English out, which is perhaps a good reason for not bestowing much pity on the Irish, but it is not a good reason for telling the Irish they ought not to hate England. No pity can be made welcome which is ostentatiously mingled with contempt. It is quite true, to our minds, that during the last fifty years

England has supplied the Irish with a better government than the Irish could provide for themselves within the next century at least. There is no doubt of the substantial value of the English connection to Ireland *now;* but there is just as little that in the past history of this connection there is reason enough for Irish suspicion and dislike. The tenacity of the Irish memory, too, is one of the great political defects and misfortunes of the race. Inability to forget past "wrongs" in the light of present prosperity, is a sure sign of the absence of the political sense; and that the Irish are wanting in the political sense no candid man can deny. That they are really still to a considerable extent in the tribal stage of progress, there is little doubt. But they are surrounded by ideas, and institutions, and influences which make it useless to try to raise them out of that stage by the "imperial" method of government, or, in other words, by trying to persuade them that they have richly deserved all their misfortunes, and that the best thing they can do is to let a superior race mould their destinies. If it were possible for Englishmen to be a little more patient with their weaknesses, to yield a little more to the childish vanities and aspirations which form the nearest approach they have yet made to a feeling of nationality, and take upon themselves in word as well as in deed their share of the horrible burdens of Irish history, it would do more towards winning them Irish confidence than anything Americans are ever likely to say.

ENGLAND.

LONDON, October 4, 1872.

THE last bit of news is the elevation of Sir Roundell Palmer to the Woolsack. The present occupant of that exalted position, Lord Hatherley, is compelled by ill-health to retire. Though universally respected as a man of high honor and deep religious principle, he has not, I imagine, been a very successful chancellor. He was partly responsible for the most unfortunate scandal into which Mr. Gladstone managed to plunge a year ago. Doubtless, the explanation of an act of apparent immorality by two of the most highly moral of men was that commonly given—namely, that their profound consciousness of their own purity of intention led them to take liberties from which more worldly-minded and less immaculate persons would have shrunk. That manner of using a good character was not very felicitous. Lord Hatherley, however, survived what threatened at one time to be a very awkward scandal. Parliament was content to protest by a large minority without actually carrying a vote of censure; and Lord Hatherley remained in office for the session, although his infirmities made it generally understood that he was likely to retire at an early opportunity. It was as generally understood that he would be succeeded by Sir Roundell Palmer. Sir R. Palmer has for some time occupied a unique position. Admittedly the first advocate at the English bar, he refused to take office on the last opportunity from conscientious scruples about the disestablishment of the Irish Church. On other points, however, he was a supporter of Mr. Gladstone's government, and his independent position enabled him to render it some very useful services. On all occasions when the Government was in difficulties, he came forward and pronounced a quasi-judicial opinion, which had the advantage of coming from without, and was yet, if I am not mistaken, always in their favor. His credit was so high that he was enabled, as it were, to give Mr. Gladstone a certificate of good conduct, which was received with great respect, if not considered absolutely decisive of the question. Sir Roundell is one of the large number of men, since eminent in political life, who were nearly contemporaries at Oxford, and of whom Mr. Gladstone is the most distinguished. Like the Premier, he derived from the place of his education a certain ecclesiastical tinge, and is known as a vigorous supporter of the Church of England. Oxford may lay claim to having been of late years a mother of statesmen: besides Mr. Gladstone and Sir R. Palmer, Mr. Lowe and Mr. Cardwell, amongst the present ministry, were both distinguished at the university. Perhaps the peculiar shade of culture characteristic of Oxford men generally has marked most of them a little too strongly, and tends to diminish the sympathy between them and the rougher Dissenters who form a large part of their supporters; still, it cannot be denied that for eloquence, ability, and high personal character, it would not be easy to match them from the non-academical politicians.

The appointment of Sir R. Palmer has helped to stir up once more a certain interest in the terrible question of law reform. Hopes are excited by the advent of every new chancellor which are as regularly doomed to disappointment. Lord Westbury came in with the highest reputation for ability, if not with quite so strong an odor of sanctity as his successors, and did nothing beyond getting into a scrape for a disreputable appointment. Lord Hatherley has failed as signally. He produced a plan for the formation of a high court of appeal, which was picked to pieces by his brother lawyers in the House of Lords, and ultimately collapsed as completely—I know not whether as deservedly—as former attempts in the same direction. Mr. Fawcett and Mr. Vernon Harcourt endeavored last session to get up a debate in the Commons on the causes which seem to hinder all attempts at anything like a systematic mode of dealing with this perplexing problem. Law reform, meaning any wide measure for reforming either the substance of the law or the system of administration, is a kind of Serbonian bog at which the most energetic pioneers of progress look in despair. Can it be, as the two Radical members suggested, that our present system prevents the introduction of serious measures, because the attorney- and solicitor-general are permitted to be absorbed in private business, which leaves them only scraps and shreds of time in which to attend to legislation? Did not the Tichborne case stand in the way of organic changes in our system? The law officers utterly repudiated this theory. They gave, or were understood to give, two reasons for their failure to introduce reforms. The first was that the English law was perfect, and did not want reform; the second and more plausible was that the House of Commons could not be induced to attend to anything so dry. Our legislators can only find time for topics which are forced upon them by popular outcry or which are flavored by personal scandal. They will spend months over the details of a Ballot Bill, because their constituents have a half-superstitious belief in the ballot as a traditional part of the Liberal platform. But as law reform is a matter which, however important, is of intelligible importance only to a few educated men, it is scarcely possible to make room for it. I imagine that this difficulty is not entirely peculiar to English politics. However, we did not expect to receive such a candid avowal of incompetency from those who, in theory at least, are supposed to direct as well as to follow the national impulses. Sufficient scandal was given to induce both the law officers to explain themselves in what are now called extra-sessional utterances. Sir John Coleridge, in particular, delivered a very able address at the British Association. That amiable body of philanthropists is, I fear, rather declining in public estimation by reason of the singular dreariness of its discussions, and able men are apt to be rather shy of it. Sir J. Coleridge's desire to put forth a manifesto as to his true sentiments was, therefore, a piece of rare good fortune; and his exposition left nothing to be desired, so far as good wishes are valuable. If Sir John Coleridge could have his way, it is plain that we should not only see our judicial system reconstructed, but have a serious experiment made in the direction of codifying the law. Whether, however, he or his colleagues will be able or willing to translate these aspirations into practice remains to be seen. The commission which has been dawdling over the matter for some years appears to have produced no particular result. Yet the whole question has attracted more attention than might have been expected; and it is not improbable that some serious measure of law reform will find a place in the programme of next session. Indeed, I have reason to know that Government has already taken some steps in the matter which may probably lead to more active measures. There is a chance for somebody to distinguish himself by bringing comparative order out of chaos, and it is permitted to hope, in spite of former disappointment, that Sir R. Palmer may snatch at such an opportunity of acquiring a permanent reputation.

His appointment naturally suggests a reflection on the chances of another agitation which is trying to struggle into notice. Sir Roundell refused office because he could not consent to the disestablishment of the Irish Church. Is it possible that he may have to resign it because the disestablishment of the Church of England will become a Liberal measure? Mr. Miall, an excellent and hard-working Dissenter, with room in his mind for one idea, and possibly for more than one, is obviously of this opinion. He is doing his best to rally the Dissenters for an assault upon the object of their antipathy. For reasons which I have formerly noticed, I think it far from improbable that the next serious party battle in England may be waged over an ecclesiastical question. It is, however, equally clear that the Dissenters by themselves have not sufficient power to stir up much feeling against an institution which, however indefensible theoretically, is connected by so many intricate ramifications with the whole social structure of the country. It has struck its roots so deeply, and we are so much accustomed to its anomalies, that a successful assault from without is improbable. The real danger depends upon the internal dissensions. Whilst amiable High-Churchmen like Bishop Wordsworth and equally amiable Broad-Churchmen like Dean Stanley are yearning for a wider union and carrying on harmless flirtations with the Old Catholics, the Church is daily becoming more divided within itself. The threat of demanding disestablishment is becoming familiar to the most energetic of the clergy. One party, represented by Archdeacon Denison, threatens to leave the Church if the Athanasian Creed is abandoned; their opponents say that they will leave it if the Creed is retained; and although these threats are at present nothing more than threats, people are gradually familiarizing themselves with the idea. But in the absence of any internal convulsion, the chance of upsetting the establishment seems to be small. One

question which would have to be solved in such a case is sufficient to indicate the difficulties with which the agitation is beset. What, in the event of disestablishment, is to be done with Westminster Abbey? It is, if the name can be given to any building, a thoroughly national building. To allow it to be private property would seem to be out of the question. Could we give up Poets' Corner and the statues of Chatham, and Pitt, and Fox, and Wilberforce to any sect, however respectable? Disestablishment would in all probability be followed by subdivision. The church would become two or three churches within a generation or two. Could we allow the venerable Abbey, bound up so indissolubly with the historical associations of ages, to belong to the Wesleyans, the Independents, the Baptists, or to the Episcopal Church which would be on a level with them? What is true of Westminster is true in a measure of all our cathedrals; nay, it is more or less true of every parish church in the land. The difficulty, though small in the eyes of theorists or of excited ecclesiastical parties, is great in the eyes of the neutral mass of English laymen, and may serve to indicate one of numerous reasons which will long make disestablishment a delicate subject to approach.

Correspondence.

THE POSTMASTER-GENERAL AND THE CHORPENNING CLAIM.

To the Editor of the Nation:

Sir: In your article of last week, entitled "The Chorpenning Claim," there is much that reads like an attempt to justify the Postmaster-General in the matter of this claim, by transferring the infamy which attaches to that transaction from him to the Congress which enacted the law.

Your implied defence of Mr. Creswell is based upon the fact that the law of 1857, to which the joint resolution of July 15, 1870, referred, made the affidavits and proofs on file in the House of Representatives the sole basis upon which the present Postmaster-General was bound to act. A careful comparison of the two laws will, or should, satisfy you that this is an error, but it is unnecessary to follow up this question; and I only remark that the joint resolution of 1870 is entirely silent as to these affidavits and proofs, and complete effect could be given to it without referring to them. Waiving this issue, and admitting that Mr. Creswell was bound to regard the affidavits and proofs as conclusive in his investigations, I propose to consider whether he discharged his duties faithfully under the law.

These affidavits and proofs are precisely what you describe them to be, viz., a mass of rubbish: no fair-minded man could insist that they proved anything. Notwithstanding, Postmaster-General Brown, or those of his subordinates who were charged with the duty of examining this rubbish, were induced to find in it evidence of extra services amounting to $79,072, and made two awards amounting to this sum, which were paid and accepted.

The claimant (Chorpenning), not satisfied with these awards, filed his petition in the Court of Claims, asserting upon the basis of the services which Postmaster-General Brown found, by the evidence submitted to him, Chorpenning had performed, there were errors in calculation and in the construction of the law amounting to $76,576 37. Then follows this allegation:—"And your petitioner further avers, that the affidavits and proofs on file in the House of Representatives show that he performed other extra services not included in either of the said statements. That for said services, *not so included*, your petitioner is entitled, under the said act, to the further compensation of one hundred thousand dollars." This petition, which may fairly be presumed to make the best showing the claimant could for himself, was signed and sworn to by Mr. Chorpenning in March, 1866. In all, showing a demand for only $176,576 37.

A copy of this petition, as the law requires, was sent to the Post-Office Department and placed on its files, to the end that that department should be advised of the extent and character of the claim. Soon afterwards, at the request of Chorpenning, the Postmaster-General transmitted to the court a certified copy of the affidavits and proofs, which had previously been transmitted to his department from the House of Representatives. When the present Postmaster-General undertook the examination of this claim under the joint resolution of July 15, 1870, and, as is assumed, was constrained to accept these affidavits and proofs as conclusive against the Government, he had before him Chorpenning's sworn statement that his damages amounted to no more than $176,576 37. Had not Congress a right to regard this as a limitation set by the claimant against himself and conclusive upon him, beyond which Mr. Creswell would not presume to go? Could it be supposed that, in the face of this sworn statement voluntarily made, the Postmaster-General would attempt to find, in a mass of rubbish, evidence of services which the claimant four years before had not found, and which would nd did, in the opinion of this Government official, swell the damages to 440,000?

It is difficult for me to find any excuse for such conduct, nor do I see any mitigation of it in your extenuating article, which I confess was a surprise to me (a regular, steady reader of the *Nation*), and quite out of place in a journal which generally supports a higher tone of morality and justice. But few if any greater derelictions of duty have stained the characters of high public officials, and if there have, there is no propriety in "sheltering the commission of crime under the protection of precedent."

I do not propose in turn to furnish excuses for the action of Congress, but when the infamy of this transaction shall be fairly apportioned, the burthen of it will be found to rest where public opinion has placed it, that is, upon the shoulders of the man who attempted to execute the law by perverting it.

Perrin.

October 14, 1872.

[Our readers, a portion of the people of the United States, do not vote for the Postmaster-General, neither can they remove him from office nor yet impeach him for malfeasance. In our article we were dealing with the men they do elect, viz., the majority responsible for the vicious system of Congressional legislation and the more vicious apologies that are put forth for it in the stead of effective reform, and we took the Chorpenning claim as a pointed text for our remarks. It was not our intention to enter into the question of Mr. Creswell's complicity, and we think we used language sufficiently guarded in saying that the former Postmaster-General found his hands tied by the first statute precisely as the present Postmaster-General "*asserts* he has found his tied by the last"—conceding, what our correspondent manifestly thinks, that Congress in its character of national steward introduced a burglar into the national warehouse as an assistant, and told him to help his pal to as much as he chose to take, and that the pal took an unexpectedly large quantity. We still are not content with our steward's apology that he did not know the burglar to be a burglar nor the pal to be a pal; and we grow the more dissatisfied when we find that the steward continues to allow the alleged burglar to retain his position in the warehouse without even an attempt to bring him to justice. Our correspondent has doubtless noticed that Mr. Creswell has been making campaign speeches, averring that Congress left him no discretion in the matter, and that this has not been gainsaid by Mr. Dawes nor any other Republican "watchdog of the Treasury." Indeed, the conduct of the "watchdogs" seems to imply that they intend to keep a burglar in the warehouse, so as to have somebody to bark at. The case, as our correspondent states it, certainly seems a bad business, and furnishes an additional reason for electing a Congress which is not afraid to investigate Mr. Creswell's conduct and punish him if his guilt be established. To have this done we need to elect neither "war-horses" nor "watchdogs," but honest, earnest, competent legislators.—Ed. Nation.]

THE WORKING OF THE NEW INDIAN POLICY.

To the Editor of the Nation:

Sir: In the heat of the Presidential campaign, when the friends of General Grant are finding it so hard to hit upon acts of the Administration which they can present without qualification as reasons why it should be supported, it may be of interest to your readers to have their attention called, by one outside of politics, to one feature of the public policy which is producing results greatly to the credit of its instigators. I refer to the new policy in Indian affairs. Whether for better or worse, it is the child of the present Administration, and as such has been the object of incessant attack.

The Annual Pay Commission has just completed its work in Minnesota, and the general gathering of the Indians at the headquarters of the Reservations has furnished excellent opportunity for judging the present Indian policy by its fruits. Facts have also been brought to light which are not without scientific value.

It is true that the opportunities for this last experiment in Minnesota in dealing with the Indian have been unusually favorable. The Chippewas are above the average type of Indian. They have had long and peaceful intercourse with the whites. Living, as they do, somewhat out of the direct line of immigration, they have not been exposed so mercilessly as other tribes have to the skirmish line of ruffians which has preceded the settlers in many of the Western States. Their reservations are such as to permit their increasing their finan-

cial resources by the sale of their pine timber or by the cultivation of the soil; and in their agent (E. P. Smith) they are blessed with a man not only of irreproachable character, but one who as secretary of the American Missionary Association in the South has had much experience in dealing with men of a degraded class. But, on the other hand, Minnesota is a State where, from various causes, culminating with the Sioux war of 1862, hatred of the Indian is universal and bitter, witness the atrocious murder of two Indians by a mob in the streets of Brainerd the other day. Receiving uninterrupted annuities, the Chippewas have had the constant attention of the well-known Indian Ring; they have been the fat ox caught in the woods by the wolves; agent after agent, many of them men of notorious character, have fattened upon them; their pine has been stolen; their reserve funds have been spirited away; their school-money has been consumed, leaving no trace; their annuities have been taken from before their very eyes; while whiskey has been always accessible, when not actually furnished by the Government agent. As a consequence, they have a deep-seated distrust of the whites, and dread a closer contact with them. Little Thunder, a leading chief at Red Lake, in the extreme northern part of the State, said in the council that as he saw the whites beginning to approach them he lay awake as one who is frightened in the night. And the responsibility for the work among these 6,000 Indians scattered over eight reservations, the furthest of which are 350 miles apart, is laid upon one man.

The new policy has been in force scarcely two years, and these are some of the results: The Indians have begun to work. The unsettled Indians are gathering on the White Earth reservation, where the soil is adapted to farming. About 1,000 are there now. Many have cast aside their blankets and cut their hair. Over 100 houses are building and built, in which a large part of the work is done by the Indians. This year they had on that one reservation 140 acres of wheat, and many more of potatoes and garden products; they have 250 head of cattle, besides horses and hogs; there is a sawmill cutting from 15,000 to 20,000 feet of lumber daily, run by a dozen Indians under the direction of one white man; two fine buildings accommodate a boarding-school with seventy scholars and four teachers; and in a comfortable chapel built by the Episcopalians a full-blooded Chippewa preacher gathers every Sunday a congregation of sixty to a hundred. This reservation is the home of the agent, and most of his work has been done here; but its influence is felt at all the other points. The Red Lakers referred to it, and asked that they also might be put in the way of getting a church, a school, and oxen. In council with the Commission, the Red Lake chiefs said that they could not afford to set aside any of their annuity for these purposes; but, in response to what was said to them on the subject, the next day they appropriated $1,000 for a school, and a further sum for oxen, wagons, and ploughs.

Quite as notable a change is seen in the temper of the Indians. Hitherto the councils of chiefs on Annuity Day have been the occasion of a long series of complaints against the agent: this year there was an entire absence of anything of the kind. Indeed, every speaker took occasion to express his gratitude for what has been done for them, and his entire confidence in the management of their affairs. One of the traders, himself a half-breed, who has lived among the Indians upwards of sixty years, assured me that this is the general feeling, and said that the change wrought in the past two years is greater than he had ever deemed possible.

The question will occur whether or not these changes in the line of civilization find any real favor with the Indians, and will be permanent. Several of the chiefs said publicly, of their own motion, that they wanted it understood that they love their new habits, and desire above everything to progress in them; they deprecated their own want of facility, but spoke hopefully of their children. One has only to see the conscious pride with which men who, a year ago, were worthless savages, drive their oxen, and point to their gardens and houses, to be convinced of the strong hold the new life has upon them. Of course, the average progress has as yet been very small, and if the present policy should be changed, they would doubtless relapse into their old condition; but if they can be subjected to the influences under which they now are for a few years longer, the best results may be looked for.

Some incidental facts were developed which are interesting. The only complete mortality records, those at Red Lake, indicate 50 births and but 14 deaths during the year on that reservation, with a population of 1,075. At Leech Lake, where food is scarce, and the Indians in a more wretched condition, the births have been about 45 and the deaths 25 in a population of 1,500. The half-breed trader to whom I have referred above, a man of considerable intelligence and character, whose knowledge of the Chippewas is more exact, perhaps, than that of any man in the State, told me that within his memory there has been no perceptible diminution in their numbers; the rolls would indicate a slight increase. The preponderance of women over men is also noticeable. The Pillager rolls at White Earth give this year 107 men, 141 women, and 223 children, and the Mississippis 140 men, 171 women, and 192 children. The Red Lake rolls contain 269 men, 357 women, and 449 children (all above 15 years of age are counted adult). This is in face of the fact that pulmonary disease, attributed to the practice of carrying heavy burdens on the back, is prevalent among the women.

The men, as a rule, are strong-featured, athletic, and of good height. I measured a number, and found them to be over six feet high. Their speeches, by their clearness, force, point, brevity, aptness of illustration, and quickness of repartee, did much to justify the traditional Indian eloquence.

Just at present the best state of feeling does not exist between the Chippewas of the lower reservations and the people of Northern Minnesota. Several murders have been committed on both sides during the summer, for which no one has as yet been punished. On the part of the Indians they were committed solely for plunder by some young ruffians between 18 and 24 years of age. The leading one, Bobolink, is under arrest, and, if convicted, will be hung. The lynching of the Indians at Brainerd, and the comparative indifference of the authorities to it, have created a good deal of feeling on the reservations; but the day of a more even-handed justice is at hand.

KENT.

MINNEAPOLIS, Oct. 14, 1872.

Notes.

STILL another American novel is announced by D. Appleton & Co.—"Spicy," by Mrs. M. J. Lamb; also, "Coffee: its History, Cultivation, and Uses," by Richard Hewitt, jr.; and "Little People of the Snow," illustrated, by W. C. Bryant.——Dr. Elliott Coues, a first-rate authority, will publish through the Naturalists' Agency at Salem, Mass., a "Key to North American Birds," illustrated by six steel plates and more than 250 woodcuts.——John Ross & Co. have transferred "The Mother's Register," lately published by them, to G. P. Putnam & Sons, who will make it a companion volume of "The Mother's Work with Sick Children," which they will shortly issue, and of other reprints of works by the same author, Prof. J. B. Fonssagrives, of Montpellier, France.

—Having let fall a few recommendatory words last week respecting Max Müller's introductory lecture at Strassburg, "On the Results of the Science of Language," it is but fair for us to add that no one who goes to that lecture for information respecting the present state of the science, for deep views of its principles and methods, or for kindling and inspiring words as to its future, can fail to be disappointed. It is long since Müller has produced an occasional effort that was at all worthy of his reputation; and the chief characteristic of this one is that it is commonplace and superficial, or, as Germans would be apt to say, *nichtssagend*. One of its most salient features is its denial that the question as to degrees of connection between the different branches of the Aryan or Indo-European family—the question, for example, whether the Celtic is more akin to Latin than to German, or the Slavic to German than to Sanskrit, is a legitimate, scientific question at all worthy of serious attempt at solution; the alleged reason being that at present there are very discordant views held respecting it; that is, that it is not yet solved! It would be curious to see what account of the "Dialectic Process" could be given which should justify us in enquiring and deciding whether English is a closer cousin to Dutch and Frisian than to German, and forbid our extending the same enquiry to the whole Germanic branch in its relations to its peers. Again, the assertion that, in any event, "it would be as wrong to speak of Aryan blood as of Dolichocephalic grammar," is one that has, indeed, a kernel of truth in it, but is falsely used to deny that the investigation of languages has any bearing on the determination of races. Once more we are told that "were it possible to trace human language directly back to natural sounds, to interjections or imitations, the question whether the science of language belongs to the sphere of the natural or the historical sciences would at once be solved"—namely, as we are doubtless to understand, in favor of the natural sciences. But we find it impossible to see how the settlement of one of these questions involves that of the other. If men, in their first attempts at communication, were guided by their natural exclamations, and by imitation of sounds outside themselves, that is no argument against the essentially voluntary character of the process, and the historical nature of the development of the produced instrumentality. One might as well say that if the first instruments used by men were actually sticks and stones, then the study of men's use of machinery is a physical science. No one would guess from Müller's paragraph what was the true aspect of the question, or what had been his own attitude with regard to it. English readers, we will add, may find the whole lecture in the *Contemporary Review* for June last.

—If Mr. Froude got a singular notion of social New York when Mr. Oakey Hall stretched a hand of honest welcome to him at the Lotos Club, he had an opportunity of revising his conclusions when he was dined at Delmonico's on what we have no doubt was a better dinner than he ever ate before, and certainly in about as good company as our unmonarchical land can show. He told an affable *Herald* interviewer who dropped in on him when he landed, that he was delighted with him—one surprise at least for that gentleman—and he must have been in bliss itself when he met the company that Messrs. Scribner and Armstrong and Seymour gathered together to see him and to make speeches. American publishers may before this have given one of their "eminent hands" a more superb and flattering repast, flanked by better oratory, a finer banquet accompanied by a more gorgeous feast of reason and flow of soul; but if so, history records it not. Since Johnson's dinner behind the screen, author and publisher never cut mutton in a manner so ideally perfect. The viands were in the well-known style of the distinguished caterer, the Falernian was of the rarest vintage; "perhaps the most distinguished man in the country" was present in numerous but select assemblage; he had read Froude with more satisfaction than he ever got from any other work; he spoke fluently and tenderly of the love we bear to the Tower and the Lions in the Tower, and Shakespeare and Milton, and he must have given Mr. Froude the impression that when an Englishman of any size comes over here among his cousins, he is sure of a welcome such as Swift describes as common in the country in his day. Seriously, the affair was a great success in all aspects. The speaking was, most of it, very happy; Mr. Curtis outdoing himself, which is what no one else has done for him in after-dinner oratory, and Mr. Bryant and Mr. Emerson, both masters, together with the other speakers, acquitting themselves in a manner which, we will do Mr. Froude the justice to say, probably did not make him sick with envy, but which would have that effect on the average Englishman. Laird or Lowe or Earl Russell would have stood the ordeal very differently, we may be sure.

—The public have since had opportunity for testing Mr. Froude as a lecturer, and it is safe to say that he will have success. It is true, however, that his reputation and his quality of guest will make his success as a lecturer much more certainly attainable than his unaided oratorical powers would have rendered probable. A thoroughly English voice and a delivery marked by the queer inflections which frequently to an American ear seem absolutely contradictory of the sense of the words spoken; and marked also by the singing cadences which are never heard from American lips, unless from Mr. Sothern's, would be against the lecturer in a comparison with hosts, we shall take leave to say hordes, of our own champions of the platform and the stump. Upon this sort of subject the American journalist has a liberty to be somewhat impertinent, and we shall not apologize for anything we say in the discussion of it—which is perhaps a necessary preface to the remark that if Mr. Froude expects "to stand well with our people" he must take care in addressing his audience to say, Ladies and Gentlemen, and not "Gentlemen" alone. We never allow our females to stand up in horse-cars, as even an untravelled European may fairly be expected to know; we are extraordinarily polite to women; it is a national trait. If Mrs. Fair happens to attend Mr. Froude's lectures when he goes to San Francisco and our Mighty West, the "Short Studies on Great Subjects" will stand a chance of never being completed unless he mends in this respect. Making points is another matter in which our distinguished lecturer may easily improve. He has them—the lectures, indeed, may be said to abound in them; but Mr. Froude, in a way which we will not offend our countrymen by calling rather well bred than otherwise, slurs over them, though there is not a Young Christian Associate whose heels are not burning to applaud every epigram that hits a Roman Catholic abuse and every bit of declamation. "Our people" enjoy point, and like nothing better than to laugh heartily with a speaker who has pleased them, and whom they are willing to please and wish to encourage. Mr. Froude's audience, when we have heard him, may be described as being, so to speak, an evangelical audience, as distinguished from a secular and worldly audience. There was a very strong infusion of the young men, their sisters, wives, fathers, mothers, clerks, and cashiers who have built up the Young Men's Christian Associations throughout the country. With these there was a sprinkling of other sorts of people; but on the whole the audience was very distinctly an American audience, a Protestant American audience, an audience which knows Ireland chiefly by its experience—Mr. Froude does not know how direful—of the kitchen in the basement where the meals are ruined, or in the wards where the heavy Democratic vote is polled; an audience fitly represented by the doctors of divinity who profusely accompanied the lecturer upon the platform, and congratulated him at the close of his very well-received remarks.

—In the last number of the *Contemporary Review*, Mr. J. A. Symonds points out an important service which has been done to poetical literature by Signor Cesare Guasti's recent edition of the poems of Michael Angelo. Hitherto, Mr. Symonds informs us, the commonly-received version of these poems has been based on the edition of 1623, which was prepared by the poet's grand-nephew, himself called Michael Angelo Buonarotti. This gentleman, sharing a self-confidence which, curious as it may be, has often mangled the works of great men in full belief that it was mending them, undertook to improve upon his great-uncle's style and thought, and set himself to soften down the asperities and obscurities of the original poems. To this end, he amplified, transposed, and in many and various ways mutilated the sonnets according to his own ideas of morality, taste, and grammar; and on the Dantesque audacities of Michael Angelo grafted the prettinesses of the Petrarchisti of the seventeenth century. He had the decency, however, to preserve the originals, so that we at last have the opportunity of examining critically what it was that the poet himself composed. The grand-nephew's "reduction," as he terms it, proves to have been thoroughgoing. In sonnet xxxi., for example, the original agrees in only one line with the version of 1623, while the remaining thirteen are distorted, transposed, mangled, deprived of point, and adorned with superfluous conceits. A chorale of Bach's in the hands of an Italian chapel-master of the last century could not have fared worse. All the later editions, till Signor Guasti's appeared, followed this vitiated edition prepared by Michael Angelo the younger, and, of course, all translators made use of a corrupt text. The true text, says Mr. Symonds, has not at all removed the obscurity and crabbedness which have always been alleged against the sonnets; on the contrary, perplexed syntax, harsh elisions, strained metaphors, and incomplete expressions are multiplied rather than diminished, and the difficulty of understanding the poet is increased. Still, such is the intellectual habit of the age, which is perhaps honest as no other age has been, that there will be general satisfaction among people interested in the matter that we have now in its integrity just what the poet wrote. Mr. Symonds would seem to have been able to master the obstacles besetting a translator of works so difficult; for he gives us twenty-three of the sonnets in an English version which we suppose to be faithful, and which certainly is not wanting in lucidity and ease. We select one for quotation, not as being a characteristic sonnet, for it wants the lofty Platonism of most of these productions and the strong feeling of others of them, but it has a simple and common—indeed, now commonplace and popularized—beauty which makes it generally acceptable; and it affords the translator a favorable opportunity. It is an apostrophe to Night:

> O night, O sweet though sombre span of time!—
> All things find rest upon their journey's end—
> Whoso hath praised thee, well doth apprehend;
> And whoso honors thee hath wisdom's prime.
> Our cares thou canst to quietude sublime,
> For dews and darkness are of peace the friend:
> Often by thee in dreams upborne I wend
> From earth to heaven, where yet I hope to climb.
>
> Thou shade of Death, through whom the soul at length
> Shuns pain and sadness hostile to the heart,
> Whom mourners find their last and sure relief,
> Thou dost restore our suffering flesh to strength,
> Driest our tears, assuagest every smart,
> Purging the spirits of the pure from grief.

Some of the religious sonnets, translated by Mr. Symonds, are fine; but we make room for a sonnet, relating, perhaps, to Vittoria Colonna. The poet first addresses Earthly Love, demanding of him the delights of youthful passion, and afterwards the Divine Love is shown to have supplanted the other:

> Bring back the time when blind desire ran free
> With bit and rein too loose to curb his flight;
> Give back the buried face, once angel-bright,
> That hides in earth all comely things from me;
> Bring back those journeys ta'en so toilsomely
> So toilsome-slow to him whose hairs are white;
> Those tears and flames that in one breast unite;
> If thou wilt once more take thy fill of me!
>
> Yet, Love! suppose it true that thou dost thrive
> Only on bitter honey-dews of tears,
> Small profit hast thou of a weak old man.
> My soul that towards the other shore doth strive,
> Wards off thy darts with shafts of holier fears:
> And fire feeds ill on brands no breath can fan.

—Mr. Browning's enquiry, "What's become of Waring," has recently received an answer in the shape of the reappearance of Mr. Alfred Domett, latterly of New Zealand, who is said to be the gentleman in question, and who now offers the public a poem in eighteen thousand verses. Mr. Domett was known as a poet before this work was produced. He is the author of a well-known Christmas piece, beginning with the verse—

> "In the solemn midnight centuries ago,"

and descriptive of the humble Babe in the manger at Bethlehem, an obscure hamlet of the mighty Roman empire. He is also the reputed author of

the poem which is put into the mouths of English officers in India during a cholera season, and of which a part of the chorus is—

"A cup to the dead already,
And a cheer for the next who dies."

Neither of these pieces promises true poetic excellence; nor, indeed, would Mr. Browning's "Waring" lead one to expect much beyond promise, so-called, from its hero, who appears as a sworn brother of the versatile ineffectual order so numerous and so sure to disappoint the expectations of the unwise and uncynical. "Ranolf and Amohia" is the title of the new poem, which appears to be a long tale of love and adventure, interspersed with philosophical remarks on religious and other topics. Ranolf is a Scotchman, very highly educated, with a taste for travel and a love of nature. Sailing for the Pacific, he lands in New Zealand, where nature is presented to him not only in foliage, flowers, beasts, and scenery, but also in the person of Amohia, a princess whom he finds in the hands of certain natives of nefarious intentions. From these he rescues her, and they love. Tangi Moana, her father, an enlightened man who has led his tribe to reject cannibalism, apparently has no objection to Ranolf as a husband for Amohia, especially as Ranolf, after passing in review in many verses the theories of Locke, Berkeley, Hume, Kant, Fichte, Schelling, and the Brahmins, and having been initiated into the New Zealand systems of cosmogony and theology, finds himself, in point of religious belief, a New Zealandite—or a New Zealot, we may say; his poem here becomes what may be called advanced, and liberal, and mighty impudent to the poet's elders, and all believers in such pursuits as theology and cosmogony. We would not say a word which should lead any of our readers to suppose that we favor the practice of cannibalism; still we must recollect that Tangi Moana had it in his hands to have kept from us a poem that is two thousand lines longer than the Paradise Lost, and explicatory of Locke, Berkeley, Hume, Fichte, and Schelling, and the doctrine that

"God and the general predominance of good"

are the things to believe in, and not creeds, and priests, and such things Kangapo, the villain of the drama, is determined that the husband of Amohia shall not be Ranolf, but another, and he causes Ranolf to be kidnapped. In vain, however, is the conspiracy, for Amohia contrives to release her beloved "Ranoio"—which is as near as she can come to "Ranolf"—and he escapes. Then arrives an embassy prompted by the wicked Kangapo, which demands the hand of Amohia for a chieftain who is the neighbor and rival of Prince Tangi Moana. To escape the hated nuptials Amohia plunges into the lake, resolved to swim away, she knows not where, but somewhere, and do something, she knows not what; anything to beat Kangapo, the sorcerer priest. Luckily, when she reaches the other shore, and is bathing in a natural vapor-bath to recover her exhausted strength, she is discovered by her Ranoio, who weds her. There is more of it; indeed, a great deal more of it—many cantos; but this description will let our readers see what the poem is like.

—The displeased but respected young Frenchwoman who some time since wrote us a rebuke for making Erckmann-Chatrian into two people when in reality there was but one of him, is not the only person who has been mistaken in regard to this curious literary partnership. That novels of such unity of tone should be the joint work of two men has been more or less puzzling to many people, and the following explanation of the method of the gentlemen in question will have interest. A correspondent of the London *News* is our authority. M. Chatrian is the more imaginative of the two, and to him is usually left the first invention of the plot and the management of the love scenes. He it is also who does all the descriptions of Phalsbourg and the scenery around. When a new story is to be made the two authors meet, and amid much smoking of tobacco discuss the details of the plot and the situations, and one of the pair writes a chapter or two, leaving blanks for the dialogues, descriptions, or what not which his friend is to furnish. M. Chatrian, for instance, makes the skeleton of a novel and begins by writing a chapter, which by-and-by goes to M. Erckmann, who puts in the necessary political reflections, furnishes the soldier-types, and elaborates the quaint and plain-spoken speeches which are put into the mouths of the peasants, the old sergeants, the watchmakers, and schoolmasters. The tureens of soup, the mealy potatoes, the browned sausages, the steaming sauerkraut with which the novels abound, as Dickens's earlier works abounded in beef, beer, punch, pudding, and gravy, are to be attributed to M. Chatrian, we are told, while the black coffee is put in by M. Erckmann, who is a connoisseur. Perhaps in their case, as in Dickens's, early privation may have increased the respect with which MM. Erckmann and Chatrian regard full meals of victuals. Both were long in poverty. For twelve years after their first meeting at Phalsbourg, where M. Chatrian held an ushership, they labored hard with painful bad luck, and without success or profit. Those were evil days for literature in France. It was of this period that Victor Hugo speaks where he tells how the servants looked upon him when he was visiting in a friend's house in Alsace; at dinner the unliterary butler kept a sharp eye on the suspected Bohemian, and when the champagne came to be served asked his master, "Shall I give any to the man of letters?" Politics was all in all in 1846, '47, and '48. Then was the time when the statesmanlike M. Sue was made a member of the Constituent Assembly of 1848, because of those political treatises, "The Wandering Jew" and "The Mysteries of Paris," and when Lamartine's "Girondins" was able to make him a principal minister of state. Afterwards the literature of the Second Empire came in, and the demand was for another sort of books than the unsensational, truthful, and pure productions of the two Alsatians. They were all but worn out with ill-success and disappointment when about a dozen years ago there came a call for a new edition of "L'Illustre Docteur Mathéus," which had previously shared the neglect of its author's previous productions. Since then they have had fame and prosperity, and have been unable to produce novels as fast as the publishers have demanded. Our informant says that this is likely to continue to be the case. Everywhere, he says, in rural France copies of the various novels comprising the "Romans Nationaux," are sold by the dozen where the colporteur disposes of one volume of Dumas or Paul de Kock or Ponson du Terrail.

—The three hundredth anniversary of St. Bartholomew (Aug. 24) has revived the old-time discussion as to the guilt of the church and the Pope for the massacre. In England, it took on a very lively complexion, the *Times* engaging in it, and some of the most eminent English Catholics, Father Newman among them, being constrained to denounce the deed whether sanctioned by the Pope or no. In France, Veuillot's *Univers* foolishly called in question the authenticity of the medal struck by Gregory XIII. in honor of the massacre, bearing his bust on one side and on the other an exterminating angel with the legend *Ygonotorum Strages*, 1572. M. Henri Bordier, whose statements concerning this medal in his "History of France" were specifically attacked by Veuillot, made a vigorous rejoinder through the *Journal de Genève*, referring to the "Trésor de Numismatique" (1840) of Charles Lenormant, editor of a Catholic journal, and to the "Histoire numismatique des Papes" of the Jesuit Father, Filippo Buonanni, published at Rome in 1699, for a representation of the disputed token. For the rest, the anniversary has called forth the following works: "L'Intolérance de Fénelon," by O. Douen; "La Saint Barthélemy devant le Sénat de Venise," being the reports of the ambassadors Giovanni Michiel and Sigismondi Cavalli, translated with notes by William Martin. Other recent French publications are M. Gainet's "La Bible sans la Bible," or the history of the Old and New Testaments based on profane testimony alone, or as nearly alone as the good curate could afford to do; the second and third volumes of Maxime du Camp's "Paris, ses organes, ses fonctions et sa vie dans la seconde moitié du XIXe siècle," a very thorough account of the social and industrial life of the great city; a second edition, revised, but not too carefully, of the Abbé Villeloin's "Livre des Peintres et Graveurs"; and "Nouvelles Etudes sur le Brésil," by Charles Pradez, a Swiss author, whose sketches of country life in Brazil in the first volume of this work, and, in the second, reflections on the subject of emancipation, may be read with confidence and respect. The number of works on the Franco-Prussian war hardly diminishes. For reference on account of the author's statistics, Major H. de Sarrepout's "Histoire de la Défense de Paris en 1870–71," and "Le Bombardement de Paris par les Prussiens en janvier 1871," are worth owning. The same may be said of Gen. Trochu's "L'Empire et la Défense de Paris devant le Jury de la Seine," an official report of the trial in which the General was lately involved in defence of his own reputation. We will just mention, besides, another batch of not uninteresting memoirs—"Journal d'un Aumônier militaire" is the general title of them—by the Abbé de Meissas, the Abbé Bertrand de Beavron, the Abbé Faivre, Father Dufor, the Abbé Pretot, etc.

RECENT POETRY.*

II.

ONE thing is to be said in favor of the much abused books of ineffectual poetry, and that is, that whatever dark doubts they throw over the mind as to the intellects of a large part of mankind, they are, on the other hand, capable of reassuring an aged pessimist as to the moral condition of his fellow-beings. To find anything corrupting, or indeed anything not of the soundest morality, to say nothing about most of the virtues of antiquity, or

* "The Outcast, and Other Poems. By J. W. Watson." Philadelphia: T. B. Peterson & Bros. 1872.
"My Recreations. Verses by Emily E. Ford." New York: Hurd & Houghton.
"The Days of Jezebel: an Historical Drama. By Peter Bayne." Boston: Gould & Lincoln.
"Robert of Woodleigh, and Other Poems." New York: James Miller. 1872.

of the graces that adorn the Christian scheme, one must steer clear of the vast majority of unheeded singers. There is Mr. Joaquin Miller, to be sure, who writes verses which are bad enough to guarantee the goodness of his morality; while his printed morality is so bad as to demand much better verses than he has ever made or probably ever will make; but this Oregon Byron is exceptional among his fellow-poetasters. For one Miller there are a hundred J. W. Watsons and Timothy Titcombs, writing "Beautiful Snows" and "Marble Prophecies," praising the endearments of home life; caressing children and loving flowers like genuine nurserymen and florists, as the signboards say; execrating bad men; befriending women of the town who are repentant and out in the wet; lashing the Pope, lauding our native land, and inculcating every ennobling doctrine that the sun shines on.

"Blessings be on them and immortal praise."

Mr. Walt Whitman's name will, perhaps, occur to the reader as that of another exception, and a worse one than the blanketed poet of the sierras and sombreros and William Walker; but, for one thing, he has ceased from his early dirtiness; and for another, impossible as it is, that he should produce poems, he is a man of a larger pattern than the poets of the newspaper corners and the unsold small editions and the well-sold large editions which the magazine readers run in shoals to buy. Much less than his insight—which we were on the point of calling poetic insight—and much less than his fervor and force suffice for the making of the class of poets whom we have been praising for their blameless walk and conversation, and their abstinence from causing the cheeks of young females to blush. He has "invited his soul" more than they ever have, and his barbaric yawp has sounded over the roofs of the world further than their better regulated voices have gone, although when they come to lie upon the bed of death, where indeed yawps afford but small consolation, they can reflect upon complete editions of their works with a satisfaction that only expurgated editions of Mr. Whitman's works will afford his dying hour.

Of the poets before us for notice this week we should say Mr. J. W. Watson may rely with as much confidence as any on his chances of a satisfactory hereafter. If his book is an index to his heart, and if his daily life is in accordance with the sentiments with which his heart inspires him, he is an Israelite without guile and fitted to be an ornament to any community. He is the author of "Beautiful Snow," as an appendix to this volume asserts, and as Mr. Watson is ready to show by documentary proof, although as many as nine persons—and some of them, we are sorry to say, of the softer sex—have maintained that they were the authors of that work. It is a poem in which good women are compared to new-fallen snow, and fallen women are compared to the same snow after it has been trodden in the mire, and his success with this comparison has had the effect of making Mr. Watson fall in love with his subject, so he writes "The Outcast." It is like the rest of its author's works, and will please people who are so far from being difficult or nice that they are excessively good-natured, and, we may wickedly say, easy even to the point of what Mr. Sumner calls ridiculosity, to be pleased with any poetry that appeals to their kindness of heart and is not too much like doggerel. Even poor poets, we dare say, have their commiseration. The outcast in Mr. Watson's poem is a girl, though it might well enough be her father,

"A [blind] man who cowering stood in rags both scant and thin,"

and played on a violin one bitter winter's night, hoping for pennies. The poet listens, and the violin tells as plainly as words that the old man once had health, strength, friends, a home, and a wife:

"And who on all the earth could make a little go so far
As she the Mary of my love, my life's bright guiding star?"

Children also were his:

"When children came to bless our hearth, the neighbors far and near
Declared they were the best they'd seen for many and many a year."

They were four in number, all daughters, of whom "the first that left was Abigail," who died of consumption;

"The next was Hannah, she so young, so thoughtless, and so gay,"

who was accidentally drowned;

"Then Mary with her golden hair and skin like tinted pearl,"

who died after a brief illness;

"And Mary's mother and myself were left once more alone;
No! not alone; there still was one, a wanton, wandering child."

This last was the outcast. Then the outcast's mother died, and the widower gradually slipped into neglect, destitution, mental wretchedness, slow starvation, blindness, vagrancy, and playing on the violin in the streets, as heard by our author—

"The music changed, with one deep sob, into the tones of prayer,
So mournfully, so pleadingly, upon the cutting air:
A woman dressed in drabbled robes went flaunting idly by,
With painted cheeks and bloodless lips, with dim and sunken eye.
She stopped and turned her ill-clad back upon the whistling blast,
And listened with an eager air unto the very last.
"The music ceased, the woman reached toward the blind old man;
She stooped her head with starting eyes, she clenched her hands and ran;
But suddenly, with faltering steps, she tottered back again,
And stood as though her gasping lips were seeking words in vain.
A moment thus I watched the two, the man's unconscious form;
The woman bent and kissed his hand, then fled into the storm."

We advise Mr. Watson, when the next edition appears, to have the pair of them clubbed by the police, and carried to Blackwell's Island with their feet frozen. That termination would prevent any one's complaining of the gay levity of the work.

"My Recreations" is a work which ought to disarm criticism, if criticism were as civil as it should be, and as it will be in a better world. The authoress thus speaks of her verses:

"I am no poet, and I know it.
But if a wild bloom lingers
Within my loving fingers,
From the woods I joyful bring it;
In my sweet friend's lap I fling it.
Can you blame me that I show it?
. . . . . .
"I am no poet, and I know it.
But a robin's homely note,
Joyful gushing from his throat,
Though no semblance of a tune,
Adds a charm to leafy June.
My rude song, must I forego it?"

The volume contains a great many pieces the composition and perusal of which have, no doubt, given the author and her friends a great deal of pleasure. No producer, says Aristotle, "master of those who know," has such joy in his completed work as the poet; and there is none of Mrs. Ford's poetry which calls for the censure of her friends. As good perhaps as anything is this sonnet:

"Hail to thee, Absence! Friendship's touch and test!
Thou art abused as Love's destroying foe.
But little of thine office do they know
Who call thee this. Idealist the best—
Delightful Fancy is thy constant guest,
And flowers and fragrance showers at thy behest.
If sound the heart, and fixed strong and true,
The loves of years thou ever dost renew,
Casting the sad away, and hoarding all the rest.
From daily sight, beloved ones lie concealed
Within thy clear obscure. Owe we thee hate,
When sundered from all ill, there stand revealed
The hidden glories thou dost indicate?
Vanish friends' outward forms—if fresh and fair
Their memories vital blossom in thy air."

Perhaps we ought to warn Mrs. Ford about making the daughters of the Byzantine "sultans" habitual and hereditary Christians; and also against a way she has, and a very embarrassing way, of omitting the definite article. The elision is made in the interest of euphony, we suppose; but the effect is exasperating on the reader, and probably will increase the sinfulness of the world. Here is an example:

"On height sublime
Blooms Edelweiss, cheering hard Alpine toil
It shrinks not from snow line."

The mention of the edelweiss reminds us to remark that the lovers of flowers and gardens will find in Mrs. Ford's book verses in honor of the hyacinth, the bouncing bet, the nasturtium, the chrysanthemum, the gladiolus, the rose, the daisy, the dock, and many other of their favorites and aversions, each of which gives the author an excuse, which she is ever ready in taking, to "stoop to earth and moralize her song," for each is made to teach some useful lesson. The zinnia, for example, instructs us thus:

"The moral of bright Zinnia's tale
Is, love and culture must prevail,"

the zinnia being a flower for which gardeners have done much.

Mr. Peter Bayne is known as a Scotch gentleman who has written in theology and in criticism, and has found acceptance with a good number of readers interested in a certain set of subjects. His "Days of Jezebel" will not permanently enlarge his audience, but we should think it might do good to those whom he addresses. Anything that helps to make the Bible less of a fetish—which is what it is to many minds north of Tweed, and north and south of many other rivers—is a gain for everybody. This we suppose Mr. Baine's volume will to some extent do. The kind of men and women who get spiritual comfort out of the word Mesopotamia because it is a good Scripture name, and who read Pollok's "Course of Time" because a minister wrote it and it is gloomy, will no doubt be all the better for it if they can be made to see that Jezebel was a human being, and a Sidonian young woman, and that by possibility she may have had other occupations and objects in life than painting her face and cutting the throats of prophets and getting tumbled out of the window by Hebrew politicians. We shall decline to commit ourselves in regard to the historic Judea of Mr. Bayne's construction and its Jezebellian politics, though we may say in general that we profoundly distrust and not a little despise most such reconstructions as being usually done for some one purpose which is very much smaller than was the

life of the age and community reconstructed, and very much smaller, too, than the whole life of the age and community for which the reconstructor works. As regards the poetry of Mr. Bayne's work, it is creditable to his intelligence, but does not give him a rank among poets who need be discussed at this distance from Edinburgh.

"Robert of Woodleigh" is an astonishing poem.

> "At Woodleigh dwelt Judge Leeson and his sons—
> Robert, the eldest, tall, and dark, and proud;
> And Maurice, fair, and slight, and delicate;
> And though the judge was father to them both,
> They yet were not full brothers. Either claim'd
> A mother for himself—both now in heav'n."

Both these youths are in love with one girl, "a kinswoman of Leeson's latest wife." The elder brother is silent about his passion, while the younger is all the time hanging about the young lady and offering himself to her. But she, however, loves Robert, and does not love Maurice. Under pressure from Rodney Gray, his friend, Robert at last descends to ask her hand:

> "Yet still his plea the younger brother pled;
> And when the harvest-sheaves were gather'd in,
> And all the implements of toil laid by,
> And Woodleigh rang with shouts of mirth,
> He drew her from among the merry guests,
> And lured her on, with soft and honey'd speech,
> Across the slope, and thro' the moonlit wood,
> And halted on the summit of the cliff
> Which overhung the lake, and sued again
> With all the fervor of his ardent tongue,
> And laughing, vowed if she his passion spurn'd,
> To cast himself into the lake below.
> And from the distant vale the harvest-glee
> Was faintly borne—a joyous melody."

Seeing the pair leave "The Hall," Robert followed them, and, though he hears Maurice's vow, he is not the man to trust to contingencies, and he pitches Maurice into the lake and drowns him. Having done this he does not stay to press his suit, because he loathes the fainting maiden at his feet, and, as he turns from the cliffs, very justly heaps imprecations on her—the cause. After some years of absence the war of the rebellion breaks out, and Robert, entering it, makes prisoner one day of his old friend Rodney, who informs him that "the maid" is still true, and that Maurice was not drowned after all. Upon this the stricken man goes home, and finds that the judge is still living, and that what Rodney said of the younger son is true also, he having indeed been fished out of the lake. Happily, however, his wits were lost in his immersion, and he is a gibbering idiot, and clearly an ineligible life-partner:

> "The aged man then call'd his elder son,
> And beckon'd Amy Winthrope to his side,
> And plac'd their hands together, palm to palm.
> Be not afraid to take her hand, my boy;
> She loved you best, and waited all these years."

What Mr. Stoner knows about half brothers will be an interesting subject to his prospective relatives when his father marries again.

THE DEBATABLE LAND.*

THIS book is less a story than an argument. Its object is twofold: to trace the perversions, as the author thinks them, of Christian doctrine by the Protestant reformers, especially by Calvin, and to show that spiritualism is necessary to assure the further progress of Protestantism, mainly by affording phenomenal proof of a life to come. "Phenomenal proof," says Mr. Owen, "is far more convincing than historical evidence. Had the electric telegraph been invented and employed for a brief period 2,000 years ago, and had telegraphy then become one of the lost arts, the old records of its temporary triumph, how well attested soever, if unsupported by modern example, would have created but feeble belief to-day." Before attempting, however, the task of establishing this phenomenal proof, Mr. Owen makes a prefatory address to the Protestant clergy, and in it devotes a third of his volume to a sketch of the successes and reverses of Protestantism. During the forty years ending with the year 1562, he reminds us, the larger part of Europe was lost to the Roman Church. Ranke exclaims, "What an immense empire had Protestantism conquered! . . . An empire reaching from Iceland to the Pyrenees, from Finland to the summit of the Italian Alps." But in the year 1648, the contest of the religions having subsided, "the rights and the boundaries of the rival churches were determined by treaty. But how determined? . . . France and Austria and Belgium; Bavaria, Bohemia, Poland, and Hungary; even Westphalia, where the partitioning treaties were signed, had fallen back into the Roman faith. Not only had Protestantism lost them all, but, after the lapse of 201 years more, she has never regained one [of these countries]. . . . Not a single European nation is Protestant to-day except those that had been Protestant more than 300 years ago." At present there are more than two Catholics to each Protestant in Europe. In the United States, the Catholics increased in the nine years from 1859 to 1868 one hundred per cent.; while the Protestants increased in the same time less than twenty-nine per cent. At the present rates of increase, Mr. Owen concludes, the Catholics in America will largely outnumber the Protestants in the course of thirty-one years from the present date.

What then is the reason, asks Mr. Owen, that Protestantism has failed to hold its own? The error of Protestantism, says Macaulay, is this: "All divine truth is, according to the doctrine of the Protestant churches, recorded in certain books. It is plain, therefore, that in divinity there cannot be a progress analogous to that which is constantly taking place in pharmacy, geology, and navigation. A Christian of the fifth century with a Bible is on a par with a Christian of the nineteenth century with a Bible." From this opinion Mr. Owen dissents. Yet he endeavors to show that modern Protestantism has vital need of certain supplementary truths. These truths that Protestantism must receive, if it would maintain its place among religions, are, he argues, those of spiritualism. This position taken, our author brings forward the evidence given in the body of his work favoring the belief that disembodied human spirits exist and hold communication with men. This he introduces with a reference to two theories respecting the miraculous phenomena recorded in the Christian Scriptures. The first is that they were isolated phenomena, miraculous in the orthodox sense of the word. But the belief in the miraculous is melting away, in the progress of science; and the ultimate result, says Mr. Owen, will be disbelief in the alleged miracles of the Gospel. The second theory is, that the so-called miraculous phenomena of all history are continuous; that the existence of spiritual gifts is traceable from the earliest times to the present; and that the marvellous powers ascribed to the founders of Christianity were natural and credible, and are of a piece with the so-called spiritual manifestations of our day. If the latter prove genuine, adds Mr. Owen, they form "the strongest evidences to sustain the authenticity of the Gospels. . . . To act upon the ignorance of the first century, it needed works which that ignorance looked upon as miracles. To act upon the apathy of our day, it needs phenomena acknowledged to be natural, yet of an intermundane character."

Upon the question, On what basis of fact do the alleged "spiritual manifestations" rest? Mr. Owen has a better right to be patiently heard than many, even than most other, writers who have discussed it. A more dispassionate mind, a more laborious observation, has seldom been brought to the study of the question. Mr. Owen has not the scientific habit of mind; he leans rather toward acceptance, if not toward credulity, than toward scepticism; but he has the advantage of being conscious of his own temperament. He makes constant endeavors to apply the personal correction to his own observations. We have never seen an account of physical manifestations so full as that which this volume contains which is, at the same time, more careful and methodical in its account of the experiments and of their circumstances. Nearly all of the observations recorded here were made from notes taken on the spot or shortly after the occurrence of the phenomena. Mr. Owen has guarded himself, as far as in him lay, from the imputation of carelessness or inaccuracy in his record; and of his perfect good faith there can be no doubt. We cannot enter into the consideration of individual experiments, for which we must refer the curious to the book itself, in the chapters headed "Characteristics of the Phenomena," "Physical Manifestations," and "Identity of Spirit." It is enough to say that Mr. Owen believes that he has seen the violation of familiar physical laws, as other experimenters have seen it, in the case of heavy tables lifted into the air, and there suspended or caused to rotate without the slightest visible contact of any sort (pp. 363–365), and all the familiar forms of apparition which spiritualists profess to have seen and felt—the lights, the touches, the figures of ghostly shapes. Many of these phenomena, says Mr. Owen, were seen by him at the houses and in the company of private friends alone. Many occurred in the presence and by the aid of professional mediums. Some of the narratives, as that of the spinet of Henry III. (first mentioned in the Paris correspondence of the *Nation*, June 12, 1866), are marvellous beyond the average of spiritualist tales, while none of them are trivial; and Mr. Owen is a good story-teller.

The force of personal testimony, indeed, cannot well go further. But personal testimony, in the present state of scientific knowledge, will not be regarded as conclusive respecting the phenomena in question, so long as physiology finds so much of apparently counterveiling testimony in the facts of unconscious cerebration. Between two witnesses—the careful, unprejudiced observer on the one hand, and the advocate of a mysterious brain-action upon the other—science is not yet prepared to decide. It is hardly less surprising that unconscious cerebration should make the ghosts of the dead live again in the convictions of cool observers, than that a real communication between the two worlds should be demonstrated. Upon either explanation of the facts, a mystery underlies them; and it is somewhat difficult to excuse

* "The Debatable Land between this World and the Next. With Illustrative Narrations. By Robert Dale Owen, author of 'Footfalls on the Boundary of Another World.'" New York: G. W. Carleton & Co. 1872. 12mo, pp. 542.

the apathy with which so many scientific men have regarded the examination of this whole subject. Granted that all the phenomena claimed for spiritualism are a delusion, few enquiries are more interesting than those which should show how Messrs. Owen, Reichenbach, Crookes, and other intelligent investigators of the subject, have become the dupes of unconscious cerebration. Of this, we think, Dr. Carpenter's widely-read recent essay upon the subject fails to take account. His theory only changes the ground of the difficulty: an unconscious cerebration that leads men like Prof. Huggins to read a false number upon a dynamometer is a phenomenon, it seems to us, of as questionable shape as the very ghosts which it discredits. Yet, when a theory like that of spiritualism is challenged by science, the accuser, and not the accused, must have the benefit of the doubt.

After all, in attempting to decide the claims of spiritualism, we are attempting to write sentences in a language of which we hardly know, as yet, the alphabet. What is spirit? what is matter? Science, to all appearance, draws slowly nearer and nearer to answering these questions; and books which, like "The Debatable Land," contribute their quota of carefully observed and recorded facts to the discussion are to be welcomed. In Sir John Herschel's thoughtful statement, which serves as a motto to Mr. Owen's book, "Occurrences which, according to received opinions, ought not to happen, are the facts which serve as clues to new discoveries."

THE "NORTH AMERICAN REVIEW" FOR OCTOBER.

"THE Political Campaign of 1872" is the article which will attract most attention in the October *North American*. It is appropriately sedate, but of necessity it is interesting, and, as we look at the political situation, it is wise and will be found profitable for instruction. We do not understand, indeed, how a contest "of vital concern to thoughtful citizens" is at the same time but "a first-rate second-rate contest" and only "momentous" in the conventional language of party orators. If it is "of vital concern," why it is of vital concern—momentous to everybody, and no more and no less momentous to party orators than to the rest of us. However, writers of judicial coolness and philosophic poise and calmness may be allowed their little ways as other people are, and nobody need quarrel much with our author, who as he goes on shows himself to be uninfected by political indifferentism. He speaks first of the President's early mistakes and misfortunes, among which he counts Mr. Motley's removal, Mr. Sumner's displacement from the Committee of Foreign Affairs, the Santo Domingo business, the readiness with which the President fell a prey to politicians who perceived in his embarrassment their own selfish opportunity; the appearance of either the reality or the semblance of rings senatorial and military, as exposed by "Mr. Sumner's unsparing pen," and the dismissal of men like General Cox and Mr. Wells, whose names were in a particular manner connected with the people's rather vague but sincere hopes of reform in administration. "Except," he remarks, "in the simplicity and honesty of his character, the President's traits were not calculated to propitiate the critical disposition thus evoked. If he had had the slightest touch of the dramatic dignity of Marlborough or of the electric tact of Napoleon, he might have shrouded the errors of inexperience beneath a halo of well-earned prestige; but being as plain as an average private and as silent as a model picket, his shortcomings lay open to the dullest observation, with everybody welcome to make the most of them"—and with nobody, it might perhaps be added, to care much about correcting them. Endowed with a most extraordinary and overmastering force of will, and caring far less than most men for the approval or applause of others, it is likely that the routine duties of General Grant's civil office, and even its higher duties, have had small power to captivate a man who probably was never so happy nor in so full exercise of all his faculties as when he was urging a vast army to the destruction of other armies which called out all his indomitable moral energy and force of character. As to the President's falling out with Mr. Sumner—or Mr. Sumner's falling out with the President—we fancy that the *North American* writer exaggerates its importance as influencing the original Cincinnati movement; and that perhaps he is inclined to exaggerate General Grant's individual responsibility for whatever fault there was. So far as we are aware, the public has not as yet seen any full statement of the causes which led to Mr. Sumner's hostility, and we should say that the safest data upon which to base a conclusion as to the relative culpability of the two men are furnished by the matter and tone of the senator's recent attacks upon the President; and the well-known feeling of resentment and impatience with which Mr. Sumner's peculiar manner has inspired many of his associates must also be taken into the account. General Grant was not without earnest help in the assault that was made. Accepting these as the best available data, most persons will hesitate to pass upon the President any severe condemnation, and indeed will reserve judgment. And of how much importance was Mr. Sumner's dissatisfaction as influencing the original promoters of the reform movement may be inferred from the course pursued by him and by them after the Cincinnati nominations were made. Manifestly they and he had next to nothing in common; he parted company with them and they with him, almost instantly and with emphasis.

Coming to the Cincinnati Convention, our author says that precisely how the honor of a nomination fell upon Mr. Horace Greeley, "whether through previous negotiations with Democratic leaders, of which there is some evidence extant"; or through the skilful tactics of Governor Brown and General Blair in the Convention itself; or because of political spontaneous combustion in an inflammable crowd, is not known to this day, and he does not attempt to conjecture. As we suppose, all these causes affected the result; and besides these several others. The picture of the baffled Fenton "fleeing" from Cincinnati, all his schemes "stamped out," has frequently been exhibited since last May, and the theory has many times been scouted that our honest senator knew about twice or three times as much concerning what the Convention was going to do, and what the subsequent Fifth Avenue Conference was going to do, as was within the knowledge of one-half of the Conference and the Convention. But the truth is, we take it, that to scout this theory is to shut one's eyes to an important fact, and one which should have its weight when one is weighing the issues of the canvass. We are not among Mr. Fenton's well-wishers and friends, nor in his confidence, and we should be pleased to see him "flee" from all sorts of decent places, and fleeing as baffled and stamped out as the most disgusted Liberal Republican editor could wish; but we happen to know what were the confident expectations and predictions of some of the delegation who went out from this city with Mr. Waldo Hutchins, and who so promptly slaughtered Judge Selden and his friends the moment those reformers opened their mouths. All this, however, is of the past, Mr. Greeley having got his nomination, and, as things look now, being likely to get much good of it.

Without having too much respect for the political sagacity of the Cincinnati reformers, and, perhaps, with a somewhat deficient sympathy with the objects of the best of them, our author nevertheless treats these latter gentlemen fairly; and most of them, we dare say, will agree with him that the movement was somewhat premature. He does not deny that under certain leaders very different from those who were selected, it might have been wise to trust the moderate and respectable Democrats whom it would have attracted, with a fair share of power; but he discerns in the present activity of the worse half of that party, and in the success of that party as a whole under the weak control of such men as Greeley and Brown, a great danger to the peace of the country and to the Constitution as remodelled. The interminable continuance of rancorous and stupid wrangling over bygone issues, renewed attempts to set aside the verdict of the war; in short, troublesome though fruitless attempts at reaction, are what he fears from the success of the Greeleyites in the campaign. Financial and reformatory questions are, he concedes, to be the next issues in our politics, and party lines are to be rearranged; but in his opinion the people will not take up a new set of questions till they have definitively disposed of the set which has long and violently agitated them, and he regards the attitude of the Southern whites and of Democrats like Mr. Jeremiah Black as sufficient notification to the people that they must once more inform "those unapt students that the fruits of the war as embodied in our political system are a finality." This we hold to be sound doctrine, and a just statement of the question to be settled next month; it is, moreover, as we are glad to believe, a statement which sufficiently indicates what will be the event of the contest. Pennsylvania managers of the Republican party may buy voters at a dollar a head; Republican postmasters may be assessed to pay the wages of brass-bands; Southern communities that have sown the whirlwind of slavery and ignorance may reap the wind of ignorance and carpet-baggism; but the people will not attend to these abuses while Georgia young men shoot negro voters on election day, and while Mr. Black tells his friends to support Mr. Greeley because his election, although it will not indeed take the three last amendments out of the Constitution at once, will yet "begin the process of their gradual extinction." It was to be wished rather than hoped, that by 1872 the South would have learned her lesson, and accommodated herself to the changed condition of the country; but, doubtless, the East and the Mississippi Valley are to set her her task one more time yet, if not several times.

It is, by the way, an interesting subject of thought for politicians who have asserted the death of the Democratic party, that one great section of the country is to-day almost solidly "Democratic," and bids fair so to remain. There are good political thinkers in the South, and plenty of men who regret the estrangement which has taken place. But the political activity of the South has for a long time been directed not by capable men, but by visionaries and ignorant zealots, who have led their quieter and more sensible countrymen to foolish destruction. While back-country editors, preaching

doctrinaire politics and prejudice of race, can set hot-headed and thoughtless young men half-crazy, there will be a safe anchorage for the Democratic party, and it will die hard. The war did not kill it; it is still a great party, and has to be fought hard to-day; and we see no sign that it is not going to continue formidable.

We have left ourselves but little space to speak of the other contents of the number, but there is little that we could say of them. "The Germanic World of Gods" is by Mr. Karl Blind; "Niccolini's Anti-Papal Tragedy" is by Mr. Howells; "Kristofer Janson and the Reform of the Norwegian Language" is by Mr. Boyessen; "Herder" (second paper) is by Mr. Karl Hillebrand; "American Novels" is by Mr. T. S. Perry (who, by the way, will have charge of the *Review* in the absence of Mr. Lowell and Mr. Henry Adams); and the ten book-notices are by various hands, and are nearly, but not quite, as good as usual. This, it will be seen, is a very literary number of the *Review*, and there is nothing in it that is not readable, Mr. Boyessen's article, perhaps, being the most so, for though it is rather feeble in its criticism, its subject is fresh. It contains some account of a Norwegian poet, Janson, who appears to be of no remarkable merit, and it approves and defends the course of those Norwegian men of letters who are strongly in favor of developing a literature strictly Norwegian in language, and to a great extent national in sentiment and thought also. For outsiders to judge correctly of such a controversy is not easy. It is however right, we suspect, to have fears of any system which tends to provincialize a people, no matter how pure and brave and free were their ancestors. After all, much must be secured if lack of knowledge is to be compensated for, and if full companionship with the brotherhood of nations is to be shunned.

To Niccolini's tragedies Mr. Howells gives high praise, perhaps higher than is altogether deserved, foreign politics, whether in prose or in numerous verse, not being of an interest that absorbs many people. We, for our own part, confess that Barbarossa's just indignation with Adrian IV., and Arnold of Brescia's struggles with his cruel superiors, arouse in us nothing like the same feeling with which we regard the Cenci's of Shelley's Italy for instance, or the English young lady of Doctor Antonio's. This is ungrateful to people who may be said to have fought our battles for us and to have died that we might live—to have been imprisoned, and scourged, and burnt, to have thought, and fought, and conquered, that we might be able to scoff at rascally and tyrannical saints and priests and to read political newspapers, instead of the "Summa Theologiæ" and our own death-warrants. All we say is that since Adam fell it has been a natural feeling; and that there is a perennial battle going on regardless of Adrians and Italian histories and politics, and of which we think when we are asked to give much of our admiration to poetry like Niccolini's, good a patriot in his day and generation as Niccolini no doubt was.

Mr. Karl Blind's article and Mr. Hillebrand's are both easy reading, though how sound the former may be we do not know. It treats of ancient German mythology. Mr. Perry, in indicating the faults of several American novelists, dwells upon the false conception of the "truly American" in fiction, thereby furnishing almost the most American thing of the quarterly. Perhaps it may not be amiss to say that the *North American Review* should be rather more American in the paternity of its articles than the number before us. It is true that American men of letters do not much affect quarterly publications, and that it is hard to get them to write.

Work and Wages Practically Illustrated. By Thomas Brassey, M.P. (New York: D. Appleton & Co. 1872.)—This work will please that large class who will have no political economy except what is based on "facts." It is a book of facts by a man of facts, with as little admixture of "theory" as is compatible with intelligent treatment. The father of the author was the greatest railway contractor of England, and seems to have collected and preserved all his observations of the conditions on which the rate of wages depends, and of the efficiency and prosperity of the laborer under various circumstances. As his experience included but a single class of labor, the author extended the work so as to include a similar survey of all classes.

A collection of facts made in this way is necessarily too incomplete to serve as the basis of any generalization. If we had complete tables, like those of a census, showing the average wages of each and every class of laborers throughout an entire country, during intervals sufficiently long, and classified according to the conditions on which the rate of wages may be supposed to depend, we might infer something from them. But we cannot legitimately infer anything from the experience of particular railroads or factories, because, however extensive it may be, that of other similar establishments may be directly the opposite. It is therefore wise in Mr. Brassey that he has considered his facts only as illustrations of the subject, and has mostly left the work of generalization to the reader, only showing what a practical man of large views and extended experience might fairly infer from a great mass of facts which had come under his notice. It is pleasant to find him concluding from such data that trades unions are powerless to change the rate of wages, and that this depends entirely on supply and demand, rising when there is a demand for labor, without any combinations among the workmen, and falling in the opposite case in spite of all the unions can do.

One of Mr. Brassey's most suggestive conclusions is that, notwithstanding the great diversity in the rate of wages, the cost of a given amount of labor is nearly the same everywhere. Very often he found men who would work for one-third or one-half the wages of an Englishman, but experience always showed that they could do only one-half or one-third the work, so that in Italy, Moldavia, or India any piece of engineering work could be constructed as cheaply by English as by the native laborers. We are prepared to accept this conclusion on strictly scientific grounds. It is a well-established principle of physiology that all the muscular force put forth by the human body is derived from the combustion of food in the lungs, and that the greater the healthful combustion the greater the available power. We may consider that the excavation of a cubic yard of earth necessitates the consumption of a definite weight of roast beef, which remains the same whether the beef be consumed by a coolie, an English laborer, or a Jamaica negro. To make Mr. Brassey's proposition universally applicable, it should be so stated as to make the cost of labor, as expressed by food consumed, the same everywhere. We can hardly doubt that the money cost of labor is much higher in America than in Europe.

To the friends and fosterers of our American manufactures we especially commend the chapter on dear labor and invention, as suggesting that that most greedy infant, our iron manufacture, could fight its own battles with the world if our tariff men would only give it a fair field. We learn that our cast-iron car-wheels are better than any that Europeans can make of wrought iron, owing to our skill in mixing the ores; that labor-saving appliances have been brought to such perfection that in twenty-five classes of hardware goods the United States are able to export largely into countries in which the pay of artisans is scarcely a quarter of that in America. Although Mr. Brassey writes these chapters without any reference to our tariff, it is impossible to study them without seeing that the great burden with which our iron manufactures have to contend is not the competition of European "pauper" labor, but the cost of the raw material consequent upon our high duties. The skill, ingenuity, and tact of our mechanics are great, in proportion to their high wages; but the best situated iron ore of the country is in the hands of a few hundred men who, by the aid of a high tariff, can enhance the price at which they sell the mechanic his raw material.

From a politico-economical point of view, the short chapter on the hours of labor is among the most important in the present work. The question of reducing the working hours depends mainly on whether the workman can accomplish as much, or nearly as much, in the shorter number of hours; and this can be determined only by careful trial and experiment. Mr. Brassey cites a number of instances tending to show that the shortening of the hours of labor is compensated by the increased vigor and industry of the laborer. His instances are, however, altogether too few to warrant any general conclusion, and we only call attention to them as being the solitary attempt which has come under our notice to collect practical data for an intelligent judgment of the question.

The political economist will find little that is new or striking in Mr. Brassey's work. But it is calculated to do much good among those who do not believe in political economy, and wish to substitute for it conclusions drawn entirely from practical acquaintance with the affairs of life. To such we cordially recommend it, hoping they will not think the worse of it for not trying to refute the Ricardos and Malthuses.

Introduction to the Study of Biology. By H. Alleyne Nicholson. (New York: Appleton. 1872. 8vo, pp. 183.)—While this compend deals too much with generalities to serve as a manual for the beginner, it reflects very well the actual state of the science, both as to its latest and highest conquests and as to its still vexed problems, and may be recommended to the general student who would like, by a few hours' reading, to learn with what kind of enquiries biologists at the present moment are busying themselves. Advanced students will also find it a useful summary. The author's own opinions are decidedly "vitalistic," as opposed to the recent tendency to explain every fact of life through a mechanical conception. He is evidently

opposed to Darwinism—some of his objections, by the way, are rather wild—and in one place he goes so far as to assert that "living matter can overcome the primary law of the *inertia* of matter," and originate and arrest motion. This seems a rash statement to any one who has once accustomed himself to conceive of living matter as simply embodying the universal force in a state of high tension; which tension may be resolved and the force let loose by the advent of an incommensurably small amount of extraneous force, or *stimulus*, as it is called. The stimulus may often escape our detection and the movement appear spontaneous, but we are not yet justified in denying, with Dr. Nicholson, that it has an outward origin.

JOSEPH NOIREL'S REVENGE. By Victor Cherbuliez. $1 25.

"Outdoes the French novelists with their best weapons. Besides his superiority in the construction of his plots, his treatment of his characters is most able, and his style of the greatest brilliancy. It is never a distracting wit that dazzles one to the harm of the story, but always seems like the flow of the best spirits, tempered by a generous cultivation. . . . Perhaps the greatest merit of his stories is his power of healthy treatment of all his subjects. . . . He is entertaining without being low, witty but not cynical, careful but not mechanical."—Nation.

"In reading 'Joseph Noirel,' one feels that our ordidary English novels are very superficial. The French novel is the work of a thinker as well as a delineator of character."—Boston Globe.

HON. MURRAY HOFFMAN'S ECCLESIASTICAL Law Books.

THE RITUAL LAW OF THE CHURCH. With its Application to the Communion and Baptismal Service, to which is added Notes upon Orders and the Articles. By the Hon. Murray Hoffman, author of "Law of the Church." 8vo, cloth, $4; law sheep, $4 50.

"If the American Church has another man equally fitted to do precisely this work, he has not yet come to the Church's notice."—Churchman.

"We may thank the venerable author for his care and labor in collecting much curious learning, which, scattered through many books, has hitherto been hardly accessible to ordinary readers."—Church and World.

"We are proud to see an American law book on Ritual of the respectable character and authority which we have no doubt will be accorded to this work"—Church Journal.

ECCLESIASTICAL LAW. By the Hon. Murray Hoffman. 8vo, cloth, $2 50; sheep, $3.

"Such a book from such a source will be most acceptable to the Church at large. And as the work contains expositions of ecclesiastical law as applicable to all the different bodies of Christians, its usefulness will be confined to no one body."

This work contains information which not only every clergyman but every layman who attempts to take part in the management of a parish should be acquainted with. It contains also historical notices of all the churches and religious societies that existed in our Province before the Revolution.

Post free on receipt of price.

The Nation.

NEW YORK, THURSDAY, OCTOBER 31, 1872.

The Week.

THERE will be elections held on Tuesday next for members of Congress and State officers in fourteen States, and for members of Congress alone in fourteen more. In the remainder the Presidential electors alone will be chosen. The Greeleyites concede to Grant twelve States, yielding in all 119 votes, while they claim for Greeley seventeen States, yielding 178 votes, leaving Grant only one Southern State—South Carolina. They declare eight States to be doubtful—namely, California, Illinois, Minnesota, Mississippi, New Hampshire, North Carolina, Rhode Island, and Wisconsin, yielding 69 votes, and thus, if their calculations are well founded, they have only six votes to get from the doubtful States to give them the victory. But out of the Greeley list the Republicans claim, with the utmost confidence, at least Connecticut, Indiana, New Jersey, and New York, yielding 65 votes; and they count with greater or less confidence on every one of the States set down by the Greeleyites as doubtful. Should their anticipations prove correct, they will thus take away 65 of the votes of which the Greeleyites profess to be sure, and 69 of those of which they profess to have some expectation. These, added to the votes which the Greeleyites concede to Grant already, would give him 253. The States in which the contest will undoubtedly be close, and in which, therefore, one can fairly call the issue doubtful, are New York, and New Jersey, and Michigan, and Indiana, yielding 70 votes in all. Should Grant lose the whole of these, it would still leave him 183 votes, or a majority, supposing the remainder of the Grantite calculations to be correct. We ought perhaps to include Illinois among the closely contested States, though our belief is that the Liberals have made a great deal more uproar there than their strength will justify. As the result is so near, there is no use in prophesying. Many Republicans believe Greeley will carry no Northern State, and we think this a not unreasonable view; but it is only about the amount of Grant's majority that there is now any question in any quarter.

The *World* has practically given up the Presidential contest in a philosophical article intended to show that it makes little difference who is elected, which is a concession of some value, as it was the firm belief of the Democrats, and of many of the Liberal Republicans, six or eight months ago that the continuance of Grant four years longer in office would prove the ruin of free government in America. They were measurably successful in making converts to this belief, extravagant as it was, until they produced their remedy. When they said that Greeley was the only hope of the country, people began to lose confidence in what they said about Grant, and have been losing it steadily ever since. Indeed, the experience the country has had with them is not unlike that which people sometimes have with lunatics. A crazy man will often tell strangers a very plausible and coherent story about the persecutions of which he is the object, and the losses and vexations to which his enemies subject him, and obtain general credence; but when he comes down to details, and tells you that his own mother and the pastor of his church often pass the night under his bed, on all fours, pushing up the mattress with their backs, his tale assumes quite a different aspect. So the public was really getting alarmed by the accounts some of us gave of the President's ignorance and usurpations and of the abuses of the civil service, until we introduced Greeley as the great administrative reformer. Then there came a terrible laugh, and people began to see a queer, wild look in the Liberal Eye, and wonder they had not remarked it before.

The farce will be brought to a close on Tuesday, and all good causes will be the better of its termination. In place of the usual exhortation to all good citizens to vote early and on the right side, and go round and see that their friends vote too in the same way, we hereby remind the "organs" that there are only three days left now for the production of "charges." Let them, therefore, examine their drawers and see if nothing has been overlooked. Has no Greeleyite or Grantite minister been selling bad liquor on the sly in the basement of his church? Has no brother editor been carrying off the silver spoon out of the medicine glass of his dying friend? Has no senator been defrauding and brutally beating his sick washerwoman? Has the Attorney-General had nothing to do with the late silk robbery? In short, brethren, is there nothing more that you can say to give anybody pain, or to blacken a fair reputation, or to make your country look to the civilized world like a den of drunken thieves, and thus exalt "journalism" in the eyes of the community?

Popular interest has been almost completely turned away from the Presidential contest by the "horse epidemic," which begins to produce serious business embarrassment, and is apparently by no means so slight or evanescent a thing as was first hoped or believed. There seems to be very little known about the disease, medical science having really bestowed very little attention on animals, whose ailments are, in the main, treated by practitioners of about the same standing as the mediæval barber-surgeons, and who are mighty with drugs and "liniments." The principal feature of the disease seems to be an ulcerated sore throat, and it was supposed that a favorable change in the weather would arrest its progress or moderate the symptoms; but the weather has changed, and the malady continues to spread and assume a severer type. The increase in the number of fatal cases is hardly so serious an indication as it seems, inasmuch as large numbers of sick horses are being worked, either through necessity or cupidity, and work in many or most cases doubtless means death. At this writing there are no signs of improvement. The inconvenience caused by the stoppage of traffic is assuming grave proportions. The effect on foreign trade bids fair to be almost disastrous, and where the remedy is to come from it is hard to see. No mechanical substitute for the horse labor of a great city could be produced for months, and the epidemic is raging over a very wide area. Even if it were not, fresh horses could not be brought here. There is one good that may come out of the pestilence, and perhaps must come of it, and that is the total withdrawal of the horse from the regular passenger traffic of large cities. The way in which our car and omnibus horses are now worked and lodged ought to have brought a horse plague long ago, and the stables ought to have produced a man plague. If people are to be transported on rails, the work ought to be done by steam-engines of some kind, even in the streets. Most New Yorkers and Bostonians are now drawn from their business to their homes like pigs, and the animals that draw them are literally tortured to death, for overwork is torture, and torture of the worst kind.

The legitimate weapons of anti-Greeley warfare are too numerous to justify assaults on the Sage like that perpetrated in the *Times* on Friday. That paper published an "unearthed" letter of Mr. Greeley's, written two years ago to Mrs. Josephine Griffing, and tendering some wholesome advice in regard to her mode of befriending the blacks in Washington. To those who understand the circumstances of the case, the protest will be thought creditable to the good feeling and judgment of the writer. It was, in fact, a proper rebuke to the well-meaning but unwise philanthropists whose charity was tending to pauperize the whole black race in the District of Columbia, and if it has any present "interest to colored men," as the *Times* seems to think it has, it is not as a piece of "heartless and impertinent interference with a scheme of benevolence"—we

quote the *Times* once more. Mr. Greeley's bad (and not "unmistakable") handwriting is doubtless responsible for his seeming to call the blacks "an easy, *worthless* race." The context clearly shows that careless, thoughtless, or heedless was the epithet intended.

Mr. Wendell Phillips has fallen in among an evil and adulterous generation, who do not know a prophet when they see him and hear him, and indeed act as if prophets were bores. He wrote a letter for the benefit of the nominating convention in the Fifth (Mass.) District, giving them a mass of overwhelming reasons why they should nominate Mr. Buffum, a Labor Reformer, for Congress, but instead of surrendering, they only gave Mr. Buffum one vote, and nominated Mr. Gooch, who is, Mr. Phillips says, "a worthy, intelligent gentleman," but not "a live man," and his nomination is an insult to the Workingman. It is getting to be the general opinion in other parts of the country, we think, that the Labor Reform Party in Massachusetts ought either to grow strong, or die, or hold its tongue. It makes a prodigious noise in "halls," and is under the guidance of the wisest man of this or any other age—a man who never made a mistake, and never said anything that was not only true in a general, loose, domestic way, but strictly and literally true; and yet the politicians seem to care no more about it than about the noise of the wind in a pine-tree, and it makes hardly more show at the polls than the Graham-bread movement or the movement to remove the national capital to St. Louis.

A decision has been rendered during the past week under the Treaty of Washington, which takes away from the politician the last bone of contention between England and the United States. The Emperor of Germany has decided the Northwest boundary question in favor of the United States. The Administration having telegraphed its thanks for the care and attention bestowed by Germany upon this vexatious question, and the English press having had its final grumble over what they would call in France the "treachery" of the Emperor, the San Juan difficulty may be said to be at an end. The question practically was this: whether, under the Treaty of 1846, which established the boundary between the United States and British America, the cluster of islands (of which San Juan is one, and the most significant) lying east of the Haro channel, between Vancouver's Island and the mainland, belonged to Great Britain or the United States. It was a question of the interpretation of a very loosely worded instrument, relating to a matter not of vital importance to either country, as any one can see by looking at the map. As a "difficulty" it had some value, for it furnished a means of intelligent occupation to diplomats of both countries, and would have afforded a convenient *casus belli* to either country whenever one was wanted. It is a relief to have it out of the way, and fortunate that the American claim was allowed. "Fifty-four forty or fight" was a very good party cry in Polk's time, but "a hundred and twenty-three fifteen west longitude or fight" would never have done as a slogan at all.

To an age which has lost its sense of wonder, the horse distemper easily overshadows the event of the week which is by all odds the most marvellous and inspiring. A news despatch from Australia, *viâ* the Overland Telegraph and its connecting cables, dated Melbourne, October 24, was printed in our Saturday morning papers all over the country, from New York to San Francisco. The possibility of this achievement was of course contained in the successful working of the first Atlantic Cable, but it will still be long before we can find it perfectly natural that twenty-four hours only, or fewer, separate us from the antipodal continent which steam communication has but just begun to make seem neighboring. The remarkable feature in this case is the building of a line eighteen hundred miles long across the wilderness, and almost desert, of which the English settlements in Australia form merely a fringe along the coast. It was an undertaking certainly not unparalleled, but probably unsurpassed of its kind, and in its consequences is likely to resemble more our Pacific Railroad than our own overland telegraph. It has already made useful additions to the geography of the interior of Australia, and has begun to be used not only as the thread along which to string new settlements, but as the base of departure for several exploring expeditions in the waste on either side. It offers a fresh illustration of the value to mankind of the solitary labors of men devoted to science, when the perilous transcontinental pilgrimages of Burke, Stuart, and MacKinlay are followed within ten years by a telegraphic service that binds the colony to the mother country and the island to the mainland, and adds one more link to the solidarity of nations.

A few days ago Mayor Hall made one of his melodramatic appearances in court, and insisted on a speedy trial of the charges against him connected with the Ring frauds. A jury was speedily empanelled, the Mayor making few objections, or none at all; indeed, instead of making use of the dilatory machinery which served him so well on his first trial, he seemed only anxious to bring matters to a crisis as speedily as possible. As soon as the jury was empanelled, the Mayor addressed it in a few words, hailing it "as the star of his deliverance," referring in feeling terms to the cruel imputations on his character, assuring the jury that his professions of readiness for trial were no poor bravado, for there had not been "a second of time in the day or in the night" that he had not been ready to meet his accusers. The trial then began, and is likely to be a short one, and not so thrilling as the first, at which the demon Garvey made his first appearance on the stage. The present indictment covers the previous six, and embraces all charges, including "negligence," connected with the proceedings of the Board of Audit with which—"under the inscrutable decrees of Providence," according to his own statement—this unfortunate man had "happened to be connected." It will be a great pity should it be found impossible to convict Mr. Hall under this indictment, for there is no one in the city who does not believe him guilty of connivance at the Ring frauds, and his escape will be taken as a sort of demonstration that the popular belief in the safety of rascality on a large scale is after all correct. The evidence that has been put in thus far does not do much to connect Hall with the frauds. The main facts in the case are really these: 1st. That Hall, having been entrusted with the duty of auditing claims against his constituents, in conjunction with two others, agreed with the other two to neglect the performance of this duty, and transfer it to a third person, asking no questions, and allowing him to do exactly what he pleased, without supervision or restraint. 2d. That this was done by a man who had been fifteen years in city politics, knew the character of city politicians thoroughly, and must have been morally certain that the object for which the reference was made was no good one. 3d. That when the frauds were discovered, instead of expressing surprise or regret, he assumed a bold front, laughed at the whole matter, dared his constituents to do their worst, and has to this day never given the slightest evidence that he ever regarded the frauds themselves as any more than ordinary moves in the political game.

Gambetta still continues to furnish the principal topic of French politics, and he makes it fruitful by delivering plenty of speeches. But he has stirred up an old-fashioned quarrel between the Radical and Conservative press. The latter are raking up all the horrors of the Revolution, much in the style in which De Maistre did it, by way of showing that the modern Republicans are the legitimate successors and heirs of the Marats and Robespierres; while the Radicals will have it that all Conservatives are Bourbonists in disguise, and would like to restore the taille and the seigneurial "droits" and persecute the Protestants. The discussion is very exasperating in a country like France, but there is one good sign about it: each party evidently looks on want of moderation as the worst charge it can bring against its enemies; but there are also bad signs in it, and the worst is the one to which our Paris corre-

spondent calls attention—the way in which French politics is dominated by one man : if not Bonaparte, Thiers ; if not Thiers, Gambetta ; if not Gambetta, some one else. There is no more indication of the rise of *law* above men than there was under the Empire, though adhesions to what is called the Republic continue to be very numerous. M. Simon, the Minister of Public Instruction, has issued a circular which shows that he at least has learnt something, proposing to modify the French educational system in the direction of those of England and Germany ; that is, by the introduction of greater freedom, the diminution of supervision, the increase of open-air sports and gymnastic training. At present, the one "manly exercise" in which young Frenchmen of the middle class excel is fencing, and the conscience and self-reliance of the youth of both sexes are sapped by minute espionage and suspicion.

The Germans are going into social science with characteristic love of drudgery and painstaking. A sort of revival has sprung up among them on the subject, the leaders of which are mostly college professors and young men, and between them and the "practical men" there now rages, our American protectionists will be surprised to hear, a deadly feud. The "practical" economists in Germany are all, or nearly all, of the Manchester school of free-traders, or, in other words, of the extreme school, who eschew all kinds of government interference with industry, and indeed would confine government to mere police duty ; and Prussian policy has for years run in this direction. Not only have all changes in the tariff been strongly in the direction of free trade, but the Government has refrained from taking any of those measures with regard to the regulation of factory and mining labor which have been long on the English statute-book. The German economists have been for some time divided into three schools, the historical, philosophical, and statistical ; but the statistical alone has had any influence on legislation. The historical school, which is mostly found in the universities, and is disgusted with the disorder and disorganization produced all over Germany by the tremendous rise in prices, and the impetus given to speculation, by the great influx of capital from France, is now raising its head, and has just called a Congress at Eisenach, in which it declares war against the non-interference men, and calls for legislation regulating trade, industry, commerce, and labor in the interest of social morals, and in order to the more orderly and regular distribution of the products of labor. The mediæval system, it acknowledges, is its ideal, and while it does not hope or wish to bring it back, it thinks some modification of it must be attempted in order to prevent modern society from going to pieces. The principal speaker at the Congress, however, made propositions which the other members considered so wild, that most of the first session was passed in refuting him. By the time they had finished, he was himself so out of conceit with his own resolutions that he withdrew some and explained away others. In fact, the "practical men" have thus far carried the day.

The efforts to raise money in this country for the suffering victims of the floods in the valley of the Po, in the early part of this year, can hardly have ceased when they are again rendered necessary, and doubly necessary, by inundations which have taken place within the past fortnight, and apparently on a scale far exceeding that of the former disaster. The regions about Mantua and Ferrara are particularly mentioned as being afflicted. However it may be with Mantua, Ferrara has had forebodings, now completely justified, and if the complaints which it has sent up since 1865, and as late as the middle of last month, are warranted by the facts, the Government engineers are responsible for some portion, at least, of the present widespread destruction of life and property in that province. It seems a little extraordinary that the high engineering talent of the nation which accomplished the Mont Cenis Tunnel should not have rendered this periodical overflow either impossible or harmless.

Spanish finances, like most other Spanish things, are in a bad way. The hard facts of the case are that there is a floating debt of $84,000,000, which no government since the Revolution has shown its ability to deal with, and there is a deficit in the revenue this year of $20,000,000. The last finance minister but one, Señor Angulo, could think of no better mode of making ends meet than clapping a tax of 18 per cent. on the interest of that portion of the debt held by foreign creditors, but this met with no acceptance at home, and abroad was treated as an attempt at robbery. His successor, Señor Camacho, proposed to pay one and a half or two per cent. of the foreign obligations in cash, give bonds for the remainder at the market price of Spanish securities, and the foreign creditors received this proposition favorably, but the Cortes did not even consider it. The present minister, Señor Gomez, now proposes an ingenious kind of loan, the leading feature of which is the payment of two-thirds of the interest due to the holders of certain classes of the public debt in money, and the other third in Government bonds during the next five years, and a loan of $10,500,000, the interest of which is to be paid in the same way, to be negotiated by the Bank of Paris and of the Netherlands. This plan is now coming before the Cortes. Señor Gomez estimates the expenditure of the coming year at $333,500,000 ; the revenue at $272,500,000.

A very pretty diplomatic quarrel is raging in Europe over the old Laurium mines, so famed in Athenian history, and which once furnished a considerable portion of the Athenian revenue, but have not been worked for two thousand years. In 1863, a company composed of Italian and French capitalists bought the old ground on the sea-shore, near "Sunium's marble steep," from the village, got a confirmation of their title from the Government, and went to work and began speedily to make large profits by merely working over the débris left by the ancient miners, whose work—they were all slaves—was slovenly, and whose processes were of course imperfect. The result has been that a town of 3,000 inhabitants has sprung up around the mines, a railroad seven miles long has been constructed to connect it with the port, forty miles of macadamized road have been made in the neighborhood, and employment at high wages afforded to the surrounding population. But the company have had a funny experience with the brigands. One chief attempted to levy $10,000 of blackmail on them, and probably would have done it if they had not taken the precaution to have him killed. Another attempted to carry off the Superintendent, who had to call out his armed employees and offer battle under the rules of the military art on the adjacent plain, and the action was only prevented by the arrival of a reinforcement of regular troops from Athens. Finally, the Greek public became too much outraged by the spectacle of the company's prosperity, and the Government was obliged to pass an act declaring all the débris of the old mines public property, and clapping an enormous tax on the company for the future, and claiming $400,000 as arrears. This the company could not stand, and offered to sell out to the state for $2,800,000, but the state refuses to buy, and they are now trying to get the French and Italian Governments to interfere for their protection. The Greek defence is very characteristic, and would have delighted a sophist. It is that the original grant to the company only included the "scoria" or slag left, after smelting, by the ancient miners ; that "ecvolades," or ore thrown up by the ancient miners and left there as not worth smelting, do not belong to the company, and that their title to them being disputed, the matter ought to be referred to the courts. The company, however, treats the proposition to submit their rights to the Greek judges in a matter of this kind as a bad joke, and clamor for foreign interference. As nearly all the "smart" Greeks in Greece who are not brigands are engaged in "journalism," it can be readily imagined that the uproar over the affair at Athens is great, and that it is not likely to draw foreign capital very strongly towards what our politicians would call "the home of Pericles."

THE JUDICIARY AND THE BAR.

MR. DISRAELI has asserted in one of his speeches, aimed at Sir Charles Dilke, that the American legislative system costs more than the British civil list; from which he would have it inferred that a republic is a more costly government than a monarchy, and that the British nation gets more for its money than it would get should it adopt the governmental system of the American people. Of course the costliness of a government does not come from its being called a republic or a monarchy, nor from its executive head being elective or hereditary; yet nevertheless it is a startling assertion that, with all our simplicity, economy, and niggardliness on the one hand, and the meagreness of governmental detail on the other, we not only get less for our money than the English people, but we actually pay more for the little we do get.

The same thing, we suspect, may be readily demonstrated of the two judicial systems. While the English people pay very high salaries—about $45,000 a year in currency—to a few eminent lawyers who wear robes and wigs and are addressed as "My Lord," they receive from them such certainty and exactitude of legal justice, with such promptitude of administration, as to reduce the litigation of a naturally pugnacious and litigious people to a comparatively small compass, and almost relieve the modern law of England from the law's proverbial uncertainty. The value of knowing what the law is, or, in other words, of knowing what a decision would be if a suit were brought, and of thereby preventing the enormous mass of legal experiments which make up American litigation, cannot be more completely illustrated than by the spectacle of the three superior courts of Westminster, consisting of five or six judges each, carrying along the entire law-litigation (as distinguished from equitable) of the people of England. And this efficiency is in turn illustrated and in some degree explained by the extreme fewness of appealed cases. In our American system, the law reports consist almost entirely of cases carried by appeal from one court to another; in England, there are not enough of these cases to fill a volume, for which reason they are interleaved with the reports of the court where they originated. Thus we find in the reports of last year, that the largest number of cases carried to the Exchequer Chamber from any one court is but nineteen, and that the total of the appealed cases from the three courts—virtually all the law courts of England—is less than fifty.

This extraordinary fact is the most conclusive demonstration of the respect which is paid by the bar and people to the English courts—a respect so practical in its effects as to secure the belief that the decisions are ordinarily the true exposition of the law, from which it would be folly to appeal, and not mere stepping-stones to the court of last resort. Now, if any person on going into a court-room will contrast the value of the time lost by jurors, witnesses, and suitors, and the amounts paid for retainers, counsel fees, witnesses, travelling, printing, etc., etc., with the salary of the judge who sits on the bench controlling the movements of the complicated machinery below, he will perceive that the dollars and cents, or pounds, shillings, and pence, paid from the treasury for judicial salaries form really the smallest item of the expense which a nation bears in carrying on the administration of justice. Hence we can hardly value too highly a judicial system which by rendering the law "certain" (which means, simply, settled and known) shall prevent litigation; and we can hardly censure too strongly a system which by its uncertainty of administration invites men to invest in the chances of litigation and risk the outlay of additional costs as other men risk the price of a lottery ticket.

Remembering that both systems consist of courts of the common law, we should say that their distinctive characteristics are the extraordinary centralization of the one and the extraordinary dispersion of the other. In the English system, the centralization indeed amounts to substantial unity. The decision of a single judge is reviewed by the other judges of the same court; the decision of a single court by the judges of the other courts; to-day, the Queen's Bench and Common Pleas review the decisions of the Court of Exchequer; to-morrow, the Common Pleas and Exchequer will review those of the Queen's Bench. The law is virtually declared by all of the judges constantly intermingling and acting together, and it is impossible for two courts to be long apart or far apart. Further than this, the same unity extends downward as well as upward, for the chamber business of the three courts is performed by one, each court successively taking charge of it for a year. The conflict, therefore, of orders and injunctions with which we are so familiar cannot exist, and the bar, while giving different names to the different courts, and styling one judge a justice and another a baron, still finds them all congregated under a single roof administering one system of laws as parts of one judicial system.

The Federal judicial system, on the contrary, is broken up into different strata, the district and circuit courts. (The Supreme Court we throw out, as being merely appellate and taking the place of the House of Lords.) The lowest stratum is next broken up into nearly fifty isolated courts held by single judges, having no official communication with each other. All of these judges are underpaid; some of them are comparatively idle, their duties not filling a month of the year; others are overworked and wearied, wearing those ruts in their lives in which overworked, isolated men are pretty sure to travel. If two of these weak tribunals decide a point of law in two different ways, it ordinarily must follow that there will be two appeals. But the imperfection of the system was such that the circuit was often held by district judges, and, at best, it now amounts to little more than one man sitting to review another's work.

As such a defective system of course sent up to the Supreme Court, for the only real review that exists, all cases that could possibly be carried there, it followed that the Supreme Court fell some three years behind its work. To accomplish a judicial reform in this state of things, it was necessary, first, to relieve the judges from other duties, so that they should reduce their enormous docket; and, second, to improve the administration of justice in the courts below, so as to lessen the ratio of appealed cases. For the first evil, Congress created nine new circuit judges, and, to a great extent, relieved the Supreme Court judges from circuit duty. The second evil Congress seemed utterly unable to comprehend or to grapple with. Instead of appointing these new circuit judges—which is only a step towards the complete isolation of the circuit courts—it is obvious that Congress should have merged the district and circuit courts and united the district judges of each circuit into a court of review. Requiring them to hold court in each State of their circuit, prohibiting the judge who tried the case from sitting to review it, and paying them liberally for their expenses, would have made each circuit much like one of the courts of Westminster Hall; while the occasional presence of a judge of the Supreme Court would have tended toward the uniform action of all.

When we pass to the State tribunals, we find much diversity, but nevertheless a progression toward this same principle of division and subdivision and isolation. The former constitution of New York probably reached the limit; for while the people of England, with nominally three distinct courts of law, had one harmonious administration of legal justice, the people of New York, with nominally one Supreme Court, had really eight distinct and often jarring legal tribunals. Added to these were two courts, in the great centre of commercial litigation, of almost equal jurisdiction and importance. It is plain enough that the Court of Appeals must have become overloaded in the task of gathering together all of these conflicting elements, and reducing, after years of delay, judicial diversities into something like judicial unity.

When these systems are analyzed, and their inherent weakness laid bare, no one can suppose that any great respect could ever be rendered to each of their multiplicity of courts. There is in them no congregated whole which can command respect. The controlling principle is not diffusion, but belittlement. The division is in practical effect so complete that the parts cease to be parts and become paltry unities. The division also reoperates in another direction; for, as there is no great judicial power for the bar to re-

spect, so there is no united bar to scrutinize and uphold the judiciary. When we remember how completely the legislative bodies of the country are in the hands of lawyers, it seems at first inexplicable that lawyers should have done so little for the judiciary and for their profession. With every other profession and trade and interest so slightly represented in all our legislative councils, we might reasonably expect that the judicial system would have received the strongest support from government, and have been built up into a state approaching perfection. But the American bar of late years has never stood face to face with the judicial power and realized the duties which each owes to the other. When a Barnard or Cardozo has mounted the bench, the immediate remedy has been to carry business into some other court, and to regard the disgrace as affecting only one of the units of the judicial system, and not the judiciary. When the injustice and tyranny have grown insupportable, the fraction of the bar directly oppressed have not received the support of the entire body, by whom it has in fact been regarded as a local affair. In England, the whole judicial power is directly confronted by an entire and united bar. A Barnard or Cardozo upon the bench of any of the three courts would directly affect every lawyer in England, and he would feel that the scrutiny of every lawyer was upon him.

And this brings us to a scheme, which has been provoking much sharp discussion in England, looking toward a limited decentralization of the judicial power. The Judicature Commission, in August last, reported to Parliament a proposition in effect to increase the jurisdiction of the county courts and to concentrate them into what has been termed provincial courts. The commission is made up of judges, the Attorney-General, and eminent members of the bar, and among others Sir Roundell Palmer. If the commission had reported with anything like unanimity, its recommendation would probably be adopted; but it is almost equally divided, and many of its most respected members are of the minority. Among them is Mr. Justice Blackburn, the leading judge of the Queen's Bench after Chief-Justice Cockburn, and he gives this very pointed testimony to the value of a united and powerful bar:

"I attach much importance to keeping up the great central bar of England. The *only real, practical check on the judiciary* is the habitual respect which they all pay to what is called 'the opinion of the profession.' And the same powerful body forms, as I think, a real and the principal check on the abuse of patronage by the Government."

These county courts, it must be understood, are by no means the same as the county courts of the United States. The judges are barristers receiving ordinarily £1,000 and their expenses, which sometimes amount to £200 more. But though the purchasing power of their pay in gold is about equal to the paper-money salaries of the judges of the Supreme Court of the United States, their common-law jurisdiction is limited to £20 in cases of tort and £30 in cases on contract; and 80 per cent. of their business consists, it is said, of cases below £5. They are, therefore, small-debt courts respectably managed—so respectably that, while the appropriation made by Parliament for 1871 was £414,706, the fees collected and paid into the treasury by the county courts amounted to £358,031, leaving to be borne by taxation only £56,675. We may also note as one of the poor man's advantages in a respectable and well-paid judiciary (even for small-debt courts), the system popularly known as the "banking business"; which is the discretion given to these judges to withhold execution, and allow the judgment debtor to pay by instalments. That there is some defect in the English system is universally conceded. The Judicature Commission states it thus:

"There are two classes at least of the subject matters of litigation—those which can bear the expense of being tried before an elaborate central tribunal, and those which require a cheap, simple, and local procedure and trial. But there is a third or intermediate class of cases which frequently involve questions of complexity and serious importance to the persons interested, yet the expense of taking the parties and witnesses to any considerable distance from the place where the cause of action arose and they probably dwell, is generally wholly disproportionate to the value of the matter in dispute."

It is this intermediate class of cases for which the change in the county courts is proposed, and it will be interesting to watch the manner in which some improvement will be worked out by the able minds now in conflict. But from all that has been proposed, the judicial power of England is in no danger of immediate decentralization; for the proposition which has divided the commission and caused all the uproar of printed discussion is to increase the exclusive jurisdiction of these courts to £50. Yet it illustrates how clearly the bar and bench of England perceive the benefits arising from their relative positions, and how jealously they regard any proposition which may divide the influence of the one or lessen the greatness of the other.

THE POSITION OF THE HORSE IN MODERN SOCIETY.

IN spite of the inconvenience, as yet on the whole slight, caused by the "horse epidemic," there are but few persons interested in public health and morals who will not be glad of it, if it calls public attention in a serious way to the necessity for some change in our treatment of horses, at least within the limits of great cities. What is the exact nature of the difference between our duty to our fellow-man and our duty to the lower animals, or whether there is any difference at all; whether there is any difference in kind between cruelty to a horse and cruelty to a servant; whether the one can be practised without serious injury to the moral nature any more than the other; and whether, in short, "the beasts of the field" are not entitled to a higher place in systems of morality than has yet been accorded them, are questions which are now at last beginning to receive a good deal of discussion, but we do not purpose taking them up here. We merely wish to point out the striking illustration the prevailing horse disease affords of the importance of the part which this animal has come to play in our commercial civilization, and of the close relation there exists between *his* physical condition and *our* material interests. Our talk has been for so many years of the railroad and steamboat and telegraph, as the great "agents of progress," that we have come almost totally to overlook the fact that our dependence on the horse has grown almost *pari passu* with our dependence on steam. We have opened up great lines of steam communication all over the country, but they have to be fed with goods and passengers by horses. We have covered the ocean with great steamers, but they can neither load nor discharge their cargoes without horses. We have collected at the mouths of our great rivers and at the intersections of our railroads vast bodies of people, covering miles on miles of area with their dwellings and factories, but have left them wholly dependent for their intramural travel and for their regular supplies of food and clothing on horses. More than this, we have within the last few years made horse labor an almost essential condition of the protection of our great cities from fire.

This increase of our industrial and commercial dependence on the horse has, however, been so gradual, so quiet, and has issued so naturally from the state of things prior to the introduction of steam, and has been so completely overshadowed by the great applications of science to industry and locomotion, that little or no thought has been bestowed on its dangers. Indeed, most of us have well-nigh forgotten that the horse was an animal like ourselves—liable to pains and aches and death. We have come to think of him as a machine, on whose endurance we could calculate as on that of an engine, and for whose mortality we could make ample allowance in our business under the head of "wear and tear." We really ought, therefore, to be thankful that the present epidemic has brought us face to face with the startling fact, that the sudden loss of horse labor would totally disorganize our industry and our commerce, and would plunge social life into disorder, would threaten the lives of hundreds of thousands of human beings, especially if it occurred in winter, and might expose our great cities to destruction by fire. In short, we are now for the first time forcibly reminded that a plague might break out among horses, as plagues have broken out among men, which would sweep them away by the hundred or thousand every day, and which would momentarily baffle science. What we would now bring to the notice of the public is, that in our large cities

horses are exposed without let or hindrance on the part of sanitary authorities to just those conditions from which the great pestilences among human beings have sprung and do still occasionally spring. We take precautions in the public interest against overcrowding, filth, and absence of ventilation in tenement-houses, but we take no precautions against the overcrowding, filth, and want of light and ventilation of city stables; and yet every one of the large stables may fairly and properly be called a hot-bed of horse disease.

Light is as necessary to a horse's health as to that of a man, and yet nearly all our horses live, except during their few hours of work out of doors, often in the case of the city horse not over two or three, almost in complete darkness. In the best and most commodious city stables they have nothing more than a twilight. Moreover, the lungs of the horse are just like those of a man—only larger; their functions are precisely the same; the contact of oxygen with his blood is just as necessary for the preservation of his health and strength; nevertheless, nearly all our stables are built and regulated apparently on the theory that the horse does not need fresh air at all. The windows are small, and are either not made to open or are never opened. There are, in the case of horses kept for pleasure, and of horses kept in the country, mitigations of their lot which we need not point out; but in the city the working horse is treated worse than a steam-engine or sewing-machine. He is almost invariably, if his owner be a poor man, shut up during sixteen hours out of the twenty-four in a small, noisome den, every plank and beam in which is impregnated with foul exhalations, and which probably stands in a fetid alley, or behind a filthy yard. If he belongs to one of the great car companies, or omnibus companies, or livery-stable keepers, he is either immured in a cellar several feet below the ground, into which the light and air *cannot* come, and which is probably damp, or else kept in large rooms, with low ceilings and small windows, and in which light and air are not *allowed* to come, and in which he is packed together with several hundred of his fellows, almost as closely as they can stand together, up to his knees in half-rotten straw, and with fermenting manure all around him. The result is that, as any one may ascertain for himself, the stench of these places when the doors are opened in the morning is almost insupportable; and it is as certain as anything can be that the constitution of a horse which passes many nights in them rapidly gives way, and he dies; but he is set down in the books as having been "worn out" by hard work. The fact is, he dies of foul air and darkness and dirt—dies, in short, for want of the ordinary conditions of healthful animal life. If, instead of dying in this way singly, horses should now any day take it into their heads to fall sick by the hundred, and die of an equine "black death," it would serve us right. We could not justly complain of it.

The condition of the horse among us is a disgrace to our civilization. The manner in which we permit him to be used by car companies for local transportation, the pavements with which we supply him to do his work upon, and the dens in which we allow him to be lodged, are worthy of the Dark Ages. Our indifference to these things is like the indifference once shown about the physical condition of workingmen; the result may not be one which will rouse our sympathy or our fears, as the great human pestilences once did, but it may be one from which our manufactures, and commerce, and social life would suffer terribly. We tolerate in this city about a dozen great horse *ergastula*, every one of which not only disgraces us as a civilized community, but as a community which makes a pretence of knowing something of sanitary science; and the only excuse we offer for it is that the victims of these places are merely "private property." We now see that they are not simply private property; they are wheels in our great social machine, the stoppage of which means widespread injury to all classes and conditions of persons, injury to commerce, to agriculture, to trade, to social life; and that the sanitary inspection of horses and their dwellings during their life is just as necessary as sanitary arrangements for the removal of their bodies after death in every well-regulated municipality.

GAMBETTA'S CHANGE OF FRONT.

PARIS, October 11, 1872.

THERE is not much that is really republican in the Republic of M. Thiers; and what has been sometimes called the "loyal trial" of the Republic is merely the "loyal trial" of M. Thiers. Thirty-six Departments are still in a state of siege. The whole machinery of centralization works as smoothly and as irresistibly as it ever did. The Minister of the Interior, placed at the centre of his telegraphic cobweb, like a political spider, sends to the eighty-six capitals of the eighty-six Departments the decision of M. Thiers on every question, great or small. If there is an institution which may particularly be considered as inherent in a republic, it is the custom for all politicians to come before the people and to express freely their sentiments. Gambetta, in this respect, is trying to educate the country. He has just been stumping, as you say in America, a large portion of France, and made a succession of speeches. Some time ago it was noticed that Gambetta had made a secret alliance with M. Thiers. Though he was the leader of an opposition, he was practically an ally. He induced the Left of the Chamber to vote the law on the taxing of raw materials, which has a protective character, though the Left defends theoretically the principle of commercial freedom. Gambetta supported M. Thiers because M. Thiers was the founder of the Republic. As long as he kept that name he was constrained to give him his support against the monarchical majority of the House. This moderation astonished those who have always known the intemperance of Gambetta's character, the violence of his passions. But it was not the first time that he had shown some prudence. At Bordeaux, he threatened to make a *coup d'état* to arrest M. Jules Simon, who was the bearer of the decree of the Government of Paris which convoked the Assembly. Orders were already given for the arrest of all those who supported the Government of Paris against the Government of Bordeaux. Bismarck wrote a single line which at once sobered Gambetta. He gave up his dictatorship and retired from public life. When the Commune broke out, one of its principal leaders was Rane, an intimate friend of Gambetta and his prefect of police at Tours and at Bordeaux. Most of the leaders were what I may call Gambetta men, who had always defended the war *à outrance*. Gambetta remained prudently at San Sebastian in Spain, under the orange-trees of its lovely terrace, waiting to see which side would win, Versailles or Paris.

His is one of those Italian natures which are hardly well understood in France. It would be a curious calculation to see for how many years France has been really governed by Italians. I will only name Catherine de' Medici, Concini, Cardinal Mazarin, Bonaparte. Thiers was born in Provence, a province in which the Italian influence was very visible. Gambetta's father was a Genoese, who settled at Cahors as a grocer. He has a truly Italian appearance and an Italian nature. I don't remember who made this admirable eulogy of Turenne as a military leader: "His prudence belonged to his temperament, his temerity to his reflection." This last sentence could also be applied, in another sense, to Gambetta. He has no real political passion; he can appear violent, brutal, headlong. These outbursts are mere effects of his calculation. He is never angry, and he speaks so often as an angry man that, with his long flowing hair, he is compared to a roaring lion. It was thought by many that the lion had become a lamb. He had lately been moderate to the point of dulness. It suited his purposes to play that part, so that M. Thiers could reconcile France to a Republic which he called "profoundly conservative." M. Thiers had been completely successful. One by one the members of the old constitutional party had come to him, taking their places in the new *cadres* of a great party open to all. His triumph had been too complete; there was no longer any serious opposition. M. Thiers, under the name of President, had as undisputed authority as Napoleon III. ever had. He received the same ovations; the same mayors presented to him the same addresses; the same guns fired the same salutes; the same official journalists wrote the same articles on the impotence of all parties and the virtues of the existing régime.

Gambetta has found it necessary to interrupt this monotony. He felt that he would soon be forgotten; so he went to Grenoble and made a sensational speech which threw the whole country into a state of agitation. The French *bourgeoisie* was getting accustomed to the idea of a conservative Republic, of a Republic managed by old royalists, of a Republic without republicans. Gambetta threw off the mask and gave his own definition of the Republic. He declares that when he speaks of the republican party, he means "those republicans who have always been republicans." Again: "we must," he says, "distinguish among our recruits; we must be prudent, vigilant, suspicious." Here we have the keynote, the old Jacobin cry. We have not yet a law of the "suspected"; but we have already great classes of "suspected." Gambetta tells us that it is too late now for all those parliamentarians, all those partisans of fallen government, who are ready to join

the conservative Republic. "Why," he declares, "they make themselves republicans because they don't know what to do. We will leave them—as the early Christians used to do—at the door of the church to do penance." In 1848, the distinction was made between the republicans of the *veille* and those of the *lendemain*. Gambetta does not use these words, which have become ridiculous; but he will have nothing to do, he says, with eleventh-hour laborers. He thunders against those "who would take the Republic, place her on a chariot adorned with flowers, and bring her under the knife of the murderers." Here, again, we have the true Jacobin ring, the very phraseology of Barnave, of Danton, of Robespierre. When Gambetta, a law student, lived in the sixth story of a furnished house in the Rue Bonaparte, he had no other literature than the reports of the Convention. He learned them by heart. He is a mimic, an actor. During the war his proclamations, his bulletins, seemed to be addressed to the armies of Sambre-et-Meuse. Now, he speaks of the "Republic, adorned with flowers and conducted to the scaffold." The Danton in him burst forth when he called the conservative Republic "an ignoble comedy." The Comité de Salut Public would approve of these words: "Let us remain faithful to the true method. We approach the goal. Our motto is patience, vigilance, firmness. . . . We know all the machinations of our enemies, and we will, if need be, deal with them as they must be dealt with." Remember that these machinations are but the lawful claims of those who placed M. Thiers in power, with the distinct understanding that the question of the form of government should remain open as long as the French territory should not be liberated. In this long and intolerant definition of the true Republic not a word is said of the Communists, of those who took arms against the Assembly, under the very guns of the Prussians, so as to give them the spectacle of a French civil war; not a word of condemnation is pronounced against the men who seized and shot the hostages and who tried to burn a capital they could no longer terrorize.

When Louis Philippe was still an aide-de-camp of Dumouriez, he was sent to Paris with the report of the battle of Valmy. He was received by the Council of Ministers. A man touched his shoulder while he was speaking to the Minister of War. The young officer turned round. "I am the Minister of Justice—Danton." Louis Philippe could not disguise his emotion. Here was the man who had ordered the massacres of September. Danton seemed to understand his thoughts. "Young man," said he to him, "you don't yet understand politics." Gambetta understands politics. As long as the reaction against the horrors of the Commune was felt, he remained silent. Now he comes forward. He dares not yet make a defence of the Commune; but this is the way in which he speaks of the Assembly which vanquished the Commune: "Those *gens* of Versailles, of whom there is nothing to hope, with whom there is nothing to do." The Chamber has not yet begun to exercise the constituent rights which it pretends to have; but Gambetta is eager for a dissolution. "The dissolution," said he, "need not be pronounced: it is practically accomplished. The Chamber of Versailles is a *cadaver*, and the grave-digger is all ready to tumble it into the grave and to cover it with earth."

The dream of the conservative Republic is come to an end. Behind M. Thiers we see another, a younger Dictator, who will bring with him a new generation of ardent politicians; and behind these there is the great host of fanatic Communists, who already consider Gambetta as a reactionist. There is no constitution, no limitation of powers, no system of checks. Demagogy is already sweeping like a tide over all the great cities of the South; it is only kept back in Paris by the state of siege and martial law. M. Laboulaye has just published a long series of letters in the *Journal des Débats*, trying to make the framework of a republican constitution adapted to France. But he confessed a few days ago, in an American drawing-room, where he felt probably more free to speak his inner thoughts, that the public turned a deaf ear to his advice; that nobody cared less for a republican constitution than the actual President of the Republic, than Gambetta, who thinks himself already President, and than the Republican party at large. M. Thiers lives happily in the lovely palace of the Elysée, surrounded with generals, with courtiers, with the respectful representatives of foreign powers. He professes not to feel any uneasiness. He treats Gambetta as a mere spoiled child. "He is not a real lion," he says, "he is a lion of the botanic garden. I can always tame him and cut his claws." Bismarck, who is a profound politician, and who sees that under the present régime everything is gradually dissolving, treats M. Thiers with marked courtesy; he cajoles him, and M. Thiers does not see through this coquetry. The *habitués* of the Elysée shrug their shoulders when the Commune is named; they only have the Empire on the brain. The day before yesterday M. Thiers discovered that Prince Napoleon was in the house of a friend in the country, and, on his own responsibility, he sent a force of police to oblige him to leave the French territory, though there is no law of banishment against the Bonapartes.

All governments seem to be blind. Napoleon III. never saw any danger for himself or his dynasty except in the Orléans. He persecuted them, he confiscated their property; yet in fact the Orléans had nothing whatever to do with the revolution of the 4th September. It is the same now. The Bonapartes would not be in the least dangerous at present, if France had a well-ordered and well-established government of any sort. The country could only condone Sedan if it found itself in mortal fear of the Communist party, and if no dynasty was found but that of the Bonapartes ready to quell the spirit of revolution and of socialism. There is not a man in France who does not feel that France would appear very contemptible in the eyes of the world if it threw itself again at the feet of the Man of Sedan. All the abuse, the execration, then lavished on him would fall back on the country itself. A call for the Bonapartes would be tantamount to a declaration of impotence, of political imbecility. The Bonapartes are therefore the most distant danger; but they are, nevertheless, treated like the nearest danger, and the danger of Gambettaism and radicalism is overlooked by the Government. M. Thiers used the Commune in order to terrorize the Assembly of Versailles into accepting the Provisional Republic. He now uses Gambetta, consciously or unconsciously, in order to terrorize the Assembly and the country into an absolute submission into his own so-called conservative Republic. But if he uses Gambetta for the hour, Gambetta uses him for the future; and this curious and truly extraordinary combination of forces leads the country in a direction which is adverse to its own instincts. The pen of the Cardinal de Retz only, or of Saint-Simon, could well describe the complicated features of this political situation. Two semi-Italians have again the fate of France in their hands. They are half allies and half enemies. They attack each other publicly to suit their parties, and have private agreements. Each admires the other, and each wishes to be feared by the other. They are both *parvenus*, haters at heart of old well-established and traditional grandeur, of priests, kings, and noblemen; both passionately fond of military pomp, eager to surround themselves with gilded uniforms; both incapable of any personal attachment, of generosity, of any feeling of mercy; hard politicians, restless, fond of intrigue, of the sound of their own words; fond of art, though devoid of taste; both genuine children of the French Revolution, and imbued with all its prejudices and passions; both believers in force more than in justice. But force, alas! is now turned against France; and Germany has not more to fear from Gambetta than from Thiers.

Correspondence

THE PENNSYLVANIA JUDICIARY.

To the Editor of the Nation:

Sir: The London *Spectator* of Sept. 7, in the course of an article on the "American Judiciary," says: "The corruption of the Pennsylvanian bench in particular was notoriously as great as that of the worst of the New York judiciary." I believe this accusation to be grossly unjust as it regards the great body of the New York judges, and it is wholly without foundation in Pennsylvania. It is not only untrue, but there is nothing to afford excuse or color for such an imputation. I speak with some authority from a large experience, which has brought me in contact with men from all parts of the State, and my assertion will be confirmed by every Pennsylvanian. The proofs are so numerous that it is difficult to bring them within the compass of an article. The present Chief-Justice of Pennsylvania, after a service of fifteen years, was recently before the people as a candidate for re-election. He was a Democrat, and his opponent a Republican. Our journals are not overscrupulous during the heat of an election, and it is a misfortune that such an office should be subjected to the chances of party contest. Yet the Republican papers contained no word derogatory to the purity of the Chief-Justice, to his impartiality as between man and man, or to his fearlessness in the face of any corporation, however powerful.

His high qualifications were fully and generally conceded. The points of attack were, that his decisions showed him to be a strict constructionist and an advocate of State rights, who ought not to be chosen by the supporters of a national government. To Pennsylvanians the accusation of the *Spectator* is simply preposterous. We know the judges, their simple and laborious lives, and that they leave little to their heirs except in the rare instances where they inherit a patrimony or have achieved a competence before their elevation to the bench. A charge which does not condescend to facts, and can only be met by a general denial, may leave a stain where it is least deserved. Fortunately, in this instance evidence can be adduced that ought to satisfy any candid mind.

Such is the standing of the judiciary in this community, that many important offices which were formerly elective have, within twenty years, been placed in the gift of the courts. The Board of Health, the Guardians

of the Poor, the Inspectors of the Prisons, the Board of Public Education, and, recently, the Board of Public Trusts (which last is the trustee in the place of the City of Philadelphia of the immense property, including the Girard Estate, so lately held by her), are appointed in this county by the judiciary. These trusts involve an annual expenditure of several millions of dollars, and of course the custody of a much larger sum. This increase of power was not desired by the courts, and they have, on the contrary, sought to avoid a dangerous responsibility, tending to bring them into conflict with a race of politicians who are accustomed to regard such offices as their legitimate spoil.

But it was not easy to decline the flattering confidence reposed by the community in the integrity and good sense of the judges; and although the propriety of loading the courts with patronage foreign to their appropriate function has been questioned by far-sighted men as dangerous to the independence of the judiciary, yet the experiment has confessedly been successful in its immediate results. The judges have, as a rule, gone out of the ordinary field of politics to choose men eminent in private life, who have administered the public money with a care and fidelity which is not always seen on either side of the Atlantic.

These remarks may suffice to show that the *Spectator* has been laboring under a false impression. It is a subject of regret that a journal which is distinguished for sound thought and earnestness of purpose should have been betrayed into an error so well calculated to increase the sentiment of distrust between the United States and England. It is difficult for an American not to be provoked by such a charge, and no Englishman who believes it can regard America as a country in which life, liberty, and property are secure.

PHILADELPHIAN.

"DIFFERENT TO," AGAIN.

To the Editor of the Nation:

Sir: Mr. Richard Grant White, in commenting on my former letter, attributes to me a statement which I did not make, and should never think of making. Premising "different *to*," he speaks of my "assertion as to its general use at the present day by the best bred and most cultivated speakers and writers in England." He also says, "I have noticed 'different *from*' in the speech and the writing of only the younger generation of Englishmen, and those who to travel had united some loving study of the great Elizabethan writers."

To be sure, after saying that I had rarely, if ever, heard "different *from*" used by an English lady, I went on to say. "Moreover, 'different *to*' is just as usual with the vulgar English as with the educated, from whom it has descended to them"; but I thought the context sufficiently showed that I was there referring to oral usage alone.

One of the best living English writers, and one of the most voluminous, is Dr. J. H. Newman. Has he ever printed "different *to*"? Or has Bishop Thirlwall, Bishop Moberly, Bishop Wilberforce, Archbishop Manning, or Mr. J. S. Mill? To go back a little, does it occur in the pages of Dr. Arnold, Landor, Lord Macaulay, Mr. De Quincey, Bishop Hampden, or Mr. Grote? Southey may be alleged for it; yet, in all his writings where, save in his "Colloquies" (2d ed.), vol. 2, p. 273, and in his "Essays," vol. 1, p. 10?

We read, further: "Mr. Hall has shown that the phrase was used about a hundred and fifty years ago." To the extract which I quoted from a romance published in 1635, I may add the following from another romance nearly as old: "So was he enforced . . . to embrace a life much *different to* his humour" (Brathwait's "Two Lancashire Lovers," 1640, p. 231). Mr. Lowell, in his "Biglow Papers," second series, introduction, p. xliii., alleges that "different *to*" is "used invariably by Sir R. Hawkins in Hakluyt"; a still older authority than any I have happened on. Besides the eighteenth-century references which I gave, I may name Addison, *Spectator*, No. 239, and Richardson, "Sir Charles Grandison" (ed. 1811), vol. 6, p. 344.

"You appear very different to me *from* what you were lately;" "you appear very indifferent to me *to* what you were lately." Here, says Mr. White, are examples of "different *from*" and "different *to*." But surely *indifferent* is not *different*, or, in the sense which it bears in the latter of these passages, even the opposite of *different*. There is here just as much a play on words as there is on *concision* and *circumcision* in Philippians iii. 2, 3, or in the Greek original. Nor does it follow that, because, for instance, *dependent* takes *on*, *independent* must be followed by the same preposition. That our ancestors put *on* and *from* after *independent* I am aware. Besides, what preposition but *to* could *indifferent* take, the meaning being "as compared with"? We say, "this is ordinary *to* that." Bishop Bale, with a keen appreciation of the *odium theologicum*, wrote before 1463:

"There is no malyce *to* the malyce of the clergye."

"Different *to*" will be found criticised in Robert Baker's "Remarks on the English Language" (ed. 1779), p. 4. Baker calls it "an expression often used by good writers."

Formerly I compared it, from an analogical point of view, with "averse *to*." And not unlike it is "dissimilar *to*," which we much the more generally find; as witness Paley, Hallam, Southey, Mr. De Quincey, and Dr. Newman. Gibbon has "dissimilar *from*," and so has Landor, but also "dissimilar *to*," and that more frequently.

"To differ *to*," as I remarked, I have not seen, to my knowledge. "Differing *to*" would be equally gross; but "disagreeing *to*" occurs in Dacres's "Machiavel's Discourses" (1636), p. 155.

Addison, Steele, Defoe, Colman and Thornton, and Coleridge use "different *than*"; Glanvill, Landor, Mr. Dickens, and Mr. Charles Reade, "another *from*"; Miss Burney, "another *to*"; Henry More and Steele, "contrary *than*"; the *Spectator*, No. 491, "inseparable *to*." Similar instances of carelessness bestrew our literature abundantly; but they have not, like "different *to*," obtained something of a footing.

In order to its being a neologism, an expression has absolutely to be of recent origin, so far as is known. If found, however infrequently, in books other than recent, an expression is no neologism; and, to my thinking, Mr. White, when he applies this term to "different *to*," employs language inexactly. Your obedient servant, Fitzedward Hall.

Marlesford, Suffolk (England), October 6, 1872.

P. S. On looking over my notes, I see I have omitted what follows: "Truly, I thinke there was never dreame, so *different to* the course of cogitation, and so full of monstrosity, ever hatcht in the braine of man." Sir Arthur Gorges, translation of Bacon's "Wisedome of the Ancients" (ed. 1619), preface.

Notes.

Shepard & Gill, Boston, announce "The Deserted Ship," by George Cupples; "The Soul's Inquiries Answered," by Geo. Washington Moon; Black's edition of De Quincey's works, in sixteen volumes; and a new juvenile by "Gail Hamilton," illustrated by Billings and Bush.

—Prof. F. L. O. Rochrig, of Cornell University, reprints from the Smithsonian Report for 1871 a paper on "The Language of the Dakota or Sioux Indians," among whom he passed several months in 1866. Though modestly professing to give only "a few faint and cursory glimpses" at this language, the paper will be read with interest by ethnologists and philologists. The writer hazards no opinion as to the origin of the Dakota group of languages, but he has observed, as some earlier writers have observed, "dim and vague resemblances, an occasional analogy, or perhaps *merely casual* coincidence" between it and the so-called "Ural-Altaic" family of Asia, and he points out some of these resemblances, without drawing from them any conclusions as to the affinity or identity of origin. It should be remarked, however, that the structural and grammatical features to which he directs attention are not peculiar to the Dakota, but are found in many other North American languages. The "polysynthetic arrangement" is less remarkable in the Dakota than in the Algonkin, and the use of postpositions and of intensive reduplication is common to both. Twenty years ago Gabelentz (in his "Grammatik der Dakota-Sprache," based on the excellent grammar and dictionary of the Rev. S. R. Riggs) arrived at the conclusion, beyond which sound philology may not yet advance, that "any supposed accordance between the Dakota and Altaic tongues is a matter of *feeling* rather than of scientific conviction (mehr Sache des Gefühls, als der wissenschaftlichen Ueberzeugung)." Prof. Rochrig remarks on the harmonious character of the Sioux language, on its euphonic changes of vowels and permutation of consonants, and on the derivation and composition of words. He points out the mistake of translating by "laughing water" the name *Minnehaha*, which really means "curling water," and is "the usual word for a waterfall or cascade." The chief to whom interpreters gave the name of "Hole in the Day" was, it appears, known among his people as "One who perforates the sky with his arrows," Sky-piercer.

—General Grant is the great quarreller of this age, but such of our readers as are old enough and Protestant enough to have knowledge of the congregations of twenty-five years ago, will recollect how easy it used to be to quarrel about all sorts of queer and trifling things; how readily Paul "withstood Peter to his face" in parish meetings about matters which the Master of both of them would have considered of no great consequence; how near

Dorcas, and Lois, and Eunice, and Lydia used to come to wishing it were lawful for big girls and women to slap each other in the face after the manner of small girls when they fall out. Anything would do to fight over. As we have just been reminded by the *Examiner and Chronicle* (which, however, is a Baptist journal), a Methodist Conference once felt compelled to decide a controversy as to the proper means of holding up breeches and pantaloons, and pronounced deliberate condemnation of "the ungodly habit of wearing suspenders." No doubt the fight over this article of apparel was warm; we dare say some very good men and women brought bitter hearts to the bread and wine of the communion table both before and after the Conference had rendered the decision. Perhaps there was even a secession and a new sect. We dimly recollect, and so, we suppose, can the *Methodist*—whether the *Examiner and Chronicle* can or not—a time when in many New England villages there was an upper chamber in which, much to the wonderment and curious awe of infantile enquirers into holy things, a small assembly gathered themselves together each Sunday morning and worshipped apart by themselves as "Jug Baptists." Why these separatists were thus out of communion with other Baptists, whether for difference of opinion as to suspenders and similar things, we have never known; but it is as likely as otherwise that the quarrel had about the same reason for existing as the quarrel decided by the Methodist Conference. At one time, the fight would be over the question whether, forsaking the Scriptures, and flying in the face of Providence, a stove should be admitted within the sacred walls, or, as of old time, the meeting-house should be kept righteously cold in winter, and the brethren and sisters who were weak in body or of feeble faith should be left to bring hot soapstones on their individual responsibility. Then at another time the wrangle would be over the minister's luxurious gold-rimmed spectacles, or his use of a fob-chain with seals, or his wearing clothes too fashionably made, or his wife's letting her boys use white linen handkerchiefs on weekdays, or his daughter's learning the piano.

—Innumerable and amazingly paltry used to be the causes of church members' conflicts, which were acrimonious out of all proportion to the importance of the matter in dispute; but, as we remember, no source of wrangling was so prolific as "the singing seats." The proverbial jealousies and meannesses of persons endowed with vocal gifts were of themselves enough to make the gallery of men-singers and women-singers anything but a fore-court of heaven or a promoter of harmony and sweet accord in the congregation. But apart from these rivalries "the choir" and the church music always were and still are the cause of no end of dissension, of heart-burning, backbiting, malicious prayers in evening meeting, and black looks while going down the meeting-house steps. Once, as history tells us, the dispute was whether the psalms should be read by the parson to a stuck-up body of Amandas, and Maranthas, and Ebens, and Jonathans, who thought themselves better singers than the Ruth-Marias, and Deacon Tim's daughters, and Abiels, and Salems, and the rest of the congregation; or whether they should be "lined out" to the whole congregation. The records tell of one deacon whom the advancing tide of false progress had left almost alone, but had not submerged or swept away, who, till the town constable interfered, used to enliven the services and make much disturbance by rising after "the choir" had sung, and inviting "the Lord's people" to "jine in" with him in singing a hymn which, now that "the world's people" had got done, he would deacon out to them. There was also the fight as to whether uninspired hymns might be allowed to supplement the inspired psalms of Sternhold and Hopkins. Long afterwards came the fight as to whether the violin and the bass-viol (called by their enemies and the light-minded among their friends the fiddle and the bull-fiddle) should be allowed in the singing seats as aids to the voices of the singers. Still later was the easier struggle as to whether the organ should be introduced; and, later still, arose the struggle, unfinished as yet, between the partisans of quartette or choir singing and those of singing by the whole congregation—a struggle in which the latter should be safe to win, one would say: if the business is to get the congregation spiritually aroused and in key with the preacher and his theme, the best singer that ever sang (let alone the majority of persons who hire themselves out to sing hymns for so much a year) is as nothing in comparison with the voice of a whole congregation. But there is difficulty in getting the people to trust themselves to sing, and, after that has been overcome, in getting them to sing in time and tune. The *Examiner and Chronicle* puts forward what looks to us like a very good suggestion, when it urges the use of the cornet in "leading" the singers. The notes of that instrument, penetrating but soft, can be heard above the sound of the voices, and would so much more than take the place of precentors and choirs in guiding the singers that congregational singing, of which many now despair, might probably become greatly successful; and, accompanied by the organ, the cornet would be better still than when used alone.

—As we desire to give the Honorable James Irving a lift in his present struggle for the right, we take pleasure in publishing a campaign song which has been put forth in his interest, and which a correspondent has kindly forwarded to us. The picture of a bull which ornaments the top of the broadside in our possession the resources of our establishment do not permit us to reproduce. It points to the fact stated in the second of the succeeding stanzas that Mr. Irving—he was in handcuffs the other day for a felonious assault—is a dealer in beef or beef cattle. The same stanza, it will be observed, affords indications that the gentleman who opposes Mr. Irving's desire to be an alderman is a dealer in liquors, the term "fusel-oil" evidently being a covert allusion to the principal sustenance of "the boys":

JAMES IRVING is our Candidate,
And we are called upon
To do our best endeavor for
This friend and worthy man.
Our benefactor we have proved
And always found him true,
Amongst the Democratic ranks
His equals are but few.

Our nominee provides us with
Fresh Beef from native soil
To counteract diseases that
Proceed from "Fusil Oil,"—
That dire annihilator which
Destroys the soul of man,
And has so much misfortune caused
Since this world first began.

The widow and the orphan in
The district where he's known
Have been consoled and comforted
By him when sad and lone.
Oh, yes his generosity
Goes on to prove the while
Where formerly a tear was shed
Can now be seen a smile.

The hand of friendship he'll extend
To relieve one in distress;
His purse is always ready
Any grievance to redress.
A breast did never shield a heart
More patriotic, kind, and true;
He never yet has show deceit
To one that e'er he knew.

How dare a "fusil" vendor have
Presumption to aspire,
To take the Chair so often filled
By him we most admire?
Jim Irving is the man for us,
None other we'll sustain,
We've raised him to position of't,
And shall do so again.

In conclusion Fellow-Citizens
Our next November Day
Go to the Poll, with heart and soul,
And triumph in the fray.
Yes, vote for Irving every one
With all your will and might;
This one request I ask of you,
And "God defend the Right."

Respectfully dedicated to the HON. JAMES IRVING, by one of his constituents.

—*Hermes*, the Berlin "Zeitschrift für classische Philologie," edited by Emil Hübner, with the co-operation of R. Hercher, A. Kirchoff, and Th. Mommsen, contains a sharp criticism of F. Lenormant, from the pen of R. Scholl. In 1866, Lenormant published a large number of Greek inscriptions, chiefly monumental, purporting to have been collected by himself in Athens and its neighborhood between the years 1856 and 1863. Some of these exhibited novelties of form and style which, if genuine, would have a philological value; but for this very reason they require verification. Now Scholl asserts that, to his personal knowledge, for a whole year Stephanos Kumanudes has searched the streets and the houses of Athens, even to the dog-kennels, in the hope of adding these inscriptions to his own rich collection, but no trace of them has he found. A friend has made a thorough exploration of Attica, but without success; the inscriptions in question are declared by competent authority to be unknown; the originals of Lenormant's stately list have vanished! Truly does Scholl pronounce this a singularly malicious accident. Is it possible, he asks, that in six years these inscriptions have all been destroyed, or built over, or concealed? Or did Lenormant remove them to France, or — what? He reminds us that in 1854 Lenormant discovered in Normandy the remains of an old chapel and churchyard, with numerous early Latin inscriptions, but he has never produced the originals to the satisfaction of scholars. Hence his inscriptions must be classed as "suspected."

—The "prayer-gauge" controversy, which was begun three or four months ago by an article from an unknown hand in the *Contemporary Review*, seems in a fair way of bringing itself to a close. The *Popular Science Monthly* for November contains an article on the subject by Professor Tyndall (printed from advance sheets of the *Contemporary*), in which that gentleman, apparently confessing himself the original culprit and author, makes a clean breast of it, and states in a plain and straightforward manner exactly

what he did mean by his "infidel attack" on the efficacy of prayer. In the original article in the *Contemporary* the suggestion was made that as there was a good deal of doubt in the minds of many people as to what may be called the physical efficacy of prayer—that is, as to the value of prayer in varying the effect, let us say, of the attraction of gravity, or the velocity of light, or of sound, or the operation of the *materia medica* upon the digestive organs or nerves—the question might be tested by a comparison of the results of some particular human effort directed to the accomplishment of some physical object, compared with the results of the same human effort directed to the same end and assisted by prayer. For the sake of experiment, it was proposed that the test should be applied to the cure of disease; that in some one hospital the patients should be tested according to a certain regimen, and in others the same regimen should be used, with the addition of prayers. Immediately on the appearance of the article, the *Spectator*, with numbers of other papers, indulged in "a considerable amount of animadversion" upon him and the unfortunate editor of the *Contemporary*. Perhaps, on the whole, it is fortunate that this was done, as the controversy has resulted in producing the explanation to which we now refer. The explanation, in brief, is this: Disclaiming all desire of anything save the "purification" of religion, Mr. Tyndall points out that the history of the human mind shows a steadily increasing tendency towards the definite separation of religious from physical beliefs. The gradual process of purification has relieved religion of the most of her early burdens, and at the same time freed science of the thousand superstitions which once hampered its progress. "Some of us," Mr. Tyndall continues, "think a final act of purification remains to be propounded," in the abandonment of the belief in the "physical value of prayer." The question is this: There are in the world a large number of people who sincerely believe that "prayer, at all events, upon special occasions," invokes "a Power which checks and augments the descent of rain, which changes the force and direction of winds, which affects the growth of corn, and the health of men and cattle—a Power, in short, which, when appealed to under pressing circumstances, produces the precise effects caused by physical energy in the ordinary course of things." Now, when prayer is brought to the attention of the scientific student as an equivalent of physical energy, "he claims the right of subjecting it to those methods of examination from which all our present knowledge of the physical universe is derived. And, if his researches lead him to a conclusion adverse to its claims—if his enquiries rivet him still closer to the philosophy enfolded in the words, 'He maketh his sun to shine on the evil and on the good, and sendeth rain upon the just and upon the unjust'—he contends only for the displacement of prayer, not for its extinction. He simply says physical nature is not its legitimate domain."

—The third of the series of Annual International Exhibitions of Selected Works of Fine Art (including Music), Industrial Art, and Recent Scientific Inventions and Discoveries, will be opened at South Kensington, London, in April, and closed in October, 1873. Some account of the International Exhibition of 1871 (and more particularly of its picture-gallery) was given by Mr. W. J. Stillman in the *Nation* of Oct. 26 of that year. The third will consist of three divisions: (1) Fine Arts; (2) Manufactures; (3) Recent Scientific Inventions and New Discoveries of all Kinds. Fine Arts embraces works executed since 1863, or, in the case of "photography as a fine art" (if we understand the commissioners' circular), executed in the preceding twelve months; tapestries, carpets, embroideries, shawls, lace, etc., must be shown "not as manufactures, but for the Fine Art of their design in form and color." Under Manufactures may be named those in steel, including cutlery and edge tools, surgical instruments and appliances; and two classes—substances used as food, and carriages not connected with rail or tram roads—in which the commissioners remind us that America excels, singling out "the application of machinery to the making of carriage wheels." The universal Yankee, however, will perhaps be most at home in the third division; and if it is too late for him to put in an appearance at the Vienna Exposition, he may be almost fully recompensed by sending his invention to London. No rent will be charged him for space. If notified of his requirements before Jan. 31, "Her Majesty's Commissioners will provide glass cases, stands, and fittings, steam and water-power and general shafting, free of cost"; and "will carry out the arrangement of the objects by their own officers, except in regard to machinery and other articles requiring skilled assistance and special fittings," which must be provided by the exhibitor. Some conditions are imposed, viz., the objects offered will be admitted subject to the decision of competent judges as to their being worthy; they must be sent in between March 1 and April 7, the greatest punctuality being insisted on for paintings in oil and water colors and sculpture, while carriages alone will be received after the 19th of April; they must in every instance be accompanied by a label, "stating the name and address of the exhibitor, the special reasons, such as excellence, novelty, cheapness, etc., why it is offered for exhibition, and (whenever possible) the retail price at which the public can obtain it." In this commercial aspect the London Exhibition appears to be more immediately attractive than the Austrian. No prizes are awarded, but a medal certifies to the distinction of admission. Full information in regard to the Exhibition can be had by addressing the Secretary, Upper Kensington Gore, London, S. W.

—A description of the ivories, ancient and mediæval, in the South Kensington Museum has just been published, which is, with one exception, an admirable example of what an art catalogue should be. The exception is the title, which, being entirely without punctuation, after the objectionable French style, leaves the reader uncertain whether William Maskell is the author of the description or only of the preface. The great merit of the catalogue is its fulness. For every ivory, the author, whether he be William Maskell or some unknown laborer, gives size, date, and, in the comparatively few cases where it can be done, country, and then, in smaller type, a word-picture of the carving and an explanation of the details which are so apt to puzzle all but antiquaries. And in the case of two dozen remarkable examples the descriptions are supplemented, and may be tested, by photographs—a method of representation singularly well fitted to show the smoothness and apparent softness of ivory. The catalogue is preceded by a well-written preface of over two hundred pages—which is certainly by Maskell—in which the progress of ivory-carving is traced from prehistoric times and the caves of Dordogne, through Egypt, Greece, and Rome, to the Middle Ages, where there is most to record. A collection such as is here described has a double interest—the interest of art and the interest of antiquities. The merit of the different examples varies widely. A large part of the ivory-carvings that we have seen, or seen represented, can hardly give much pleasure unless some previous training has taught the student what beauties to look for among manifest defects. In the present collection we have religion represented by crosiers, crucifixes, pyxes, rosaries, and various diptychs and triptychs; war by swords, daggers, and a trumpet; games and sports by a hunting-knife, powder-flask, and chessmen; the domestic arts by combs, knives and forks, mirrors, and book-covers. But these reveal nothing new, nothing that was not known to us by hundreds of other monuments; they merely recall and confirm. There are, however, a few precious ivories that go beyond this, and give us a narrow but clear view into a very distant antiquity, a time earlier even than the age of iron or of bronze, "a time so remote," says Lubbock, "that the reindeer was abundant in the South of France, and probably even the mammoth had not entirely disappeared." These ivories, or rather mammoth tusks and reindeer's bone, are carved with so much spirit, so naturally, with such a perception of the characteristic features of their subjects, and such power of representing them, that they could not be the work of beginners in their art; and it is difficult not to believe in the coexistence of a considerable degree of civilization, so much superior are these carvings to the work of tribes known to be savage. It must be confessed, however, that they are also better than some of the work of nations not savage, and that civilized and artistic are not convertible terms. But, as inspiring a hope in further discoveries, they are historically more interesting than the mediæval specimens. We trust that the South Kensington Museum, which has already published excellent catalogues of its Mediæval Italian Sculpture, by Robinson; of its Textile Fabrics, by Rock; and of its Lace, by Mrs. Palliser, will extend the series to all other branches of its art collection.

— The foreign journals report the death of Dr. Merle D'Aubigné, author of the well-known "History of the Reformation," and the leading member of the Protestant Theological Faculty at Geneva. He was born near Geneva, August 16, 1794, and was, therefore, seventy-eight years of age. He was a descendant of the old Huguenot historian of the same name, his ancestors having been among the refugees from France after the Revocation of the Edict of Nantes. He prosecuted his studies partly at Leipsic and Berlin; was a pastor at Hamburg for five years; was then President of the Consistory of French and German Churches at Brussels; but for the last forty years has been Professor of Historical Theology at Geneva. He published at Paris, in 1848, a work upon Oliver Cromwell, in which he follows in the steps of Carlyle in the estimate of Cromwell's character; also, "Germany, England, and Scotland; or, Recollections of a Swiss Minister"; besides other writings of less account. His principal production is the "History of the Reformation," the publication of which was not finished at his death. This work is written in an animated, popular style, in a fervent religious spirit, and with a zealous sympathy for the Protestant side. It has attained to great popularity, and has diffused much valuable information respecting the age of the Reformation among a multitude of readers whom this knowledge would never have reached through any other channel. It is not characterized, however, by the accuracy and dispassionate tone which would be requisite in order to constitute it an authority. Although D'Aubigné sat, for a while, at the

feet of Neander, he did not possess the critical habit which has marked the German theologians of the liberal evangelical school since Schleiermacher. His work is also in some parts extremely, even tediously, copious. He devotes several volumes to the ecclesiastical affairs of Geneva prior to the work of Calvin. D'Aubigné's history, however, has for the most part the merit of being interesting. But its rank will not be among works of a scientific character. It lacks the discriminating and judicial tone. Dr. Merle—as he was called at Geneva—was a man of fine presence. His personal appearance was even commanding. He bore a striking resemblance, which was often noticed by his American visitors, to the late President Wayland. We believe that his character and social traits were worthy of very high esteem.

MUSSULMAN "FENIANS."*

DR. HUNTER is already well known as a writer on ethnological and linguistic questions, and has thrown a good deal of curious and interesting light on the composition of the population of British India. In the volume before us, he gives an account of one of the strangest of the many strange episodes by which the history of English rule in that country has been marked. Most of us, in talking and thinking about British India, forget that when the British began to "absorb" it in the middle of the last century, they found it ruled exclusively by Mohammedans, to whom the bulk of the population were despised infidels—"gens taillables et corvéables sans merci ni miséricorde," and most of us are ignorant of the fact that there are thirty millions of these Mohammedans still in the country in a state of social decay, smarting under the recollection of their lost supremacy and under the elevation of the race which their fathers held almost in slavery. How they must hate the British who have displaced them may be inferred from the fact that even under the Mogul Emperor Akbar, who professed to have reformed the administration and admitted the Hindoos to a share in it, among the twelve highest officers of the government not one was a Hindoo; and in the other grades, out of 252 officers only thirty-one were Hindoos. Of the Mussulmans of Bengal, where the Mussulman aristocracy obtained their most powerful hold, Dr. Hunter gives a picture which explains the change which British rule has wrought in the relations of the old conquerors to the Hindoo population:

"Their old sources of wealth have run dry. They can no longer sack the stronghold of a neighboring Hindoo nobleman; send out a score of troopers to pillage the peasantry; levy tolls upon travelling merchants; purchase exemption through a friend at court from their land tax; raise a revenue by local cesses on marriages, births, harvest-homes, and every other incident of rural life; collect the excise for their own behoof, with further gratifications for winking at the sale of forbidden liquors during the sacred month of Ramazan. The administration of imperial taxes was the first great source of income in rural Bengal, and the Mussulman aristocracy monopolized it. The police was another great source of income, and the police was officered by Mohammedans. The courts of law were a third great source of income, and the Mussulmans monopolized them. Above all these was the army, . . . officered by a great confederation of conquerors who enrolled their peasantry into troops, and drew pay from the state for them as soldiers. A hundred and seventy years ago, it was almost impossible for a well-born Mussulman in Bengal to be poor; at present, it is almost impossible for him to continue rich."

For some time after the British took possession of the government, the Mussulmans retained their hold of the offices, both high and low—judicial and administrative; but as security has increased, and the means of education improved, the Hindoos have been gradually working their way to the front, and now fill every grade of official life. They take comparatively kindly to the civilization, new laws, and new learning, and, besides this, are shrewd traders and financiers. The result is that the Mohammedans have everywhere gone to the wall. One is not, therefore, surprised to hear that throughout British India, wherever you find a Mussulman, you find a secret or avowed enemy, and often a very bitter one, of British rule.

This state of things has produced the singular conspiracy which Dr. Hunter describes. As long ago as 1820, a famous freebooter in Northern India, named Sayyd Ahmad, took to the study of the Sacred Law, and became a prophet, and began preaching the purification of the faith, and, travelling southward to Calcutta, made converts all along the route in great numbers, and appointed agents to collect taxes, besides four "khalifs" or vice-prophets, and a high-priest. In 1824, he found himself powerful enough to enlist a large armed following, and, establishing himself in the mountains on the Peshawur frontier, began preaching the Holy War against the infidels. He first commenced hostilities against the Sikhs, with whom he had many bloody encounters. In 1830, he actually took Peshawur, the capital of Western Punjab, proclaimed himself Khalif, and caused coins to be struck in his name. Having offended the prejudices of many of his followers, besides falling into other errors, he was defeated and killed in the following year. A successor was, however, found among his disciples, and he established a regular camp at a village in the mountains, called Sittàna, just outside the British frontier, and this camp has lasted down to our day as the headquarters of Mohammedan fanaticism in India, to which recruits flocked from all parts of the country.

"In this way," says Dr. Hunter, "the fanatics firmly established a twofold power on the frontier, and by their emissaries among the superstitious border tribes kept alive the embers of the Holy War. During intervals of many years they sank into the insignificance of border freebooters, but from time to time fired up into a fierce army of the Crescent. They perpetrated endless depredations and massacres on their Hindoo neighbors before we annexed the Punjab, annually recruiting their camp with Mohammedan zealots from the British districts. We took no precautions to prevent our subjects from flocking into the fanatical colony which spent its fury on the Sikhs, an uncertain coalition of tribes, sometimes our friends, sometimes our enemies. An English gentleman who had large indigo factories in our Northwestern provinces, tells me that it was customary for all pious Mussulmans in his employ to lay aside a fixed share of their wages for the Sittàna encampment. The more daring spirits went to serve for longer or shorter periods under the fanatic leaders. As his Hindoo overseers every now and then begged for a holiday for the annual celebration of their fathers' obsequies, so the Mohammedan bailiffs were wont, between 1830 and 1846, to allege the religious duty of joining the Crescentaders as a ground for a few months' leave. For the remissness which thus permitted our subjects to join the fanatic host against our Sikh neighbors we were destined to pay dear. The Prophet had established a regular system of Apostolic Successors, both in our territories and on the Sikh frontier. . . . Two of the khalifs or vicegerents whom he had appointed at Patna in 1821 made a pilgrimage to the frontier, and ascertained that their leader's disappearance was a miracle; that indeed he was still alive, and would manifest himself in due time at the head of a Holy Army, and expel the English infidels from India. His deputies continued, therefore, to levy money and men, but especially money, in the chief towns along the Valley of the Ganges, where the Prophet had preached on his journey to Calcutta in 1820–22. A perennial stream of malcontents thus flowed from our territory to the Fanatic Colony. Absconding debtors, escaped convicts, spendthrifts too ruined to be at peace with social order, traitors too guilty to hope for mercy from the law—all flocked from the British plains to this Cave of Adullam in the North. There were also refugees of a nobler sort; and every Mohammedan religionist too zealous to live quietly under a Christian government girded up his loins and went to the Sittàna camp. Their hand fell heaviest upon the Sikh villages, but they hailed with fierce delight any chance of inflicting a blow upon the English infidel. They sent a great force to help our enemies in the Cabul war, and a thousand of them remained steadfast against us to the death. In the fall of Ghazni alone, three hundred obtained the joys of martyrdom from the points of English bayonets."

In 1852, they were found to have a regular organization for passing arms and men and money up to the camp from British territory. They made incessant raids, tampered with the native troops and police, now and then committed murders. Their power and activity may be estimated from the fact that between 1850 and 1857 the British Government was obliged to send out sixteen distinct expeditions against them, and between 1857 and 1867 four expeditions more, employing in all 60,000 regular troops, besides auxiliaries and police. In 1863, the expedition against them cost the British 847 men killed and wounded, but it punished them so badly that they remained quiet for four years. In 1868, they rose again on a great scale, and tried to form a general coalition of the mountain tribes, but were baffled, and driven back into the mountains by an army of 7,000 regular troops, some of the operations being carried on 10,000 feet above the level of the sea. Since then, trials of agents of the camp discovered in various parts of the British territory have every year occupied the courts, and a batch of convictions was secured as late as last year.

The most interesting portion of the book is the account of the machinery of the propagandist organization on British soil, as revealed by the evidence on these trials. The whole movement is distinctively Wahabi in its origin and spirit—that is, its chiefs belong to the puritanical or reforming sect of Mussulmans, which took its rise in Arabia about the beginning of the last century, as a fierce protest against the corruption of morals and doctrine and ceremonial introduced into the faith by the sensual Turks. Its seven great doctrines were: the oneness of God; the absence of all mediation between God and man; the right of private interpretation of the Koran; the rejection of all the rites, ceremonies, and forms introduced by mediæval and modern Mussulmans; the constant imminence of the second coming of the Prophet to lead the True Believers against the infidels; constant readiness to wage war against the infidels; implicit obedience to the spiritual chief. In sixteen years after the death of Abdul Wahab, the founder of the sect, his followers had overrun the greater part of Asiatic Turkey, and (1803-4) captured Mecca and Medina, massacred the inhabitants, and carried away into the desert the rich offerings which Mussulman princes and the pilgrims from many lands had, during eleven centuries, laid on the Prophet's tomb. From this until 1809 no caravan crossed the desert. The Wahabis next overran Syria, made one campaign against the British in the Persian

* "The Indian Mussulmans. By W. W. Hunter, LL.D., Director-General of Statistics to the Government of India, etc." Second Edition. Trübner & Co., London. 1872.

Gulf, threatened Constantinople, and were only defeated and driven back into the wilderness by Mehemet Ali in 1813. Since then they have been a poor, wandering, and despised sect; but in India the faith has been kept alive, under the stimulus of adversity and tribulation, better than elsewhere. They have produced a copious literature, inculcating the duty of rebellion, and prophesying the downfall of the British power, which is sold all over India by the missionaries. The headquarters from which the propagandist stream issued was established at Patna, and consisted of a huge mass of buildings communicating by secret passages and side-doors, forming a labyrinth which, when it came to be suppressed, the troops did not venture to attack without having previously procured a plan of it. Here the recruits for the Sittâna camp were received, instructed in the faith, and sent off in batches under trusty leaders; hence, too, the district missionaries were sent out, and the funds and supplies collected and tax-gatherers appointed. The taxes consisted of two and a half per cent. on all property, though this was afterwards increased; and every head of a family was obliged to put aside a handful of rice for each member of his household at each meal—the store to be subsequently sold for the benefit of the cause. The sect would probably prove too powerful to be suppressed by the courts, and would continue to give the British Government increasing trouble, if it were not at last arraying against it the prejudices of the well-to-do and conservative of the Mussulman faith, though whether these will suffice to disarm it is still doubtful. The Wahabis are the "Reds" of the Mohammedan world, and threaten the established order of things too fiercely to make them anything but abhorrent to fathers of families and owners of property. The bulk of the Mohammedan population in India, as they belong to the Sunni sect, though intensely disaffected, do not want to be told, or have their children taught, that they must conspire and revolt in order to escape everlasting damnation, and have, therefore, been sorely tried by the preachings of the Sittâna missionaries, and at last resolved to meet them fairly and squarely on theological ground. The issue raised was a very curious one. All true Mussulmans acknowledge that if a country be "Dar-ul-harb," or the country of the infidel, it is the duty of the Faithful if dwelling in it to revolt against its rulers or quit it; if dwelling elsewhere, to make war on it at all convenient times. So the question was submitted to the doctors of the law at Mecca, whether India was "Dar-ul-harb," the country of the enemy, or "Dar-ul-islam," the country of the Faithful, and they cunningly, to oblige the well-to-do, have delivered an opinion, which it is admitted is a little too subtle, that to make a country "Dar-ul-harb" the ordinances of Islam must not be observed in it, and it must be in such contiguity to a country which is Dar-ul-harb that no city of Dar-ul-islam intervenes, and no Mussulman is in the enjoyment of religious liberty; but these three conditions are not found in India; *ergo*, etc. What the effect of this will be on the Wahabis still remains to be seen, but Dr. Hunter does not seem to be very sanguine.

THE MAGAZINES FOR NOVEMBER.

OF the November magazines, *Lippincott's* seems to be as generally readable as any, Mr. Black's "Strange Adventures of a Phaeton" being very readable indeed, and the rest of the magazine being all fairly enough interesting. We should suppose that Mr. Black's story must have made him many friends who will be more than willing to meet him again. His stories published previously have had very good things in them; but not the least of the good things about this story is that it seems to give assurance that its author has now parted company with some of the views and conceptions which lay at the foundation of his earlier novels, and which made them on the whole something to be regretted, clever as they were in parts, and good an opinion as they gave one of their author. "The Strange Adventures of a Phaeton" seems to us a story for which to be grateful. At the same time, a writer who could write, and write so well, a novel so dubiously worth writing as "A Daughter of Heth," is a writer of whom expectations are not to be entertained without some fear and trembling.

The other contents of *Lippincott's* are some verses by Mr. Boker and Miss Emma Lazarus; an article about manufacturing straw into the paper on which the Philadelphia *Ledger* and many other journals are now printed; an account of a sojourn in Costa Rica by the late Mr. Robert M. Walsh; some remarks on "the London Season" by a gentleman who appears to have had opportunities of acquiring information on the topic of which he treats; an interesting description of some of the torpedo-boat expeditions made by the Confederates during the rebellion; some sketches of life in New Orleans before the war; a story for oppressed wives concerning unappreciated toil in the kitchen; "Monthly Gossip"; three or four good book reviews; and, finally, an article which takes as a text Professor Fairman Rogers's collection of pictures, and discourses of Isabey and Merle, and touches upon Ziem, Compte-Calix, E. Hübner, Boutibonne, Luminais, Hoff, William T. Richards, and George Boughton—all of whom are represented in Professor Rogers's gallery.

We should say that most persons who have opportunity to examine the pictures of which this critic speaks might do well to examine them with the help of his criticism. Whether or not it is in all points accepted, it may probably give them great assistance in feeling the pictures. The article about the torpedo-boats is obviously the work of a Southern soldier; but it is not intemperate, and has merits which will make its readers wish for more reminiscences from the same and similar sources. *Lippincott's*—as being a magazine with a Southern as well as a Northern outlook, and worthy of the confidence of both the North and South—might properly seek for much more of this historical material, of which a great deal will perhaps never see the light. Mr. Boker's verses lament the death of Mr. T. Buchanan Read, and express a private as well as a political grief. "Expectation," by Miss Lazarus, is a poem finished in details and true to a certain phase of feeling.

In the November *Atlantic*, Mr. Parton brings his life of Jefferson down to the time when Washington called his friend home to be Secretary of State, and gives us a glimpse of the beginnings of the French Revolution. A curious question is suggested to the reader by Jefferson's opinion, here given, as regards the relative value of general causes and special causes in bringing about great movements in history. "Let me have had control in France," Jefferson says, in effect, "and the king should have been made disgusted with his wife, who was the principal cause of his ruin. A representative Congress of Frenchmen should have been established as the legislative political body of the nation, and then France, after a faithful, though brief study of the institutions of America and England, would have peaceably and slowly effected such changes as were necessary for the best good of her citizens, and there would have been no such bloody and violent upheavals as shook France, Europe, and the world." Thus he speaks of Marie Antoinette and her influence:

"This angel, as gaudily painted in the rhapsodies of Burke," wrote Jefferson, forty years after, "with some smartness of fancy, but no sound sense, was proud, disdainful of restraint, indignant at all obstacles to her will, eager in the pursuit of pleasure, and firm enough to hold to her desires, or perish in the wreck. Her inordinate gambling and dissipations, with those of the Count d'Artois and others of her *clique*, had been a sensible item in the exhaustion of the treasury, which called into action the reforming hand of the nation; and her opposition to it, her inflexible perverseness and dauntless spirit, led herself to the guillotine, drew the king on with her, and plunged the world into crimes and calamities which will for ever stain the pages of modern history. I have ever believed that, had there been no queen, there would have been no Revolution. No force would have been provoked or exercised."

The question suggested is never asked until, so far as concerns the particular problem in hand, it has already been settled and set aside; but a discussion of it will be found not without its profit, though we imagine that not many people will come to Jefferson's conclusion, and believe that had Louis XVI. been addicted to mistresses instead of fond of his wife, there would have been no French Revolution.

"Guest's Confession," by Mr. H. James, jr., is concluded in this number of the *Atlantic*, and so is Dr. Holmes's serial tale, "The Poet at the Breakfast Table"; while Professor De Mille's "Comedy of Terrors" keeps on. "Guest's Confession" is a study of character which no one could have written who had not habitually observed closely; who had not been on several sides open to impressions; who did not get great enjoyment from the analysis of motive and feeling. It is a sort of comment on character, or a dissection of human nature, which is pretty sure to be interesting; but a danger in the way of the analyst is that he may be tempted to make his personages rather with a view to their cutting up interestingly and easily, than with a view to their being men and women capable of being alive, and to this danger Mr. James appears to us to have fallen a prey in this instance. We would not say, indeed, that we should be immensely pleased by a perfect success; but could we be so pleased, we think Mr. Guest's confession would not go very far towards pleasing us, acute and clever as it is.

Mr. John Fiske makes an essay entitled "The Primeval Ghost World," and popularizes some science which is likely to be as immediately fruitful as any science latterly preached. The subject is set forth skilfully and takingly. We would, however, commend to Mr. Fiske's attention Mr. Mark Twain's dog, who "couldn't be depended on for a special providence," as being nearer to the actual dog of everyday life than is the Skye terrier mentioned by a certain correspondent of *Nature*, to whose letter Mr. Fiske refers. The terrier is held to have had "a few fetishistic notions" because he was found standing up on his hind legs in front of a mantelpiece, upon which lay an india-rubber ball with which he wished to play, but which he could not reach, and which, says the letter-writer, he was evidently beseeching to come down and play with him. We consider it more reasonable to suppose that a

dog who had been drilled into a belief that standing upon his hind legs was very pleasing to his master, and who, therefore, had accustomed himself to stand on his hind legs whenever he desired anything, and whose usual way of getting what he desired was to induce somebody to get it for him, may have stood up in front of the mantelpiece rather from force of habit and eagerness of desire than because he had any fetishistic notions, or expected the india-rubber ball to listen to his supplications. We admit, however, to avoid polemical controversy, that in matter of religion the dog is capable of anything.

"A Prodigal in Tahiti" is by a writer of much cleverness and of a niceness of taste which is innate rather than cultivated and refined by those processes of education with which so few can dispense. "A Dinner Party" is a singular production, very noticeable for its difference from most of our magazine articles. But it is too ill-digested a compound of invented matter and apparent fact to be as good as it should be.

The poetry of the *Atlantic* is all worthy of notice, the sonnet of a new writer, J. Logie Robertson, seeming to us as good as any, and worth quoting for the imagery of the last three or four lines:

"IDLENESS.

"And slow and slower still, day after day,
Come the sad hours with beauteous upturned eyes
Gleaming with hopes I may not realize,
And seeming in their earnestness to say
Entreatingly: 'O send us not away
All empty-handed as we came: arise,
Give us at least some promise we shall prize
To be fulfilled though after long delay.'
And I, although I weep to see them pass
With lingering pace and disappointed look,
Am lifeless as a statue bound with brass,
And listless as an open, loose-leaved book,
Turned by the wind, yea, passive as the grass,
Weak as the wavelet of a summer brook."

If anybody wishes to see a perfect specimen of the worst sort of stories written by and for young women, he may turn to a story entitled "The Visit," in *Harper's Magazine*. The unripened apple, already rotten there, loads the tree, and exquisite ignorance in combination with a plentiful lack of that "simplicity concerning sin which is wisdom," are exemplified in a way which, if it is not as uncommon as it is detestable, is nevertheless, we are glad to say, not at all common in our periodical literature.

In this month's *Harper's* there is a long and anonymous *résumé*, which might have been done by the next friend of Mr. Bancroft Davis, of the negotiations of the Treaty of Washington; some chapters of General Strother's ("Porte Crayon's") sketch of life in the Virginia mountain region; the sixth of Señor Castelar's discourses on European republicanism; more of Mr. Wilkie Collins's, Mr. Charles Reade's, and Miss Thackeray's novels, and illustrated papers descriptive of Geneva, and of Mr. Junius Henri Browne's trip down the Danube.

Mr. Browne appears also in the *Galaxy* for November, and relates his experience among dying men. As a rule, men die without disquietude, and almost willingly, is the conclusion to which Mr. Browne's observation has brought him, and his observation has been extensive. Our own has not gone far, but so far as it has gone it has corroborated Mr. Browne's view, the thought of death being more terrible than the fact, and more terrible to those whom health and strength has, so to speak, unprepared for dissolution than to those made gradually ready by disease or wounds.

"Carl Benson" makes a victorious attack upon the delusion that publishers, or indeed anybody or anything, except merit, can secure the success of an author, and relates how he revenged himself and the whole craft and fraternity of the quill upon a certain too high and mighty publisher:

"The inexperience and incapacity in business matters of many, perhaps most authors, can hardly help inspiring a shrewd business man at times with a feeling of superiority; in one sense they are his puppets; unless his judgment is clear and discriminating, he may be tempted to consider them such in all senses. On the whole, it is no great wonder if a successful publisher (who, after all, is but mortal) sometimes thinks very well of himself, and puts on a few or a good many airs. They do think very well of themselves, some of these publishers, and are sedulously considerate of the distance between themselves and some other classes of mankind. Once in my younger days I had a pleasant encounter with one of them on some literary business. (In justice to myself, I must begin by saying that I did not wish to go near this person at all, having certain suspicions about him which subsequent experience and observation fully confirmed; but I suffered myself to be overruled by an aged friend, supposed to be wise in such matters.) It was a rainy day; I went on foot in my oldest clothes, English fashion. The great man took me for some poor devil of a sucking author, and was barely civil, more of the bear than the civility, as Tom Taylor used to say. However, my revenge came in time, and after this wise: A year or two later there fell into my possession sundry small bonds and mortgages, one of which was executed by a person of the same name and nearly the same initials as this publisher. When quarter-day arrived I walked down to his office and applied for payment of interest, with the most innocent air in the world. Imagine his indignation at the thought that any one could suppose his premises or property mortgaged for $5,000! Of course I attempted to apologize, but as my excuses were somewhat after the fashion of Brummell's when he had gone to the wrong house ('Johnson and Thompson, so much alike, you know'), they only made matters worse, and I left him looking things unutterable. So I paid that party."

Another article to which attention may well be called is one that upbraids the American woman—who, however, is certainly doing better than formerly—for living indoors too much, for feeding herself foolishly, and for dressing herself with too much regard for her appearance and too little regard for the needs of exercise. He animadverts also on the American woman's habit of treating her child as a doll, rather than a human being whom in its early years she has the tremendous responsibility of preparing for a life of health, strength, or of weakness and disease. In this respect, also, we note a change for the better; but the author's strictures are not uncalled for.

Miss Christina Rossetti, "H. H.," Mr. T. W. Higginson, Mrs. Celia Thaxter, Mrs. Elizabeth Akers Allen, Mrs. Oliphant, Doctor Holland, Mrs. A. D. T. Whitney, and Miss Edna Dean Proctor are among the writers in *Scribner's* for November, but the only writer who contributes something for which *Scribner's* regular readers will not furnish a sufficient audience is Mr. Edward King. He was with Mr. Stanley, of Livingstone fame, three or four years ago, when fighting was going on in Spain, and he gives the reader a lively impression of the energy, enterprise, and courage of this newspaper correspondent. We may add that he gives the reader a pleasant impression of his own trustworthiness and skill in his profession.

Town Geology. By the Rev. Charles Kingsley, F.L.S., F.G.S., Canon of Chester. (New York: D. Appleton & Co. 1872. 12mo, pp. 231.)—Canon Kingsley has put into his little book something of the enthusiasm of his "Westward Ho!" and not a little of the grace of the "Andromeda." It is not, as might be supposed, a bit of local description, done in high colors; on the contrary, it is to be commended to all novices in the science of geology, even though they care ever so little for Chester and its geology. As he is talking to a class of intelligent mechanics, men with some training but small acquirement, he prefaces his work by a general defence of science, which naturally leads to an attack on the ordinary educational system. Here, too, in an earnest, simple way, which seeks to strain neither the word nor the fact, he tries to show the absence of conflict between science and religion. Whatever may be the differences of opinion as to the success of the effort, there can be none as to its honest spirit. Out of this spirit we may hope to fashion some accord. With his ground well laid, the author takes up six simple questions concerning the origin and history of familiar things. "The Soil in the Field; the Pebbles in the Street; the Stones in the Wall; the Coal on the Fire; the Lime in the Mortar; the Slates on the Roof," furnish texts for six excellently-planned and well-framed lectures, which treat of familiar things in a very happy way. The specialist can find faults of detail, but they are readily forgiven to one who in the simplest, purest English, writes his thoughts of things made clear by long and loving study. We hope the book may be extensively read, especially among our clergymen and other amateurs in geology. We hope, furthermore, that when they are moved to write, in their first ferment of knowledge, they may study Canon Kingsley's way. If they each write as good a book, we shall have the pleasure of being grateful; if, as is far more likely, they make a failure, they will at least not fall as far as if they had tried the difficult work of writing, when they should have been reading, a text-book.

SUMMARY OF THE BUSINESS

OF

THE MUTUAL LIFE INSURANCE COMPANY

OF NEW YORK,

F. S. WINSTON, *President.*

For twenty-eight years and eleven months, from its organization to January 1, 1872.

THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK,
ACTUARY'S DEPARTMENT, October, 1872.

F. S. WINSTON, ESQ., *President, etc. :*

DEAR SIR: In compliance with your request, that this Department make an accurate Statement of the Condition and Monetary Affairs of the Company, for the information of our General Agents, Policyholders, and the Public, I have carefully prepared the following full exhibit on all important points, and have had the same thoroughly examined and compared with the several accounts by my Assistants, and by the Auditor. I believe it to be true and worthy of all confidence.

The great financial strength of the Company, and its more than sufficient pecuniary ability to meet all its obligations, as exhibited in this Statement, are mainly due to the low rate of ordinary expenses, and of Mortality, and high rate of Interest, which have characterized its experience in the past. In all these facts, which are vital in the science and business of Life Assurance, the Company exhibits a record of success and an attitude unequalled by any other Company in this country or in Europe.

Our net prices for Assurance are, as you are aware, based upon an Annual Interest of Four per cent. for money, and the Mortality rates of the American Life Table; and our selling prices, called Office Premiums, result from a percentage addition to these, to cover expenses other than Death Claims. The Company has, since its organization, returned to its Policyholders, in money, abatement of Premiums, increased Assurance, and for surrendered Policies, nearly one-half (0.458) of its Cash Premium Receipts; and paid, in cash, death and other Assurance claims, but little short of Seventeen Million Dollars, besides investing, at Seven per cent., being Three per cent. more than assumed in Premiums, a Reserve Fund sufficient to induce any Insurance Company doing business on legitimate principles, to assume all its obligations, present and prospective, amounting, at the close of last year, to nearly Two Hundred and Forty-nine Million Dollars.

Results so striking as these can only have been secured by the habitual practice of a rigid economy in expenditures, great caution in the selection of lives, and a most active vigilance in investing the funds which have been, and are now, constantly flowing into the Company.

Moreover, our business is steadily on the increase; the returns thus far received from our General Agents, and the current operations of the Home Office, indicating an augmentation in the amount of our Assurance of over Ten Million Dollars during the present year, over and above all its cancellations.

Respectfully submitted,

(Signed) WM. H. C. BARTLETT, *Actuary.*

STATEMENT.

RECEIPTS.

Premiums received in Cash,	$64,677,770 23
do. do. Surrender of Dividends,	23,152,560 01
Interest, Rents, etc.,	17,486,707 79
Total Receipts,	$105,317,038 03

DISBURSEMENTS.

Claims by Death, Annuities, and Matured Endowments,	$16,959,557 04	
Dividends paid—by reduction of Premiums, in increased insurance, for post-mortem claims and in Cash,	23,386,833 93	
Paid for Surrendered Policies,	5,172,395 31	
Commissions and Brokerages to Agents,	5,984,789 99	
Medical Examinations, Printing, Advertising, Salaries, Rents, etc.,	3,835,523 86	
Taxes,	713,366 73	
Total Disbursements,		56,052,466 86
Net Assets, January 1, 1872,		$49,264,571 17

SUMMARY OF INVESTMENTS.

1. Bonds and Mortgages on property worth more than double the sum loaned,	$39,480,285 39
2. United States Stocks,	4,203,108 75
3. New York State and City Stocks,	1,000,000 00
4. New York State Town Bonds,	70,000 00
5. Real Estate,	1,089,863 89
6. Cash in Banks and Trust Companies at interest,	3,306,039 50
7. Balances due from Agents,	115,273 64
	$49,264,571 17

ADD:

Interest accrued,	$512,730 03	
Accruing Semi-Annual and Quarterly Premiums,	1,122,442 86	
Premiums in course of transmission.	134,480 57	
Market value of Stocks in excess of cost,	543,772 37	2,313,425 83
Gross Assets, January 1. 1872,		$51,577,997 00

The appraised cash value of the property mortgaged to the Company as security for these Bonds and Mortgages, is over $80,000,000. Fire Insurance to the amount of $23,000,000, in addition, is also held as collateral security to these loans.

I have carefully examined the foregoing statement, and find the same correct.

(Signed) ISAAC F. LLOYD, *Auditor.*

BUREAU OF ACCOUNTS,
THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK,
144 and 146 Broadway.

The undersigned Committee, appointed to examine "the Accounts and Assets of the Company," hereby certify that they have carefully examined the same and compared them with the "Statement of The Mutual Life Insurance Company of New York, for the year ending December 31, 1871," and they find the same to be as stated, and such Statement to be correct.

(Signed) JOHN WADSWORTH,
L. ROBINSON,
W. M. VERMILYE,
W. SMITH BROWN,
JAS. C. HOLDEN,

NEW YORK, February 1, 1872.

Gross Assets as above, $51,577,997 00

LIABILITIES.

Reserve required for all Policies in force,	$36,248,937 84	
" " " additions to same,	10,259,355 45	
" " " Annuities,	170,543 96	
Reserved for Expenses,	449,088 79	
Claims by Death not yet due,	456,478 97	
Post-mortem Dividends due on demand,	56,000 00	
Premiums paid in advance,	33,654 39	
Surplus accrued on Tontine Dividend Policies,	8,197 22	47,682,256 62
Surplus over all Liabilities,		$3,895,740 38
Dividend declared January 1, 1872,		2,843,727 92
Undivided Surplus,		$1,052,012 46

The Reserve Fund for Policies, and Additions to Policies, is ascertained by the American Table of Mortality and Four per cent. Interest.

The Mortality actually experienced by the Company has averaged about seventy-five per cent. of that predicted by the American Table.

	Percentage.
Ratio of Commissions paid to Total Receipts,	5.68
Ratio of all other Expenses to Total Receipts,	4.32
Ratio of Total Expenses to Total Receipts,	10.00

The Ratio of Expenses to Receipts has been steadily declining for several years, having been for the year 1871 only 7.8 per cent. against an average of 10 per cent. during the whole existence of the Company.

The Amount of Dividends paid (Cash value) is,	$23,386,833 93
Add Surplus existing after Dividend of 1872, to be returned,	1,052,012 46
Amount Paid for Surrendered Policies,	5,172,395 31
Total amount returned to Policy-holders,	$29,611,241 70
Total amount of Cash Premiums paid by Policy-holders,	64,677,770 23
Ratio of sum returned to Cash Premiums received, 45.8 per cent.	

It is not claimed that every Policy-holder has had his percentage of cash premium returned: the general average only is here intended. Some have had more and some less, depending upon the kind of Policy, its age, and that of the owner, and whether the latter has or has not used his dividends in payment of premiums. For instance, Policy No. 3, now the oldest, rises to 128 per cent.; whereas, No. 106,328, one of the more recent, and on which the dividend has been surrendered in payment of premium, reaches only to 32 per cent.

When Annual Cash Dividends remain with the Company, and are used to purchase more Life Assurance, payable with the Policy, the amount so purchased will, on the general average, be more than double that of the Cash Dividends.

In conclusion it is submitted whether any other Insurance Company in existence can make a more favorable exhibit in regard to the extent of its business, amount of its accumulations, magnitude of its dividends, economy of its expenditures, and the character and sufficiency of its securities.

(Signed) WM. H. C. BARTLETT, *Actuary.*

At the usual quarterly meeting of the Board of Trustees, held on the 16th of October, 1872, on motion it was unanimously

Resolved, That in accepting the statement of the Actuary and Auditor at this meeting, the Trustees deem it their duty, and the present a fitting occasion, to express their continued confidence in the watchfulness, ability, and integrity with which the business has been conducted by the Executive Officers, and their appreciation of the faithful performance of their duties by those employed in other departments of the institution.

Resolved, That we, the undersigned, Trustees of the Mutual Life Insurance Company of New York, do express our entire confidence in the accuracy of the preceding statement.

The two other members of the Board—namely, Messrs. Alex. H. Rice and Henry A. Smythe, are absent in Europe.

We append Extracts from the Report of a Committee appointed by Policy-holders residing in Boston, Mass., to examine the condition and management of the Company.

REPORT.

To the Policy-holders of the Mutual Life Insurance Company of New York, residing in Boston and Vicinity.—By their Committee appointed at the Meeting held in Boston, May 19, 1870, upon the Specific Charges presented at that Meeting, upon other points set forth in the Letter of a Policy-holder, and upon the General Condition and Management of the Company's affairs.

Boston, June 8, 1870.

. . . . . .

"We accepted the duties of this commission with intent to their full performance in the interest of our constituents, to uncover the truth, whether of right or wrong, if found hidden; knowing well that the purest integrity and the best ability must not only guide, but must be fully believed to guide, the management of the sacred trusts held by our Life Insurance Companies, for the protection of the insured, and not less for that gainful progress and success essential to the maintenance of low rates of premium under the mutual system. Well-grounded confidence, the effect of able and faithful administration, is indispensable to that feeling of comfort and content which ought to belong to every man who insures the future welfare of his dependent ones, it may be from hardly-earned savings. The duty to condemn the wrong carries the coequal duty to approve the right. Unjust aspersion of a faithful officer is as wrong as the retention and defence of an unfaithful one.

. . . . . .

"We were authorized 'to investigate the affairs of the Company.' Every facility for it was given by the President and other officers, who placed at our disposal every account and record in the office, and their own services.

"Besides the executive and administrative officers, there is for each department a Committee of Trustees, whose duties are not merely formal, to give sanction without knowledge; but each member of the several committees is required to know and pass upon the merits of each separate transaction in his department. For instance, no money is loaned until the value and other particulars of the estate offered as security under mortgage have been ascertained by their own inspector of real estate; nor until the title thereto has been examined by expert conveyancers, and by the learned and faithful counsel of the Company, and reported clear; nor until these have been passed upon by the Committee of Trustees, and the written signature of each member present given in approval of the loan—these papers each bearing a plan and description of the estate in question, all being recorded and preserved in the office. The success and value of these precautions are shown in the results that will be mentioned in another place.

"The trustees, men of high personal character and eminent in their several professions, not only give this constant attention, in sufficient number, to the ceaseless transactions, but, in further security of the vast interests in their charge, they appoint from time to time their own committees of investigation and review, calling to their aid the services of mathematical and other experts in determining the laws and principles of finance and insurance by which they shall be governed.

"The routine of business is so nearly perfect in its system that we could see no place for amendment. At every step, from the application for insurance upon a life to the safe and profitable investment of the rapidly-accumulating premiums, there is a test of accuracy, a check against error, wilful or accidental. We cannot take space to describe all this in detail, but must be content to say that, if the system pursued is not perfect, and does not avoid the possibility of error, it is because these results are not easily attainable by fallible men.

"All the reports upon the general condition of the affairs of the Company concur in showing a rapidity of healthy progress, success, and strength of position attained, without parallel elsewhere. These show an able and careful administration of this great trust, and a satisfactory condition of its affairs at the present time.

"Our conclusion, from the enquiry which we were commissioned to make, fully sustains the language of the Superintendent of Insurance: 'that the Company has been managed with peculiar ability and integrity, and that its condition is eminently sound.' The excellence of that management in the past, and the character of the men administering the trust, give good assurance of what it will be henceforward.

"With our congratulations to you, and all others who are so fortunate as to hold policies of the Mutual Life Insurance Company of New York, we submit in this informal manner the first Report of the Committee of Boston Policy-holders.

"Respectfully,

"B. F. NOURSE,
WILLIAM HILTON,
"Committee."

The Hon. William Barnes, late Superintendent of the Insurance Department, writing under date of June 16, 1869, says: "Holding the rank which you have held so long as the leading Life Insurance Company on this continent, I am happy to see that your condition was never stronger or more impregnable than at this date. Your Assets are in such a situation that either your Board, or the Superintendent, can at any time accurately test the solidity of the same, and in such a manner as to satisfy, beyond cavil, any honest and intelligent Policy-holder as to the soundness of the Company.

. . . . . .

"I shall also feel it to be my duty, as the Legal Guardian of the Public interests connected with Life Assurance, to disabuse the public mind from any ignorant, false, or malicious assaults upon your standing, management, or responsibility."

The following statement exhibits the progress of the Company since January last, and its condition on the 1st instant:

SUMMARY OF THE BUSINESS FROM JANUARY 1st, 1872, TO OCTOBER 1st, 1872.

Net Assets, January 1st, 1872,		$49,264.571 17
RECEIPTS.		
Premiums,	$8,794,676 88	
Interests, Rents, etc.,	2,318,985 47	11,113,662 35
Carried forward		$60,378,233 52

Brought forward		$60,378,233 52
DISBURSEMENTS.		
Claims by Death, Annuities, and Matured Endowments, ...	$2,087,125 04	
Paid for Surrendered Additions, . .	1,708,548 77	
Paid for Surrendered Policies, . . .	1,215,335 01	
Commissions to Agents, Medical Examiners, Printing, Advertising, Salaries, Taxes, etc., ...	1,024,706 59	6,035,715 41
Net Assets, October 1st, 1872, ...		$54,342,518 11
SUMMARY OF INVESTMENTS.		
Bonds and Mortgages, ...		$46,105,357 07
United States and New York State and City Stocks, .		5,773,108 75
Real Estate		1,272,701 49
Cash in Banks and Trust Companies at Interest, . . .		1,158,489 46
Balances due from Agents, ...		32,861 34
		$54,342,518 11
ADD:		
Interest accrued, ...	$750,690 13	
Accruing Semi-Annual and Quarterly Premiums, ...	1,120,000 00	
Premiums in course of transmission, .	106,172 75	
Market value of Stocks in excess of cost,	561,332 13	2,538,195 01
Gross Assets, October 1, 1872, ...		$56,880,713 12

I have carefully examined the foregoing statement, and find the same correct.

ISAAC F. LLOYD, *Auditor.*

Number of Policies in force October 1, 1872, 77,265, insuring $260,374,332.

WM. H. C. BARTLETT, *Actuary.*

The Company will continue to guide its business in the future by the same principles and rules which a long experience has shown to be most conducive to the safety and best interests of its Policy-holders. It will issue Policies of all approved descriptions, and at its usual Table rates.

FREDERICK S. WINSTON, PRESIDENT.
RICHARD A. McCURDY, VICE-PRESIDENT.

JOHN M. STUART, *Secretary.* W. H. C. BARTLETT, LL.D., *Actuary.*
FREDERIC SCHROEDER, *Ass't Secretary.* L. C. LAWTON, *Ass't Actuary.*
C. A. HOPKINS, *Cashier.*

WILLIAM BETTS, LL.D.,
HON. LUCIUS ROBINSON,
HON. HENRY E. DAVIES, } *Counsel.*

ISAAC L. KIP, M.D.,
G. S. WINSTON, M.D., } *Medical Examiners.*

HON. MURRAY HOFFMAN'S ECCLESIASTICAL Law Books.

THE RITUAL LAW OF THE CHURCH. With its Application to the Communion and Baptismal Service, to which is added Notes upon Orders and the Articles. By the Hon. Murray Hoffman, author of "Law of the Church." 8vo, cloth, $4; law sheep, $4 50.

"If the American Church has another man equally fitted to do precisely this work, he has not yet come to the Church's notice."—Churchman.

"We may thank the venerable author for his care and labor in collecting much curious learning, which, scattered through many books, has hitherto been hardly accessible to ordinary readers."—Church and World.

"We are proud to see an American law book on Ritual of the respectable character and authority which we have no doubt will be accorded to this work"—Church Journal.

ECCLESIASTICAL LAW. By the Hon. Murray Hoffman. 8vo, cloth, $2 50; sheep, $3.

"Such a book from such a source will be most acceptable to the Church at large. And as the work contains expositions of ecclesiastical law as applicable to all the different bodies of Christians, its usefulness will be confined to no one body."

This work contains information which not only every clergyman but every layman who attempts to take part in the management of a parish should be acquainted with. It contains also historical notices of all the churches and religious societies that existed in our Province before the Revolution.

Post free on receipt of price.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 7, 1872.

The Week.

THE general result of the Presidential election will not surprise the country, though there are some special details of it about which there had been, up to the last moment, sufficient doubt to make the final news waited for with expectancy and received with gratification. In spite of the "claims" of the Liberal Republican papers, it was well enough known that no one of any sense thought that "the only Southern State likely for Grant is South Carolina"; or that Illinois was doubtful, or that New York and New Jersey belonged in "the Greeley column." But there was grave doubt if O'Brien might not be elected Mayor of New York; if Banks, in his Congressional district, might not fail to reap the fit reward of his unprincipled astute stupidity; if ex-President Johnson might not succeed in inflicting himself upon the country as a Tennessee Congressman for the next two years. But the game of Senator Blair and Senator Fenton—good enough for the small caucussing in which those leaders are adepts—was tried on too large a scale to meet with anything but the most thorough and sweeping defeat, and nearly everything has gone as every sensible man thought it must go and every decent man wished it should go. All the great States have cast for Grant and Wilson a very heavy proportion of the Republican party vote, and the action of the Democrats has fulfilled the words common in the mouths of many of them last July when their Hoffman-Kinsella-Ben-Wood leaders turned them over to Greeley at Baltimore; they were sold, but declined to be delivered. As we go to press, it seems probable that the Republicans have carried every State except Kentucky, Tennessee, Maryland, Georgia, Missouri, and Virginia; and of these States Tennessee seems to have elected a Republican Congressman-at-large and Missouri may have elected a Republican Governor, while Virginia may turn out to have gone for Grant and Wilson. Supposing this general calculation of the electoral vote to be correct, the Republicans would have well on to three hundred votes, against something less than a hundred for Greeley and Brown. It is some time since we have had any expectation that the Coalitionists would secure many more votes than were secured by Seymour and Blair in 1868, and at their best they have apparently done very little better than the Democracy did then. For the interest of both the North and the South, we may say of humanity, we hope the South will ponder this result and consider carefully what shall be its political course. Certain things, she should know, are settled and at rest; or at least will always be decided in this one way as often as they are brought up for decision.

The result of the municipal election has, if possible, been even more satisfactory than that of the Presidential election. O'Brien, who entered the field as a "boss," has been badly beaten—his followers numbering in all about 33,000. This is an unpleasantly large number, it must be admitted, considering that the candidate secured them solely by distribution of coal and other acts of "kindness to the poor." But it was a small number, considering that the Republican "managers" in this city bargained with him some days before the election, came very near nominating him for the mayoralty and supporting him with all their force, and only gave up the plan at the last moment through sheer shame. The fact that they had been bargaining, however, got abroad, and created the belief in many minds that they were only running Havemeyer as a "dummy," and were secretly helping O'Brien, a theory which O'Brien did his best to spread. Many persons were thus led to vote for Lawrence, the Tammany candidate, fearing that a vote for Havemeyer would be thrown away. That the latter has been elected, and that O'Brien should stand at the foot of the poll, under these circumstances, must therefore be considered a most cheering sign, and we trust will be a warning to "managers." It will be a great gain when these gentlemen are thoroughly convinced that the public is not made up of knaves and fools.

Along with Havemeyer's election comes that of the Reform Judiciary ticket. Two excellent Judges, Messrs. Van Vorst and Noah Davis, mount the bench in place of McCunn and Cardozo. Josiah Sutherland, also an upright and experienced man, succeeds as City Judge Gunning S. Bedford, one of the Ring charlatans, a young person of the Hall type of mind and character, whose antics on the criminal bench have, during the past few years, been one of the municipal scandals, though we believe no charge of "corruption," in the New York sense of that word, has been brought against him. In fact, the reform spirit seems to have fairly taken possession of the city voters, and if it can be kept alive by solid results, there will be a fairer prospect of pure government than we have had since 1846. But we doubt if it can be kept alive, unless the number of elective officers is cut down, and the city elections are separated *in toto* from the national ones, in time at least. The O'Brien bargain was the result of having the city and national election on the same day; it would not have been thought of otherwise. Every voter yesterday had nearly fifty candidates for city offices submitted for his choice, and there were not over six of them about whom a man having honest business to attend to could know or learn anything. On the whole, therefore, the result is most encouraging.

The most significant and striking "lesson of the election" is undoubtedly the rebuke it administers to "managers" and "practical politicians." We do not think six months would be a day too long for the members of this calling in the Liberal ranks to retire from the public gaze. The young ruffians and blatherskites whom they put forward to do the public and dirty work of the canvass of course have various excuses to offer, but the knowing men who palmed off Horace Greeley on the Cincinnati Convention as "truly popular," even if nothing else, must surely long for "a lodge in some vast wilderness." Those sagacious Westerners too, who snorted over the simplicity of the Eastern men when they doubted Greeley's "availability," and promised wonderful things from a certain mysterious state of feeling about the Sage which they said existed "west of the Alleghanies," and which no New Yorker or New Englander could understand, must feel that they owe an apology or explanation to somebody. Though last not least, the Greeleyite delegates who attended the Fifth Avenue Conference must, and ought now, for the credit of their sex, if for no other reason, to explain the grounds on which they were so sure that Greeley would carry every State in the Union except Massachusetts, which as moderate and cautious men they left "doubtful." Those who were present at that remarkable gathering may remember how the supporters of Honest Horace rose man after man in their seats, and, after likening him to some disgusting drug, declared that their sole reason for accepting him was their certainty that he would win, and how each of them then, with calm and unblushing brow, announced the majority by which Greeley was sure to carry his State. But the best and most enjoyable feature in the proceeding was their scorn and indignation for the "visionaries" and "impracticables" who refused to accept Greeley at any price. One old Democratic War-horse from Pennsylvania got so angry over them that he could hardly keep his seat. He wanted to go home and work for "a fact" and have done with talk. He has got his "fact," and we suspect would now prefer a vision or fancy.

The last important "exposure" of the campaign appeared in the *Times* of Monday. From this it appears that "the party which holds up its hands in horror at the use of money in elections," *i.e.*, the Greeley party, had drained the pockets of the patriots who composed it to the extent of $300,000 during the canvass; that among others Mr. A. T. Stewart was approached at an early day, and asked for money; that he, with his accustomed sagacity, replied that owing to his extensive business connections, and the necessity of keeping on good terms with the Grant officials, he could not subscribe openly, but would *sub rosa;* that Mr. Ethan Allen was so overjoyed by this that he immediately "rushed the fact into the newspapers"; this singular indiscretion disgusted Mr. Stewart, and it was as much as Mr. Fenton could do to get him to give even a portion of what he had at first promised. He afterwards subscribed to the Grant campaign expenses, thus treating "both sides alike except only as to amounts." There is a scandalous story also about Ethan Allen and ex-Marshal Murray, who, it seems, are quarrelling over a sum of $1,000, part of the campaign fund. This dispute may get into the courts, and if it does, there will be a great deal of amusement among all regular Republicans and Democrats, and a corresponding amount of chagrin among the Liberals over the Marshal's spelling, which, to judge by the letter published in the *Times*, is far from correct, and shows, as our fathers would have said, that "the intelligence of those who advocated the election of Mr. Greeley was quite on a level with their morality."

The *Times* also published the same day a long and despairing letter written by the late Secretary of the Greeley National Committee, and which, together with the other exposures, were doubtless sold to the *Times* by Greeley "workers" anxious to turn an honest penny before the camp was broken up. Although this Johnson letter, or "Confession" as the *Times* calls it, relates to events which have now lost their interest, it is worth preservation as the most perfect specimen of a politician's "view of the situation" we have ever seen. Its mixture of shrewdness and candor, of professional despondency with personal jollity, of public admiration with private contempt, of readiness to tell lies with zeal for "the right," have never been surpassed. The effect is heightened immensely by the lingo in which it is written, and which is the regular caucus dialect. Another remarkable thing about it is its abundance of grotesque imagery, which must in many places have cost the writer a great deal of trouble, though, as the letter was private, it is hard to see why he should have taken it. We advise every "foreign observer" now on this continent to get a copy of it, not simply for the sake of the style, but because it is as good an explanation as has been offered, or can be offered of the causes of Greeley's defeat from the politician's standpoint; but it must be remembered that a politician's causes are all secondary. His ruin is always wrought not by public sentiment but by "dissensions" or "treachery" among the "workers," or by the want of money.

Mayor Hall's second trial has come to an end, the jury having disagreed. Seven jurymen were for conviction, five for acquittal, according to common report. This result will not tend to enhance the popular belief in the value of jury trial, which cannot now be said to stand at a very high point. Although in general we do not like to criticise the judicial action of lawyers of Judge Brady's standing, we cannot avoid saying that in his charge to the jury he made a great mistake in not giving some definite indication as to his opinion about the evidence. The idea that the judge and jury are separate and independent bodies is well in theory, but it does not correspond with the actual facts as we see them. There are numerous cases in which judges encroach upon the theoretical boundary of the jury's power and are yet within the practical limits of law—as for instance, when a judge sets aside a verdict as against the evidence in the case, or for an excessive award of damages, or when he nonsuits a plaintiff, or directs the acquittal of a defendant. If it were his duty merely to admit certain kinds of evidence, explain the law to the jury, and then leave the case to them, he would do none of these things. Besides this, the rules excluding hearsay evidence, which prevail only in Anglo-Saxon countries, were originally framed to protect the public from juries' ignorance and want of skill, and are based upon the idea that what the jury needs is instruction and guidance at the hands of the court. These considerations have double force, too, at the present day, when the jury is, as a rule, in this city, though better than it has been, not wholly enlightened.

"Woodhull & Claflin" have reissued their paper during the week in a style of disgusting obscenity, and evidently for the purpose of levying blackmail by libellous attacks on persons likely to purchase immunity with money. One of these has had the male publishers arrested on a criminal charge for libel, and swears that they sent him a proof of the article on him in type, offering to suppress it for $200, which he declined to pay. In the meantime the two female editors have been indicted by the United States Grand Jury for sending indecent publications through the mails, and will doubtless get the full penalty of the law—one year's imprisonment and a fine, which will do them a world of good, and which they ought to have had long ago. We cannot help calling the attention of our Woman's Rights friends to the fact that it is to their attentions, and to their new doctrine that it makes no difference for the purposes of a "movement" what a woman's character is, provided she is "sound on the main question," that we owe the rise of these two wretched creatures into notoriety. That a considerable number of respectable women, with a fair repute for common sense, should have cast to the winds all well-established canons of human experience as to the value of female modesty, and have paraded this pair of adventurers as valued "co-workers" in a "great cause," is the most dismal illustration we have yet had of the aberrations into which the "spirit of progress" occasionally leads people.

The horse distemper—or "epizootic influenza," as it is called by those who must have a fine name, even if the ideas which it represents are rather vague—is gradually abating, so far as New York is concerned. The streets are comparatively full of horses; here and there during the past week a solitary ox-team or a handful of men might be seen dragging a cartload of furniture or of merchandise, but the cases were few and far between. One enterprising establishment, desirous of transporting its wares and at the same time of extending its "connection," conceived the idea of enlarging the ox's sphere of influence by sending a loaded team through the city with a large sign or banner above, a blouse-clad driver in front, with another on the seat, the latter being provided with several bands of sleigh-bells, which he occasionally jangled. The effect on the public was admirable, but the appearance of the team confirmed us in the belief that the ox is not an animal adapted for use on the pavements of this city. As the oxen stumbled and slipped along Broadway, patiently tugging at the heavy load behind them, the spectacle was quite melancholy, and if it became frequent would call for the intervention of Mr. Bergh. Accustomed as the ox has for centuries been to country roads, the effect upon his mind and physical constitution of such roadbeds as have been furnished us by the City Government of New York is not easy to calculate.

Four millions, at least, of the forty-four millions threatened by the Treasury, and petitioned for by "prominent business men," have been let loose. The *Times* acknowledges it in its Washington correspondence as something about which there is no concealment. It says that four or five millions of the forty-four, which the Treasury considers a "reserve" which it is entitled to issue at its

discretion, were thrown on the market at the last sale of gold and purchase of bonds on the 7th of October. Of course, if the discretion exists and five millions have already been issued, we may shortly expect the remainder. It should be remembered that there is the strongest doubt whether the law will bear any such interpretation as the Secretary of the Treasury puts on it, and considering the gravity of the question involved—namely, the right of one man, at such time as he pleases, to increase the legal-tender currency of the country by one-seventh—one would think that he would wait and get the distinct authority of Congress before moving in the matter. But respect for law, or hesitation in doubtful cases, has not been a characteristic of the Administration, and of no member of it less than Mr. Boutwell. So he is going ahead. With this power in the Secretary's hand, no man is safe in undertaking any business venture, and we need hardly say that the Secretary would have to be more than human to prevent his friends profiting by it. Greeley was not the man to give us "reform," but verily reform is needed.

A third American steamer, the *Missouri*, has been lost within the past week, and, as usual, with great loss of life, and with a lamentable display of want of readiness in danger on the part of all on board. In the case of the *Bienville*, the captain displayed courage and presence of mind; but in the other two, the appearance of peril seems to have resolved officers, crew, and passengers in a few minutes into a wild and panic-stricken mob. In the *Missouri* the boats were either not launched or launched in such a slovenly manner as to be swamped instantly. The only man on board who seems to have kept either head or heart was a West Indian passenger, who threw his own pleasure-boat overboard and got into her safely, and, knowing how to manage her, saved twelve lives. The impression which all this is making on people's minds is very painful. They are asking themselves whether the skill, the coolness in the presence of danger, and the spirit of discipline of American seamen are disappearing along with American shipping. The *World* predicts that if this sort of thing occurs much oftener, few will be willing to trust their lives on the water under the American flag. But the answer is simple—the money-getting devil has so thoroughly got hold of American corporations that they have not only got pretty well rid of the moral sense, but of national pride. Some of them do not care to ship American seamen, or any other kind of seamen, among their crews. The sailor of most of the steamers is now a "deck hand," that is, a laborer, whose business it is to load and unload freight. When it comes to launching and manning boats in a heavy sea, he is found to be uncontrollable and good for little except to howl and jump about. As to the discipline of most of the coasting steamers, the less said about it, the better. We heard of an authentic illustration of its condition the other day which is worth mention. A fight broke out among the passengers in one of the Havana steamers, the line to which the *Missouri* belonged, and knives were drawn. The Captain made his appearance to quell the riot with a long knife of his own, and threatened if the peace was not preserved he himself would "sail in" and begin stabbing. The whole matter of inspection needs thorough overhauling; in other words, the people want more protection, at sea at least, from the greed of companies, and we trust when "reform inside the party" begins they will receive it.

A letter to the *Tribune* dated Titusville, October 26, gives a curious account of a new plan on the part of those interested in petroleum to control the "crude oil" market. The plan is to establish a stock company, including producers, refiners, and also railroad lines, under the laws of Pennsylvania, with a capital stock of $1,000,000, subscriptions to be payable not in money but in oil, at five dollars a barrel, the company to be a vast oil bank, distributing or restraining the production and distribution of oil at its pleasure. Members of the association cannot sell except to the association; and it is provided that whenever the production of "petroleum shall be permanently in excess of the demand, the Council shall determine at what time the production shall be restrained, and shall take such measures as may be practicable, necessary, and lawful to prevent the drilling of oil-wells." There are a number of other articles, including the usual provision for a Bureau of Statistics and Information—not intended, as the evil-minded might suppose, for the suppression, but for the dissemination of useful knowledge relating to the business. This is the second monopoly of the kind that has been projected within a year or two, the "South Improvement Company" having failed through the premature assumption of the office of the Chief of the Bureau of Statistics by some unauthorized outsider, the public taking alarm at the statistics and information which he disseminated. The success of such a scheme must depend upon the railroads, and its chief interest lies in the fact that it should be possible, by contracts with local Tom Scotts or Vanderbilts, to control the access to public highways. Under the present system, the law of railroads is rapidly assimilating itself to that of private ways at common law.

General Ducrot, who made the great sortie during the siege of Paris, and vowed to come back "dead or victorious," but did neither, has issued an address to the troops under his command, in which, after calling for discipline and all other good military qualities, he declared that "the time might come when the Germans would regret rending hearts and homes, and tearing from France her dearest children." This has produced a good deal of perturbation, and it was rumored that the German ambassador had demanded an explanation; but this is unlikely, because the explanation is simple enough. General Ducrot has only said what the whole French army is thinking, and what M. Thiers's policy naturally leads it to think. The military reorganization has been conducted on a scale which nothing but the hope or expectation of revenge could justify; but, nevertheless, if the officers are not restrained in their speechifying, they may seriously damage French credit.

The collision which has been long foreseen between the Upper and Lower House of the Prussian Parliament has at last occurred over the County Reform Bill, which proposed to extend the sphere of local self-government in the rural districts, and which was passed by the Lower House last session, but has now been rejected by the House of Lords by a vote of 145 to 18. Whereupon Count Eulenberg, the Minister of the Interior, gave in his resignation, having made the measure "a cabinet measure"; but the Emperor refused to receive it, and the Ministers have now followed the English practice, and dissolved Parliament, or, in other words, appealed to the country. The bill will be passed again after the election by the Lower House, and should the House of Lords still hold firm, the Crown will, it is declared, follow the English precedent of 1832, and threaten to create, or create, as many new peers as may be necessary to carry the measure. There is, however, hardly any likelihood that the peers will stand firm, although they are the last stronghold of Junker bigotry. The course of the Crown—that is, of Bismarck—in this matter is as strong a proof as could be desired of the baselessness of the fears which many entertained that the effects of the war on Prussian institutions would be reactionary, or at least conservative. Thus far they have certainly proved highly liberalizing. But it makes one sad, nevertheless, to recall the fact that many European Liberals—the London *Spectator*, for instance—declared vehemently in 1870 that the cause of France was "the cause of human liberty." It was nothing of the kind. Liberty has gained and is likely to gain more from German triumphs in the next five years than from France in the next fifty. There is nothing in the present condition of France, or in its history during the last twenty years, which is not calculated to create despondency about the future of free government.

THE SECOND PRESIDENCY OF GENERAL GRANT.

THE first term of General Grant began at probably the most unfortunate moment at which any man without the training of a politician and the experience of a statesman could have assumed the responsibilities of the office. The sense of relief from the great strain of the war was passing away; the irritation arising from excessive ill-adjusted taxation and the first contraction of a delusive inflated currency, was beginning. The first burst of contemporary gratitude to a great soldier was dying out, and the debt due to him from the country he was regarded as having saved was supposed by many to be paid by the gift of its highest office; while the reverential love which a second generation gives a national hero had not yet begun. The disastrous Administration of Andrew Johnson, with its corrupt system of office-bargaining between the President and the Senate, had surrendered no small part of the attributes of the Presidency; so that instead of public officers being, as the Constitution prescribes, appointed by the President and confirmed by the Senate, they had come to be appointed by the Senate on the nomination of the President. The impeachment, too, had lessened the public estimation of the office; and to such a degree that respectable and ordinarily temperate journals and periodicals had attempted to demonstrate that an objectional President might be removed by impeachment, though entirely innocent of high crimes and misdemeanors. There were, moreover, certain personal characteristics of General Grant which tended strongly to make his administration a failure, but which, singularly, indicate that his second administration will be incomparably better than the first.

The first of these personal traits is that characteristic which cannot be readily defined, but is well understood in the common phrase of "minding his own business." This characteristic he possesses in an extraordinary degree. Positively—reticent, composed, self-contained; negatively—neither curious, nor enquiring, nor enthusiastic, nor sympathetic. In the army the quality served him both ill and well. As a subaltern, it probably contributed to his failure, being mistaken for indifference and a want of soldierly, ambitious zeal. When he became a brigadier-general he was content to be simply general, not flying about among his regiments, drilling, instructing, enquiring, but leaving all regimental work to his regimental commanders. Officers who served immediately under him, and who, fresh from civil life, felt the need of an active superior, never saw him, and regarded him as a listless, indolent, and perhaps incompetent commander. But when he rose to more extended commands, his subordinates gradually learnt two things: first, that the responsibility of their command rested entirely upon themselves; second, that while they would be justly appreciated and generously commended, they would never be interfered with within their own official spheres. Hence grew up that remarkable devotion which led such soldiers as Sherman and McPherson to refuse to be transferred to another commander, and that capability which redounded to his own success; for certainly no other general was served by such efficient subordinates as General Grant.

But when he left the army and came to direct the civil affairs of the Government, this controlling characteristic of his nature nearly caused his ruin. He had entered West Point a mere boy and grown up there, taught little of civil matters, and from his nature seeking little beyond his business, which was to become a soldier. His frontier life and the Mexican war kept him all the more closely to that business. When he left the army in disgrace, his sad secluded life was bounded by the four walls of a little shop; so secluded was it that when he went back to Galena covered with renown, it was said that not thirty of his townsmen knew him by sight. During the war he saw nothing of public men save a few officious intermeddling members of Congress, and was warned by his lieutenant that Washington was a den of disaster and iniquity. At the end of the war when he moved his headquarters to the seat of Government, he had never studied the work of the politician or the statesman, for it had not been his business; and because it had not been his business he knew nothing of it or them. Of civil affairs and of public men in civil life, he was probably the most ignorant intelligent man in the United States.

The greatest misfortune that has ever befallen General Grant is that he came to the Presidency too young. If with his unerring instinct in the selection of men, his quiet observation, sound sense, and evenly balanced judgment, he had continued four or eight years longer in Washington at the head of the army, he would probably have made a great and useful President. As it was he came not to administer but to be taught. There are indications enough that his own modest self-estimate and excellent judgment told him this; but unfortunately he had beside him a shallow, selfish, unscrupulous counsellor in Mr. Washburn, and he had been crossed and vexed in his brief administration of the War Office by Mr. Johnson, and roused into the desire for power which mortification frequently awakens in men of quiet temperament. He came to the Presidency almost absolutely ignorant, from a civil point of view, of men and things. It was inevitable, therefore, that he should lean upon the few men he knew, and obtain information only from those immediately around him. Yet he had a clear idea that the country needed something more than the management of professional politicians, and that the people looked to him to introduce an era of better things. The idea of administrative reform was not ripe in the public mind, and the desire for a new civil service had not a definite form, yet no incense was ever more grateful to the nostrils of a people than the smoke which arose while General Badeau burnt the office-seekers' letters. When Colonel McClure was sent home with nothing but the title of "The Pennsylvania Politician," and sundry intruding senators were turned back by the assurance that their assistance was unneeded, the hopes of nearly all men seemed to be no longer deferred. General Grant saw this plainly, and proceeded in his quiet way to make up his own practical working Cabinet. But when his private "slate" was broken by the declension of Mr. Wilson, and the ineligibility of Mr. Stewart, it disconcerted the plan of his campaign; his ignorance of men was an impediment to further movements, and all his military strategy unavailing to recover the ground lost by the surprise. The confidence of the country in General Grant, especially in his moral courage and firmness and his supposed determination "to fight it out on this line," caused an apparent apathy, influential men leaving the matter placidly to the President, believing that he was abundantly able to hold up his own hands during the emergency. The wily politicians in Congress saw their advantage and seized it. They held before him the fate of his predecessor, and assured him that he would have arrayed against him his own party in Congress who controlled the press and possessed the ear of the public, and they besought him as friends to follow in the beaten pathway of presidents, and warned him that his efforts were considered blunderings, and were fast becoming ridiculous. The fear of causing new dissensions between Congress and the Executive, a sense of his own inexperience and ignorance, perhaps some dread of having his high military reputation clouded by the ridicule which would be attached to a chimerical and impracticable scheme, proved too strong a combination of adverse causes, and General Grant surrendered. If the President had stood firm, throwing upon Congress the responsibility of rejecting Mr. Stewart, and patiently selecting new men who would serve their country as cabinet ministers rather than their party as professional politicians, there is little fear that the country would have been on his side, and members of Congress soon relegated to their constitutional sphere of legislative duties. We deplore the result, and cannot wholly forgive the surrender, but an examination of the operating causes and agencies enables us to understand how it was brought about.

The next characteristic of General Grant has been his instinctive sagacity in choosing men. In military life this talent had been perhaps the chief cause of his success. No other general can show such a triumvirate as Sherman, Sheridan, and McPherson, beside the long list of lesser field-officers, equally active and devoted, if

not equally renowned. When the President went over to the politicians, he chose his lieutenants as skilfully as he had selected those of the army. It is true that their tactics have been most unfortunate for the country, and almost disastrous to their party, but as mere politicians there could not have been selected more indefatigable fighters. General Grant abandoned a line of statesmanship for a line of politics, and on his new line it became necessary, in his opinion, to have a new set of corps-commanders. The men we do not admire, their field of operations we think small, their system of strategy shallow and mean; but as officers adapted to that kind of petty political warfare they were the ablest that could be had.

But there is one other characteristic of General Grant which his first Presidency has hardly called into action, but which in the second may be found to retrieve much of the ground that has been lost. This is ability to learn, and especially to learn wisdom from his own mistakes. The repulse at Belmont (whether we judge it by his first or substituted report) and the comprehensive strategy of the campaign of 1864-'5 will always seem to be the work of two different men. Yet between the two extremes can be traced his steady, patient growth; erring, but erring less and less; making mistakes, but never repeating the same one; moving tardily, but always in some way attaining ultimate success. It is on this characteristic that the hopes of his countrymen may now rest. We have reason to believe that during the four years of his term he has been learning as during the four years of the war; that little has escaped his quiet, unobtrusive attention; and that his knowledge of public men and the wants and interests of the country is incomparably greater than it was. On certain subjects, as civil-service reform, he has always been in advance of his party in Congress, and has proved to be much stronger than his party and his party leaders among the people. He owes nothing to Messrs. Morton and Cameron, and other managers, and they owe all their present success to him. With the first Presidency we hope the President will consider his debts of gratitude to those gentlemen fully paid, and himself entirely free to administer the affairs of the executive department exclusively for the welfare of the country.

POLITICAL ECONOMY IN GERMANY.

THE great rise in prices in Germany caused by the enormous sums which she is receiving from France, and the change in the distribution of population caused by the organization of the Empire, and the social awakening which has naturally followed on the development of the Constitutional system, are, as might have been expected, stimulating the discontent of the laboring classes, and stimulating the discussion of the labor question among all classes. This question has not yet assumed the prominence in Germany which it has long possessed in France, and is rapidly assuming in England, but it has begun during the last ten years to threaten all political problems with serious complications, and to exercise a very disturbing influence on industry. That socialism has not already obtained as strong a hold on the German as on the French workingmen, is not due to any lack of exertion on the part of socialist agitators and philosophers. The Church has had in Germany a succession of apostles and prophets such as Lasalle, Jacob, Bebel, and Marx, who have had full as much fervor as their brethren in France, but have had to work in a much less promising soil. The Germans have had no social revolution; and their political experience has been of a kind to make the position of the aristocracy easy. In Prussia they have been subjected to the stern discipline of a military monarchy, and, though last not least, their temperament makes them rather ill fitted for the heats and enthusiasms and visions without which socialism is nothing more than oratorical vapor.

The economical policy of Prussia, to which what we are now saying more particularly applies, has for a long while been that of Adam Smith, or, as it perhaps ought more properly to be called, that of Cobden and Bright. Prussian legislation has for many years run in the direction of non-interference with trade and industry, and employers and workmen have been left to fight their battles out as best they might. In fact, the "interdependence of classes" received a severe blow from the reforms of Stein long before it had been shaken in countries much more advanced politically. The Government has long taken charge of the education of the young, and has exacted of every citizen solid and efficient military service; but it has not, as regards either trade, commerce, or religion, been what is called a "paternal," or, in other words, a meddling Government. Its financial and industrial policy has for many years been shaped by shrewd, hard-headed economists—mostly brokers and merchants and manufacturers of the *laissez-faire* school; and it certainly cannot be said that the country has not prospered under their auspices. But it has not been in their power, and it is not in any one's power, to prevent the growth of suspicion and distrust between employers and laborers. The causes which have bred these feelings elsewhere, and which have often been discussed in these columns, are actively at work in Germany, and with the usual results. In Germany, as elsewhere, the weak, the ignorant, the idle, the shufflers, and the stupid go to the wall, and there, as elsewhere, the strong and educated, and industrious, and thrifty, and intelligent get most of the good things of this life; and in the struggle there is naturally a good deal of suffering, a good deal of both real and apparent injustice, and a good many of those contrasts of fortune and condition which the poor in our time find it so hard to bear. In other words, the *laissez-faire* policy has not any more than the protective policy abolished poverty or made honest men sure of their due, and its failure has been suddenly magnified by the enormous industrial disturbance wrought by the French indemnity.

Under these circumstances, there is occurring in Germany what has occurred in England. An agitation has been started by a number of "educated radicals," mostly young men, filling chairs in the universities, for a return to paternal government. They call themselves "historical economists," and have their minds filled with questions of the content and good feeling which reigned among the working-classes in the old days of the guilds, when the man's duty to the master and the master's duty to the man were regulated by law, and when everybody had a settled status and appendant rights, and was not left to seek his subsistence on the stormy sea of competition. They are enamored, too, as the English Positivists and Carlylists are, of strong government. They are sick of debates, and hate the very name of Adam Smith, and want to have wages and rent and hours of labor settled by the police, acting under the orders of a humane and enlightened minister. "We have had enough of your political economy," they say; "you call it a science, and yet no two of you are agreed about one of its axioms, definitions, or canons; you say it regulates industrial relations, and yet the whole industrial world is plunged in confusion; you say it provides the workingman with the means of acquiring that share of products to which he is entitled, and yet the workingman was never so discontented." In the Congress which they called at Eisenach, to which we referred last week, a misfortune overtook these gentlemen which threatens their school everywhere, but which our "Labor Reformers" have thus far been knowing enough to avoid. They had been injudicious enough to put on paper a formal and detailed statement of their demands, and the result was that their positions were one by one assaulted and carried by the hard-hearted, practical men who came to the Congress. Their aims were acknowledged on all hands to be praiseworthy, but their plans for carrying them out were shown to be so opposed to the habits, tastes, notions of morality, on which the social organization in Germany is based, that there would not be the slightest chance of securing their adoption, even if embodied in legislation. Among us the friends of paternal government have thus far confined themselves to vague denunciation of existing social arrangements, or vague longings for the regeneration of humanity by governmental action, but no blandishments have thus far succeeded in inducing

them to draft a bill for the formal extirpation of poverty and rascality.

The rising of the professors in Germany is, however, mainly interesting to us for the illustration it affords of the curious combination of mutually destructive tendencies, if we may use the expression, of which social radicalism all over the world is made up. If there is one feature in it which is more prominent than another, it is its contempt, or indeed one might say its hatred, of authority. It is not thrones, principalities, or powers alone of which it seeks the overthrow. It wages unceasing warfare on the principle of obedience in all fields of human activity. It is mutinous towards parliaments as towards kings, as impatient of jurisprudence as of theology, and dislikes the justice of the peace nearly as much as the military general; and its influence, whether good or bad, whether a preparation for better things or for worse, has undoubtedly permeated society to a sufficient extent to make the work of government—which mainly consists in ordering people to do certain things, and punishing them for not doing them—increasingly difficult. Indeed, we do not think we exaggerate when we say that the most marked characteristic of all democratic societies in our time is impatience of control, on the part of citizens, wives, children, apprentices, and pupils and soldiers. This, as we have said, may or may not be a good thing. It may be leading us on, as some people think, to a period of noble self-rule, or it may be leading us on, as others think, to truly destructive anarchy; but that it is one of the great facts of the day nobody will deny.

On the other hand, side by side with this phenomenon, and apparently an invariable accompaniment of it, is a longing for more government. The state is called on by some to suckle, clothe, educate, board, and find work for every man, woman, and child within its limits; by others, to abolish usury, provide capital and profits for all, prevent poverty, and in fact save everybody from the now ordinary consequences of his own mistakes and ignorance and want of capacity. The French Communists of course represent the extreme of this tendency, but it is found in greater or less strength in the teachings of nearly all our own philanthropists and humanitarians. But this tremendous extension of the functions of the state means the indefinite extension of the very things which advanced radicals most hate. It means more power for the government; enormous multiplication of functionaries; infinite complication of administrative machinery; increased opportunities for cheating and stealing on the part of officials; increase of inspection and surveillance and responsibility; increase of authority and of obedience—the conversion of society, in short, into a camp, governed by innumerable rules and regulations, guarded by a swarm of sentinels, with passive, unreasoning obedience the sole guarantee against worse anarchy than that of a routed army. That any kind of radical, whether philosophical, historical, or social, has in his mind any plan for the reconciliation of these conflicting tendencies, we do not believe. Indeed, we doubt whether many of them have even thought the matter over seriously. Each sect is so absorbed in upsetting the existing order of things, that it does not occur to it that in so doing it is destroying the very foundations on which any other order of things must rest. If we preach lawlessness, we must be prepared to find *our* law treated with as much contempt as other people's. In other words, the very spirit, whatever it be, which is making workingmen hostile to their employers, would render them hostile to any officer deputed by Government to offer them state protection. And yet under all this there lies a really healthy desire to have the state render more services in return for taxation than it now renders. Everybody sees that this is possible. We might have better justice, better police, safer transit, better schools, more openings for labor, more means of healthful recreation, better safeguards against disease, for our money than we now have, if the state were better organized. With all demands of this kind every lover of his kind must sympathize heartily. But this means more administration, and more administration we cannot and ought not to have without improvement in the Administration, in its personnel, its processes, its pay, its rewards—without, in other words, a great reform in the civil service. Reform in the civil service must, however, be based on popular appreciation of the value of discipline, popular remembrance of the weakness of human nature, popular respect for law, and popular desire for excellence—that is, popular love of seeing things well done, whether legislating, judging, soldiering, letter-carrying, or street-sweeping. Love of perfection, in short, of seeing men thoroughly perform what they undertake to perform, is what now needs preaching more than anything else. It is the absence of it which is working most of our evils, and which makes nearly all radical schemes for the regeneration of society seem impracticable.

THE ENGLISH LECTURERS.

MR. YATES.

THE audience which gathered at Steinway Hall on Monday evening of last week to listen to Mr. Yates's first series of lectures on "Princes of the Pen" found suggestive signs of preparation in the arrangement of stage and accessories. A large and very well drawn cartoon in colors, representing Mr. Dickens's house and garden at Gadshill, leaned against a stand on one side of the lecture-desk, flanked by a similar drawing on the other side, directly copied from the well-known plate, "The Empty Chair"; while still a third drawing, presumably a portrait, leaned against the wall, with its back to the audience, ready for exhibition in due time. The personal appearance of the lecturer, too, was well calculated to confirm the pleasant impression of his apparatus. Mr. Yates, as many of our readers have probably had occasion to know, is of rather noticeably tall, muscular, and commanding figure, his features have a certain masculine strength and freshness, and his voice is one to drive an orator, actor, or platform reader mad with envy—a simply magnificent organ, full, rich, mellow, and strong. The lecturer's manner, too, is singularly quiet, dignified, and easy, and his pronunciation shows none of the exaggerated Anglicism which so impairs the elocution of his countryman, Mr. Froude. Though his delivery is not free here and there from a slight conventionality, as of a man who reads, not speaks, it is impressive, deliberate, and singularly distinct. In short, Mr. Yates, as far as manner and method go, is particularly pleasant to listen to, and the physical appliances of his oratory are amply fitted to supplement and emphasize any good quality in its matter.

It is easy enough to assent to the principle with which Mr. Yates prefaces his lectures, that a judicious Boswellism is a main desideratum in a biographical sketch or description. Discretion will dictate a certain mental reserve even here; and a finer taste will doubt whether we really know a great man better, after all, in the petty and superficial detail of his daily existence, than in the grander and more fundamental traits of soul and imagination, of action or achievement, which all the world may read. If the hero is never a hero to his *valet de chambre*, it is because the valet, from the very necessities of the situation, must deal exclusively with the unheroic and unessential traits of his master's character. Goethe was probably not more really Goethe when powdering and dressing for a Weimar court ball, than when pondering over the Theory of Colors, or rapt in the composition of Faust or Egmont. There is nothing so very characteristic, after all, in the curls of Voltaire's wig or the cut of General Washington's buff waistcoat, and it is questionable whether posterity has not a right to enjoy its more ideal image of a great man—the assemblage of lofty characteristics by which alone he has influenced his age—undisturbed by the delineation of the commonplace or material features in which he is naturally just like every one about him.

Still, the curiosity incident to human nature, to gain something like a visible and tangible impression of the world's notable men and women—especially those who, by their actions and writings, have come closely home to our sympathies—is natural and innocent enough, and we may afford to praise the well-meaning portrait-painter who gives us Aristides or Napoleon in dressing-gown and slippers, so the portrait be truthful, consistent, and, above all, vivid. But here the would-be Boswell has a difficult problem. If he have the space of three bulky volumes in which to develop his theme, he may afford to be discursive, minute, trivial, inconsequent, to repeat and dilute, to gossip and prose, even—to transfer us as nearly as possible to the scene and surroundings from which he took his own impressions. In the brief period of a platform-hour, his finished art must atone for hurry, limitation, and incompleteness, his hasty sketch must be informed with the power of a penetrative imagination and an instructive selection. Each rapid stroke must be as bold and free, yet as suggestive and characteristic, as a dash from

the graver of Dürer or Gavarni; no dot or line must be weak or wasted, for all his picture has room for will not more than make up the complex but consistent impression we demand.

Along with the lecture proper, therefore, with its clear enunciation of principle and logical cogency of enforcement, the platform *causerie*, as one might call it—the pleasant hour or two of pleasant chat and anecdote, of gossip and reminiscence—has taken important place of late years in the annals of the lecture stage. Such lectures deal evidently but little with ready-made thought or well-developed doctrine; they aim to supply the material of such thought, and the illustrations of doctrines already held or yet to be determined. They take the place exactly of the pictures in a volume of history, travel, and biography, and, by their aptness, impressiveness, and judicious selection, should furnish us the mental atmosphere and induce the proper mood for the better reception of graver facts to be gathered from other sources. In doing this work for the life and character of his friend Charles Dickens, Mr. Yates had a task the more difficult that he was treating a theme on which the American public has already considerable and minute information, yet is insatiably eager for more. The lecturer will probably seem to well-informed hearers to have somewhat underrated the actual state of our knowledge on his subject, and, along with much which was not only pertinent and suggestive, but fresh, to have given us much which could hardly claim the merit of novelty. Even in face, too, of the difficulty of cramming into a short evening's talk enough material to produce on the minds of the auditory a clear and unitary impression of Dickens's personality, we could have wished in the lecture a little more of that constructive imagination which should pervade the enunciation of detail or incident, and blend them to a picture. The materials of Mr. Yates's mosaic were not ill-chosen, but perhaps it may not be hypercritical to think that they might have been better put together. On one point of special criticism we venture with some diffidence, but the matter may fairly claim a word of notice. Indisputably, the one point on which the American public would most eagerly demand information, if they might honorably and discreetly do so, is that of Dickens's domestic relations. It is not, nor ever can be, a matter of indifference to them that the man who, through his writings, has been their fireside friend, the prophet of all tender and earnest feeling, of all sweet and gentle domestic ties, should stand in history accused of just the opposite traits in his own life—of coldness, fickleness, or injustice. If Mr. Yates could have aided to remove this suspicion, his audience would have owed him a gratitude such as hardly any other merit of his lecture could have earned. It is to be regretted that either his sensitiveness in touching on such matters of delicacy, or—must we think?—his lack of confidence in the merits of the case, should have caused his few remarks to appear like what a lawyer would call confession and avoidance, and left the sad impression of contemporary gossip or tradition only deeper than before. But with all deductions for the shortcomings we have hinted at, Mr. Yates's remarks were a welcome contribution to the treatment of a deeply interesting theme, and those who listened to him last week will feel a pleasant curiosity to hear what he has to say about such men as Thackeray and others, concerning whom, though our interest is hardly less, our personal knowledge is notably less minute and real.

ENGLAND.—WORKING OF THE NEW EDUCATIONAL SYSTEM IN LONDON.

LONDON, Oct. 18, 1872.

TWO years ago we were all rejoicing over what we rather presumptuously called the settlement of the National Education question. Although the scheme then carried through Parliament was avowedly a compromise, it was considered to be one which would be supported by an overwhelming majority. Setting aside the few bigots who insisted upon secular education pure and simple, and the few bigots who would have none but an exclusively clerical scheme of education, it was hoped that we should all agree to work the machinery as energetically as possible, and then all kinds of desirable results would follow. All the neglected population of our streets would be forced into familiarity with the three Rs. England would, like Prussia, be thoroughly drilled into education. The schools provided by the official boards and the schools provided by the various denominations would co-operate harmoniously, and there would be at worst a sufficient degree of emulation to stimulate all persons concerned to the fullest exertion of their energy. These roseate expectations, like most others of the kind, have been doomed to disappointment. If not altogether abandoned, we are compelled to admit that the day of realization is further off than we had originally supposed, and that, in short, we had immensely underrated the extraordinary difficulty of the task which lies before us.

Thus, for example, in London a controversy has recently arisen which strikingly illustrates the various perplexities which are not yet cleared up. In the early days of enthusiasm, men of unusual distinction allowed themselves to be nominated for the board. Lord Lawrence and Prof. Huxley—to mention no others—were amongst the first members, though both of them have since been compelled to retire from ill health. The debates of the board were anxiously watched, and it was hoped that we should speedily witness unmistakable results of their labors. The debates, however, prolonged themselves after the fashion of most parliamentary performances, and a certain degree of impatience began to be manifested. Most people became rather tired of watching the course of affairs, and we had sunk into comparative indifference, when, at last, the board, having made elaborate preparations for its campaign against ignorance, began decidedly to take the field. New schools are being built; some have actually come into operation; and an attempt has been made to put in force the provisions for compulsory education. A certain number of previously neglected children have been forced into the schools. Straightway there arises a sudden shock of indignation, showing that jealousies which were supposed to be extinct are still in full force, and that the whole battle, which occupied Parliament for a session, is to be fought over again in the petty parliament of the school-boards; and that questions which Parliament evaded by committing their decision to the local bodies, are now pressing for a solution. The immediate cause of the explosion occurred at certain schools in the North of London. The visitors appointed by the board had succeeded in sending to a school already established some thirty children, who had hitherto been completely neglected. Well, one might have thought, here was a cause for rejoicing. The school would certainly welcome these little outcasts, at any rate, if their fees could be paid by the school-board. On the contrary, the children were summarily dismissed, and the managers of the school were indignant at the burden thrust upon them. Their reason was that these unfortunates belonged to the class variously designated as "waifs and strays," "street Arabs," or "gutter-children." They were poor little hangers-on upon the lowest fringe of society, who had learnt the worst of language if they had learnt nothing else, whose clothing was not even decent, and who were suspected of bringing with them physical as well as moral contagion. They were therefore received much as a sweep would be received in a first-class railway carriage. If you force these children to school, it was urged, you ought to provide a separate place for them. There are lines of demarcation amongst the London poor just as deep and wide as those which separate the aristocracy and the middle-classes. The child of the decently-clad artisan altogether refuses to be mixed up with the child of the poor beggar or crossing-sweeper. The spirit of caste, in short, raises difficulties as great as those raised by the spirit of religious bigotry.

But other complications speedily arose. The school-board naturally does not wish to open the doors of the new schools to this social refuse. It desires to make its own education a model; if its system is to be weighted by having all the refuse, a slur will be thrown upon it, and it will not be able to compete on equal terms with the denominational schools. There is nothing, it may be, which the denominational schools would like better. If the schools founded by the board are left empty, the advocates of the old system declare them to be useless; if they are filled, the same persons maintain that they are filled by draining the old schools, and that no real addition is made to the educational resources of the country. The representatives of the denominational party on the board are strongly inclined to hamper its efforts in every way that occurs, in order to prevent its competing effectually with the schools now established. The clergy, indeed, all over the country look askance upon school-boards generally, and are only too ready to denounce them as useless and expensive incumbrances. Meanwhile, if the board tries to set up an inferior class of schools for the poorest children, in order to draft them off from the better schools, it meets with a new set of difficulties. In the first place, there is the obvious difficulty of enforcing a system to which Englishmen are so little accustomed, and especially of enforcing it in the case of children whose earnings form a considerable part of the resources of the family. If a boy picks up a few pence a day by selling newspapers or matches, and you force him into school, it may be that his family will not be able to support him. And thus arise all kinds of delicate questions, which the board is scarcely able to answer. They have no sufficient machinery for deciding upon the degree of poverty of the parents and of knowing whether or not they can afford to pay school-pence, or afford even to be deprived of the services of their children. And here again comes in a conflict of authority with the system of poor-law relief. The workhouses have already large schools, at which the children of paupers are educated. Should the guardians or the school-board deal with the lowest class of children, or how should the limits of their duties be defined?

These difficulties are suggestive enough of the complexity of the problem.

There is no reason to suppose them insuperable, or even to suppose that they are not in the way of being overcome. But it is clear that the school-board has to organize a system of compulsion for which our habits have not in the smallest degree prepared us, and that in so doing they have to encounter not only the prejudices of the parents but the jealousies of numerous religious bodies already in possession of the ground, and ready to contest every inch of the way; and, moreover, to solve a variety of intricate social and economical problems. Meanwhile, public interest in the matter has rather flagged; people are unreasonably disappointed because their unreasonable anticipations were not fulfilled; and there are plenty of parish politicians who are only too ready to get up an agitation against any system which involves a pressure upon the rates. There are loud assertions that the whole thing is a failure, and suggestions that our old comfortable way of letting things alone had its advantages. How far greater results might have been fairly anticipated is a question which I am not qualified to answer; perhaps no one could. It was certainly natural enough to expect some more tangible fruits of two years' legislation; but, on the other hand, the outcry seems to prove that the board is really getting to work at last; and the complaints themselves demonstrate, if there were any necessity for such demonstration, that they have an ample field for labor. This vast disorganized mass of houses presents, of course, the most aggravated case; and it is here more than anywhere that social difficulties have outrun all attempts to grapple with them. It must be a work of many years to bring anything like order out of such a huge fragment of chaos. In other towns the work is apparently further advanced; and we may hope that more real impression is being produced on the appalling masses of ignorance and poverty. Meanwhile, the process must be slow, and moreover a good deal of heat will be generated while it lasts.

One question which seems pretty certain to arise in the next session will probably illustrate the intensity of the religious animosities which at present exhaust themselves chiefly in school-board questions. Mr. Gladstone can hardly avoid longer proposing some settlement of the Irish University question. It is idle to speculate on the nature of the solution which he will propose. He is watched by several parties, whose antipathies are so marked that it will indeed be a feat of statesmanship if he succeeds in removing them all. The Roman Catholics, who insist upon the endowment of their university; the Protestants, who will be scandalized by any kind of concession to Catholicism; the Radicals, who object to any encouragement to the denominational system, whether Catholics or Protestants are to reap the benefit, have the materials for a very pretty triangular duel; and when we consider that the question has to be fought out upon an Irish topic, and is therefore in no danger of being treated with coldness, or confined within strictly logical limits, we may anticipate a lively session. The leaders of both parties have complicated matters by flirtations with the Irish bishops and their opponents which will give ample opportunity for personal recrimination. It is not beyond the bounds of probability that this may be the shoal on which Mr. Gladstone's government will be finally wrecked, in spite of the skill with which he has hitherto frustrated the predictions of his opponents. Such speculations, however, are as yet premature; for we have been treated to no foreshadowings of policy from which the keenest of political prophets could infer the future.

SEPARATION OF CHURCH AND STATE IN ITALY.

FLORENCE, October 14.

THE difficult question which is to form the principal topic of discussion during the coming parliamentary session is now engrossing public attention in Italy to a high degree, long ere the project of the bill can be even known, nay, completely worked out in the ministerial councils. The promised "Law on the religious corporations of Rome" is indeed designed to be the finishing stroke of that legislation which has taken upon itself to regulate the relations between church and state on an entirely new principle, and to carry out definitively the famous maxim of the *chiesa libera nello stato libero* (free church in a free state), of which the type is to be found in your great North American Republic. Three important and comprehensive laws were successively voted in 1866, 1867, and 1871, with a view to attaining this desirable end; the project of a fourth is already known and tolerably certain of being accepted by Parliament; the fifth and most delicate, from a general and political point of view, is precisely the one I allude to above, and upon which public opinion, press, Parliament, and even the Ministry itself, seem to be extremely divided in opinion. There is the Clerical party, which of course finds everything *au mieux dans la meilleure des Romes possibles*, and would fain save from the rising deluge that Mount Ararat on which they have collected together with the remnants of their treasures. There is the Radical party, ever ready to make *tabula rasa*, and to proceed in an old Catholic country—nay, the centre of Catholicism, where for centuries prejudices, interests, customs, narrowly connected with the ruling church, have been accumulating—in the same way as Washington's contemporaries did on a new continent, with a Protestant church divided into ever so many sects, and entirely independent of the state. Between these two extremes are the hundred shades of opinion of all such as, while ready to give to God what is God's, and to Cæsar what is Cæsar's, are anxious to enjoy all the benefits of modern legislation, and desirous at the same time of remaining good Catholics, and to draw the patient's tooth in as painless a manner as possible; who are disposed to treat ancient and respectable interests with gentle consideration, and show deference to powerful foreign friends, yet would not be loth to redress flagrant abuses and assert the national independence.

These different currents are clearly to be seen in the successive laws I have mentioned which attempted to regulate this delicate and difficult question. The bill of 1866 simply did away with all those religious orders and corporations in the kingdom which were not of public utility, pensioned off the monks and nuns belonging to them, and put up their property at public auction. The law of 1867 conferred upon the state the right of likewise suppressing convents and pious foundations of public utility—such as the orders for the instruction of children, attendance on the poor or sick, etc.; and, in any case, of converting their property into Italian funds. The famous "Law of the Guarantees," the debates over which occupied the whole session of 1870-71, regulated the mutual position of church and state; confirmed the abrogation of all the concordats which had been formerly concluded by the different Italian states with the Holy See and were subsequently provisionally replaced by the Piedmontese law at the moment of annexation; repealed the Piedmontese legislation by abolishing the royal *placet* and *exequatur* for curates and bishops, who were henceforward to be appointed by the Pope alone; granted to the Holy Father a civil list, free residence, free communication, the right of receiving diplomatic representatives from foreign powers, etc., etc.—all rights of which, excepting that of the civil list, Pio Nono has made an implicit use, although he persists in protesting against and refusing to recognize the very law which confers them upon him. The fourth bill, an appendix (or *novella*) to the great law of the guarantees, regulates the administration of the *asse ecclesiastico*, or property of the churches and parishes, out of the revenues of which these churches are kept and restored and the priests draw their salary—for the *budget des cultes*, in the French sense of the word, *i.e.*, the payment of the priests by the state, never existed in any of the former Italian states. This bill, which confides the management of such property to local committees, composed partly of ecclesiastical dignitaries of the diocese or parish, partly of lay vestries, elected directly by the faithful, or indirectly by the provincial and municipal councils,—this bill, as I have already said, is sure of being accepted by Parliament, having originally emanated from the Right, which proposed it two years ago in the shape of an amendment to the great law, and being now presented by a Ministry which belongs to the Centre, so that it may reckon upon the support of at least four-fifths of the House. Not so, however, with the important law on the religious corporations in Rome.

The address from the throne, for which the present Ministry is answerable, promised last year that a law should be brought in "extending the law of 1866 to Rome, and divesting the Roman religious corporations of the character of moral or juridical persons, at the same time leaving the *sostanza ecclesiastica*—a very elastic term—of the city of Rome to the Romish Church. To the Keeper of the Great Seal, as Minister of Public Worship, Signor De Falco, a learned and intelligent Neapolitan jurisconsult, was entrusted the drawing up of this new law, which was to conciliate the interests of the state with those of the church, and to satisfy the Italian Liberals, the Catholics, and the foreign powers—a task not easy to be achieved. It can hardly be wondered at if Signor De Falco's remarkable scientific treatment of the question contented neither party and was abandoned after some laborious sittings of the Cabinet, whereupon the new Minister of Public Instruction, the well-known economist Scialoja, was commissioned to work out a new project, which, it is said, was finished a few days ago, and also failed in meeting with the approval of all the members of Government. Signor Visconti-Venosta, as usual timid, cautious, and somewhat too fully conscious of his country's weakness, wishes to spare the "legitimate susceptibilities" of the great powers, by which France, of course, is meant, to speak plain English. Signor Sella, the Minister of Finance and the (tacitly if not publicly and officially) recognized head of the Cabinet, is anxious to fill the treasury as well as to satisfy the advanced Liberals, whose opinions on religious matters he shares at bottom. Signor Lanza, the nominal President, wavers between both views of the case without daring to adopt either resolutely. Meanwhile public opinion is growing more and more excited; the

bare thought of French "admonitions" is regarded as a disguised intervention and continuance of the Emperor's Roman policy, and this is quite sufficient to drive many moderate folks to extremes in a radical sense. Even the words pronounced by Count Andrássy respecting the *case generalizie*, or central direction of the monastic orders, were resented and taken amiss by the irritable susceptibility of Italian patriots. It will be difficult, however, not to make certain exceptions in favor of these establishments, although no foreign power can have any formal or legal right of interfering in their behalf. Each monastic order has in Rome its General, who is the means of communication between the head of the Church and the different convents, and it is impossible to imagine the Roman Church without such an institution; but, on the other hand, neither the Augustines, nor the Benedictines, nor the Dominicans are exclusively French or Austrian, nor is it clear that these states should have any special right to protect them, unless the edifice, indeed, in which they reside belongs as property to one of these states, in which case it would certainly be respected. It is probable that if all parties knew the real state of affairs with regard to the monastic property, radical measures would be less eagerly urged upon the Government. The sale of church property has not brought in, throughout Italy, what sanguine financiers expected it would; in Rome things will be still less favorable for the finances of the kingdom. The prudent monks and nuns, seeing the storm rising, have taken steps beforehand to meet it with as little damage to themselves as possible: *i.e.*, they have augmented their *passiva* as much as they could, whilst they have diminished the *activa* in every possible way. They have contracted large debts; they have simulated sales of property as having taken place before 1870, and, by this means, pocketed the unseizable liquid, money, whilst the land is in the hands of friends; they have admitted a great number of new brothers and sisters, so that the Italian Government will find itself liable to a large amount in pensions, whilst it will only receive scanty property in return. Nay, it has itself sometimes innocently contributed to bring about this state of things by buying up at an enormous price certain monasteries which were needed for public service, and giving the monks the opportunity of hiding their thus converted riches away from it.

The consequence of all this will most likely be a bill which simply extends the laws of 1866 and 1867 to Rome; does away with all the corporations, converts into Italian funds all their property—by which measure the Government will be exempt from paying any pension; and finally allows them all—*case generalizie*, "useful" or useless convents—to be revived, not as juridical persons, but as "free associations," the members of which may again acquire property and restore the old state of things in an underhand way, as they have done everywhere in France and Italy. As to the *asse ecclesiastico*, which is legally the property of the city of Rome, it will most likely be handed over to the projected committees of laymen and priests I have alluded to above. It is a delusion to believe that, with the state of mind now prevalent in Italy, any further concession can be thought of. The separation of the church from the state would be complete, and it would remain to be seen whether this principle, applied to the very cradle and centre of Catholicism, has any life in it; whether sooner or later it will bring about that most desired and most desirable boon, religious peace; or whether, the struggle assuming another form, the interests of modern society will finally succumb to those of the church, or *vice versa*.

Correspondence.

THE ST. BARTHOLOMEW MEDAL.

To the Editor of the Nation:

Sir: There must surely be some mistake in the following paragraph on page 267 of the last number of the *Nation* (No. 382, October 24, 1872), in which it is stated that:

"In France, Veuillot's *Univers* foolishly called in question the authenticity of the medal struck by Gregory XIII. in honor of the massacre, bearing his bust on one side, and on the other an exterminating angel, with the legend, *Ugonotorum stranges*, 1572."

M. Louis Veuillot, in a leader written by himself, and which appeared in the *Univers* of August 30 last, admits with entire candor not only the existence of the medal, but also of paintings commemorative of the event. His words are as follows:

"Mais la médaille commémorative et les peintures approbatives exécutées à Rome? La médaille existe, et les peintures aussi. Je viens de lire la description de la médaille dans les *Numismata pontificum romanorum*, t. i., Rome, 1699. C'est une très-belle pièce, qui représente non pas la *Religion*, mais l'Ange exterminateur tenant d'une main la croix, de l'autre un glaive de flammes dont il atteint les rebelles qui fuient, *Ugonotorum stragges*. Quant aux peintures, je les ai vues maintes fois dans le Vatican. Elles attestent le sentiment de joie avec lequel tout le parti conservateur européen accueillit la nouvelle de cette exécution, qui ne fut pas tout de suite connue comme un guet-apens, et qui parut simplement un acte de justice et une victoire du bon parti. Ce serait la même chose si tout à coup l'on apprenait que l'*Internationale* a livré une bataille et qu'elle l'a perdue, ou qu'un prince s'est trouvé assez résolu et assez fort pour saisir tous les chefs de cette bande, les livrer aux juges et exécuter la sentence. C'est ce sentiment qui a toujours éclaté après les fausses victoires de l'ordre et qui, depuis le 18 brumaire, a fait chez nous le succès de tous les gouvernements. Louis-Philippe a reçu des journées de juin, Napoléon de la journée du 4 décembre, et M. Thiers trône à Trouville dans les flots de la mer et dans les flots de l'emprunt à cause de sa victoire de Paris."

I trust, Mr. Editor, you will do M. Veuillot the justice to publish this correction. L. B. B.

New York, Oct. 31, 1872.

[Our correspondent will observe that it was not the existence, but the *authenticity* of the medal which the *Univers* was said to have denied. We had not seen that paper when our paragraph was written, but M. Henri Bordier's statement in regard to it was as follows:

"Comme divers journaux français, détestant cette boucherie française d'août et septembre 1572, rappelaient que le pape avait fait frapper une médaille pour célébrer, au contraire, sa joie du massacre, l'*Univers* répondit que cette médaille, empruntée par ses confrères à l'*Histoire de France* de Bordier et Charton, n'avait guère d'autorité, puisqu'elle provenait de *deux compères*."

Whether the passage quoted by our correspondent preceded or followed this allegation that a couple of Protestant confederates (*compères*) were the only authority for the medal of Gregory XIII., we have no means of knowing.—Ed. Nation.]

THE HORSE QUESTION AND THE LABOR QUESTION.

To the Editor of the Nation:

Sir: Your article on "The Position of the Horse in Modern Society" delighted every lover of the "noble animal"; it ought to delight every person who claims the possession of common sense and humanity. The modern horse is a highly civilized creature, leading a very artificial life. Probably he is in some respects more *artificialized*, that is, diverted from his natural state, than his owner; and certainly civilization tells more against him in one respect: *he cannot take care of himself*. Power of speech he has not, and his power of action is very limited. He may push open a sliding window with his nose, or even break a pane of glass to get fresh air (I have seen horses who were wiser than their keepers do these things); but he cannot clean himself or his stable; he cannot put on or take off his clothing.

And here comes in the great obstacle to improvement, a difficulty which you have not noticed, and which is not, like the want of space attendant on dear land, confined to our cities. It is *the dearness of labor*. Perhaps the majority of your readers are not aware of the amount of labor required to keep private horses and their equipments in good order according to the European standard. In the city there should be one man for every two horses. In the country, where there is less night work, one man can take care (and only *just* take care properly) of three. Few of our "town swells" observe this rule. I knew a man who literally counted his fortune by millions; he and his family were fond (in a way) of horses, and he kept twelve, which two men were supposed to take care of. An extreme case this, to be sure, but the full complement of men is rare in a city stable, and Mr. Bergh's strictures on the "laziness" of grooms are not, as a general rule, founded on fact.

In the country we usually find three or more horses entrusted to a fraction of a man, the other fraction of said man being employed in other work. With the exception of some large stud-farms, like those of Mr. Mali and Mr. Winthrop, I do not remember ever having gone into a country neighbor's stable (or *barn*, in the Massachusetts dialect) that I did not find the floor soaking in liquid manure, and solid ditto lying in the stalls and the horses treading in it. Every one of these houses was presided over by a neat New England woman, with the eye of a hawk for a speck of dirt or dust, a woman who, if transported to some Southern or Western town, would set all the available "help" of the locality to scrubbing floors and washing windows till the aborigines thought she must have cold water on the brain, as many male New Englanders have in another way. Yet probably not one of

these ladies would ever think of visiting her "barn," nor do I see what good she could do if she did visit it, unless she took hold of shovel and fork herself, seeing that the *quasi* coachman would probably be off at gardening or farming or doing some other "chore."

If this is the usual state of a private stable, what must a public stable be! The horses are harnessed and unharnessed, fed (after a fashion), and *left to rot*. That is the plain English of it; and our wonder ought to be, not that a horse epidemic or plague has broken out now, but that it did not break out long ago.

Many of our tamperings with health, comfort, and safety may be traced directly to the same cause. A man occupying a "brown-stone front," with $12,000 worth of furniture in it, will tell you that he "cannot afford" to burn wood in his office, or "soft" coal in his parlor. The tariff is not entirely to blame here; it is not the difference in the cost of the fuel that he fears; what appalls him is the prospect of an additional servant. For the wood and bituminous coal fires require a quarter of a servant to look after them, and as servants cannot be hired in fractions, if you need an extra quarter, you must take an extra whole. Thus also we have gas all over the house in all manner of dangerous places, and water-pipes all over the house in all manner of frost-infested and plumber-provoking spots, and stoves that spoil our provender under pretence of cooking it. Railroad accidents happen because a company cannot (or thinks it cannot) maintain an adequate staff of employees; and so on to the end of the chapter.

CARL BENSON.

November 1, 1872.

TRADES-UNIONS IN NEW YORK.

TO THE EDITOR OF THE NATION:

SIR: On the argument of a cause in the Supreme Court, before Judge Ingraham, yesterday, the by-laws of the New York Benevolent Society of Co-operative Masons were read and commented on. I annex a copy of some of them.

It was shown in that case that most of the masons in this city belong to this Society, and that it is practically impossible for a mason to get work here unless he is a member of it. The application was for a mandamus to compel the Society to reinstate a member whom they had expelled. The relator showed that after he had committed the offence of taking a sub-contract, the Society committee went to all his workmen, and persuaded them to quit the job, and work for him no longer.

It is a good illustration of the workings of these powerful societies, and deserves the consideration of every thoughtful man. LEX.

NEW YORK, November 2, 1872.

ARTICLE XXVI.

§ 1. Eight hours shall constitute a day's work; on Saturday, leaving off at four o'clock P.M.; and one hour for dinner. This shall not be violated by any member, under a penalty of five dollars for each offence.

§ 4. The members of this Society shall not work with non-members where they have a majority; but every conciliatory effort shall be made to induce non-members to join the Society, before resorting to a strike.

§ 5. Any member of this Society who shall work for less wages than the Society may from time to time determine, or work more hours than this Society shall deem proper for a day's work, shall pay a fine of thirty dollars.

ARTICLE XXVII.

§ 1. The members of this Society shall not lump nor take sub-contracts, nor shall they work on sub-contracts for any party, under a penalty of fifty dollars for each offence.

ARTICLE XXVIII.

§ 1. The members of this Society shall not, on any account whatsoever, suffer a brother member to be discharged or otherwise injured, while acting with their consent, in a peaceable and discreet manner, for carrying out any of the rules of this Society; nor shall any member work for the foreman or boss who discharges a brother member for so acting, until the grievance is redressed.

Notes.

THE editor of *O Novo Mundo*, of this city, announces that he will publish in the course of the following year a couple of translations by Captain Richard F. Burton from the works of Brazilian authors, namely: "Manuel de Moraes," by Sr. Pereira da Silva; and "Iracema," by Sr. J. de Alencar. ——We have received from the Naturalists' Agency, Salem, Mass., Part I. of "The Birds of Florida," containing original descriptions of upwards of 250 species, with notes upon their habits, etc., by C. J. Maynard. Its thirty-two pages embrace the following families: Turdidæ, Saxicolidæ, Sylviidæ, and Paridæ—thrushes, bluebirds, warblers, titmice, etc. A scientific description precedes a familiar and thoroughly popular account of each bird's peculiarities, modes of nest-building, seasons of appearance and migration, and song; and the author's observations in New England are made quite as prominent as those in Florida, for which reason the catalogue may be recommended indifferently to the residents of either section. The form of the work is quarto, and the printing has the usual excellence of the Salem press. One of five plates, drawn and colored from nature by Helen S. Farley, accompanies the part before us.——A work on "Proportional Representation of Successive Majorities in Federal, State, Municipal, Corporate, and Primary Elections by the Free Vote," by Hon. Charles R. Buckalew, will be shortly published by John Campbell & Son, Philadelphia.——Harper & Bros. announce "Journalism in the United States from 1690 to 1872," by Frederick Hudson.

—We inadvertently stated last week that Prof. Tyndall was the author of the original article in the *Contemporary Review* which opened up the "prayer-gauge" controversy. He did, indeed, transmit it to the *Review*; but it was from the pen of another writer.

—Some eight years ago, Mr. John Gilmary Shea of this city, widely known among scholars for his valuable and conscientious labors in the field of American history, commenced the publication of a translation of Charlevoix's "History of New France." This translation he accompanied with critical and explanatory notes, which shed a flood of light on the text. Entirely at home in this field of research, Mr. Shea fully doubled the value of Charlevoix's already admirable work by comments and explanations in which he points out the sources of his author's statements, presents many facts unknown in Charlevoix's day, and cites numerous documents unearthed by modern research which happily elucidate much that would otherwise have remained obscure. Mr. Shea's careful translation is not a small part of his labor, and his disinterested zeal and scholarly devotion to his themes have here produced volumes which fill a gap in our historical literature. But the translator's devotion as a scholar is almost surpassed by his courage as the publisher of his work, which he has carried through the press almost unaided, the subscription list never having reached a point sufficient to meet the actual cost of manufacturing the volumes. The work referred to is among the handsomest ever produced by the American press, the sixth and last volume, just issued, being illustrated like all the others with fine steel engraved portraits, valuable facsimile maps, autographs, etc. We give this information for the benefit of historical societies and students of American history, none of whose libraries should be without the only work which in point of fact supplies the early annals of some sixteen States of our Union.

—A bronze statue of Sir Walter Scott, copied from that surmounting the Monument at Edinburgh, was erected in the Central Park on Saturday last, beside the Mall, and a few yards from that of Shakespeare. The funds were raised by the Scotchmen of this city, and one of their number, Mr. Wood, presented it, in a brief speech, to the Park Commissioners, Mr. Andrew H. Green receiving it, and Mr. Bryant closing the proceedings with an address. There was a large body of spectators present, the Scotch element predominating, and a company of the 79th Highlanders furnished a guard of honor, and five pipers marched round the monument furnishing a pibroch. There was nothing new to be said about Scott, and nothing new was attempted. The scene itself was one of the greatest tributes that could be paid to the memory of a great man. The spectacle of Lowland Scotchmen—that is, of Anglo-Saxon Presbyterians—clad in Highland kilts and tartan, is to the historical observer one of the strangest spectacles to be seen anywhere, and it is all or nearly all Scott's doing. It is true that Lowland Scotchmen have glorified the kilt and tartan on many famous fields, but it was Scott who made them proud to wear them as a national costume. It is in reality the most Celtic of costumes; it was "the garb of old Gaul" 2,000 years ago, and, down to the close of the last century, it was in the eyes of Scotchmen the dress of blackguard cow thieves and horse thieves, and the sight of a pair of bare legs sticking out of a petticoat made elders swear. The great "Wizard of the North," however, took it, waved his wand over it, and ever since the Johnsons, and Thompsons, and Robinsons are as eager to wear it, as the Campbells or McIvors, and have made it thoroughly respectable, though it must be admitted their knees look a little too white in it.

—A writer in the Harvard *Advocate* enters a forcible protest against falling in with the custom which prevails in some other colleges of employing a professional trainer for the college crew. He denies that this is necessary to maintain Harvard's lead at the oar, and shows that she has wone nine out of thirteen races, in each instance distancing a crew under professional care. "In 1871, she was second of three boats, and the third had been under the care of a professional. In 1872, she was second of six; and, of the four who were behind her, two were under the care of very famous professionals, one of them from the crew which beat at the Paris Exposition, and the other

from the present champions of the world." The writer offers other objections, based on the low character of the professional trainer, his unfitness to associate with young collegians, the temptations he is under to sell out his employers, and the great encouragement which his employment lends to the practice of betting on the intercollegiate races. There can be no doubt of the soundness of these views (though we think a crew should have criticism of some kind from outside its practice boat) nor of this other, which we hope will prevail at Harvard, as it takes away the occupation of the trainer: that the object of rowing is not to beat Brown, or Yale, or Amherst, but to *learn* to row thoroughly, by original application and experience—to master a science, as the writer puts it, and not to buy it ready-made. In other words, the principle which governs grown-men in the acquisition of knowledge, and which, in despite of "rank," and "marks," and "prizes," should govern the student while in college, is applicable to physical pursuits. The ambition to do good work, and the mere ambition to be "at the head," stand in the same relation to each other as the gymnast and the prize-fighter.

—Mr. Belmont has arranged for sale a selection from his picture-gallery, and the skimmings of this fine collection are found to comprise some morsels that would make the pride of a *menu* less fastidious than his. The specimen of Meissonier, for instance, is strong, terse, and solid to the extreme of that painter's bent; it shows a cavalier warming himself in an anteroom; the little touches are positive, without repentance, and, so to speak, large; one comprehends, in dwelling on this simple study of a suit of clothes and a leathery face, how Meissonier is a painter in the grand style, though restricting himself to minute focus and cabinet canvases; the brush in his fingers, broken of its vagaries, taps the picture like a punch rather than like a plume. The Gérôme is a still better example, and it is rather puzzling how Mr. Belmont could consent to part with it, as Gérôme is producing now nothing so inventive, or so beguilingly covered with the illusion of antiquity. It is the "Diogenes," the large picture, and not the little color-sketch which has been exhibited in this country; the cynic, seated in an old earthen jar, is preparing his lantern to look for a man; his procedure is watched by a crescent of dogs, lean and little-hoping brutes in full harmony with himself, who agitate their pointed snouts in a sceptical and pessimistic manner, yet a manner not devoid of appetite. The figure of Diogenes, treated in nude, is firm like a carving, and the analytical, inexorable modelling seems to pronounce the forms like some mathematical demonstration: such and such a set of muscles, cast into such action, could not possibly arrive at any other grouping or any other detail. By Merle there is the "Crétienne," showing the action of emotional contemplation on a lymphatic and sedentary subject; she makes *étalage* of her fat wrists, curly fingers, and liquid eyes; although she is well painted and popularized by a fine engraving, she seems to suffer from that indefinable lack of moral directness which Anglo-Saxons, even while forgiving much, have never forgiven when it occurs in French interpretations of religion. The large Bouguereau, too—a mother who has lifted her baby from the cradle—has a slight lack of heart, or something in the type, which has brought it about that American connoisseurs do not get along with it, even while admitting that hardly another contemporary painter could have moulded such a mother's face or such a pretty infant. For genre painting, indeed, we find nothing more hearty and enjoyable in the collection than the home-scene by Max Michael, of Berlin, wherein a good little boy, sent up to his father with a birthday address, is stealing a glance at his manuscript, like an imperfect actor as he is, amidst the delighted merriment of the parents, and the musing contemplation, not unmixed with scorn, of his elder sister. The character here is exquisitely felt, and the technic does not seem to yield greatly in ability to the Ecouen pictures of Frère and Soyer in the next room. There is a large "history," a piece of "official" art, by Robert Fleury, a magnate so very comfortable at home in the lofty praises of the community that he can afford to lose, what certainly will be slow to reach him, the chorus of American adulation. There is a cattle-piece by Rosa Bonheur, excellent for bovine character, but flat and ineffective as a landscape; and another by Troyon, the live figures in which are of less account, while in landscape it is of masterly excellence, containing indeed a sky which blinds and extinguishes all other skies in the gallery. The pictures by Zamacois, Hamman, Jacque, and Toulmouche, are in the well-known vein of their authors; but we may spare a good word for Joseph Stevens, of Brussels, whose fame is more thoroughly obscured by the brilliant reputation of his brother Alfred than it ought to be, and whose delineation here of a tired cab-horse, catching cold in the rain, is a true and brave piece of work, commendable to all who are just now sympathizing with cases of "chevaline catarrh." The indications we have given will only suggest, and not exhaust, the riches of a choice and delicate collection; the real gems of the gallery of Mr. Belmont, it is gratifying to learn, remain in each other's company and in his own favor.

—The flood of English announcements for the fall season will hardly serve to make the present year conspicuous in literature, or so raise its average as to leave it more than mediocre when compared with some of its predecessors. Among the excerpts which we shall now proceed to make from the copious lists of the London *Publishers' Circular* and the *Bookseller*, no work perhaps is worthier to stand first than Mr. Darwin's on the "Expression of the Emotions in Man and Animals," which will be accompanied by photographic and other illustrations. Doubtless this will be at once one of the most popular and most striking, not to say convincing, of all his works which treat of the origin and relationships of man. Other scientific works are: "The Story of the Earth and Man, in a Series of Sketches of the Geological Periods," by J. W. Dawson, LL.D.; "Records of the Rocks," by Rev. W. S. Symonds, F.G.S., with illustrations; "Walks of a Naturalist with his Children," by Rev. W. Houghton; "The Seaweed Collector," by Shirley Hibbard, illustrated; "The Orbs around Us," by Richard A. Proctor; the late Prof. De Morgan's "Budget of Paradoxes," originally contributed to the *Athenæum*; "Change of Air and Scene, with Notes of Excursions for Health to the Pyrenees and the Watering-places of France," by Dr. Alphonse Donné; "Nursing the Sick," by Dr. Æneas Munro; "Illustrations of the Influence of the Mind upon the Body," by D. H. Tuke; and, in intimate connection with health and disease, "The Water Supply of Cities and Towns," by William Humber, and (a second edition) Samuel Hughes's "Water-works for the Supply of Cities and Towns," with a description of the principal geological formations of England as influencing supplies of water.

—Biography counts a goodly number of works, almost all of which promise to be interesting. We may begin with "The Personal Life of George Grote, the Historian," written by his widow; "Notes of Thought and Conversation," by the late Charles Buxton, M.P., with a memoir; "Memoir of the late Dean Alford," edited by his widow; "Memoir of Dr. Norman Macleod," by Alexander Strahan; "Life and Correspondence of Field-Marshal Sir John Burgoyne," edited by Col. Wrottesley; "Life and Letters of Captain Frederick Marryat, R.N.," by his daughter Florence; "A Lady of the Last Century (Mrs. Elizabeth Montague)," by Dr. Doran; "Memoirs of Mrs. Lætitia Boothby," written by herself in the year 1775, and now edited by W. Clark Russell; "Personal Monographs," by Lord Houghton, accompanied by portraits; "Memorials of a Quiet Life," by A. J. C. Hare, embracing reminiscences of Coleridge, Arnold, and others; "Memoirs of Leonora Christiana, Daughter of Christian IV. of Denmark," written during her imprisonment at Copenhagen, and translated by Frances E. Bunnètt; "Memoirs of Baron Stockmar," by his son; "Briefs and Papers, being Sketches of the Bar and the Press"; and "Doctors and Patients; or, Anecdotes of the Medical World, and Curiosities of Medicine," by John Timbs, F.S.A.—a work in two volumes.

—Rather less numerous are works of travel, adventure, and discovery, of which the following seem worth noting: "A Search after Sunshine; or, A Visit to Algeria in 1871," by Lady Herbert; "A Scamper to Sebastopol and Jerusalem," by James Creagh; "Our Work in Palestine," a history of researches conducted in Jerusalem and the Holy Land by Captains Wilson, Anderson, Warren, and others; "Travels in the Eastern Caucasus, the Caspian and Black Seas, and Daghestan," by Gen. Sir Arthur Cunnynghame; "Jottings during the Cruise of H.M.S. *Curaçoa* among the South Sea Islands in 1865," by Julius Brenchley; "Adventures of Three Russians and Three Englishmen in South Africa," by Jules Verne; "Life and Explorations in Africa," by the Rev. C. New; "Rough Notes of a Journey through the Wilderness, from Trinidad to Pará," by H. A. Wickham; "The Mormons and the Silver Mines," by James Bonwick; and "Overland, Inland, and Upland," by a lady. In history we are promised: "Bokhara: Its History and Conquest," by Prof. Arminius Vámbéry; "History of Sicily to the Athenian War," by W. Watkiss Lloyd; "Estimate of the English Kings, from William the Conqueror to George III.," by J. Langton Safford; "St. Domingo, Past and Present, with a Glance at Hayti," by S. Hazard, with maps and woodcuts of the author's designing: "Cleveland, Ancient and Modern," by Rev. J. C. Atkinson; and "City Road Chapel, London, and its Associations," by Geo. John Stevenson, a work containing a chapter on remarkable longevity which may perhaps interest Mr. W. J. Thoms, lately editor of *Notes and Queries*, who is now engaged upon a work in which he hopes to show that no modern instance of centenarism can be authenticated—a theory which could be easily upset from this side of the Atlantic if not from the other.

—Religious works, issued and to appear, embrace: "The Gallican Church, from the Concordat of Bologna, 1516, to the Revolution," by W. H. Jervis; "History of Christian Theology to the Apostolic Age," by Professor Reuss; "Essays on the Rise and Progress of the Christian Religion in the West of Europe, from the Reign of Tiberius to the end of the Council of

Trent," by John Earl Russell; "Turning-Points in Life," by the Rev. Frederick Arnold; and "The Cloud of Witnesses," a sermon preached at Dunrobin by Dr. Cumming, when, as we learn from the *Publishers' Circular*, "the Queen was graciously pleased at the close of the service to say to him: 'Dr. Cumming, I thank you for your discourse, to which I have listened with great pleasure.'" "Sagas from the Far East, or Kalmouk and Mongolian Tales"; "Tales of the Teutonic Lands," by Geo. W. Cox; "Brides and Bridals," by J. Cordy Jeaffreson; and "Present Pastimes," by F. C. Burnand, will complete our list. The art publications, including in that term illustrated works on all sorts of subjects, are fairly numerous; but we have left ourselves no space in which to speak of them.

TYLER'S LIFE OF TANEY.*

IT was the misfortune of Chief-Justice Taney to be brought by the faithful discharge of his duty into opposition to the prevailing sentiment of his countrymen at a period of intense national excitement. His unpopular performance of a high conservative function—a performance he had no right to refuse, and no opportunity to defend—incurred a tempest of aspersion which time and reflection are only beginning to dispel. His office imposed on him the burden of pronouncing the formal logical conclusions flowing from a legal system long ago outgrown by the nation. The man was made to expiate the wrongs of the system, by politicians who found their account in directing against him the generous and easily misled wrath of that part of the nation which was the first to perceive these wrongs.

Once before, in his public career, Taney had been assailed by a clamor which was, however, neither popular nor generous. The history of the United States Bank concerns a past generation; yet so long was Taney's life that this episode in it occurred in his maturer years. For he was born in colonial days, the year after the Declaration of Independence, and he was trained by the teachings of Monroe and Madison as a strict constructionist of the new Constitution; yet he continued an active though not a partisan member of the Federal party while it strove with the Republicans of that day for the political control of the new nation. As a Federalist, he opposed the war of 1812, but forgot party ties and personal views in its hearty support when once declared. For several years, both before and after the war, he pursued his profession in the busy little manufacturing city of Frederick, where his signal abilities and assiduous study soon gained him a share in all the business worth having in what was then the great western town of Maryland, and by degrees attracted to his office cases from every part of the State. Here he married Miss Key, the sister of Francis Scott Key, whose chief distinction is that of being the author of "The Star-Spangled Banner." It might be curious to enquire how far the history of the brothers-in-law sustains the truth of the saying about the songs and the laws of a people. Yet this professional activity did not exclude interest in political affairs. Once during his residence at Frederick he was defeated as a candidate on the Federal ticket for the Lower House of the Maryland Legislature, and once again when named by the war-Federalists as representative in Congress. And in 1816 he became a member of the State Senate, and directed much important legislation in organizing the tribunals of Maryland. In 1823, he removed to Baltimore, where his increasing reputation and practice soon carried him to the leadership of the Maryland bar. It was while he held the office of Attorney-General for the State, and at the age of fifty-four, that the eye of President Jackson discerned in him a fit person for a place in the Cabinet, where the character of its chief and the gravity of the questions engrossing the public mind demanded strength and boldness.

Our domestic history has always moved in cycles determined by the oscillations of the respective orbits of national and State authority. The theories inspiring the rival parties that arose on the adoption of the Constitution are the theories which really divide parties to-day. In 1829, they marked out the grounds of conflict even more clearly. If the President, in his inaugural, condemned encroachments of military upon civil authority, attacked a national debt, and rebuked Federal interference with elections, on their part his opponents were loud in support of a high tariff, of national aid to internal improvements, and of a strong central moneyed power. It was in the contest with the last of these political heresies, as embodied in the United States Bank, that the aid of Taney's sagacity and courage and peculiar financial ability was sought by the President.

In spite of its supposed precision and its subjection to judicial construction, our Constitution has always been indirectly made to serve the turn of that sort of legislation which its friends calls progressive and its enemies call revolutionary, quite as effectively as though Congress had the omnipotence of Parliament. The theory of latent powers necessary to carry out those granted has been found elastic enough to satisfy almost any party demands in time of peace, to say nothing of its enormous extensions in time of war. Compared with the present system of land grants to railways, deduced from the power of Congress to regulate commerce, and consequently internal improvements among the States, the creation of a National Bank to equalize currency seems a safe and easy conclusion from like premises. The real dangers of the later experiment are written plainly enough in the history of the earlier one, if we choose to read them. Nor will the political passion which, forty years ago, saw in the Bank a monster, and in Jackson the saviour of his country, seem at all exaggerated when the impending struggle shall begin, less than forty years hence, between governments, State and national, and great corporations. Taney, as Attorney-General, served the President and the country well in that contest, expressing his large legal experience and solid principles in forcible counsels. When the time came for striking the last blow by the removal of the Government deposits from the custody of the Bank, Taney assumed the bold task, replacing the vacillating Duane by executive nomination, as Secretary of the Treasury. While holding that office he found occasion, in his report of May, 1834, upon the finances, to vindicate his administration of it and to justify the attack upon the Bank in a manner that ensured the rejection of his nomination by an angry Senate, the month after. It was the first instance of such a refusal to confirm the President's nomination of a cabinet officer. The motives for the rejection, betrayed by the silent vote that effected it, were so persistent as to cause his defeat when nominated the following year as Justice of the Supreme Court, even though the appointment was favored by Marshall. But the abuse heaped upon him by the retainers of the Bank, both in and out of the Capitol, soon died away; and the student of history to-day accepts the judgment formed at last by the public mind, that Taney deserves praise rather than blame for his share in the contest with the United States Bank. It must be from carelessness rather than by intention that his biographer confounds the future course and regular and solvent winding-up of the National Bank, on the expiration of its charter in 1836, with the reckless and flagitious management, ending in bankruptcy five years later, of the State bank chartered under the same name by Pennsylvania.

In 1835 the highest office under the Government became vacant by the death of Chief-Justice Marshall, who had shed lustre upon it and upon American jurisprudence since the beginning of the century. Taney's appointment as his successor was confirmed on the 15th of March, 1836, after vehement opposition from the old Whig leaders, under the pretext that the place was given as a reward for political services. It was such a reward, even as Marshall had received the same reward from Adams, for services rendered not to the President or party, but to the country. It was a reward deserved by merit and fitness, honorable both to the giver and the receiver; and it will be well for the country when a return to the old-fashioned practice does away with the modern perversion of the words that describe it.

In arguments before the Supreme Court discharging its function of pronouncing on the constitutionality of Acts of Congress, there has of course always been, as in the preceding legislative discussion, a contest between theories of a strict construction of the Constitution, and the latitudinarian ingenuity which would sustain almost any law as being within the meaning of that instrument "necessary and proper for carrying into execution" the specific powers granted. Marshall, in his earlier days a rigid constructionist, had leaned in his later years towards the other view. That it was the effort of Chief-Justice Taney to bring the court back to its former strictness in dealing with such cases is evident, not only from the current of his published decisions, but also from the protesting and almost lamenting tone indulged in by Judge Story in his dissenting opinions and his correspondence. The particular instances of this tendency in Taney's mind would be interesting only to the professional reader, who will find the biographer's review of the cases in which it was manifested to be full and impartial. Between the respective rights of the States and of the Federal Government, Taney drew a firm and clear line, and on occasions of conflict resolved the questions discussed in a large untechnical manner, yet with all due regard to precedent. He carefully observed (as in the instances of the boundary dispute between Rhode Island and Massachusetts, and in the later controversy involving indirectly a decision between the regular and the revolutionary government of Rhode Island) the distinction between matters of property and political rights, refusing to stretch the jurisdiction of the court over the latter. Yet when the occasion called for statesmanlike forecast, he did not hesitate to enlarge the area of Federal legislation to the widest allowable limits, as in his liberal decision affirming the constitutionality of the act which extended admiralty jurisdiction beyond tide-waters to the great lakes and navigable rivers of the country. Unless this tempering of conservatism by impartiality, this reluctance to magnify his office, are borne in mind, an estimate cannot fairly be

* "Memoir of Roger Brooke Taney, LL.D. By Samuel Tyler, LL.D." Baltimore: John Murphy & Co. 1872.

made of his conduct in the great case which brought such obloquy on his name.

Taney alone of the public men living at the outbreak of the late rebellion saw all the phases of that long quarrel which planted discord at the very birth of union. From the Massachusetts declaration of the right to secede, upon the purchase of Louisiana Territory, and the assertion by Josiah Quincy of the duty to do so, at the admission of that State eight years later, through the times of the Hartford Convention, accused by Adams of conspiring to dissolve the Union, through nullification and the compromises of 1820 and 1850, through the suspension of the right to petition and the Kansas and Nebraska Acts, down to John Brown's raid and the fall of Sumter, he knew all the elements in that widening strife, and the chief political actors on both sides who fomented it. The story of its progress is told by his biographer in the language of the South, with blame only for the North. It is not within the purpose or limits of this paper to point out his inaccuracies of statement, especially with regard to the fairness and general acceptance of the compromise of 1850. At last, after Taney had presided in the Supreme Court for twenty years, growing in the respect and confidence of the nation, the duel of the sections took the shape of a constitutional question before that tribunal, and the issue whether Congress could exclude slavery from the Territories was presented in the famous Dred Scott case. The decision that it could not, given by six judges out of eight, was delivered by the Chief-Justice in an elaborate opinion. It is out of place here to consider the merits of that controversy. But two points in the subsequent history of the decision, on which the biographer dwells at length, cannot be passed over if justice is to be done to the memory of Taney. In the necessary review of the condition of the African race at the time our government was formed, Taney stated as a historical fact that throughout the civilized world negroes "were regarded as so far inferior that they had no rights which the white man was bound to respect." These are the very words of his decision, and some judgment may be formed as to the temper of the times, when it is remembered that they were seized upon by partisans, falsified into an utterance of his own present views upon the rights of the blacks, and published through the world and believed by thousands as such. A graver charge against Taney, and as false a one, was uttered on the occasion of that decision by no less a person than Mr. Seward, on the floor of the Senate—the charge of a corrupt arrangement between President Buchanan and the Judges of the Supreme Court to get up a mock trial on the Dred Scott case, for a political purpose. The biographer shows conclusively, by correspondence with the judges and by comparison of dates, that there neither existed nor could have been supposed to exist a shadow of truth in the story.

Such accusations, indeed, though posterity will be sure to clear him of them, Taney could not at such a crisis hope to escape. Not he, but the Constitution, was on its trial—the Constitution, declared by Marshall to be a superior, paramount law, unchangeable by ordinary means. The time had come when it must be changed, because its provisions, framed in an earlier day of narrower thought and experience, had ceased to express the convictions and purposes of the people. Neither ordinary means, nor the extraordinary methods of amendment provided by the instrument itself, were available. The supreme remedy of civil war was close at hand.

It is a relief to turn from this public persecution to the private life and character of the Chief-Justice, as sketched in this volume. His simplicity and high honor impressed every one who came into relations with him. The great men who had been his political enemies in early life sought reconciliation and asked counsel of him in his later years. The few charming letters that are given bear witness to the tenderness of his affections and the gentle authority of his social influence. His religion was that quiet and constant force in life of which the Roman Catholic faith often offers such beautiful examples, and his charity in act and speech the ready expression of an honest, generous nature. As a strong, calm, and pure man, filling blamelessly the highest station in the most troubled period of the national life, Chief-Justice Taney will always remain one of the most venerable and interesting figures in the history of the country.

"GARETH AND LYNETTE."*

SOME other and earlier poetry of Mr. Tennyson's the "dark-browed sophist" was to "come not anear," for the reason that no such person could "fathom it," the thought and feeling being too much for him in its delicacy and profundity. We should say that in this case, too, he may probably consider himself warned off the premises, and that "Gareth and Lynette" also, like the earlier poem, is not calculated to give him much pleasure. In other words, supposing the sophist's brow to have an organ of sound judgment behind it; supposing him to be a person well acquainted with poetry and capable of detecting a counterfeit poet, or a genuine poet who has been counterfeiting and issuing notes with nothing behind them; a person who does not, for instance, confound dreamy languors with delicate sensibility to real feeling and emotion; a person who believes that the imagination of which the poet is compact is not a sick girl with sick fancies, but is, as Keats finely said, like Eve, who was Adam's dream until when he awoke he found her to be the living truth; a person who knows that poetry in its essence is not a shadow of cloudland, but a clear vision of truth, which the reason will in no way contradict nor the heart disapprove—supposing the dark-browed sophist of most of the poets who talk about him to be a person of this general description, we fancy that he got about as much satisfaction from the poem of "The Poet's Mind," produced in the Laureate's callower years, as he will be likely to get from this new idyl.

While yet the Knights of Arthur's Table are all brave and loyal, and the ladies of his court are all as chaste as fair, Gareth,

> "The last tall son of Lot and Bellicent,
> And tallest,"

burns with an ardent desire to become a warrior for the right,

> "To sweep
> In ever-highering eagle circles up
> To the great Sun of Glory, and thence swoop
> Down upon all things base, and dash them dead."

He is, however, kept at home by his mother, who is frighted at the thought of his departure from her, and has long resisted his wish; but at last he gets her leave. Incautiously telling him that he may go to the court, but that it must be in disguise, and that if serve the king he must, he must serve in the scullery for twelve months and a day before he serves in the field, he takes her at her word, and on the following day sets out for the city. The king, who knows his lineage, receives him well, granting the required boon, and Gareth becomes a kitchen thrall, under the discipline of Sir Kay, the curst and shrewd, a seneschal who nips his scullions severely, and who in particular mislikes young Gareth, and hazes him, as the mariners say, and puts upon him, as goes the phrase in the kitchens of our day. Thus Sir Kay receives his new assistant:

> "He rose and past: then Kay, a man of mien
> Wan-sallow as the plant that feels itself
> Root-bitten by white lichen,
>
> "'Lo ye now!
> This fellow hath broken from some Abbey, where,
> God wot, he had not beef and brewis enow,
> However that might chance! but an he work,
> Like any pigeon will I cram his crop,
> And sleeker shall he shine than any hog.'"

Or "pork hog," as the original has it. Lancelot, who, as well as Arthur, is in the secret of the youth's birth, is ever kind to him, and interferes to bespeak for him the seneschal's good-will, remarking with the courtesy for which he is famous that Sir Kay knows all about dogs—

> "Sleuth-hound thou knowest, and gray, and all the hounds"—

and also knows a horse, but that as a person to judge of a man he knows nothing, and that Gareth is no doubt of noble birth, his hands being fine, his nose high, his hair fluent, and so forth. To whom Sir Kay waspishly:

> "Then Kay, 'What murmurest thou of mystery?
> Think ye this fellow will poison the King's dish?
> Nay, for he spake too fool-like: mystery!
> Tut, an the lad were noble, he had ask'd
> For horse and armor: fair and fine, forsooth!
> Sir Fine-face, Sir Fair-hands? but see thou to it
> That thine own fineness, Lancelot, some fine day
> Undo thee not—and leave my man to me.'"

And of this following manner was the manner of Gareth's life in the suds under the seneschal's supervision:

> "So Gareth all for glory underwent
> The sooty yoke of kitchen vassalage:
> Ate with young lads his portion by the door,
> And couch'd at night with grimy kitchen-knaves.
> And Lancelot ever spake him pleasantly,
> But Kay the seneschal who loved him not
> Would hustle and harry him, and labor him
> Beyond his comrade of the hearth, and set
> To turn the broach, draw water, or hew wood,
> Or grosser tasks; and Gareth bowed himself
> With all obedience to the King, and wrought
> All kind of service with a noble ease
> That graced the lowliest act in doing it."

"So for a month he wrought among the thralls," and then on a day a damsel, Lynette by name, enters Arthur's hall, and cries upon him for justice, her case being this: a caitiff knight besieges the castle of her sister, the Lady Lyonors, whom he desires in marriage, she desiring none of him, but by all means somebody or anybody else. His three brethren, "strong fools," according to Lynette, guard the approaches to the lady's castle, suffering no suitors to pass the river fords, the first brother guarding one passage of the

* "Gareth and Lynette. By Alfred Tennyson, D.C.L., Poet Laureate." Boston: James R. Osgood & Co. 1872.

circumvolving river, and calling himself Morning Star, the second calling himself Noon Sun, the third calling himself Evening Star, and the three collectively being known as Day, while the fourth goes by the name of Night. This last is a knight of portentous appearance, singular habits, and of a reputation to match his looks. Some hold that he has eaten the flesh of infants; he at all events slaughters women and children; he rides always by night; he never speaks to any one but by the mouth of his squire, who gives him out for a most fearful demon when roused, and easily roused; he wears a grinning skull at the top of the helmet which crowns his gigantic stature, the skull, no less than his name of Night, threatening endless night and death to whosoever provokes his sword. This is the suitor for the hand of Lyonors, and she, extremely anxious for deliverance from him, seeks as a champion Sir Lancelot, for whom accordingly Lynette asks. But Gareth, whom previously the king had in secret made a knight, now, much to the disgust of Sir Kay, loudly demands that the quest be given to him, and obtains his request, much to the surprise of everybody and to the exceeding indignation of Lynette, who is something of a shrew, as perhaps is indicated by her curious nose:

"Tip-tilted like the petal of a flower."

At this point we are half through the mere story, and may for a moment pause to remark on the foreign matter imported into it. Of this there is not much; and what there is cannot be said to improve it. The four brethren, whom Lynette sharply but with substantial justice called four fools, borrowed their allegorical names from a painted allegory drawn on the walls of a gorge by a holy anchorite once resident there. The allegory sets forth "the war of time against the soul of man." The beholder sees the name "Phosphorus," then "Meridies," then "Hesperus," then "Nox" and "Mors" carved upon the slabs of stone, and under each name the figure of an armed man. These five, "their faces forward all," are depicted as pursuing after the soul—"a shape with broken wings" that flees for help and shelter towards the cave of the anchorite. We may anticipate the sequel of the young knight's adventures by saying that his faith and courage are victorious over all the representatives of Time, and that when he comes to war with Night and Death, that terrific monster—the skull which surmounts his helmet being cloven and his helmet, also split in two, found empty—discovers himself as a blooming youth, who asks quarter and says it was his three brethren who clothed him with horrors not his own. This fable teaches, we presume, that faith and loyalty are triumphant over Time, and that after death's grisly terrors have been encountered life and immortality are found beyond. The reader will readily come to a conclusion as to the value of this lesson and as to the poetical value of the imagery by which it is set forth. For our own part, we should say that at least it is all better than finding Gareth and Lynette to be a sun myth or a piece of phallic symbolism, though exactly how much better it is we do not undertake to say.

To return to Camelot, Lynette no sooner understands that Gareth is to be her sister's champion than she flings out of the hall in a very disrespectful fury, and sets her face towards the Castle Perilous without waiting for her escort, who, however, equips himself and makes after her. Thus she accosts the young man:

"To whom Sir Gareth drew
(And there were none but few goodlier than he)
Shining in arms, 'Damsel, the quest is mine.
Lead, and I follow.' She thereat, as one
That smells a foul-flesh'd agaric in the holt,
And deems it carrion of some woodland thing,
Or shrew, or weasel, nipt her slender nose
With petulant thumb and finger shrilling, 'Hence!
Avoid, thou smellest all of kitchen-grease";

and spurring her horse she flies from him. He follows on, and when he comes up to her is again abused like a pickpocket, but like a true knight he answers gently and with a smile which drives the young lady nearly crazy, and once more she flies. This time she loses her way in the forest, and when Sir Gareth comes up with her tells him so, and permits him to keep in her company; lion and stoat, as she tells him, having before then consented to "isle together, knave, in time of flood."

Sir Gareth begins his good fortunes by unseating Sir Kay, who pursues him to bring him back to his dish-washing, and who goes "dislocated home," for which exploit none the less does the damsel revile him. Soon afterwards he rescues from six robbers a knight whom these ruffians had bound and weighted with a great stone about his neck to the end that he might be drowned in a pool; but Lynette continues her abuse and declines to sit at the table with him:

"Him—here—a villain fitter to stick swine
Than ride abroad redressing woman's wrong,
Or sit beside a noble gentlewoman."

As they proceed on their journey, however, and success attends Sir Gareth's lance, the maid gradually begins to fall in love, though she fails not of her impudence till some time after the tender passion has stolen in upon her. This part of the story is far better managed than the rest of it, and the song of which a verse or two is sung now and again by Lynette in snatches will please the readers who have liked the blank verse songs of which Mr. Tennyson made so very fortunate a beginning in "Tears, idle tears," and one of which has adorned each of his idyls. As we have quoted from this poem so much that seems to us wholly unworthy of its author's reputation, and of evil example to all young poets—who are, we fear, but a lazy breed at the best—we will quote this pretty song complete:

I.

"O morning star that smilest in the blue,
O star, my morning dream hath proven true,
Smile sweetly thou! my love hath smiled on me.

II.

"O sun, that wakenest all to bliss or pain,
O moon, that layest all to sleep again,
Shine sweetly: twice my love hath smiled on me.

III.

"O dewy flowers that open to the sun,
O dewy flowers that close when day is done,
Blow sweetly: twice my love hath smiled on me.

IV.

"O birds that warble to the morning sky,
O birds that warble as the day goes by,
Sing sweetly: twice my love hath smiled on me.

V.

"O trefoil, sparkling on the rainy plain,
O rainbow with three colors after rain,
Shine sweetly: thrice my love hath smiled on me."

The verses mark, though not very obviously, the progress of Lynette's passion, the last of them being preceded by these lines:

"But the damsel said,
'I lead no longer; ride thou at my side;
Thou art the kingliest of all kitchen-knaves.'"

On the whole, "Gareth and Lynette" will add nothing to the value of the poem in which it is placed. It has all the faults of the other idyls, some of its own, and but an insufficient degree of the merits which have made that series of poems a pleasing and, in some respects, a delightful work. We think the author's better admirers will regret its appearance as being injurious to its companions. Parting with Mallory's charming realm of romance, and having it to some extent utilized, and so to speak utilitarianized and unpoetized, for the sake of getting the sweetness of the Tennysonian Elaine, the high strain of honor, the keen sense of duty of the Tennysonian Arthur, and the remorse and sense of sinfulness of the new Lancelot—this is one thing; but parting with our enchanted land and with Sir Gareth of Orkney and his Linet, and the Castle Dangerous, and getting in exchange a feebly grotesque story about the new Sir Kay and allegorical knights and damsels with tip-tilted noses, is quite another thing, and one which it will please few good readers to do. Let alone such higher matters as the inadequate conceptions of life, destiny, and duty which these idyls exhibit, there is in "Gareth" very little to redeem its faults in respect of such smaller matters as the frequent false simplicity of diction, and the frequent absurd turgidity; the failure—almost sure to be melancholy and total when Mr. Tennyson attempts the humorous—of Sir Kay and the fishwiferies of the damsel; the weakness of the invented part of the tale.

It is perhaps no harm to remind parents whose boys seek romantic reading, that it is now possible to get, at a cheap rate, a judiciously expurgated and well-arranged edition of Sir Thomas Mallory's compilation, and that it is a very suitable book for the approaching season of presents.

A Norwegian-Danish Grammar and Reader. By Rev. C. J. P. Peterson. (Chicago: S. C. Griggs & Company. 1872.)—This is a book remarkable neither for profundity of scholarship nor for any high degree of literary merit; but containing, as it does, the rudimentary grammar of the Norwegian-Danish language set forth in tolerably intelligible English, it may in a measure accomplish its purpose, that of bringing the literature of Norway and Denmark within the reach of English and American students. The effort is certainly in itself a laudable one, and it is therefore the more to be regretted that the author has not had the skill to avoid many of those inaccuracies which now mar the pages of his book, and which, we fear, will seriously interfere with its usefulness. His failings are especially conspicuous whenever he ventures upon a paraphrase of an English idiom—for, being but moderately versed in the phraseology of English grammar, he is frequently compelled to resort to the most artificial paraphrases. In the first part of the etymology there occur several misapplications of grammatical terms, among which we especially note the following. Any changes in the termination of words, no matter whether declensions, conjugations, or

derivative changes, are treated under the common head of inflections; *Baron* (a baron) is thus inflected into *Baronesse* (a baroness); *Biskop* (a bishop) into *Biskopinde* (a bishop's wife), etc.

On page 15, where a list is given of the nouns which change their meaning with their gender, we find two mistranslations. *En Brug* certainly means a custom, but *et Brug* (neuter) does not mean a trade, but a mill or a factory. *En Værk* is not "a pain," but a boil. In section 14 the author contradicts the rule quoted on the preceding page. "The neuter gender of adjectives," he says, "is formed by adding a *t* to the common gender"; and, as an example, he gives *god* (good), neuter *godt*. On the next page he asserts that adjectives ending in *d*, with a vowel before it, "are not inflected in gender." On page 12, where the Norwegian alphabet is given, we are told that the letter *j* is pronounced like the English *j* in *job*, while the truth is that it has the sound of the English *y* when used as a consonant, as in *yacht, yes, Yankee*, etc. It is also very questionable whether the Norwegian letter *o* can be said to be identical in sound with the English *o* in *oak*, and equally doubtful whether *ö* is the English *u* in *bury*. In regard to the English *o*, it has been observed by elocutionists that it has a diphthongal character, or rather that it is a compound sound, consisting both of the open and the closed *o*-sound. Any one attempting to pronounce *old, cold, oak*, etc., may convince himself of the truth of this. The Norwegian and Danish *o* has both these sounds, but never in the same syllable. When short, as in *Borger* (citizen), *Orden* (order), it is pronounced like the English *o* in *often*; when long, either with this same open sound prolonged, as in *order, form*, or with the closed sound of the German words *ober, Ohr*. The letter *ö* has also two distinct characters, none of which is that of the English *u* in *bury*. It is either short, like the English *u* in *uncle*, or long, and has then the sound of the German *ö* or *æ* in *Höhe, Oehl*.

In his translation of Norwegian idioms, the author gives further evidence that his knowledge of the English language is only of a superficial kind. A brief consultation of Webster's Dictionary would, in many instances, have relieved him of the necessity of making an elaborate paraphrase where a direct translation would have been more to the purpose. If, for instance, he had been acquainted with the use of the word *vein*, in the sense of turn of mind, cast of genius, he would have rendered the phrase, *Han har en poetisk Aare*, he has a poetical vein, or he has a vein for poetry, instead of "he has some *talent* for poetry," and the imagined difference would have altogether vanished. To take another example: the more literal translation of the idiom, *At gaa i Barndommen*, to be in one's second childhood, would have been preferable to "to be in his dotage"; and so in numerous other instances.

Some fifty years ago, the Danish grammarian Rask made a similar effort to introduce the Norwegian-Danish language to the notice of English readers; but his book is now both out of date and out of print. In spite of all its deficiencies, the present grammar and reader cannot fail to attract some attention among students who feel an interest in the tongues and literatures of foreign lands. And to those who are already familiar with the literatures of the Scandinavian countries, it cannot but appear strange that they should have remained so long a *terra incognita* to English-speaking nations. In Germany, the works of Oehlenschlæger, Hertz, and Bergsoe have appeared almost simultaneously with their publication in Copenhagen, while in England and America they are still waiting for an introduction, perhaps with the exception of Hertz, whose drama, "King René's Daughter," was published some years ago in Hurd & Houghton's series of foreign translations. We therefore rejoice to see names like Welhaven, Asbjörnson, and Wergeland in a book published on this side of the Atlantic, even if the selections from their writings are not in every instance judicious. It seems especially hard to forgive Mr. Peterson for choosing among all Wergeland's poems a piece of nursery doggerel entitled "The Kings of Norway," in which none of the poet's characteristics appear, which he simply wrote as an historical exercise for schoolboys, and for which he never thought of claiming any degree of literary merit. But Asbjörnson's "Reindeer Hunt," and Welhaven's "A Legend of St. Olaf," are fine and worthy specimens of Norse literary art.

Goethe and Mendelssohn. (1821–1831.) Translated, with additions, from the German of Dr. Karl Mendelssohn-Bartholdy by M. E. von Glehn. With portraits and facsimile, and letters by Mendelssohn of later date. (London: Macmillan & Co. 1872.)—At Goethe's death, in 1832, Mendelssohn was only twenty-three. The friendship between the two, if that be the right word to describe their relations to each other, had begun eleven years before, when Mendelssohn was a boy of twelve and Goethe nearly seventy-three, but still fond of talking of pretty girls, and as well-pleased as ever to have his artistic tastes skilfully ministered to. As for Mendelssohn, the boy had already written two operas and was busy with a third; to say nothing of six symphonies, a cantata, six fugues for the pianoforte, and a psalm in four and five parts with a grand double fugue. Like most geniuses, and, we believe, like all musical ones, he had developed early; and Goethe, who had listened in his own fourteenth year to Mozart in his seventh, felt moved to say that the young Mendelssohn bore "the same relation to the Mozart of that time, that the cultivated talk of a grown-up person does to the prattle of a child." A critic of seventy-three, even as cool-headed as this one certainly was, is perhaps not altogether to be relied on to compare faithfully his judgment of sixty years back with that formed in age beside a beautiful and fascinating child like Mendelssohn. The maturer works of the latter are not likely, at least, to be placed on as lofty a level as those of Mozart.

One gets a very pleasant impression both of Goethe and of the little musician in the letters written home at this time by the latter:

"Every afternoon," he says, "Goethe opens the Streicher piano with these words, 'I have not heard you at all to-day, so you must make a little noise for me.' Then he sits down by me, and when I have finished (generally improvising), I beg for a kiss, or else I take one. You can have no conception of his goodness and kindness, nor of the quantity of minerals, busts, engravings, statuettes, and large drawings which this Pole-star of poets has in his possession. That he has an imposing figure I cannot see; he is really not much bigger than my father. But his look, his language, his name, they are imposing. His voice has an enormous sound in it, and he can shout like ten thousand fighting men."

But after all there is not very much more of Goethe in the little volume than will fairly suffice to give it a taking name. There are a few notes from him which do not say a great deal, and as in the case of the Beltine correspondence "the child" has the most interesting part to play. The background against which the figure is thrown up is, of course, a great thing in itself, but here it is not much more than a background. In a letter to Goethe, Mendelssohn makes a characteristic criticism on the differences between the North and South Germans, which artists of all kinds have frequent occasion to verify:

"It is most amusing," he writes, "to see the difference between a Munich and a Berlin musical party. At Berlin, when a piece of music comes to an end, the whole company sits in solemn silence, each one considering what his opinion is to be, nobody giving a sign of applause or pleasure; and all the while the performer is in the most painful embarrassment, not knowing whether or in what spirit he has been listened to. And yet afterwards, he often finds people who have given all their attention, and been very deeply moved, though outwardly appearing so cold and indifferent. Here, on the contrary, it is great fun playing at a party, because the people can't help talking every minute about what they like; sometimes even they begin clapping and applauding in the middle of a piece; and it is not at all uncommon, when one gets up from playing, to find that everybody has moved because sometimes all of a sudden they want to come and watch one's fingers, and stand all round the piano, or some one wishes to make an observation to some one else, and goes and sits down by him and talks. Afterwards they overwhelm you with compliments and kindness; but I don't know whether I should not be afraid that, after a day or two, much of the vividness of the impression would fade."

The Appendix, which contains perhaps half the matter of the book, consists of certain heretofore unpublished letters of Mendelssohn, written for the most part to some of his English friends, and not specially interesting to the general reader. Those written to home friends while in England contain, however, some pleasant gossiping. He was exceedingly well received, as everybody knows, and gives his "dear little mother" a long account of a morning at Buckingham Palace, when the Queen came in to Prince Albert and himself, who had been "talking music," and after kneeling down in good housewifely style to pick up the sheets of it with which they had littered the floor, honored him by singing as well as "any amateur," some of his own songs. To musical people and to others who are not a little repelled by the sort of hero worship which imagines that every detail about its idol must be generally interesting, the work may safely be commended.

BOOKS OF THE WEEK.

THE GREAT BIBLE DICTIONARY.

The Unabridged, Enlarged, and Corrected Edition of

DR. WILLIAM SMITH'S

DICTIONARY OF THE BIBLE.

Comprising its

ANTIQUITIES, BIOGRAPHY, GEOGRAPHY, AND NATURAL HISTORY.

Edited by Professor Horatio Balch Hackett and Ezra Abbot, LL.D.

The Original English Edition reproduced without mutilation, text and illustration complete, with manifold textual errors corrected, and important additions made under the direction of the two most competent editors in America. In four volumes 8vo, pp. 3667, with 596 illustrations.

PRICES AND STYLES:

In cloth, bevelled edges, strongly bound, $26; in full sheep, $30; in half-morocco, $35; in half-calf, extra, $36; in full calf, $45.

HURD & HOUGHTON, - - - NEW YORK.
THE RIVERSIDE PRESS, - - CAMBRIDGE.

THE LIVES OF THE NOVELISTS.

BY SIR WALTER SCOTT.

With Notes. 12mo, 436 pp, neatly printed on toned paper, cloth extra, gilt top, price $2.

"Furnishing, as they do, very pleasing biographical sketches of Sir Walter's best predecessors, rich in thought, profound in criticism, flowing in style, these essays are worthy to be preserved among the more pretentious writings of the delightful romancer; and the fine charge in which they are now presented will be appreciated by lovers of literature."—New York Mail.

"An elegant edition. . . . The easy flow of Scott's narrative, the genial acuteness of his criticism, his robust good sense, and his healthy moral sense, are apparent on every page of these delightful biographies."—Boston Globe.

Will be sent free, by mail, on receipt of price.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 14, 1872.

The Week.

BOSTON has been the victim of a tremendous fire, originating no one knows how, occurring under elemental conditions not unfavorable, but speedily getting beyond control of the Fire Department, one of the best in the whole country, and resulting in the destruction of sixty acres of such warehouses and stores as no other city on the continent could show. The merchants of Boston have long been men of a breed aspiring to the title of merchant princes, and earning it by their public spirit, munificence, administrative ability, and the honors which have followed these. Governors and ambassadors have been taken from among their ranks; they have founded and endowed colleges, and encouraged learning, and everywhere, to the ends of the earth, have been known for their energy, ability, and integrity. In their warehouses they have of late years been accustomed to take a pride, and many a line of solid and handsome buildings attests the dignity of the "solid men of Boston." Now, from Summer Street north nearly to State Street, and from Washington Street east to the water's edge, with two or three small exceptions, there is nothing but rubbish remaining of the many hundreds of granite and iron structures in which the dry-goods merchants, wool merchants, and leather merchants of Winthrop Square, Summer Street, Pearl Street, Milk Street, Federal Street, Broad Street, Kilby Street, Water Street, Devonshire Street, and Congress Street carried on trade. Not many buildings of a public character were lost, though the warehouses covering the site of the birthplace of Franklin, and the homes of Webster and Everett, perished. Trinity Church, the Mercantile Library, and the Merchants' Exchange went down, but the famous Old South Church was saved, and so was the New Post-Office and the Old State House.

Of the origin of this calamitous fire, which will cost the Boston business community many millions of dollars, nothing, as we say, seems to be positively known, but its continuance and its defiance of the Fire Department are generally attributed to the common use of light Mansard roofs surmounting high buildings, to the tops of which the engines could not throw water. High buildings we shall assuredly be compelled to have in our cities; and we suspect no fire department will ever be very effective against a fire when once it has taken on the enormous proportions of this one. That the Mansard roof, with its projections, its joints, its light structure, is a bad roof in so great a fire, with the tremendous heat, the air full of flame and of flying cinders that effect a lodgment on its surfaces, would seem to be evident; but its sole responsibility is, we suppose, somewhat hastily assumed. There is, by the way, a certain satisfaction in thinking that handsome and substantial as was the portion of the city burned, the more beautiful portions which make the compact little city the most beautiful in America for its general position and proportions, for the individuality of its streets, houses, and squares, the absence of ostentatious pretence and monotonous uniformity—all escaped untouched, and are as they have been. For the very newest of the better parts of Boston not so much is to be said; but there are few American towns that can, for instance, show anything so graceful and pleasing as streets like the slope of Beacon Hill, with its Common before it, Tremont Street, or Louisburg Square, into none of which have some of our New York styles of architecture much more than touched as yet.

It was fortunate in some ways that the news of the fire reached New York on Sunday morning. It undoubtedly prevented a panic on the Stock Exchange, as the brokers and holders of securities had time for deliberation. Had the despatches met them for the first time on their way down to business on Monday morning, there is no knowing what might have happened. By the time they met, the fire had done its worst, and was under control, and the insurance companies had nearly found out the extent of their losses, and Mr. Boutwell—or "Uncle Boutwell," or "Father Boutwell," as the brokers begin to call him—had been communicated with, and expressed his readiness to avert a panic by extensive purchases of Government bonds. So that when the Board opened, stocks were found only to have fallen five or six per cent. instead of nine or ten, or even twenty, as many expected, and even this or the greater part of it they had recovered before the close. Moreover, it was remembered that not only was the fire much less extensive at Boston than at Chicago—for the Chicago fire was, on Sunday morning, in every one's mind—but that it reached few or no dwelling-houses and destroyed no factories or great seats of industry, that the loss fell mainly on persons of great wealth, and that Boston, unlike Chicago, was not the debtor but the creditor of the rest of the country.

Sunday was a leisure day with the reporters, and they had plenty of time to "work up" the story of the fire in thoroughly sensational style. The accounts sent to the press here from Boston were curious as examples of how a man may write a great deal and tell very little. Most of them were really, in the main, the record of the reporter's own feelings. One writer predicted about midnight on Saturday the exact amount of loss in dollars and cents the fire would cause before it ended. The reporter of the *Times*, who sent the fullest report, appears to have passed the night in a state bordering on distraction, but he is evidently a desperate man, and will never suffer himself to be taken alive. "I write this," he telegraphed, "with my hair singed by the flames, *my face burning*, and two or three burns where the coals have flown down my back.' He must have been a horrid object as he sat at his work. The *World* reporter was almost equally wrought up. He telegraphed "that it was an awful Sabbath morning, and that God only knew whether it was to be another Chicago."

Of the seventy-one New York insurance companies which had risks in the burnt district, only eight, as nearly as can be ascertained at this writing, will be put in peril by the fire, and all, or nearly all, will pay something. The Boston companies are all ruined. The Connecticut companies, and all, or nearly all, those of other States, meet the calamity without flinching, and the English companies, which have to meet losses amounting to between $4,000,000 and $5,000,000, are all strong, and telegraph their agents to draw the amount. The New York *Tribune* publishes a valuable estimate of the loss sustained in buildings, taken from the assessors' books in Boston—amounting in the whole to $7,765,000. The value of the goods destroyed is of course yet unknown, and can only be guessed at, but the common one of $100,000,000 is undoubtedly a gross exaggeration. The truth probably lies between fifty and seventy-five millions.

The magnitude of their victory has astonished most Republicans, and this not altogether because of the din and clamor made by the Liberal Republicans, but because, while it is comparatively easy to know what the action of your own party is going to be, there is one thing which it is extremely difficult to calculate beforehand with anything like precision, and that is, the inaction of the members of the other party. What number of Democrats were going to do nothing there was little means of finding out. As the result shows, an enormous number would do nothing for their candidate,

and a certain number voted for Grant. Take, for instance, a Connecticut town as to which we happen to have some definite information: its vote ranges usually at rather less than 1,700, and it has given Republican majorities ranging from about 300 to about 20. This year, of the men on the Democratic town committee's list of voters registered as Democrats, there were 257 who voted no Presidential ticket or voted for Grant. Facts like these should be borne in mind by people who think all the world has suddenly become Republican, and that there were no Republicans recalcitrant and discontented. Honest Democratic disgust, however, some of it stupid Bourbonism, more of it distrust of Greeley and contempt for the bargain and sale at Baltimore, was what gave Mr. Greeley so overwhelming a defeat; and we trust the majority in Congress, or the better leaders there, will not find their hands weakened by the brutal confidence in numbers which only too probably may be felt by their worse associates. It was this disgust with Greeley that brought Maryland's majority for him down to less than 2,000; Kentucky's down to 10,000; Tennessee's down to 8,000, or thereabouts! These three States, with Georgia, Missouri, Texas probably, and Louisiana perhaps, though perhaps not, will give Greeley and Brown 76 votes at the most, and 68 more likely. Week before last, as we observe by a remark in the *Times*, the types and carelessness in reading proof made us print "Michigan" for "Missouri" in the list of States doubtful. Of Michigan we have of course had no doubt. From the beginning, our own opinion has been that Greeley running alone would have got not a single electoral vote, and that running with Grant he would get not more, or but very few more, than Seymour and Blair.

The Republicans make great gains in Congressmen, as well as in such enormous popular majorities as 130,000 in Pennsylvania and 50,000 in New York. The present Congress consists of 243 members; the Congress which assembles on the fourth of March will contain 292, and of these it is now probable that the Republicans will have all but, if not quite, a two-thirds majority in the House, and in the Senate a majority as large as at present. Mr. Trumbull will fail of a re-election from Illinois, and this is a fact over which, standing by itself, we think no one need be glad. Though we should have been sorry to see a Liberal Republican victory of such magnitude as the carrying of Illinois by the coalition, yet we do not forget that Mr. Trumbull is an experienced and able public man who has done the state some service, and some service also to the Republican party. We regret his recent political course, because it will have deprived the Senate of his leadership—a leadership far more creditable and more useful to the country than that of the men who have recently cracked the whip over older and better men than themselves. Blair of Missouri will, it is thought, be succeeded by a Democrat, but this is not certain, nor is it certain, on the other hand, that he will be his own successor. This being so, and with the loss of a Republican senator in North Carolina, we may say that the next Senate will stand about as the Senate of this Forty-second Congress, and the Administration will be strong enough for anything—perhaps even for San Domingo, should it be thought advisable to take up that business again. It will certainly be strong enough to bear watching, "generosity" to the contrary notwithstanding, there never yet having been a political party composed of angels, and our antagonist being our helper in Washington as much as anywhere else.

Mr. Greeley has done what was perhaps the wisest thing he could do under the circumstances—gone back quietly to the editorship of the *Tribune*. In the card in which he announces his determination, he promises to make that paper "a thoroughly independent journal, treating all parties and political movements with judicial fairness and candor," and "to endeavor to give wider and steadier regard to the progress of science, industry, and the useful arts than a partisan journal can do," and that "he will not be provoked to indulge in those bitter personalities which are the recognized bane of journalism." If he carries out this programme, he will do much, even at this late period in his career, to rescue the New York press from its present low estate, and will lay the community under weighty obligations. But he will not be surprised or offended to hear that most people will for a good while look at his efforts with great incredulity, that many cannot bring themselves to expect of him, of all men, "judicial fairness and candor," and that his proposal to abstain from "bitter personalities" excites hilarity among the young and thoughtless. He can, however, live down these doubts, and will have the hearty sympathy of all decent people in his new enterprise. He speaks of his Presidential canvass as "another line of business" in which "he embarked six months ago." As during these six months he was, according to his own account and that of his friends, engaged in a gigantic effort to save the country from despotism and nepotism, to reform the civil service and the currency, and to restore fraternal union between North and South, and to banish carpet-baggers, it seems a little flippant to talk of this noble work as "another line of business." But Mr. Greeley will have his joke.

A correspondent complains justifiably of our having said in our last issue that the Presidential election "had gone as every decent man must have wished it to go." He says he knows a great many "decent men" who wished Greeley to be elected. So do we; our phrase was extravagant, at best, and we can only plead in excuse for it the near contemplation of some of Greeley's followers in this city for six weary months.

Elections have taken place in seven Departments of France to fill seven vacancies in the Assembly, and in all but Brittany the Radical Republicans have carried the day. In one sense the result is more, and in another less important than it seems. The whole Department votes at the election of each representative, so that the election of a single member furnishes an indication of the drift of public opinion. Looking at the matter in this way, the Conservatives have lost ground heavily. On the other hand, there has been an extraordinary amount of abstention—and it is admitted on all hands that the abstention has been mainly among the peasantry—that is, among the Conservatives. The explanation of this which is offered and generally accepted is that the peasants never vote when they can help it, and this year receiving no stimulation from the prefect, and being satisfied that, on the whole, "order" is in no danger from the Republic, did not poll over half a vote, and allowed their own favorites to be defeated. But even this is a great gain for the Republicans. To have disarmed the fears of the peasantry is half the battle. In Brittany, where the peasants came out in great force, and where the vote was very full, the Conservative candidate carried everything before him. In short, "the situation" may be described as meaning that the peasantry, who desire peace and quiet of all things, are sufficiently satisfied with the Republic to let it have a fair trial, but not sufficiently to give themselves any trouble about keeping it going. In the meantime, the Germans are rapidly evacuating the occupied Departments—having now left Marne and Haute-Marne. The near approach of their total withdrawal is reviving the discussion of the constitution that is to be, and all sorts of projects are laid before the public; but the probable opinion seems to be that the work of drafting a constitution will be committed to a committee of forty-five members of the Assembly. Until the constitution is adopted, there is no chance of the dissolution of the present Assembly.

The expulsion of Prince Napoleon from French soil by order of M. Thiers has caused the latest French excitement, and is viewed in a great variety of ways. The Orleanists, and all that school of politicians who take England and America for their model, deplore it as one of those pieces of disregard of the law which prevent really free institutions from taking root in France. The Radicals, as might have been expected, think it a perfectly legitimate proceeding. They never disapprove of goring, provided the victim is the right

ox. The best defence of the act has come from M. John Lemoinne in the *Journal des Débats*. He says that the Bonapartes raised themselves above the law by providing a special tribunal for the trial of offences committed by "Princes of the Blood," and that, therefore, they have no moral right to claim the benefit of the ordinary jurisprudence of the country, and that it is, with the occurrences of 1851 before our eyes, useless to say that a man's "wearing the name of a Bonaparte" ought not to be treated as a crime, inasmuch as the name was used on the occasion of the *coup d'état* as an instrument for overthrowing the Government, and doubtless would be so used again; and that an English Minister would, if Parliament were not sitting, take equally energetic measures to rid the kingdom of a pretender as formidable as Prince Napoleon. All this is doubtless true, and would be very effective if arbitrary acts were exceptional in France, and if every government did not regularly set itself above the law whenever it pleased. Gambetta even went so far as to attempt to make whole classes of persons of whom he did not approve, incligible for election to the Assembly of 1871.

M. Thiers has concluded his Commercial Treaty with England, and it is now said that his sole object in putting on the "surtaxe" on foreign shipping trading to French ports was to extract England's assent to the Treaty. The "surtaxe" has proved a total failure. In the first place, it only affected English, American, and Greek ships, as they do most of the French carrying trade—the French mercantile navy being very small, and the other powers having none to spare. In the next, it suddenly deprived the French merchants of a large portion of their means of transportation; in the third, it is sending the trade of the Mediterranean at one blow to Genoa instead of Marseilles, and is rapidly making Milan instead of Lyons the great silk entrepot, and is sending the trade of the northern French ports to Antwerp; and lastly, it has called out a counter-tax from our Government, which is causing the total loss of the export business to this country by the French Havre line of steamers. The goods hitherto brought over by these ships are now sent to Bremen and Hamburg. Petitions are accordingly pouring in for its abrogation, and it will doubtless speedily disappear or be suspended. Its practical results have been so absurd that it now begins to be said M. Thiers must have foreseen them, and only used it as a device to induce England to "come down."

Another of M. Thiers's financial failures has been the tax on matches. In 1871, a tax of four centimes on the hundred wooden matches, and five centimes the fifty on wax matches, it was calculated, would produce $3,000,000 annually. Illicit manufacture was thereupon started at such a rate that the duty only yielded at the rate of $960,000 a year, while the price of matches rose enormously. The Government then resolved to make the production of matches a monopoly, and sell it to the highest bidder, and two Marseilles houses already engaged in the manufacture have bought the privilege for $3,800,000 a year; but the price of matches is fixed at about forty cents the 4,000 matches. The monopolists also pay the Government a duty of nine centimes the 1,000 on all matches exported. This arrangement is an economical curiosity in its way, as it is a return to the old system of farming out the revenue, which was supposed to be for ever banished from the economy of civilized modern states.

The Spanish bondholders, at a meeting in London, have accepted the offer of the Spanish Minister of which we spoke last week—namely, to take one-third of the interest due them for five years to come in certificates bearing three per cent. interest—but which they accept at 50, when the market value is only about 30. In this way the Government is in reality borrowing in round numbers $16,400,000 a year for five years at 50 from its own creditors, when it could not get more than 30 from anybody else—or, in other words, is compelling them to lend to it at six per cent., when anybody else would charge it nine. The London *Economist* denounces the arrangement as "disgraceful," and says it is "bankruptcy made easy" for any government that chooses to adopt it, because it will enable it to cover virtual repudiation with all the appearance of an honorable settlement. The only excuse the creditors can give, and the only one we believe they attempt to give, for their concession is, that they are through it escaping a worse thing. But it must be admitted that the device is very ingenious, and will prove a valuable addition to the art of "financiering."

Prussia and the United States are now the two, and the only two, lucky nations which have no difficulty in making ends meet. The Prussian budget, or financial statement, was laid before the Lower House just before the late adjournment, and from this it appears that in the year 1871, although the war lasted through the first quarter of it, there was a surplus of about $10,000,000. In the current year, a surplus of $12,000,000—counting the thaler as equal to our paper dollar—is looked for, nearly all the taxes having yielded more than was looked for. Two-thirds of the increase comes from profits realized by the Government in the administration of the railways and of the mines, funds, and estates owned by the crown; in other words, through the honesty and skill of the Prussian civil service. We wish our own "Controllers of Primaries" would think seriously of this. The "Toms," Dicks, and Harrys of the Custom-house ought to ponder it. Moreover, in all this no account is taken of the French indemnity. That is solid profit which is put into public improvements or laid up for "a rainy day."

The decision of the Emperor of Germany on the San Juan boundary dispute has not been at all well received in England, and has called forth a good deal of bitter denunciation. The *Pall Mall Gazette*, which may be regarded as the calmest and most sensible of the critics, condemns the decision on the ground that, as it was absolutely impossible to make out from the language of the Treaty which channel was meant, the arbitrator was bound to gather the materials for his finding from the surrounding circumstances. He must, therefore, have seen that to give the United States the Island of San Juan is to furnish them with a base of operations which would render Vancouver's Island untenable in time of war, and would shut up the most available approach to British Columbia. He ought, therefore, have held, the *Gazette* thinks, that Great Britain did not intend the Haro Channel to be the boundary, and that as the matter was of comparatively small importance at the time to the United States, they did not intend it either; and it draws from the decision some very gloomy conclusions as to the consequences of referring of matters of this kind, deeply affecting national honor and interests, to foreign adjudication. To this the *Economist*, which represents the cooler and more moderate view, replies that the Emperor could not have had a better guide in seeking the intention of the parties to the Treaty than the history of the preceding negotiations. That in referring to this, he must have found that the line originally fixed on, 49° N. L., ran through Vancouver's Island, and that the British asked the Americans to remove it further south, for the purpose of yielding to them (the British) the exclusive possession of the island, and that it was for the accomplishment of this object, and no other, that it was made to run along "the channel" which has caused the dispute. The Emperor finding, therefore, that the Haro Channel gave England all that she originally sought, is not bound to go further and provide her with a good military frontier, which she herself evidently had not thought of at the beginning of the controversy, or protect her against the consequences of her own ignorance or laches, as to the bearing of the American occupation of San Juan on the defensibility of Vancouver's Island, particularly as the joint navigation of the channel is expressly stipulated for in the Treaty. This, we think, must strike every candid man as sound sense. The business of an arbitrator sitting on the interpretation is not to patch up a bad bargain, but to put disputants as nearly as possible in the position they themselves would probably have got into if they had not fallen out.

THE SOUTH AND THE ELECTION.

AS the Greeley managers, throwing all other business aside, declared "reconciliation between North and South" to be the main if not the only point in their policy, and as the South was thus led to expect something from the election of Greeley which would not result from the election of Grant, there is now some danger that many Southerners may be plunged into despondency by the result of the vote of last week. We think we may safely take upon ourselves to assure them that the election of General Grant does not mean any indifference on the part of the North to their condition and prospects, or any diminution of the disgust and alarm with which the Northern public has heretofore regarded the fate which has overtaken them. The North is by no means opposed to reconciliation, but it will not have reconciliation through Greeley. What the South asked in the late canvass was that the North should elect Greeley President as a sign of reconciliation, and as the only one of any use. This the North has certainly declined to do. It does not cherish any hatred to the South, but absolutely refuses to hand the affairs of the nation over to Greeley and his Democratic following as a sign of its good-will; but as far as the South is concerned, this is all that the election means. There is, therefore, no occasion either for despair or despondency. Six months have been wasted in the interchange of coarse abuse over Greeley, which is doubtless a misfortune; but otherwise things remain as they were. Republican institutions are in no more danger, carpet-baggers in no more favor, than they were before the canvass began.

What we think about carpet-baggers, and what we think about the Ku-klux act and other attempts to find a remedy for carpet-baggers, are well-known to our readers. We hold, and we have always held, that conquest entails on the conqueror, among other responsibilities, the responsibility of providing peace and security for the conquered. Unfortunately, the United States did not attempt to provide these things for the South. They set up a government which in many of the States was simply a cover for robbery; and, when Congress attempted to provide a remedy for the resultant disorders, it only went halfway. We should never have said a word against the Ku-klux Act if, in addition to hunting down midnight assassins and robbers, it had sent officers to Charleston to oust Scott and Parker and take charge of the State finances, and see to it that every taxpayer got the worth of his money in legislation and police. It would doubtless have been unconstitutional, but it would have been that kind of unconstitutionality which great crises justify, and which never lessens the respect of a community for liberty and law. What Congress did was, in practice, to furnish the carpet-baggers with all they needed—protection against the pistols and cowhides of the men they were plundering. This, we hold, was, taken by itself, both wrong and impolitic; but Greeley would not have remedied it. All that he promised with regard to the carpet-baggers was pure moonshine. Nobody believed it. He could if elected have done nothing to the carpet-baggers except denounce them; and if Parker and his kind care for denunciation, we are greatly mistaken in them. It is no doubt true that in the beginning people at the North did encourage the carpet-baggers. It was only two years ago that Parker was cited as a witness against the *Nation* by the *Independent* of this city, regarding the intelligence of the South Carolina Legislature. Many of these fellows left the North in the odor of political sanctity, and by shouting for the Union and for human brotherhood, kept up a certain kind of maudlin admiration in their rear, and succeeded in persuading a certain portion of the Northern public that they were missionaries carrying light into dark places. But Greeley was one of their most prominent supporters. Nobody did more to halloo them on, or encourage the use of United States troops to protect them against the consequences of their crimes. Therefore, it was ridiculous as well as useless for the South to ask the North to select him, as the exponent of Northern indignation against the carpet-bag régime.

But the Northern mind is completely rid of any delusions it may have ever labored under with regard to carpet-bag government. There is no desire to perpetuate or countenance any of the Southern abuses. There is no hatred of the South, or desire for her further impoverishment or humiliation that we know of or meet with. The state of the Northern mind on the Southern question, if we know anything of it, may be described as a hearty willingness to "clasp hands" and let bygones be bygones, provided the South will frankly accept the results of the war—that is, accept them just as they are accepted in the Cincinnati platform; but "accepting them frankly" means to the Northern mind accepting them in deed as well as in word—that is, not only putting the acceptance into platforms, but putting candidates and parties on the platform whom we know to be really favorable to these results, and not candidates and parties who never did accept them until they saw a chance of electing a President on whose weakness and want of perspicacity they thought they could count with confidence; and not only writing newspaper articles inviting Northern settlers, but making Northern settlers comfortable and secure after they have settled. On these things the North insists as the only true signs that the war is really over, and nothing can take the place of them.

We wish most sincerely the South could now be convinced that her future is in her own hands, and yet such is the truth—melancholy it may be, but still the truth. Congress has done all that it *can* do; the North has done all that it *will* do. Every Southern State is now handed over, as all States are, to the rule of the majority of its own people. If it be true, as many think, that where the negro voters are in a majority, or where they hold the balance of power, there is no hope of improvement from the education of public opinion, the South must look to immigration for her resurrection. Those white men who groan so dreadfully under negro and carpet-bag rule must get other white men to come down and settle on their wastes, and give them a majority. If they can neither do this nor win the negroes over, they must suffer on. They may rely upon it, there is something wrong in their own policy, as long as hundreds of thousands of new-comers from Europe seek homes two thousand miles away on the semi-barbarous Western frontier, when they could have them almost for the asking all along the Atlantic seaboard, within a day's journey of French and German and British steamers. It is not for nothing men thus plunge into the heart of the continent. If the South can find no means of attracting them beyond the publication of flaming advertisements, if when they get strangers down there they cannot make them so happy and hopeful that they shall ask their friends to follow, we do not know what remedy there is for Southern ills. All restrictive and coercive legislation is done away with, and if the white race is so far paralyzed or degraded that it can find no honest way of ridding itself of the domination which it makes a boast of despising, it must make up its mind to suffer without help if not without pity. We do not, however, believe that this is the case. In more than one State, the modern spirit—the spirit which takes facts as they stand and makes the best of them, and meets difficulties, not with oaths and execrations, but with labor and craft—is rapidly showing itself, and it will doubtless spread and do its work.

THE REISSUE OF GREENBACKS.

A SHORT time since there appeared in various Republican newspapers a series of "money articles" which would have puzzled a good deal an old-fashioned American statesman. On their face they purported to discuss a rumor which they announced to the public was afloat, to the effect that the Secretary of the Treasury intended to reissue some four or five millions greenbacks which had been retired from circulation by Mr. McCulloch. They mentioned the advantages of the plan, and its disadvantages—on the one hand, the effect which it would have in easing the money market, in facilitating the transportation of the crops to deep water; on the other, the objections to it which would arise from the danger of increasing the supply of the protested notes of the Govern-

ment, the danger to its own credit, and the doubt as to the legality of expansion attained by the reissue of notes once withdrawn from circulation, under the provisions of an act framed with the express intention of contracting the currency. The peculiarity of the articles to which we refer was that the rumor as to Mr. Boutwell's intention apparently originated in the minds of the money editors themselves, as there had been no public announcement of the intention of the Government. The articles, too, were curiously tentative, balancing with great nicety the various considerations *pro* and *con*, but preserving a judicial impartiality between them. These articles were immediately followed by the issue of the currency. Of course it would be very gross to hint that any of them, or any of the editorials written about the same time in Administration journals, were inspired by the Treasury: we do not refer to them for this purpose. We allude to them simply on this account—that so far as the public knows, the only advice which Mr. Boutwell has taken as to the legality of the issue—a matter so grave as to involve a total change of policy on the part of the Government with regard to the currency, the substitution of the policy of expansion for that of contraction—he must have got from these money articles and editorials to which we refer. Congress is not in session to explain or give an authoritative construction to the statutes under which the contraction took place, and, as we shall undertake in this article to show, Congress is the only body which can give an authoritative construction. Whether he has or has not got an opinion from the Attorney-General in favor of the construction of statutes which he has adopted, is a matter of little or no moment. In order to explain what we mean, it is necessary to review at some length the history of the legal-tender acts.

In the first place, the Act of February 25, 1862, authorized the issue of $150,000,000 of Treasury notes, and provided that they should be "received the same as coin, at their par value, in payment for any loans that may be hereafter sold or negotiated by the Secretary of the Treasury, and may be reissued from time to time as the exigencies of the public interests shall require" (Sec. 1). The supplementary Act of July 11, 1862, authorizing an additional issue of $150,000,000, gave the Secretary power to "exchange for such notes, on such terms as he shall think most beneficial to the public interest, any bonds of the United States bearing six per centum interest, and redeemable after five and payable in twenty years, which have been or may be lawfully issued under the provisions of any existing act"; and to "reissue the notes so received in exchange"; the act also provides that he "may receive and cancel any notes heretofore lawfully issued under any act of Congress, and in lieu thereof issue an equal amount of notes, such as are authorized by this act" (Sec. 1). The Act of June 30, 1864, restricting the amount of paper currency to $400,000,000, provides (Sec. 2) that "the Secretary of the Treasury may redeem and cause to be cancelled and destroyed any Treasury notes or United States notes heretofore issued under authority of previous acts of Congress, and substitute, in lieu thereof, an equal amount of Treasury notes, such as are authorized by this act, or of other United States notes."

It is on these provisions that a flimsy argument has been built to show that the Treasury has under them a general power to reissue any uncancelled notes which may come into its vaults. It needs but little consideration to show how fallacious must be the reasoning which leads to such a conclusion. Congress in passing these acts had one object in view, to raise money. In order to do this it authorized the issue of four hundred millions of promises to pay, which it floated by making them generally receivable in payment of private and public debts. Manifestly, as these notes would be constantly coming back to the Treasury not only in payment for "loans sold or negotiated," but in the ordinary course of business, it was necessary that they should be reissued, or they would totally lose their value as currency, and a contraction would take place every time any notes came into the Treasury to the exact amount of the notes; if there had been no power of reissue, the currency would long ago have disappeared from circulation. Whenever $50,000,000 came into the Treasury there it would remain, and the currency would have been diminished by that amount. This would have totally defeated the purpose of the framers of the legal-tender acts, who meant to create a paper currency, and at that day never dreamt of contraction. All these provisions as to reissue may therefore be totally disregarded, as having been framed without any other idea than that of making the legal-tender system feasible.

The real question arises under the Acts of April 12, 1866, and February 4, 1868. In the first year, as our readers no doubt remember, the currency being already at the limit prescribed by law, and the difference between the price of gold and paper causing a good deal of doubt and distrust in the minds of the business public, Congress determined upon a total change of policy—that of a return to specie payments by a gradual contraction of the currency. It is necessary to bear in mind that this moment marks a dividing line of interpretation. All acts or resolutions of Congress on the other side of this line should be interpreted in the light of their early intention, which was to maintain an expanding, or at the best a fixed currency. Acts had been passed increasing and fixing, but never diminishing its amount. This side of the line their intention changes, and interpretation must change with it. The law of April 12, 1866, authorized the Secretary to sell bonds, the proceeds to be devoted "to retiring Treasury notes or other obligations under any act of Congress." Under this law forty-four millions of currency were retired by Mr. McCulloch. Now, what did this act mean? It is argued on behalf of the Government that it only meant that the greenbacks should be withdrawn from circulation, and that no permanent contraction was intended. The act contained no provision for the cancellation of the currency retired, and therefore Congress meant to reserve to the Secretary the right of reissue. But what is the natural meaning of the words used? To "retire" obligations surely means a great deal more than to lock them up in a vault. Besides this, there was a very obvious reason for not ordering the cancellation of these obligations. No one denies that it is in the power of Congress to expand the currency, and it may well enough have been the intention of Congress to leave it open to expand by a reissue of its own. But a reissue of its own is one thing, and a reissue by Mr. Boutwell is another. We are not left, however, to conjecture as to these matters. On February 4, 1868, public opinion having undergone another revolution, and now taking alarm at the contraction carried on by Mr. McCulloch, Congress passed another law, this time suspending "the authority of the Secretary of the Treasury to make any reduction of the currency by retiring or cancelling United States notes." In this act we have an interpretation of the former one. Congress here says that by "retiring" they meant to effect a "reduction of the currency," so that we have a perfect right to read the former act in this way: "The Secretary shall sell bonds and apply the proceeds to a reduction of the currency by purchasing and retiring notes in circulation." This seems to us almost a conclusive proof, taken in connection, too, with the fact that not a word is said in the last act about reissue, although everybody knows that the cry for expansion at the time, and many times since, has been so great that Congress would have been only too glad of an excuse to reissue the forty millions retired by Mr. McCulloch, if they, in common with everybody else, had not felt that the first act was intended as a permanent measure of contraction. Under these circumstances, Mr. Boutwell's notion that he can reissue these notes is very much as if an agent having received authority to issue notes for his principal, and subsequently received authority to go into the market and buy up the notes, were to claim the right to reissue them on the ground that he had received no instructions as to what was to be done with the notes when they were bought up. Of course, in the matter before us, Mr. McCulloch and Mr. Boutwell are one person.

These considerations seem to us to show at least that there is very grave doubt as to the existence of any such power as Mr. Boutwell claims. Of course if he has any he has all, and he may to-morrow, if he thinks it advisable, issue forty millions of notes which

have been out of circulation for five years. Under these circumstances, what is his proper course? Obviously to wait until Congress comes together, and ask it to instruct him as to whether he has or has not such a power. With such doubts hanging over him, to seek to excuse himself by getting an opinion from the Attorney-General would be ridiculous. It is not a case demanding immediate action, which must be decided one way or the other; there is no need of action at all. All Mr. Boutwell has to do is to wait for the reassembling of Congress. Even with his professed ignorance and contempt of political economy, he must be aware of the dangers which the country suffers from any doubts as to the condition of the currency, the loss of credit abroad, the alteration in value of all contracts at home. For a man who knows these things to take advantage of an extremely doubtful and probably non-existent power, in the absence too of Congress, from whom he pretends to derive the power, and begin to flood the country with currency every one supposed it had got rid of, is an act of the most monstrous recklessness and abuse of authority. That any single man should have the power with a few strokes of his pen to alter the value of every debt in the country, and to raise or lower the prices, would be tantamount to bestowing upon him the right to send his official subordinates into every house in the United States, and remove from such households as he might designate certain articles of furniture, wearing apparel, food, and soon, and bestow them on the neighbors. This is the practical result of any great change in the volume of the currency. Few people will be inclined to believe that Congress ever gave Mr. Boutwell any such power; and in the present state of doubt on the subject, for him to shelter himself behind a technical legal construction would be to give proof of the most ignorant and audacious contempt of public opinion and decency. It is Congress, and Congress only, which can instruct Mr. Boutwell as to his powers in the matter. His present action has a look all the uglier, because it appears to be prompted by the desire to forestall the opinion of that body, and to force it to adopt his own construction of the law, by putting before it the disagreeable alternative of either ratifying his action or stigmatizing one of the great party chieftains as a law-breaker. How much weight such low considerations have with Congress the results of many recent investigations—such as of the French Arms Sale and the Postmaster-General's case—amply show.

GREELEY AMONG THE ARTISTS.

WHEN the London-Bridge New Zealander of the future turns his attention to our history here in America, he may probably conclude that the one man who had most to do with bringing about the result of the elections now just over was General Grant. And probably he may be right; although there need be little doubt that no one man yet rules the American people—the Atlanta *Constitution* and the Hartford *Times* to the contrary notwithstanding; and that General Grant has been successful because of the things he stood for, and not by reason of things personal to himself. Still, if one were to attempt the impossible, and try to apportion to individual persons their precise share in the work in which all of us have been engaged for the last seven or eight months, it may well enough be that a fair award would assign to the President-elect the greatest influence in causing the defeat of what General Brinkerhoff and Mr. Theodore Tilton would call The Liberal Cause. But next after the name of General Grant, if not bracketed alongside of it, would appear the name of Horace Greeley. It might appear as Horace Greeley, vituperator of Democrats; or as Horace Greeley, maker of the Pittsburg speech; or as Horace Greeley, editor of the *Tribune;* or as Horace Greeley, woodchopper; or as Horace Greeley, the friend of Seceding States; or as Horace Greeley, the signer of the bail bonds; or as any or all of these; or it might appear as Horace Greeley simply, as that comprehensive term is known to this generation of American voters; but that appear it would, we are fully persuaded. The history of the campaign, as it was recorded in the speeches from the platform and the stump, in the editorial articles of ten thousand papers, in the talk between individual men, leaves no doubt of this. One-quarter of the breath expended in the contest has perhaps been spent in extolling and decrying the services and disservices of General Grant in war and in peace; but if so, at least another good quarter has been spent in execration and mockery of the dissimulating wickedness and transparent folly of Honest Old Horace Greeley, and in praise and laudation of the amiability, generosity, integrity, popularity, and far-sighted wisdom of the same gentleman.

As recorded in the pictures of the political artists, this prominence of Mr. Greeley in bringing ruin upon his own party is made even plainer than in the speeches and the newspaper articles. And we do not know that the artists of Mr. Greeley's own side, and especially the principal one, were not as efficacious against him as Mr. Nast, who is entitled to such credit as belongs to one of the most effective allies of the President. This happened, however, if happen it did, rather in consequence of the treatment given to Mr. Greeley's antagonist by the Greeley caricaturists than in consequence of their way of representing himself. For some reason or other, probably because of his slight acquaintance with American affairs, and perhaps by reason of that "condescension in foreigners" noted by Mr. Lowell, Mr. Matt Morgan, or the editor of *Frank Leslie's Illustrated Paper,* saw fit to represent General Grant as a low blackguard, constantly drunk, a thief, and an incapable idiot—a conception of the American chief-magistrate rather more likely to please a foreigner than to be approved by the average American voter. It is not too much to say, then, that Mr. Morgan's caricatures went a long way in defeating Greeley, and especially in defeating Greeley and sober Gratz Brown. In one picture, Grant, stupidly drunk, with a dirty pipe in his mouth, stops his horse-cart loaded with cordwood, and deposits his "first Presidential ballot for James Buchanan." In another, Grant, drunk again, stands in front of a blackboard on which is written a list of his monstrous thefts, and Tweed in front of one which displays thefts of a very much smaller size; nevertheless, a policeman approaches Tweed to handcuff him, while Grant surveys a kneeling crew of his followers. Conkling offers him a crown, Tom Murphy a house and a glass of liquor, others money. In a third, General Grant, dirty and ragged, and still drunk, is dancing while Tweed looks on, and Grant, with a whoop, tells him that he is going to set up O'Conor as a "dummy," and that if the trick succeeds, "I'll remember yer, old fellow; yer almost as good as one of the family." In a fourth picture by the same artist, Grant, drunk always, heads a motley horde of office-holders advancing against the people, and armed with money-bags; Grant cries out that he has formerly trusted to numbers to carry him through, and numbers of greenbacks must do it this time; but opposing him is a dignified array of Liberal Republican politicians, across the front rank of which a gigantic Greeley, of a benevolent but firm aspect, stretches a baton, before which the enemy shrinks appalled. Another picture shows us a shell from Baltimore, smoking on the floor of the Long Branch cottage, into which it has just dropped, and at which the President, with a face of drunken astonishment, is gazing in terror.

These pictures, even supposing them veracious in their suggestions of fact, would, for the reason indicated, have been mistakes. In the first place, the people are so unwilling to dethrone a popular idol that they are sure to give an incredulous hearing to such stories. Then, again, they know, as everybody knows, how easy it is to set such stories afloat; everybody has experienced the difficulty of proving them, and many persons look on the fault charged as venial; finally, once before had the accusation been brought, and it had broken down. For these and other reasons, all these caricatures were political blunders. It is not the same thing to pronounce on the effect of campaign instrumentalities before an election that it is to pronounce upon them after the polls have spoken for or against them with majorities of hundreds of thousands. One is in danger of speaking too confidently. However, one may safely set down in moderate terms an opinion always held; and it is our opinion that these caricatures have always been very weak in this other respect—namely, in portraying Grant as a ruler with despotic inclinations and habits. Many people may have believed that undue means were used to induce North Carolinians to vote for Governor Caldwell, and if so, it was good caricature to depict a crafty-looking Internal Revenue officer arresting a tobacco planter for a petty violation of the law, and offering him a choice between confiscation of his tobacco and a vote for the Republicans. But the good sense of putting Grant in a royal seat, with a crown on his head and a host of bayonets behind him, is not apparent.

Very inefficacious, too, were Mr. Matt Morgan's pictures of Mr. Greeley himself, Mr. Schurz, Mr. Trumbull, and Mr. Sumner. It may be, however, that upon people unfamiliar with the faces of these persons and not very familiar with their characters, the pictures were of more effect than was the case among people who knew them more thoroughly. There may be persons to whom Mr. Morgan's benevolent, hydrocephalous Mr. Greeley,

> "That old sage, so mild and bland,"

is a real being; and who are not struck by the utter "ridiculosity" of these portraits of Mr. Sumner. To Mr. Morgan the Senator from Massachusetts is a lofty statesman, a shade too good for this world of mere men, and whose

wishes are rightly held sacred. He has one cartoon, in which Mr. Sumner, in flowing robe and with a majestic dignity upon his brow, stands upon an eminence from which he surveys a Red Sea full of Grantite Egyptians, Pharaoh Grant being on the point of getting the full force of "a tidal wave." Beside this Moses is a meek and philanthropic Joshua in the person of Mr. Greeley, also robed in white, who wears the look of those among the children of men in whose mouths butter will not melt. In front are some colored children of Israel, to whom Moses utters these words: "I have brought you out of the land of Egypt, and out of the House of Bondage, through the Red Sea of Slavery, to the Promised Land of Equal Rights to All, by the aid of this good man Horace, and I now commit you to his guardianship."

Mr. Morgan's mottoes, by the way, have been curiously bad. Latterly, in particular, they had a Sunday-schoolish, goody tone singularly inappropriate to a political contest. We give one instance out of many. Take the motto of a cartoon representing an honest American mechanic (looking like a pious English blacksmith), who holds by the collar a villanous United States deputy marshal. Thus does the honest mechanic address the myrmidon of power, who wants to find out whether there has been any false registration: "Although my house is so poor that it does not shelter my wife and children from the rain and snow; though every cold breeze may blow through the side and through its rafters; nevertheless the President of the United States cannot enter it save by mandate of the law," and therewith, by hand and knee, he ejects the astonished deputy (from a thousand-dollar staircase, by the way), who looks as if he had never heard such a torrent of good language in his life, as indeed he probably never had, especially in that portion of the city. Usually he was called a "mutton-hearted thief," and told where he could go.

It would no doubt have been asking too much to have asked an English artist to come over to this country and suddenly become competent to treat of our institutions and politics, and it is not to Mr. Morgan's discredit that he has made a failure. An American artist in England might make a worse, and in fact would be almost sure to make a worse, unless he had far better guidance than Mr. Morgan appears to have had. It was, however, not expecting too much to expect from Mr. Morgan an occasional exhibition of the imaginative effectiveness displayed in some of his work for the *Tomahawk*. There has been some of this, but only a little. Indications of it are to be seen in the picture of the historic dead of the Republic rising from their graves to view with horror the corruptions of these later days; but in the details of the cartoon neither artist nor handicraftsmen made a success. In general, Mr. Morgan's work has been spirited and good in drawing, though he has either caught likenesses but poorly, or else has wilfully Liberal-Republicanized them with the Sermon on the Mount in view as the platform of that noble party, and Mount Ebal as the standing-place of the Republican party of hate and cursing. His grouping, however, has been confused, and he has not cared on how many different scales of size he has drawn the figures of the same cartoon.

Mr. Nast's pictures have excellently answered their purpose. They have given evidence of great fertility; of the true caricaturist's boldness and irreverence; of a keen relish for ridicule and of a capacity for making fun, and a less capacity for enjoying pure fun; of much acuteness in the perception of character, as exhibited in external signs, and a great readiness in catching and vulgarizing a likeness; of a sufficient degree of coarseness; of a hearty sympathy with "the masses," in their tastes, opinions, and wishes. The popular idea of that side of Mr. Greeley's character at which people in general have always smiled, and that side of it on account of which they have always distrusted his leadership and disregarded it, Mr. Nast has held up to the country in pictures recognized by everybody. We have heard of one voter, a fisherman of Patchogue, Long Island—not a very literate gentleman, but on the contrary one of the kind that was to go with such a tremendous rush for Honest Horace and Governor Brown—who has been heard laughing to himself at intervals throughout a whole evening, saying, "Go West, young man, go West"; and reminding his companions of the amazed look worn by Mr. Nast's Greeley when the temporary occupant of his editorial chair makes it known to him that he has lost his editorship as well as the election. The white coat, and the readiness to change it; the furious bawling and violent language; the addiction to headlong assertions and contradictions; the fickleness; the readiness for all sorts of political bed-fellows; the temerity and lack of tenacity, Mr. Nast's pictures have all expressed very thoroughly, whether or not very subtly, and whether or not another analysis than his would discover the real secret of this curious character. At all events, they have been well adapted to their audience, and must indubitably have had great effect; though here again we see Mr. Greeley at work defeating himself, the artist's most recondite researches having taken him not much deeper than to the recent files of the *Tribune* and to Mr. Greeley's speeches. But these the artist has used with an ingenuity and vigor not super-subtle, indeed, nor over-scrupulous, but extremely telling. For instance, Mr. Greeley in that stumping tour "which has filled even his enemies with admiration"—and which alone would have been enough to kill him dead as a candidate, he acquitted himself so marvellously—spoke at Pittsburg about the convention of soldiers and sailors after a fashion which everybody recollects. Immediately Mr. Nast came out with a full-page picture that made votes for the Republicans wherever there were surviving soldiers that needed conversion from Liberal Republicanism, and wherever there were Northern youths who were boys in the days of Lincoln and have since studied school histories. In the upper corner of the page is a printed extract from the speech, setting forth that the convention was called together "with the single purpose of rekindling the bitterness and hatred, the animosities and antipathies," etc., etc. Down the centre of the picture marches a procession, headed by General Burnside and consisting of the surviving soldiers, some sound and some on crutches, who bear transparencies with the regular inscriptions and pictures—a woman strewing flowers on graves, while Confederate and Union soldiers shake hands; a lion and an eagle lying down together; such assertions as that "We will vote as we fought, for Union," and the like. As they march, they pass a platform from which they are furiously assailed by a stout gentleman in a white coat and hat, who gesticulates violently. Out of his pocket protrudes a placard with the inscription, "Perhaps it was a mistake that I was born: H. G.," in allusion to the unfortunate speech in which Mr. Greeley said that perhaps his opposition to slavery was a mistake; at the end of his tail, for our old gentleman is simian, is the famous tag marked "Gratz Brown" which has made the second of the Liberal Republican candidates so ludicrous throughout the canvass; on the side of the platform is the inscription, "If you vote for Grant you are bought"; in the shadow of it two villanous-looking jail-birds, disguised in white hats and coats, are looking to their pistols; from the pocket of one issues an inscription, "What I know about Reform," and from that of the other, "Baltimore, 1861 and 1872"; in the foreground, and with the platform just behind, is a warrior also in white coat and with his trowsers tucked into his boots, who blazes away at the procession through a bell-mouthed blunderbuss, labelled "New York *Tribune*" and "This is not an Organ."

A lyre the "organ that is not an organ" has lately become; but it has also been a hand-organ, a trombone, and a fiddle played upon by an enormously long bow. We have not time, however, to do more than barely indicate the ingenuity which has marked this series of political pictures, undeniably coarse, but not so much so as former works by this artist, who constantly, if slowly, improves both in mental force and adaptability, and who perhaps would earn higher praise had he subjects less coarse with which to deal. Reviewing his dealings with the Ring, as well as with the Assistant Democrats, it is remarkable how seldom he has offended against good taste.

THE BOSTON FIRE.

BOSTON, November 11, 1872.

ARRIVING here at sunrise this morning, with the last sensational reports of the New York papers—the blowing up of Parker's, the destruction of the Old South Church, and both the old and new Post-Offices, as well as the newspaper offices, and the threatened destruction of State Street—I was prepared for the worst. As we came into the city the early dawn revealed a huge, dark cloud hanging over it, into which the smoke from the burnt quarter seemed to rise as a water-spout rises from the surface of the sea, or perhaps still more exactly, as the cloud of vapor, in the old Arabian Nights' tale, rises out of the fisherman's jar. We ran into the depot as usual, and the crowd of passengers, taking the customary direction, moved along towards the centre of the city. We had not gone far when we became aware of a condition of things for which I, for one, was not prepared. The entrance to a narrow street near where the fire began first showed the scene of the disaster. Imagine a narrow way through which you had passed a thousand times ending suddenly in a huge, vague, bluish waste, through which could be indistinctly seen, here a tall chimney, here the edge of a wall, there an iron shaft tumbled in the midst of a huge pile of brick, mortar, and other débris—a thick flaming smoke belching up from behind and out of the bottom of everything; at the mouth, standing guard, a mounted patrol. The effect would have been strikingly picturesque and military, if it had not been that the patrol had given it a rather burlesque air by drawing his sword to warn off the inoffensive crowd, who, being generally unarmed, would hardly under any circumstances have made an attempt to force the guard. The patrolling squad is stationed in a circuit round the burnt district, and no one is allowed to enter the lines without a pass. This guard was established when the fire was got under control, and has proved an excellent means of maintaining order and preventing robbery.

In order to understand the history of the fire, it is necessary to have a map, because the burnt streets are so crooked, short, and peculiar, that no verbal description will render the matter intelligible. The streets wholly destroyed comprise a district of about sixty acres, bounded roughly by Bedford, Summer, Washington, Water, Congress, the south side of State, Broad, Milk, and Oliver Streets, and the water. The buildings in these streets were mainly solid granite structures, four, five, and six stories in height, occupied by jobbing and commission firms engaged in the wholesale dry-goods, boot and shoe, and wool business. The stores on Devonshire and Franklin Streets were perhaps the most substantial in the country. They were built, however, in great part with light, wooden, slated Mansard roofs, and these roofs it was, according to the universal testimony here, which caused the rapid spread of the conflagration. The fire began in a warehouse on the corner of Kingston and Summer Streets, no one knows how, and speedily made its way to the roof, the elevator passage furnishing a convenient draught. The engines quickly made their appearance, but they were too late, for the flames were out of their reach. No stream of water could reach the top of the buildings, and the fire had full swing. Creeping along the roofs, it very soon took in several large buildings, finding its way gradually down as it went on. There were also a great many flat roofs covered with tar and pebbles. The interior of the buildings, too, was very combustible, the light brick walls, and innumerable wooden partitions, drawers, and shelves, furnishing the best possible fuel to the flames—to say nothing of the stores of cotton and woollen goods. Every one whom I have consulted is agreed that but for the Mansard roofs the fire would have been got under control, and there is plenty of positive evidence pointing in the same direction. Hovey's large, old-fashioned store in Summer Street, for example, built of heavy granite, was made use of to arrest the progress of the flames. The roof was covered with wet blankets—the same protection which was devised, if I remember right, for Mr. Ogden's house in Chicago—and the store in this way did effective service for Summer Street. So also the new Post-Office, built of huge granite columns and blocks, effectually stopped the fire in another quarter. And this morning, from the roof of a building in Devonshire Street, I could see a large iron building, with a flat top, which had been burned round on three sides, but was itself uninjured. There was abundance of water, there was no want of discipline in the fire department, and there is no suspicion, so far as I have heard, of incendiarism. Indeed, as aid poured into Boston from all the surrounding cities, it would have been strange if the spread of the fire had been attributable to lack of force for the suppression of it. Nor had "politics" anything to do with it. The horse disease, no doubt, increased the difficulties with which the firemen had to contend, engines having to be brought by hand from great distances, and inflammable goods being left necessarily in the way of the flames, owing to lack of transportation. With horses the fire might possibly have been got under before it obtained headway, but after once getting into the roofs all the horses in the world would have had little effect.

The fire was stopped partly by natural causes, and partly by gunpowder. The general direction of the wind was northwest (though there were also local currents, caused by the intense heat, blowing from other points of the compass, which accounts for the stories about the fire moving "against the wind"), and the fire was carried by it directly away from Washington Street and down to the wharves at the water's edge. There it blew itself out; in the same way it was brought to an end by an open space known as the Fort Hill improvement, recently laid out by the city; there were buildings on the further side of this, but the flames could not cross it. On what may be called the northeast and southwest *sides* of the fire, many buildings were blown up. In one direction the new Post-Office, the most solid granite structure in the city, occupying in length an entire block, dammed the fire, and saved that part of Devonshire Street which lies between Milk and State Streets. The granite is flaked and chipped, and many edges are completely spoilt, so that the expenses of repairs will be very great, but the amount saved is also very great. It may safely be assumed that with a few more tolerably fire-proof buildings in this part of the city, the fire would have been got under control early. No attempt was made to stop the flames to the leeward, and the general opinion seems to be that if the wind had been blowing strong the other way, there would have been little chance of saving the city.

As to the condition of the burnt district, it may be described as a gigantic smouldering hole. Except on the edges, I do not think there is a single building left, and those that have been burnt are ruinously and hopelessly burnt. The warehouses seem to have tumbled down *en masse*. The general effect is more like the ruin produced by a hurricane, than what we ordinarily expect to see after a fire. As the fire began not long after sunset on Saturday, and was over by the middle of the next day, there was not much time to remove goods or empty safes. The safes tumbled down with the fall of the walls into the cellars, as all good fire-proof safes are warranted to do. I saw the contents of that of the Revere Bank, which were in perfectly good condition, and the same may probably be said of most of the others. The only one mentioned as destroyed was said to have been injured by being pierced as it fell by an iron shaft.

It will be seen from what I have already said that the Boston fire is not at all a "second Chicago," except that it was caused in great measure by the same carelessness in building. The early estimates of losses were perfectly wild; but there are several considerations which show that though the calamity is a severe one, it is not only not irreparable, but will by the community at large be felt but slightly. In the first place, only a small number of families turned out of house or home—the burnt district contained few tenements; in the second place, the stores of goods were not very large; in the third place, the buildings were occupied by men who sold not on their own account but for factories all over the State. These factories are of course better able to bear the loss than the individuals who compose them would be, and the total effect of the destruction is lessened by its distribution. The insurance companies, too, promise to come out better than was at first anticipated. It is safe to say that the prosperity of the city will not be seriously affected by the fire. In one way the destruction will be a positive advantage; the streets in the burnt districts were the only avenues for the transportation of heavy merchandise between the north and south ends; they were crooked and inconvenient to an inconceivable degree. They will now be laid out wider and straighter, and the effect of this on real estate will of course be important. The actual loss in buildings and goods may be roughly put down at $25,000,000; but this estimate is of little or no value until the condition of the insurance companies is known.

Throughout the city perfect order has been maintained since Sunday. During the entire day I saw no drunken men in the streets, and the discipline of the troops on guard is better discipline than one would expect to find in an ordinary volunteer camp. The self-control on the part of the inhabitants during the height of the excitement appears to have been very great. At one time a large crowd collected in front of the safe-deposit vaults on State Street, where millions of securities were stored, and demanded that the vaults should be opened, that they might get their deposits out. State Street was then threatened with destruction. With the most praiseworthy firmness, their demand was refused. Of course, in the confusion there would have been the best possible opportunity for robbery.

There seems to have been some carelessness, however, and certainly great want of organization, about the blowing up, and this, as usual, is attributed to the character of the politicians in control of the city. By the general statutes of the State, it is provided that "the engineers, or any three of them present at a place in immediate danger from fire, or, in their absence, two or more of the civil officers present, or, in their absence, two or more of the chief military officers of the place present, shall have power to direct the pulling down or demolishing of any such house or building as they shall judge necessary to be pulled down or demolished in order to prevent the further spreading of the fire"; while, according to the common law, any one can blow up a building if the act is necessary. Under the statute the city would be responsible to the owner; under the common law, the owner would have to bear the loss. It has never been decided in Massachusetts that the statute supersedes the common law, but such seems the better opinion. If it does, there is likely to be a good deal of trouble; for the two chief exploders were not, I am informed, the engineers or other officers mentioned in the statute, but the Mayor of the city and the Postmaster. A friend of mine, who is a member of the city government, informed me that he asked the Mayor during the height of the fire what preparations had been made towards organizing this part of the work, and the Mayor told him that no organization was possible, but that he had given general permission to thirty persons to blow up buildings at their discretion. The Postmaster may have been one of these. The Mayor is a shrewd New England lawyer of the "smart" sort, without much administrative ability; the Postmaster, an active politician. On the whole, the blowing up seems to have been managed badly; but as the fire was stopped by it, it is hardly likely that the officials engaged in the work will be allowed to suffer.

I may observe in conclusion that nowhere have I witnessed that peculiar kind of scene which "baffles," or beggars, or staggers description. There may have been such scenes, but if there were, they must have taken place in secluded spots, in the presence of a select "reportorial" audience. All the people I have seen in Boston have seemed remarkably cool and collected; the streets here are very full of people, but they look very much as they do on ordinary occasions, very quiet and business-like. Already those who have been burnt out have

put up signs indicating their new or temporary place of business; people are wandering about the "burnt district" attracted by curiosity or interest, conversing in the usual curt, informal manner of native American citizens. The normal conversation is something of this sort: "Awful, ain't it?"—"Yes." "How did you come out?"—"All gone to smash."—"So have I." Every one takes it very quietly, and there is a general feeling among those Bostonians whom I have seen, that though it may look very badly just now, "it will all come out right in the end."

HUGO—PROUDHON—GAUTIER.

PARIS, Oct. 25.

THE war has spread consternation in the French literary world, and our republic of letters is not as prosperous as M. Thiers' Republic. Renan, after having published his "Intellectual and Moral Reform," so full of gloomy prophecies, has gone to Italy. He is now in Rome, correcting the proof-sheets of his new work, "The Antichrist"; he looks with more sadness than pleasure on the agony of the Papacy, and he has not concealed it from his Italian friends that he would like to see young Italy merciful and generous in her dealings with Pio Nono. Michelet is alarmingly ill, and will probably never write any more. Madame Sand, at the end of the most laborious literary career, finds herself so poor that she is obliged to exhaust the rest of her energy in novels which denote her fatigue. Victor Hugo's genius is still as powerful as ever, but his mind is, so to speak, intoxicated and maddened. His last book, "L'Année terrible," is Communistic in all its tendencies. It fully deserves the wild praise of Mr. Swinburne, but there remains nothing in it of the poet of the "Voix Intérieures" and of the "Orientales." I have read it with more horror than admiration, and wondered how so great a genius could roll down into an abyss of coarseness, of immorality, of perversity. Taine is preparing a work on the Principles of '89, which will be a severe critique of the French Revolution and of the revolutionary school.

Sainte-Beuve is gone, and his editors have only lately republished his curious book on Proudhon, with additions which have attracted some notice. These additions are some letters of Proudhon addressed to Prince Napoleon in 1853. It is certainly singular that the famous socialist should have taken for his confidant at that time the prince who is now the most active representative of the Imperial system. But like many socialists, Proudhon always professed to be indifferent to mere political questions. He favored a general progress towards socialism and revolution, and if Cæsarism could be his instrument he would have accepted Cæsarism without too much reluctance. These letters to Prince Napoleon are full of alarming prophecies on the state of French society; Proudhon is constantly pursued (and remember that the letters are dated 1853) by the dream of a royalist restoration. The supporters of the Empire are all traitors in disguise: out of a hundred salaried functionaries of the state, there are ninety-five who laugh at the Emperor and who with all their hearts demand Henri V. "I have received this confidence from one of the most "attached followers of his majesty." Here Sainte-Beuve wrote with a pencil on the letter the name of M. de Persigny. "I am," writes Proudhon at the time of the Crimean war, "like an *illuminé*, under the light of one of those intuitions which sometimes come on me, and which make me speak like an oracle. Well! what was at first only an intuition has become a certainty." His intuition which had become a certainty was the abdication of Henri V. in favor of the Comte de Paris. What a confidence to make to Prince Napoleon! and who can say that this prophecy will not prove true, though the Comte de Chambord only a few days ago issued a new manifesto, in which he still assumes, with as much emphasis as ever, the rôle of a king by divine right of the son of Saint Louis. There are many curious anecdotes in this book of Sainte-Beuve's. Proudhon not only wrote sometimes to the prince, he occasionally visited him. "What society do you dream of?" said the prince once to the socialist. "A society, sir, where I should be guillotined as a Conservative." Proudhon had married, in the latter part of his life, a woman of very low extraction, an *ouvrière*. He writes these lines to his friend Bergmann, the philologist of Strasbourg: "I have just married at the age of forty a young and poor *ouvrière*, not for love—you know me too well to believe that I can indulge a passion—but simply out of sympathy for her position, of esteem for her person, because, would you believe it? in the absence of love, I had the fantasy of a home and of paternity." He had three girls, and after their birth he wrote: "I regret not to have been in 1848 already a father of a family for at least five or six years." The time of 1848 was the period when Proudhon indulged in the wildest socialistic plans. In fact, Sainte-Beuve shows well how, by the natural process of thought and under the teaching of events, Proudhon had finally become prudent, almost conservative. If he prophesied, he perhaps secretly desired, the return of Henri V. and his abdication in favor of the Comte de Paris.

Two days ago, one of the minor stars of our literary world died out. Théophile Gautier, who is not much known out of France, played, however, not an unimportant part in that literary revolution which is called by the name of *romanticism*. Victor Hugo, Lamartine, Chateaubriand, Alfred de Musset, were the great leaders of the movement against the classics; but Gautier was for a time the noisiest and the most unruly warrior of the romantic army. The time is now very remote when the first representations of Victor Hugo's dramas, "Hernani" and "Ruy Blas," were events which almost convulsed Paris. Gautier was then very young; he had long curly black hair falling on his shoulders, he wore a beard like a bard's; he was to be seen in the parterre of the Théâtre Français, surrounded by an enthusiastic band ready to do battle with the classics. The rivalry between the followers of Hugo and the exclusive admirers of Racine and Corneille was so strong that they often came to blows; many times the wooden benches of the pit (there were no chairs then in it) were broken by the disputants. The classics had their allies on the stage. Mlle. Mars, who had so much finesse and grace, and was accustomed to the old répertoire, would not bring herself to recite that verse of "Hernani":

"Vous êtes, mon lion, superbe et courageux."

She would say:

"Vous êtes, monseigneur, superbe et courageux."

Gautier and his friends on this occasion threatened to storm the stage, and obliged her to say "mon lion," trembling with fear and rage.

Such scenes now seem to belong to past ages; we have become terribly eclectic. There are no more classics, no more romantics. One day the Théâtre Français plays the *Cid* or *Andromaque* before an admiring audience; the next day the same audience will applaud a modern drama of Augier, of Pailleron, of Ponsard. The same actors are accustomed to wear the peplum and the latest fashion in cravats; the public of the first representations, which are the most decisive, is completely changed; the pit, the ancient parterre, is no longer the tyrannical king of the theatre. It is now filled, in its reduced proportions, with hired applauders, who form what is called the *claque*. Public opinion is formed by the young *élégans* of the clubs (for a *première* is always fashionable); by ladies of the *demi-monde*, who have only that sort of culture which can be acquired at the Bois, at the races, in the great restaurants, and in a world of elegant pleasure; and by journalists, who are generally the friends of the actresses and of the managers. This mixed public has no real passions, it wishes only to be amused. It has a sort of unconscious and instinctive taste, but no principles of any sort. Its formulas are very simple: "It is a success; it is not a success." It is also changing and fanciful. Just now, for instance, there is a real reaction in favor of the classics; after Offenbach and the buffooneries of the operettas, the rusticity and the heroism of Corneille seem refreshing. To-morrow the mode goes somewhere else.

Théophile Gautier was like a fossil representative of past ages; he remained to the last romantic; only his ardor was calmed and his enthusiasm was cooled. He was, in his books, the representative of the school of "art for art." He cared not for ideas, he was a true pagan. There was a sort of epicurean calm in his person. He wore to the end his long, flowing hair and beard, and looked like a smiling "Jupiter Olympius." He was exclusively an admirer of beauty, a colorist in style; he chiselled his verses with much perfection, and he was very careful to avoid any moral sentiment. He was not really immoral, though "Mlle. de Maupin" is certainly one of the most obscene works of our present literature; he ignored morality. The two types of humanity which he constantly loves to depict are the Spanish *torero* and the ballet-girl. His book on Spain, "Tra los Montes," has a real beauty of coloring and a great freshness of description. Gautier has a genuine admiration of the elegant *torero*, who, dressed in silk and gold, under the burning sun and the eyes of thousands of people, asserts the triumph of human courage over brute force. This spectacle does not inspire him with horror; he can sympathize with those Roman ladies who ask the gladiator to die with grace. The *torero* means to him beauty, pride, calm, intelligence, all that makes humanity glorious. The same spirit throws him into a sort of ecstatic admiration before the ballet-girl. She means the poetry of movement, the music of forms, of attitudes. How often I have seen him at the opera with his eyes half-shut, looking as it were through his imagination on the gay drama of a ballet. He wrote himself the libretto of "Giselle," the most poetical ballet played for many years, and various others. He was as fond of the sight of dancing in his late years, when he had become a respectable father of a family, as in the days of his youth. He wrote little for his reputation, as he was very lazy and not fond of producing much; but he was obliged to make his living as a critic of art and the drama. For years he wrote theatrical reviews for various papers. He was of such an easy and indulgent

disposition, that he has never been known to say a harsh word of any piece or of any actor. In fact, he cared very little for comedies or vaudevilles. His annual reviews of the exhibitions of art were written with more care; when he had to describe a picture he recommenced it, as it were, and described it as it ought to have been. But he was too systematic; he cared for nothing but color, and never looked at a picture which did not glare at a distance.

Gautier was a sceptic in politics; he went through life as a dreamer, caring more for the rhythm of a verse and the form of a vase than for the social or political questions of his time. He was treated with much favor by the government of Louis Philippe, but wrote an official *cantata* in the *Moniteur* on the birth of the Prince Imperial; and these paid verses were not without grace and even sentiment. His was essentially an affable and amiable nature; he had lost his god, the god of his youth; he could not sympathize with the author of the "Misérables" and of the "Châtiments"; he remained like the priest of an ancient religion, who feels that he can make no converts, and only expects tolerance for himself.

Correspondence.

"ANOTHER LIE NAILED TO THE COUNTER."

To the Editor of the Nation:

Sir: A correspondent of the Boston *Transcript*, commenting upon the New York papers, says: "The other papers which supported Grant or Greeley in New York are numerous. Among the former we may mention the *Nation*, which was disposed to carp, but drew itself 'out of that crowd' in season to save its reputation. If reports are correct, the *Nation* has long been dependent for support upon funds furnished by the Union League Club of this city. As the Club was for Grant, it can readily be seen where the shoe pinched."

If it is true that the *Nation* supported Grant because it was dependent upon a Grant club for funds, I shall be disgusted to hear anything more about independent journalism in America. I think justice to your readers requires you to offer some explanation.—Yours, respectfully,

A. M. Goodwin.

Waltham, Nov. 11, 1872.

[We advise Mr. Goodwin to take a more cheerful view of "independent journalism," and to find some more profitable occupation than ascertaining the truth of all the "stories" sent by lying New York Bohemians to the papers of other cities. Since he asks the question, we do not mind saying that the *Nation* is supported wholly by money received from its subscribers and advertisers, and that we have as yet received nothing from the Union League Club. If any money has been raised for us in that body, we advise the donors to look after the collector, who is apparently a scamp. Should anything be recovered from him, of which there is little likelihood, we promise to hand it over to the Children's Aid Society as soon as received.—Ed. Nation.]

IMPORTANT AND TRUE.

To the Editor of the Nation:

Sir: Another weapon to fight the d—l with has been invented, and household peace, quiet, and contentment have been assured by a captain in the British Army. No longer can it be said that the Lord sends meat and the devil sends cooks, for not one bit of difference need it now make who the cook is, or what the stove or the range may be. Only find a place where water can be made to boil, and a good dinner you may surely have, if you have the material, even though Bridget has never before been taught how to boil a potato.

This promise I found not many months ago in one of the London papers, and since then I have eagerly watched for a chance to buy a "Warren Cooker," and I think it not the least of the benefits conferred on me by the *Nation* that from an advertisement of the New York Lead Works in your paper I obtained what I sought.

This apparatus, which was invented by Captain Warren, consists of a tin vessel divided into several compartments. First, an outer vessel or boiler about fourteen inches deep, in which a moderate quantity of water is placed, inside of this outer vessel is placed an inner vessel or oven, around the sides of which the water rises so as to reach about half its height, and into this inner vessel or oven the meat is put; upon the top of this oven another vessel of two compartments for vegetables or pudding is then placed, by which the oven is closed, *steam-tight*; the upper compartments are covered with a cover, and the apparatus may then be placed on any stove, range, or fire whereby the water may be made to boil. It will be observed that the meat is not exposed to the contact of the steam, but is enclosed and surrounded by boiling water or hot steam, while the vegetables or puddings are steamed in the two upper compartments, into which the steam is allowed to enter; the process taking longer than the ordinary process of cooking, but it needs no attention if sufficient water is used. The meat is neither dried up nor soddened, but all its juices are retained and it cannot be burned. To give it a good appearance, it needs to be taken from the cooker ten minutes before it is served, basted, and placed in a quick oven to brown.

An ample Sunday dinner may be placed in this apparatus, set upon the stove, and there left while the whole family, including the cook, go to church, with the certainty that it (the dinner, not the family) will be nearly ready to serve after the service.

For stewing, making soups, and for all cooking which requires to be done slowly and with moderate heat, nothing could be better; for brown bread it serves most admirably; and if a separate cooker of the right shape is kept for fish, those who eat the fish will think they never tasted fish before.

As a duty to dyspeptic humanity, I have sent this note to you.

Yours economically, Paterfamilias.

Boston, November 8.

[It is perhaps right to say, this being a suspicious world, that "Paterfamilias" is a contributor of ours, who has nothing whatever to do with the manufacturer of the "Cooker."—Ed. Nation].

Notes.

Macmillan & Co. have in preparation "The Runaway," by the author of "Mrs. Jerningham's Journal"; "P's and Q's, or the Question of Putting Upon," by Miss Charlotte M. Yonge; and the following child's stories: "Tales at Tea-time," by E. H. Knatchbull-Hugessen; "Ribbon Stories," by Lady Barker; "In the Golden Shell," by Mrs. Linda Mazini.

—General George Gordon Meade's death took place at Philadelphia, yesterday week, he being in the fifty-seventh year of his age. His illness was jaundice, complicated with water on the heart and pneumonia, and his death followed after less than a week of sickness. General Meade was born at Cadiz, in Spain, where his family was temporarily resident. He graduated at West Point in 1829, and received an appointment in the artillery branch of the service, and seven years afterwards resigned. In 1842 he re-entered the service, on which occasion he was promoted to a second lieutenancy in the Topographical Engineers. These appointments are sufficient proof of his studious habits, and indicate also the character of his mind, which was cool, cautious, methodical, preferring always to work on a well-studied plan, of which all the details were prearranged. Thus, he was never a general whose operations were marked by dash, or one who took pleasure in seeking the plaudits of his soldiers, who, however, soon learned to trust him as a safe man, provident of their interests and careful of their comforts. He obtained a brevet first-lieutenancy in the Mexican war, for gallantry at Monterey and Palo Alto, and in 1856 he was made a captain. In 1862 he was made a major in the regular army, having previously in 1861 been commissioned as a brigadier-general of volunteers, and in 1862 as a division commander under General Reynolds. Afterwards, in December, 1862, he succeeded General Butterfield in command of the Fifth Army Corps, which corps always felt something of a sense of property in him, though he soon left its command for the command of the Army of the Potomac, to which he was appointed after General Hooker's disaster at Chancellorsville. Many of our readers will remember the modest, business-like order in which he made known the President's appointment, and will recollect that it was in harmony with all his subsequent orders and proclamations, and with his whole conduct, which always was dignified and temperate, and in marked contrast with many of our too Napoleonic, proclamatory, declamatory chiefs. A few days afterwards he took up his position in the neighborhood of Gettysburg, and there fought the battle which will make his name always famous in our history, and which turned back the rebel invasion. It is for better judges than we can pretend to be to say whether there was excess of caution in his decision not to attack the retreating rebel army; public opinion was divided at the time, but public opinion was ill-informed and incapable of passing judgment, and has since adopted a view different from its former view, and accordant with that which was urged by General Meade's proper advisers,

his subordinate commanders. It is certain that the principal leaders of the Army of the Potomac were not at that time as harmonious among themselves as they afterwards became, and General Meade's position at their head was one of delicacy and difficulty. In 1864 General Grant took the main command, his headquarters being with the Army of the Potomac, and under him Meade served till the close of the war. He was then made a full major-general of the regular army, and during Reconstruction was successively in command of the Military Division of the Atlantic; of the Third Military District (Georgia, Florida, and Alabama), and again of the Atlantic Division, with headquarters at Philadelphia. General Meade was a cultivated gentleman, clear-headed, a man to be relied upon; not of warm passions, though he could at times be irascible. His sense of justice, however, could always be trusted to repair such consequences of the anxieties and responsibilities which weighed on him so heavily, as on many others of our countrymen of whom the country will always be proud. He belonged to a type of soldier and public servant which is not now so abundant as it has been, and will bear all the cultivation we can give it, the type which is greedy neither of gain nor glory, and finds its happiness in the doing honest work faithfully and well.

—We gave some account of the history of Phillips Academy, Exeter, N. H., in No. 366 of the *Nation* (July 4). At the same time we instanced a few of the more famous alumni of this excellent institution, which has probably trained for college and for public life a greater number of noted and able men than any similar school in the country. We have before us a list of the students attending the present term, and an analysis of it shows no diminution, but the contrary, of the university character (so to speak) which has long distinguished Phillips Academy. Maine has 5 students; New Hampshire, 29; Vermont, 2; Massachusetts, 42; Rhode Island, 3; Connecticut, 4; New York, 23; New Jersey, 2; Pennsylvania, 6; Ohio, 6; Illinois, 2; Wisconsin, 1; Minnesota, 1; District of Columbia, 2; Delaware, 1; Virginia, 1; North Carolina, 1; South Carolina, 1; Kentucky, 1; Missouri, 7; Kansas, 1; Arkansas, 2; Louisiana, 1; California, 3; Nova Scotia, 1; Denmark, 1 —in all, 149.

—The Springfield *Republican* has recently had some letters about Yale College and Harvard College, from a correspondent who evidently knows a good deal about the past and present of "the university at Cambridge," and takes a deep interest in its success. It is true that his mind is in some trouble as to whether President Eliot will not by-and-by become too much like the archangel Uriel, but as the letters are instructive we shall overlook his fears on that point, and also his man-destroying and really horrid course as regards this journal, which we are happy to say worries him rather more than the archangel and the President combined. Uriel, the reader should know, is reported by Mr. Emerson, in one of his finest and most completely characteristic poems, as having astonished the other thrones, and dominations, and principalities, and powers, by speaking one day some deep words disclosing profundities which even the divinest of created intelligences could not contemplate without a shudder, or rather what the French call a "sensation." Then, when he perceived the shock he had given, he is said to have retired into his cloud and for ever after held his peace. Even so, as the correspondent vaguely fears, it may turn out that the progressive President of Harvard, dismayed at the dismay which, as the correspondent is credibly informed, he has stricken into some bad old dull conservatives and some judicious observers, may cease from going onwards in the path of liberality and may turn his back upon advancement. Harvard has always had a good deal of conservatism, he says; in "the splendid star of idealism," for instance, which arose at Concord (in the northwest), Harvard could see nothing but German transcendentalism; she has not as yet made Mr. Wendell Phillips a doctor of laws; Theodore Parker, that giant, she never so much as noticed, and may she not by-and-by begin to go backward? She may. We think, however, that the correspondent will be able to find easy means of reassuring himself. He has but to turn his eye from the Harvard College which declined to fit out John Brown expeditions, and was fond of the merchant princes of Boston and was not fond of Brook Farm, to the Harvard College which moved its students from Cambridge to Concord, in order that Washington's troops might have winter quarters in the College yard; whose undergraduates were among the three-months men of 1861, and to the memory of whose graduates and undergraduates killed in the war which followed 1861 a hall is now dedicated; which taught spiritual freedom as early as any similar institution in America, or in England, or in any country where the English language is heard; which, despite its age and its dependence upon the good-will of its wealthy graduates, has, in accordance with its traditions, set itself to the work of turning a college into a true university, and by general consent has measurably succeeded. Mistakes have been made in the past, and will be made in the future, and probably may be making now; but we should say that as regards the mistake of undue conservatism, the unduly conservative person would oftenest be found to have "Uriel" marked on his shirts, as Mr. Hosea Biglow says, and not "H. U." Our correspondent informs us that at present the catalogue of the university shows that the College proper and the two schools of divinity (Episcopal, and Unitarian or General), the Law School, the Medical School, the Lawrence Scientific, the Agricultural, the School of Mining and Practical Geology, the Observatory, and the two Museums, contained last year the names of 1,214 students, of whom 621 were in the College itself. This year there are about 650 in the College, and the whole number of names in the catalogue will be about the same as before. The fact that a Harvard degree in law, medicine, dental surgery, or any other study pursued in the university, has by late changes in the government and practice of the institution come to signify real attainments on the part of the person holding it much more certainly than before, may doubtless be held responsible for the fact that the number of students is temporarily less than it would otherwise have been. But this failure to show a gain in point of numbers we suppose to be altogether temporary. The total number of instructors connected with the College is about one hundred, exclusive of lecturers and private tutors, who are numerous.

—Every little while the local editors of a pair of Western papers printed in rival cities, or rivals in one city, begin a tilt at each other in reference to some peculiarity, or alleged peculiarity, of their respective cities, or of the respective editors. The relative wickedness of Saint Louis and Chicago has been a fertile topic; so was the relative size of those two cities, and of each as compared with Cincinnati, and there have been countless other causes of dispute which were productive of an amount of extravagant, low fun and horse-play which we suppose the journals of no other country have ever displayed. One editor, we see, having recently remarked that in his family it has been usual for the male members to complete the allotted span of human life, his neighbor thereupon reminds him that "that was before the coming in of capital punishment." Another records the loss of a mule from his establishment, and his rival remarks that no greater case of self-forgetfulness was ever put on record. "Small Talk," of a Chicago paper we believe, is reported by a friend in another city to have fallen off a steamboat in the middle of Lake Huron, and to have at first abandoned all hopes of his life. He, however, luckily bethought himself, and, extending his ears to their full length and breadth, he was swiftly wafted ashore under a fine press of sail. We are next told that "Shakespeare" of the Chicago *Post*, although he is but seventeen years of age, yet can sit at his desk and brush the cobwebs from any part of the ceiling with his ears. It is thought that as he grows up, his ears will match any possessed by the editorial fraternity of his native city. The size of the feet of the ladies of Louisville has been a powerful theme of discourse by the St. Louis papers recently. One of them informs its readers that the agitation of the earth's surface, reported from Nashville as an earthquake, was really caused by a fashionable ball in Louisville. The same paper says that the popular cradle in Louisville has bay-windows for the infantile feet, and that Louisville shoemakers use pile-drivers for pegging thin-soled work. The jokes are carried to an absurd degree of extravagance, and are not always extremely provocative of laughter; but sometimes again they are very funny. The political campaign, as might be expected, has been fruitful of them, and a very amusing and jocose collection might have been made by any one who had thought of doing so in May last.

—In 1633, when Boston was three years old, the General Court of Massachusetts was called on to deal with the "labor question." The scarcity of workmen, Governor Winthrop tells us, "had caused them to raise their wages to an excessive rate, so as a carpenter would have three shillings a day; . . . *and accordingly* those who had commodities to sell advanced their prices, . . . so as it grew to a general complaint." "The evils which were springing, etc., were: (1.) Many spent much time idly, because they could get as much in four days as would keep them a week. (2.) They spent much in tobacco and strong waters, etc., which was a great waste to the commonwealth." The court taking notice of these "and some further evils," devised in its wisdom a remedy, which, if not thoroughly effectual, answered its purpose as well as some modern prescriptions for adjusting by legislation the relations between capital and labor. The conditions of the problem seemed, to Governor Winthrop and the magistrates, to be plain enough. The workingman must be protected against himself. He was growing poor by being overpaid. Because his wages were too high, he worked only two-thirds of his time, and for the rest of the week he was spending money instead of earning. By spending, he was raising the prices of all commodities, and so was compelled to pay more than he ought, not merely for his "tobacco and strong waters," but for necessaries of life.

The General Court interposed for his relief and the good of the state, *by lowering his wages* and compelling him to work six days in the week. They ordered that master carpenters, masons, etc., should not take more than two shillings (or fourteen pence, with board) per day, and that they should "work the *whole day*, allowing convenient time for food and rest." The wages of inferior workmen should be fixed by the constable and town committees. Every person was forbidden to "spend his time idly or unprofitably," and offenders in this wise—especially "unprofitable *fowlers* and *tobacco-takers*"—were to be looked after and brought to due punishment. And to the end that "honest and conscionable workmen should not be wronged or discouraged by excessive prices" of necessary commodities, the court decreed that no goods should be sold in the colony for more than fourpence on the shilling advance on the price at which the same description of goods "might be bought, for ready money, *in England*." What more could a General Court do for "labor reform"? And yet, four years afterwards, the law-makers were obliged to listen to "direct complaints made concerning *oppression in wages*, in prices of commodities, in smith's work," and so forth, "to the great dishonor of God, the scandal of the Gospel, and the grief of divers of God's people both here and in the land of our nativity."

—The New York correspondent of the *Messager de Paris*, an able writer not wholly enamored of our democratic American form of government, and who even thinks that "aujourd'hui la République américaine a cessé de vivre," has been reviewing M. Laboulaye's well-meant attempts in the *Débats* to frame a constitution for France after the pattern of our own. The main ground of his criticism is that Laboulaye, in spite of his long and minute study of American politics, has a very imperfect knowledge of what he is talking about, and displays in his recent articles "cette ignorance du fond et cette perfection de la forme qui sont comme le cachet distinctif de ses écrits politiques." Ignorance of the matter and perfection of style, the correspondent should have remembered, have sometimes been thought the distinguishing stamp of French writing generally. Perhaps we should not bring him to book for assuring his readers in the *Messager* that Mr. Greeley's election was certain long after his defeat had become more than probable. That was an error of judgment not necessary to be laid to his account as a foreigner. In the very letter, however, from which we have quoted, he has fallen into an historical error so gross as to prove him a very indifferent schoolmaster on American affairs. He names three causes as having contributed to the decay of American institutions, of which the first is "la transmission de la nomination du président du Congrès au suffrage universel" (!).

"Previous to 1825," he says, "the choice of President, instead of being committed to the people, was made by the Senate and House of Representatives in convention. Accordingly we observe that the Presidents appointed in this manner are remarkable for the most eminent qualities of mind and character; they were Washington, Adams, Jefferson, Madison, and Monroe—statesmen, writers, thinkers. But no sooner had Congress divested itself of its right in favor of the masses and the conventions which represent them, than we see men of inferior calibre mounting to power," etc., etc.

M. Laboulaye will doubtless not have to look into the United States Constitution to inform his critic that Congress never elected any President, and that John Quincy Adams was the only one whom, from failure of the people to make a choice, the House of Representatives had an opportunity to elect and did so elect.

—Literary activity in Italy scarcely yet permits the regular and unfailing chronicle which French, English, and German literature sustains. Only now and again does a work not technical appear which deserves mention outside of the peninsula. The recent erection in Milan of a monument to Leonardo da Vinci has given occasion for the publication of "Studj intorno all' arte e al genio di Leonardo da Vinci," by Carlo De Blasiis, a slight work embellished with copper-plate engravings of Leonardo's portrait of himself in the Florence Gallery and of his *Gioconda*. "Scritti inediti di Lodovico Antonio Muratori" is a Bolognese publication, marking the two hundredth anniversary (Oct. 20) of the birth of the great historian. The first part of the volume is edited by Prof. Cesare Foucard and Prof. Galassini, and contains contemporary documents illustrative of Muratori's varied career, the "Treatise of Moral Philosophy for the Use of the Prince," and sundry letters; the second part contains an autobiography. Muratori's bones, by the way, have just been removed from their first resting-place in Modena, and an examination of them proved him to have been a man above the average height. The eighth volume of Nicomede Bianchi's "Storia documentata della Diplomazia Europea in Italia dall' anno 1814 all' anno 1861" has appeared, and is even richer than its predecessors in the curious documents brought to light. It embraces the period from 1850 to 1851. A posthumous work on Assyrian antiquities ("Ricerche per lo studio delle antichitá assire"), by the late lamented Felice Finzi, a young scholar of great acquirements and still greater promise, shows a thorough acquaintance with the foreign literature of the subject. A social question which concerns all manufacturing countries is treated for Italy in the brochure of Dr. S. Bonomi, of Como, "Sul lavoro dei fanciulli negli opifici," in the course of which the author says: "By getting operatives at ten years of age, you will have only wretched soldiers at twenty and thirty, and ruined men, worthless for reproducing the species; compelling a child to labor prematurely will never make an intelligent and robust workman." Two other Italian physicians, Drs. Verga and Valsuani, have been investigating the pretensions made concerning the anti-cancerous properties of the weed cundurango ("Il condurango nelle affezioni cancerose"). They agree with the faculty here in regarding its alleged virtues as decidedly "not proven." Of the life of Daniel Manin, by Profs. Errera and Cesare Finzi, we spoke some time ago in advance of its publication. Another Venetian work, of a different order, which has passed to a second edition, is Tassini's "Curiosità veneziane, ovvero origine delle denominazioni stradali di Venezia." Prof. A. de Gubernatis has in press at London an English work in two volumes on Zoological Mythology—the worship of the cow, the bull, sacred elephants, etc. Ferazzi's "Manuale Dantesco" has reached a fourth volume; "Bibliografia," another bibliographical work that promises well, is Giovanni Papanti's "Catalogo dei Novellieri Italiani in Prosa," which will be a valuable supplement to the catalogues of Borromeo, Gamba, and Passano. It is in two volumes, and, it is said, describes a large number of rare works from personal observation. What would an American public think of the condition of the Biblioteca Nazionale at Florence, where the mass of manuscripts coming from the suppression of the monasteries has overpowered the cataloguers, so that new books received to-day cannot be catalogued and placed at the disposal of the public for a couple of years? The librarian sees the evil, but with his small force professes himself unable to remove it. It does not seem to have occurred to any one that it is possible to catalogue a book that is in demand before another previously received book that nobody wants.

—Among the recent publications of the English press we should like to call attention to the privately printed issue of the dramatists of the Restoration. It is to contain the works of Killigrew, Shadwell, Etherege, Centlivre, Wycherley, Sedley, Congreve, Farquhar, and others. The first volume of the series has appeared. It contains three plays by Sir Wm. Davenant, Ben Jonson's successor in the laureateship. Perhaps the only one that is at all well known is the comedy of "The Wits," which was printed in Dodsley's collection, and which, in spite of the coarseness of the time, is an amusing play. Of those in this first volume of the reprint one might be readily excused for ignorance. What especially strikes the reader of the tragedies is the bombastic fierceness of the plots and the tremendous mouthing of almost all the characters. Thus, for instance, does Albovine, in the tragedy of that name, woo his mistress:

> "Fill me a bowl with negro's blood, congeal'd
> Even into livers! Teli her, Hermegild,
> I'll swallow tar to celebrate her health."

This, however, is no fair specimen of the author's general style, but only of his by no means uncommon frightful faults. A more valuable extract is the following from the second act of "The Cruel Brother," to which the editors of this edition call attention. Now that it is rather the fashion to run down the French, it is not wholly out of place:

> "'Tis known the French do take a pride
> In the emphasis of sudden anger,
> As if alacrity in ill did make
> The fault look handsomely, and dulness add
> Deformity to sin.
>
> They have spirits: but they all are useless made
> By forward and affectate violence.
> He that spends his fury and his strength
> I' th' first charge, must not hope to make 's retreat
> So nobly as the modest combatant,
> Whose onset slowly moves: as careful not
> T' outride his skill. Their valor is t' attempt,
> Not to perform. 'Tis a giddy nation;
> And never serious but in trifles.
> Thou dost mistake—in natural effects,
> Where fancy is so rich, 'tis incident
> To some misexpence. These witty riots
> Divulge the wealth of th' brain. Fruit that is ripe
> Is prone to fall, or to corrupt itself,
> According to the age of Monarchies,
> They now are fully ripe: they reach
> The height and top of mortal faculties.
> Nature in them doth stand upon the verge
> Of her own youth. The English want
> Three hundred years of that perfection.
> And as the moon ne'er changes but i' th' fall,
> Even so the mighty nations of the earth
> Change in their greatest glory. First, their strict
> And rugged discipline to vain delights,
> Their solemn marches next to wanton jigs,
> Their battels fierce to duels splenative,
> Or witty quarrels of the pen."

This play was written, by the way, in 1630, so that England has still sixty years before it is wholly given over to Offenbach and journalists' duels. Of the paper and neat appearance of this volume too much cannot be said. We notice, however, a list of twenty-five *corrigenda*—far too great a number. Subscriptions may be sent to J. Baer & Co., London, Paris, and Frankfort.

—Lovers of Elizabethan literature are shortly to have a three-volume edition of George Chapman's fifteen tragedies and comedies. The text, says the *Athenæum*, is to be printed *verbatim et literatim* from the now very rare original quartos, and will be accompanied by a memoir of the author.

—We read in the English papers that M. Alma-Tadema, the French artist, intends transferring his allegiance, and has applied for letters of naturalization to make himself a British subject. To some extent our American artists appear to be undergoing this same process. Mr. George Boughton, so well known for his Puritan maidens and his graceful landscapes, has quite won the English heart by his confiding sentimentalism and pretty pensiveness. Mr. Hennessy also has apparently taken up his permanent residence in London, and we see that the English critics speak with praise of his pictures, which certainly are not wanting in sentimentality either, but which his foreign critics commend as rendering skilfully what they take to be some distinctively American landscape effects. Mr. Bradford is another American artist who has had success; he has at least been warmly received in some extremely fashionable circles, everybody running after his photographs, and even, we believe, applauding his pictures. As representative of American art, we may properly be better pleased that the London public have had an opportunity to become acquainted with some of the works of Mr. John La Farge. The critic of the *Pall Mall Gazette*, not an unexacting judge, and the critic of the *Daily News*, both speak very favorably of some landscapes painted by this artist, whose landscapes, for their disintegrating effect on landscapes by most other artists which may be hanging in the room with them, are indeed likely to be as effective in most British galleries as they are in our American places of exhibition. Some of Mr. La Farge's flower pieces, also admirable, and, so far as we know, altogether unequalled by similar work done by any other contemporary artist, are also praised by the critics we have mentioned, though not as their delicate beauty merits.

—The London *Bookseller* calls attention to the falling off in the accuracy with which the *Times* used to be printed, in the days when, as the tradition ran, "there was a well-paid official in Printing-house Square who forfeited a guinea for every typographical error detected after the publication." "Not a day now passes," says the *Bookseller*, "without errors in every page of the *Times*. Nor are these mere clerical errors. They are blunders implying not carelessness, but ignorance; not rapidity, but stupidity." It cites such instances as these: "Infallible and *impeachable* are not synonymous," where *impeccable* is evidently used by the writer (Sir George Bowyer); "*Honnonian* school of geology" for *Huttonian*. "In the list of Greeley's supporters we find Charles A. *Duna*, for *Dana*, a name which might be familiar to English readers." "For years the name of the American Secretary of State was constantly printed as *Fisk*." "The same paper has sadly muddled the name of the new German envoy at Constantinople, and even the erratum had to be corrected." "In the review of Robert Chambers's life, William, the biographer, is put to death, and has to protest that not he, but his brother, succumbed to overwork in preparing the 'Book of Days.'" The *Bookseller*, however, might be a little modest in this matter. We have found its proof-reading noticeably less accurate than that of the *Publishers' Circular* when authors' names were concerned, and we fear that in its very just criticism on the *Times* it exhibits some of the "nodding" with which it reproaches the Thunderer. Thus we suspect an error in the sentence: "In the article on 'Our Foreign Critics' at the Autumn Manœuvres, the words *fear* discipline were printed for *feür disciplin*." Should we not have read: "*Fear discipline* were printed for *Feuerdisciplin*"? And is there not an anachronism when the *Bookseller* says, after speaking of the *Times's* "Southern articles during the war": "We have not the slightest doubt that *in those days* the Secretary of State was supposed in the *Times* office to be Mr. Fisk, the Prince of Erie, of unhappy notoriety"?

—The *Revue des Deux Mondes* for October 15, contains an interesting article on Rabelais from the pen of M. Albert Réville. The article is a criticism of a recent work on the curé of Meudon by a German professor—Dr. Fr. Aug. Arnstaedt. M. Réville gives what we suppose may be taken as the "modern" view of the writings of Rabelais, which differs from the old view in being in most respects exactly opposed to it. According to what may be termed the Rabelaisian legend or myth, Rabelais stands a representative of "absolute scepticism"—the calculating cynic, the corrupter of youth who delights in his work, the fallen angel of the literary world. Illustrating this attributed character, certain stories have clustered about his name. On his death-bed, for example, he had himself wrapped in a domino that he might make a sacrilegious pun about dying *in Domino*. Another story ran that he died with a jest on his lips about "drawing the curtain on the *farce jouée*." These stories are apocryphal, M. Réville assures us, as that other tale (which will die a harder death, perhaps) about the curé's amusing fancy, when in want of money for a journey, of labelling some packages of ashes as poison intended for the royal family, having himself arrested with these in his possession, and so, carefully looked after as a suspected criminal, carried to Paris for nothing. Unfortunately there are no proofs of any of these stories. Indeed, little is known of his life, but that little, taken in connection with his writings, makes the legend very legendary indeed. It is calumny, M. Réville says, to accuse Rabelais of intentional immorality or impiety. "One finds in him neither the insinuating and perfidious sensuality of the *Decameron* nor the unhealthy obscenity of the *Nouvelles Nouvelles*." His aim is generally very lofty, though his methods of reaching it are often very strange. "Rabelais is indecent, but not a corrupter." The legend, so far as it relates to his religious life, fares no better. "That he was a very poor Catholic, and more detached from the traditions of the church than many of his Protestant contemporaries, there is no doubt"; but that he was a good curé, faithfully performing the duties of his office, beloved by his flock, and with so good a reputation as a preacher that people came to Paris expressly to hear him, there seems also reason to believe. The story of his substitution of himself on a fête-day for the statue of the patron saint of his convent is apocryphal. Were it true, it ought properly to be regarded rather as a juvenile freak than as a characteristic piece of cynicism.

—Turning to Rabelais's writings, or rather to the chief of them, "Pantagruel," the most interesting question is, Have we the key to them? According to the legend, the characters of Rabelais's "Gargantua," "Grangousier," "Pantagruel," "Panurge," and the rest, were taken from the most distinguished men of his time, as, for example, Francis I., Louis XII., and Henry II., and the Cardinal d'Amboise; according to another explanation, they were taken from the royal family of Navarre. These theories, however, are completely abandoned nowadays, and a new explanation invented, viz., that no explanation is needed at all, that there is nothing in the writings of Rabelais "except the play of imagination, with laughter for its sole end, or at the most with the aim of introducing here and there a few philosophic truths." This theory is also erroneous. The fact of the matter is that Rabelais's writings contain a hidden or esoteric doctrine, and that the characters do not represent historical persons but personified abstractions, such as royalty, science, the state, the religious life, and so on. The serious idea of the two first books of "Pantagruel" is the education of youth and the ideal of life. The three others deal with the search for truth in general, the aids which help the search, the obstacles which hinder it, and the enemies which must be overcome to reach it. The unity which binds together the somewhat incoherent parts of the scheme is the individuality of the author himself. We have not space to go into all the details of M. Réville's proof of this explanation, nor the theory of life to which it in the end brings us, nor his interesting literary criticism. It is enough to say that "Pantagruel" and "Panurge" are taken as representing the opposite sides of Rabelais's (or, perhaps, we ought to say of human) nature, one strong, amiable, loyal, learned, courageous, religious, in short, noble—the other cowardly, lazy, thievish, vindictive, foul, and ignoble. "Panurge" and "Pantagruel" stand to each other in a relation analogous to that of Don Quixote and Sancho, Faust and Wagner. Whatever Pantagruel conceives from an elevated, ideal point of view, Panurge with his enthralled intelligence regularly translates and lowers to the level of his material tastes. Pantagruel seeks the supreme word of fate; Panurge wants to know if he may marry without risk. The young hero loves the glory acquired in defensive warfare; Panurge dreams only of the palpable profits of victory. Pantagruel is merciful and generous; Panurge delights in cruel vengeance, in the humiliation and death of those who have offended him; is only prodigal in the interest of his own skin. "It is a perpetual contrast, yet withal never was there a more intimate union." The search for truth ends in the discovery of Rabelais's philosophical and religious principle, which M. Réville calls "l'amour de la vie intense," which we might translate: "love of life at the full." The theory, however fanciful the reader may think it, is well carried out; and M. Réville's article, containing as it does besides this "key" an explanation of Rabelais's very advanced and enlightened views of education, ought to do something to rehabilitate the reputation of one of the wittiest and profoundest of French writers.

FROTHINGHAM'S RISE OF THE REPUBLIC.*

THE title of Mr. Frothingham's work is not on the whole a well-chosen one, for the reason that it appears to cover a wider field than the author had in mind. The real subject of the book is the formation of the American Union, and this subject is treated of with great breadth and fulness. But points even essential to the development of the Republic, except when they bear directly upon the sentiment or establishment of union, are treated only incidentally, if at all. Thus the internal governments of the several colonies, as well in institutions as in political usages and principles of administration, are hardly touched upon; although these are surely of the greatest importance in the establishment of the American Republic.

We must, therefore, forget the large promise of the title, and look merely to what the author set out to do, if we would judge fairly of his book. Regarded as a history of the establishment of the *Union*, it is marked by great simplicity and comprehensiveness of plan, and contains a very complete relation of the events which gradually led the colonies to regard themselves as having common interests, secured their political independence, and thus at last brought them into a firm and lasting connection. These events are analyzed with care, and so grouped that the successive chapters emphasize and bring into distinct view the successive steps in this development, particularly in the reciprocal relation between this process and the causes which occasioned these steps, whether these causes were foreign enemies or acts of the English Government. In this way the English legislation from the Stamp Act down, and its influence upon public sentiment and revolutionary action, are made unusually clear. This particular merit finds expression in the headings to the chapters, which state tersely and suggestively the successive acts of aggression and the consequences of each in the colonies; as, "The Tea Act and American Union," "The Regulating Act and Association," "The King's Proclamation and Revolution."

We wish the headings to the chapters had stopped here; but each chapter has besides another and expanded form of the same, and, what is worse, an introductory paragraph in which the substance of the chapter is packed into a few excessively heavy and obscure sentences--not a bad plan in itself, if only it were done with more skill. Thus, in Chap. VII., "Royal Instructions and Party Organization" is expanded to "How the Patriots advanced from an embodiment of Public Opinion to a Party Organization, by forming Committees of Correspondence. March, 1770, to August, 1773." This is all very well; but then follows this ponderous paragraph: "The patriots, in dealing with the Stamp Act and the Townshend Revenue Acts, developed elements of union, which had gathered strength beneath the diversity that characterized the colonial age; and thirteen communities embodied in their varied action common convictions on political ideas, and so were prepared for a general organization. When the ministry attempted to carry out their policy by arbitrary Royal Instructions, the patriots formed committees of correspondence, and thus organized the party which achieved the American Revolution"—p. 249. We must do Mr. Frothingham the justice to say that this is not by any means a fair specimen of his style. When he philosophizes he is heavy; but when he narrates, he is, although certainly not lively or picturesque or even elegant, yet on the whole an interesting writer. His style improves as he warms into the subject, and the last chapters are much more readable than the first; even if at times we meet with very clumsy expressions, as that at the close of the war (p. 582) the soldiers "impressed an American lesson on mankind" in returning quietly to their homes.

The principal fault we have to find with this book, from a general point of view, is the failure to appreciate honest differences of judgment, as well as the various modes of political thought, in the revolutionary period. We should be sorry if it did not show a hearty sympathy with the revolutionary movement; but surely at the distance of a hundred years, we ought to be able and willing to recognize what there was of good on the other side; to admit that the policy of independence was not so unquestionably clear as it seemed to ardent minds at the time, or as we have been accustomed to regard it in the light of subsequent events. An undiscriminating eulogy of everything that was said and done on one side, and censure of everything on the other side, are not what historical science at the present day demands or permits.

In like manner there is hardly any discrimination among the partisans of independence themselves, or intimation of that variance of opinion and purpose which already existed among them, if only in the germ, and which afterwards divided them into two hostile parties. In truth the American revolution was carried through by a coalition of parties not unlike that which expelled James II. from the throne of England. It was only in the face of a common enemy that John Adams and Samuel Adams, Washington and Jefferson, joined hands in a common cause; when this external pressure was withdrawn, and the one object—Independence—which they all equally desired, was attained, the natural divergences of temper and opinion carried them farther and farther from each other, and created the most intense and venomous party spirit that has ever existed in this country.

But it is not enough to recognize this latent divergence among the patriots; it should be noticed further that the revolutionary movement was in the main controlled and inspired by what we may call the conservative division of the patriot party. Under the influence of the prolonged political rule of Jeffersonian Democracy, it became the fashion to forget this, and to regard the revolution as representing the theories of the school of political philosophy which succeeded in reaping its results. De Tocqueville pointed out with great emphasis, and we cannot insist upon it too strongly, that the American Revolution was essentially a conservative one; that it was of the type of the English revolutions, and not of the French. It is true our fathers went to war, as Webster says, "on a preamble"; but it was a preamble that dealt with specific historical rights, not with abstract theories. It was in defence of institutions and practices of long standing—and that too not merely of the few years of the colonial period, but of the hundreds of years of English liberty—that they took up arms.

On the other hand the oppressive measures of the English Government were an innovation; just as the whole series of the triumphs of prerogative have been. The reduction of the Belgian provinces under the authority of Spain; the subjection of Hungary and Bohemia to Austria; the submission of the entire church under the Papal See; the enforcement of tonnage and poundage and of ship money—all these victories of prerogative were gained over long-established and well-defined liberties. George III. came to the throne with the same lofty notions of prerogative which had brought the Stuarts to ruin—notions which he had imbibed from somewhat analogous causes with them. The attempt to crush the liberties of the American colonies was the commencement of his systematic efforts to carry out his radical theories of prerogative; it was the liberties of Englishmen, no less than their own, that the colonists successfully vindicated.

Again, it was not true of the American revolutionists, any more than it is true necessarily of other communities, that the radical and subversive theories of liberty were found in the most democratic communities. There was a certain aristocratic element in all the colonies; but it was strongest in Virginia and New York, those which took the lead in the radical crusade of Jefferson and his school; while democratic Massachusetts was the consistent and vigorous supporter of the Federal party. Neither is there any inconsistency in this. The democratic institutions of New England were characterized by an organized action, a vigorous and orderly administration, and a rigid adherence to the precedents of historical liberties, such as have characterized all free governments that have endured. It was emphatically the self-government—government of self and by self—of an intelligent and organized community; not that lawlessness of a mob which passes for democracy nowadays. An illustration of the degree in which the "liberties" of the New England municipalities consisted in strictness of procedure, and in an administration which, in Mr. Mill's words (Disc., vol. ii. p. 137), "breaks the headlong impulses of popular opinion, by delay, rigor of forms, and adverse discussion," is found in the rule by which no matter of business can come before a town-meeting unless it has been distinctly announced beforehand in the warrant; again, in the rule that all appropriations of money are made for specific objects, and that the magistrates are held rigidly accountable for applying the funds to these purposes. It was this organized, orderly, conservative democracy that began and carried through the struggle of the Revolution, and that stood firmly by the statesmanlike administration of Washington.

It is indeed in forms like these that the guarantees of liberty mainly consist, as Webster finely pointed out in his speech on the Presidential Protest (Works, vol. iv. p. 129). "Nothing is more deceptive or more dangerous than the pretence of a desire to simplify government. The simplest governments are despotisms; the next simplest, limited monarchies; but . . . every free government is necessarily complicated, because all such governments establish restraints, as well on the power of government itself, as on that of individuals." In consistency with this, the progress of despotism in the old countries has consisted essentially in doing away with local forms and usages, and forcing various differently organized communities to surrender their individual and often complicated institutions, and to adapt themselves to one simple model. In like manner the type of democracy which follows this same innovating process, and aims to reduce all political action under the simple will of the numerical majority, is in reality in league with monarchy, and effectively prepares the way for the one-man power, whether of Cæsar or Cleon. And not merely this; it should be observed that it is noways incon-

* "The Rise of the Republic of the United States. By Richard Frothingham." Boston: Little, Brown & Company. 1872. 8vo, pp. 640.

sistent with an arrogant sentiment of aristocracy. The New England democracy is essentially conservative; Jefferson democracy found its strength and heartiest expression among Virginian slaveholders.

The portions of Mr. Frothingham's work which seem to us to merit special praise are: the third chapter, which gives a remarkably clear and interesting account of the proceedings under James II. and William and Mary, and brings into great prominence the career of Jacob Leisler, in connection with the Congress of 1690; the portions which treat of the part taken personally by King George III. in forcing the oppressive measures of the ministry; the analysis of the successive steps by which the colonies merged their individual action in that of Congress, and thus made a "beginning in America of what in matters of international law is termed sovereignty" (p. 419); and especially in Chap. XI., the able exposition of events during the month of June, 1776, as bearing upon and preparing the way for the Declaration of Independence in the succeeding month.

RECENT NOVELS.*

"UNAWARES" is a perfectly simple little tale, told in a very charming way, and one that we warmly recommend to our readers. The plot on which the story rests is so slight that it would be an act of ingratitude to reveal it; one can guess beforehand how it will turn out without losing any interest in the welfare of the heroine whose love adventures fill these few pages. What the reader feels is not any terror that is instinctively associated with certain tragic events, even if they are clumsily lugged in by the novel-maker, nor any intellectual tickling from an epigrammatic flirtation, but genuine sympathy with a human being who is having her tussle with the troubles of life. The heroine is no exalted creature unduly beset by cruel fate, but a simple enough person, in whom the principal interest is her girlishness as it is shown in her confident belief in the certainty of her ultimate happiness, in her half-romantic dreaming, and in her self-confident inexperience. A writer who can draw a character that is what people are, and not merely does what people, and most commonly people in novels, generally do, is a successful novelist. Perhaps the captious will take exception to the hero, who is too much like the hero of women who write novels, and so, probably, of many who read them; and, in our opinion, they will be justified in regarding him as rather a man of straw who is to be adored for his energy and his constancy than as a representation of an energetic and constant man who is as well drawn as the heroine. There is a slight angelic flavor in the foresight, the professional wisdom, the ardent love, the self-abnegation, etc., with which his womankind might properly invest him, but which is of a sort that to some extent mars the dispassionate novel. Still, there is no need of dwelling on a fault which, in this case, is too slight to hurt a story in other respects so good. Especially deserving of praise is the natural way in which the story is set in a foreign country, so that the reader receives the impression of what is most important in the scene of the novel without having it ungracefully thrust upon him. It is all subordinated to the real story. We once more recommend "Unawares" as well as "The Rose-Garden" as novels which are far superior to most of those which we have seen this year. They interest us as pictures of life, not as an exhibition of the mechanical ingenuity of writers.

Mrs. Cashel Hoey's "A Golden Sorrow" belongs decidedly to this latter class of novels. There are a number of people in the volume, rather than in the story, who appear occasionally as if they were taking part in characters, and give us amateur imitations of selfishness, love-making, typhoid fever, etc. There is the cruel father who is painted with the blackest of black paint, the girl who marries the choice of her heart, albeit to the worldly eye it is a most imprudent match, and the girl who does not believe in love and who marries for money. We only wonder that the author gave this one a chance to humble herself and try again under the other dispensation, instead of letting her starve to death in her best clothes on a desert island as an awful warning to cynical young women. Indeed, she better deserves that fate than the one which is chronicled as a punishment for her extraordinary behavior about her rich but aged husband's will. This may be worth mentioning as an example of the ingenious devices, not so much of the women who are so far mistaken as to marry rich men, but of those who try to write novels without material. The husband is just dead, his young widow fears that his money will pass into some other person's hands, and persuades her docile brother to put on a night-cap, jump into another bed, and, pretending to be the husband, to make a will in her favor, forging her husband's name. This is perfectly successful, and her only punishment is that she marries the gentleman whom she had thus defrauded, and whom, we are told, she really loved.

"The Lady of Lyndon" is a novel that is especially remarkable for the high-toned names of the people who fall in and out of love in the story. Fitzgerald, "commonly called Fitz," Tempest and his sister Winifred, Sir Vere Lyndon and his sister Clare Lyndon, Lady Constance Hampden and her sister Lady Audrey Hampden, Lord Tudor the fastidious, and *his* sister Lady Fullerton, Bertram Denbigh and Edith Hampdon, daughter of the Reverend Augustus Hampden, Sir Montague Lyndon, who is occasionally referred to, who is dead and gone—such people are to be criticised with reverence. The story is simply one of flirtations, which are complicated by various social entanglements. To follow the plot, to keep the run of the calls which are made and returned, and not to confound in one's mind the madly exciting events of the various tea-parties, requires of the reader the most unflinching attention. The author takes very good care of all the characters, they all move and have their being "in the highest circles," and she marries them all off in succession to the right people. The novel is simply a long tale of gossip, as devoid of faults as it is of any genuine interest. Now that the equinoctial storm is over, we feel doubtful about recommending it, but it may do for very bad weather in the winter.

A much more ambitious and a far more successful novel is Miss Healy's "A Summer's Romance." The scene is laid in the island of Capri, and all the incidental part of the story, such as the descriptions of the island and the delineation of the unimportant characters, is managed with a great deal of skill, which is successful in attracting and pleasing the reader. We doubt, however, whether as high praise can be given to the way in which the main plot of the novel is told. It would seem as if the author had introduced characters which she could not manage, and which she had studied rather in the pages of other novelists than in actual life. In a few words it may be said that the romance is one that went on between a pale, at first sight unattractive young woman, who had been a companion to an aggravating English matron, and a young painter. The young woman had been left free for a few months by the matron's death, and a sum of money that had been left her, and she determined to spend her vacation at Capri. These two young people are thrown a great deal together in an unconventional way; they have long and emotional conversations about themselves; he gives her instruction in drawing, and sings to her with the usual result, until finally the evil angel appears, disguised this time under the sweet-sounding name of Carryl Crittenden. This new arrival does not believe in love, and warns his pliant friend Lester, the painter, against the danger he is running of getting entangled. Moreover, he promises to turn the girl's love from Lester to himself, the irresistible. He only succeeds in falling hopelessly in love himself; but he takes his revenge by persuading Lester to leave the island, to return to England, and enjoy a legacy which had been left him by his aunt, the English matron referred to above, on the condition that he should not make an unsuitable match by marrying beneath him. There is, of course, very much more than appears in this very meagre analysis; but this may, perhaps, be enough to warrant a closer criticism of this part of the novel. What had gone before was prettily and naturally told, but from the moment that this "man of the world" appears, we find a great change. He is always posing, always grim at heart, however delightful in manner, cynical but entertaining; in short, he is too much the ordinary hero of fiction. And there is something, not painful, for that was to be expected, but unnatural in the way in which the tragedy is shuffled into the story, and a very amiable young woman is racked because a young man prefers money to marriage. This is a fair problem, and one for which no novelist need go far for example; but the story is harmed by the fact that this question is complicated by Crittenden's jealousy and Lester's blind devotion to his friend, so that the most definite impression left upon the reader is one of the absolute impotence of Lester's mind. He was false because he could do nothing but follow the advice of the person who spoke to him last. The writer fails to represent a man who decides after a struggle which would be the dramatic centre of the story; she only paints a weak man with no mind of his own, who does as he is bid, and we should feel grateful that Louisa escapes him. In spite of this fault, however, the novel is better than most, and we trust that it will be followed by more from the same pen.

One is averse to saying anything about Mrs. Oliphant's last novel, "Ombra," because its dulness is so rare a fault of hers, and one that, in general, wherever found, is sufficiently obvious of itself. The story is not a particularly interesting one, nor is it told with the author's usual skill; but although the novel was apparently hastily written, there is some of the keen observation and the delicate humor that all the readers of her books will remember.

* "Unawares. By the author of 'The Rose Garden.'" Boston: Roberts Brothers. 1872.
"A Golden Sorrow. By Mrs. Cashel Hoey." New York: Harper & Bros. 1872.
"The Lady of Lyndon. By Lady Blake." Boston: J. R. Osgood & Co. 1872.
"A Summer's Romance. By Mary Healy." Boston: Roberts Bros. 1872.
"Ombra. By Mrs. Oliphant." New York: Harper & Bros. 1872.
"The Eustace Diamonds. By Anthony Trollope." New York: Harper & Bros. 1872.
"Victor Norman, Rector. By Mrs. Mary Denison." Philadelphia: J. B. Lippincott & Co. 1873.

On the whole, however, "Ombra" is disappointing, and cannot be recommended.

"The Eustace Diamonds" is the name of Mr. Trollope's last novel, which fills a bulky volume of three hundred and fifty pages. Every one who reads novels has made up his own mind exactly how much merit this author has, exactly how far he sees into human nature, and how interesting his delineations are. That his popularity is declining we should explain as merely the weariness of the public at what formerly amused it. In his method, Mr. Trollope is singularly unchanged, and advancing years only give him more experience. This novel will, we think, be found very readable by those who are not appalled by the author's formal slowness and familiar mannerisms. There is something very ingenious in the account of the bad heroine's lies, and in her unreasonable devotion to her falsehoods. The book is dull at times, but it is clever and more entertaining than half a hundred of the parodies of sentiment which for ever attract hungry readers.

How to render a verdict on "Victor Norman" without finding it flimsy in plot, indelicate in idea, and marred in other respects by unpleasant imitations of Dickens when not at his best, we do not know. The hero, a gentleman of rather "high-church" proclivities, and rector of a flourishing parish, is dogged throughout the story by a suspicious woman and an underbred child, who bears him a striking likeness, and who imparts that flavor of doubtful morality, or that suspicion of hidden sin under a just exterior, which appears to be so taking with both novel readers and novel writers. Of course the damaging suspicion is unfounded, and after suffering all the usual horrors, and inflicting them upon that member of his congregation who is most in love with him, Victor Norman comes forth "as clear as the sun," if by no means "as terrible as an army with banners." Then we have also an old "parcel man," lame and ugly, who marries out of pure benevolence, and with a wish to save her from a life of shame, the most beautiful and innocent maid that ever stood with "bare little feet" on a New York crossing, and swept it for casual pennies. He carries her home to his "pepper-pot of a house," and watches the gradual passion that grows up between her and his handsome grown-up son, to whom he has entrusted the forming of her mind. How Dick grows mad with longing, and how he is tempted to poison his father, but heroically resists, and is in the end rewarded by hearing from his complaisant parent that nothing could have given him a truer joy than to watch the struggle between love and duty in these two who are so dear to him, and that although he was properly married in church to Bessy, yet he has never held other than parental relations with her, and will be happy to resign her to his son. All these things are told in a way that makes one wonder if there is such a thing as delicacy of soul recognized by or recognizable in our popular literature. For Mrs. Denison goes on to "annul the marriage," and makes Dick and Bessy orthodoxly happy. It is unfortunate that novels like this should get a publisher.

JOHN J. CRITTENDEN.*

THIS is the life of one of the best examples of a Southern public man of the old school. If the leading slaveholders had had his moderation, or the wisdom to be guided by his counsels, they might have held their slaves and maintained a powerful influence in national affairs for many years to come. Mr. Crittenden was a slaveholder and a believer in the political necessity and morality of the system. At least we have never seen any reason to think that he questioned either the one or the other. A letter from the late James G. Birney, dated Feb. 11, 1836, inviting him to be the President of the short-lived Kentucky Society for Gradual Emancipation, which is printed in this work, gave him an opportunity, had he wished it, of expressing his opinion on this subject. As the answer is not given, and we believe was never made public by Mr. Birney, we may infer that he did not see fit to commit himself to any effectual action against slavery. That he would have rejoiced in any method of freeing Kentucky from its blasting effects, and would have gladly co-operated in carrying it out, we are willing to believe. But like Mr. Clay, he doubtless thought that the predominance of the party to which he belonged in the nation was of too much importance to be risked by any such Quixotic adventure. He was a thoroughgoing Union man to the last, and, like most other such North and South, believed that the Union was only to be maintained by granting the slaveholders every possible protection for their peculiar species of property; and his name will be best known in history by his last abortive attempt to compromise the differences, which seemed to him but superficial and immaterial, while they were in fact vital and arising out of the very nature of things and the constitution of the human mind.

Mr. Crittenden was born on the 10th of September, 1787, in Kentucky. She was when she received him at his birth but a rude nurse; half civilized, and possessed of but few of the necessary appliances for his nurture and education. Perhaps it was no real disadvantage to him that he had to wrestle with hardships and difficulties, and to be his own best instructor. He made his way to the bar at the age of twenty, was appointed Attorney-General of the Territory of Illinois at twenty-two, took part in the war of 1812, and was at the battle of the Thames, which was the remote occasion of making General Harrison President, and incidentally Mr. Crittenden his Attorney-General; was elected to the U. S. Senate at thirty in 1816, resigned three years later, was made District Attorney for Kentucky by President Adams, turned out of office by Jackson, and again elected to the Senate in 1835. When General Harrison was elected President, Mr. Crittenden was made Attorney-General, but resigned his office in a few months with the rest of the Harrison Cabinet, with the exception of Mr. Webster, because of the treachery of John Tyler to the party that elected him. He was almost immediately returned to the Senate, and there remained till 1848, when he resigned to become Governor of Kentucky. On this occasion a dinner was given him by Senators and Representatives and citizens, without distinction of party. The list of the signers of the letter of invitation is given, and is noticeable for the forgetfulness which has settled down upon the greatest part of them in the course of a quarter of a century, from which a very few—Jeff. Davis, Mason, Bell, Toombs, etc.—are rescued by the infamy of their treason. Low down in the list is a name, perhaps the obscurest of all at that time, and which no one then dreamt was to be the most illustrious in our history since that of Washington. We need not add that the name was that of "A. LINCOLN," then a Representative from Illinois. Mr. Crittenden returned to Washington as Mr. Fillmore's Attorney-General in 1850, after the death of General Taylor, and held the office until the end of that Administration. In 1855 he was again elected to the Senate, and so remained till 1861, after which he was returned to the House of Representatives. While canvassing for a second election, he died on the 26th of July, 1863, in his 76th year.

During the intervals of his national service at Washington, Mr. Crittenden was generally in the Legislature of Kentucky or some State office. He was thus an example of the excellent policy of the slaveholding States before the war, of continuing a man of ability in office all his life, which was a main reason of the advantage the Southern politicians had over the raw and undisciplined levies of the North. He was all the time a lawyer in good practice. He had great power over juries, which, in the half-civilized condition of Kentucky society, were greatly in the power of skilful rhetoricians. The chief forensic triumphs of Mr. Crittenden, as recorded in these volumes, were had in rescuing sundry villanous murderers from the gallows they had most richly merited. The last and most notorious of these cases was that of Matt Ward, who murdered a Yankee schoolmaster. That Mr. Crittenden should have *volunteered* to defend that dastardly assassin, and employed his skill and used the weight of his name to procure an acquittal, was a stain on his personal and professional character, which the labored defence which he thought it necessary to make of his conduct failed to wipe out, and which will attach to his memory as long as it holds a place in men's minds. So will the opinion which he gave in 1850, as Attorney-General, in support of the Constitutionality of the Fugitive Slave Bill be for ever remembered against him. There are certain things which posterity never forgets, and the actors in which it never forgives, and of these that legislative crime is one. All the sophistries that legal casuistry threw around it at the time to disguise its enormity will be swept away by history, and it will be recorded in her blackest characters. Mr. Crittenden had the palliation of his Southern birth and his *status* as a slaveholder to mitigate the severity of the judgment which posterity will pass on the actors in that deed, but they will not be allowed to amount to his acquittal as an accessary before the fact. This is the more to be regretted as his public action in general was very honorable to his political wisdom and independence of character. He resisted the annexation of Texas, resolutely withstood the repeal of the Missouri Compromise, sternly condemned the Lecompton fraud and the Kansas villanies, opposed the measures looking towards the annexation of Cuba, and was a bitter opponent of secessionism. In view of the uncertain sound which many Northern statesmen gave forth at the beginning of that struggle, it is not strange that Mr. Crittenden should have thought that he could calm the rising tempest by the magic of his resolutions, known as the Crittenden Compromise, to which we have already alluded. His failure to satisfy the secessionists showed that the object of those conspirators was not the security of slavery, which that compromise would have established as far as laws could do it, but their own supremacy in the nation.

Mr. Crittenden was naturally the personal and political friend of Mr. Clay, and supported his claims to the Presidency as long as there was any

* "The Life of John J. Crittenden, with Selections from his Correspondence and Speeches. Edited by his Daughter, Mrs. Chapman Coleman." In two vols. Philadelphia: Lippincott & Co. 1871.

hope of his success. Mr. Clay, however, held that as long as there was life there was hope, and clung with desperation to his last chance in 1848, when he had reached the limit of threescore and ten years. Mr. Crittenden seeing the impossibility of his success was one of the earliest promoters of the election of General Taylor. This produced a personal coolness on the part of Mr. Clay towards his old friend, which was only cured when he was on his death-bed. The rivalry between the really great men of the generation for the privilege of the Presidency, the disappointment of their hopes, and their mortification at seeing the quality of man which the people chose to honor in their stead, might furnish a fruitful theme for the moralist or the cynic. Clay, and Calhoun, and Webster, and Scott, all of them thinking their claims good, and one at least with reason, bidden to stand aside for Van Buren, and Harrison, and Polk, and Fillmore, and Pierce! It is a pregnant lesson on the vanity of ambition. Mr. Crittenden himself was named as a possible candidate on one or two occasions, and certainly would have made a much more creditable head to the nation than any of the mediocrities we have named, whose very insignificance and want of weight was the motive power that hoisted them into the White House. Mr. Crittenden was not the intellectual equal of either of his great contemporaries, but he was certainly among the first in the second line. He was not a man of genius—how few have there been!—but of excellent abilities, strong common sense, and sterling worth in private life. His speeches are vigorous and able productions, well adapted to produce the effect he proposed to himself and to secure the respectful attention of his hearers. It is only when he attempts to set off the forcible simplicity of his sentences with the ornaments of poetical or classical illustration that he sometimes comes to grief. As where he gave to Richard (the Third we presume) the one merit of the Thane of Cawdor, that "nothing in his life became him like the leaving o't"; and to Addison the line of Pope's Prologue, about "a great man's falling with a fallen state"; and to a "Roman conqueror" the "stern word" "*Væ victis!*" with which Brennus the Gallic chieftain taunted the Romans, when he threw his sword into the scales where the ransom of Rome was weighing. But Mr. Crittenden had no lack of Congressional companions in this particular distress to keep him in countenance.

Mr. Crittenden is shown by the pious pains of his daughter in a most amiable light in his relations with his family and his friends. He had the grief, common in all civil wars, of seeing his sons take opposite sides in the rebellion. His eldest son, disregarding his father's earnest exhortations "to be true to the government which has trusted you, and stand fast to your nation's flag," turned the sword he had received from his country, and which she had taught him to use, against her life. Two of his other sons, however, served through the war in the Union army, and are still officers of rank in it. Mrs. Coleman has done her work so well where she appears in person, that we are the more sorry that we see no more of her own proper hand in it. The defect of the book as a literary work is, that it is less a continuous narrative of a life than a collection of documents relating to one. The book is unmanageably heavy, and would have been better and would have had more readers had it been retrenched by a third. The writer of the life of a public man should act on the presumption that none of the readers know anything on the subject. This assumption may be courteously veiled and the necessary narrative made as concise as possible, but it should govern its composition. It is quite proper that the story should be illustrated, and the character of the subject exemplified by extracts from his speeches and public papers, but they should be brief and consist only of the titbits and plums, for there is nothing that the average reader regards in the light of what novel-reading young ladies call "*skip*" so much as these passages. A thread of narration giving the prominent public events of her father's life, on which his own writings and the letters of his friends should have been strung, would have made her work clearer and more satisfactory to all her readers. For even of those who have lived through all the events she would have had to tell, very many have but a confused recollection, and very few an accurate knowledge, of them; while to the generation that have come to maturity within the last ten or a dozen years they are all one as ancient history. Not unfrequently the reader is tantalized by having his interest excited by the action of Mr. Crittenden in some matter of public or private legislation, and no word added to tell the result. The brief account which Mrs. Coleman gives in the beginning of her work of the manners and customs of Kentucky in the earlier days of her father's life, is so lively and entertaining that we are sure she could have done well and gracefully the work we miss, had she thought it best so to do. The letters to Mr. Crittenden form a very valuable and entertaining part of the contents of the volume. Those of Governor Letcher are rollicking and jolly in a high degree, and of those true letters which the writer never dreamed would be seen by any eyes but his correspondent's. Mr. Clay's are rather of the sort which are written with the sense that posterity is looking over his shoulder as he writes. General Scott's are not all of this kind, but excellent and entertaining, and quite redeem his character as a letter-writer from the ridicule the unlucky epistle over which he spilt his "hasty plate of soup" had attached to it. General Taylor's are manly and sensible, and give one a higher opinion of his capacity as a civilian than it has usually obtained. Much light is thrown by them on the secret history of the time of the Mexican war and the intrigues intended to ruin General Taylor, but which ended in making him President. There is much valuable matter of historical and personal interest contained in these and other letters, which will render the work one of permanent value.

RECENT POETRY.*

III.

EACH season in London there is some book—a novel, or a poem, or what not—which is received with a universal kindness of welcome that must be somewhat trying to authors who have to run the ordinary gauntlet, and which to the outsider is often inexplicable. We recall at this moment three or four of these favorities of fortune. One was "The Coming Race," a public satire on things in general, and on republican forms of government in particular—a good deal of the story of which, by the bye, we take to have been unblushingly "lifted" from Mr. Robert Landor, who twenty-odd years ago published a two-volume work, "The Fountain of Arethusa," of the same general description as "The Coming Race." A very suggestive, full-flavored, and hearty book it is, too, penetrative, humorous, and every way enjoyable. Another of these spoiled children of criticism was George Eliot's "Spanish Gypsey," though it is easy to see in her case how a disinclination to be rude with a writer to whom so much respect was on other grounds due might prevent plain speaking in regard to our philosophic novelist's poetry. Later came "John Jerningham's Journal" by some writer to us unknown, and, to hear the reviewers, one would have supposed it to be anything but the vapid little thing it was—a piece of young missish verse-making relative to some persons and adventures which, without the rhyme, not even a New York *Ledger* audience would have listened to for five minutes. The latest of these lucky performances that we have noticed is the one which heads our list of books, "Olrig Grange." It is a higher class member of the school of "John Jerningham's Journal," though it is not quite so "powerful weak" as that effort; but it will do very well. Its burden is the life, love, and early death of a youth called "Thorold":

> " . . . He was
> A student who had travelled many a field
> Of arduous learning, planted venturous foot
> On giddy ledge of speculative thought,
> And searched for truth o'er mountain, shore and sea,
> In stone, and flower, and every living thing,
> Where he might read the open secret of God
> With his own eyes, and ponder out its meaning"

He is, in short, busy to some extent with the problem of unifying faith and science, and although but a youth,

> "And tall, and slightly stooping, with features high
> And thin and colorless: yet earnest life
> Beamed full of hope and energy and help
> From his great lustrous eyes,"

and he is introduced to us when the poem begins as going forth to a scientific career, in which he is to win distinction. He does not, however; he falls in love with a lady whose mother is evangelical in point of religious professing, but bitterly worldly in point of fact, and who is determined that her daughter shall marry a baronet even if she turns ritualist to effect that object. Her father, a scientific *dilettante*, but not really scientific, is equally decided against Thorold, who had expected him to stand his friend. Without meaning to betray Thorold, Rose has to give him up in favor of the baronet; the hectic shortly comes into Thorold's cheek, and he goes home to Hester to die, which he does after a long monologue, in which he explains his love affairs, and "reconciles faith and science" as follows:

> "My old doubts?—Well, they no more fret,
> Nor chafe and foam o'er sunken rocks.
> I don't know that my Faith is yet
> Quite regular and orthodox;
> I have not keys for all the locks,
> And may not pick them. Truth will bear
> Neither rude handling, nor unfair
> Evasion of its words, and mocks
> Whoever would falsely enter there.
> "But all through life I see a Cross,
> Where sons of God yield up their breath:
> There is no gain except by loss,
> There is no life except by death,
> There is no vision but by Faith,
> Nor glory but by bearing shame,
> Nor justice but by taking blame;
> And that Eternal Passion saith,
> 'Be emptied of glory and right and name.'"

* "Olrig Grange. Edited by Herman Künst, Philol. Professor." Boston: J. R. Osgood & Co. 1872.
"A Hidden Life, and Other Poems. By George Macdonald, LL.D." New York: Scribner, Armstrong & Co. 1872.
"Poems. By J. G. Brinckle." Philadelphia: Claxton, Remsen & Haffelfinger. 1872.
"June on the Mismi. By W. H. Venable." Cincinnati: R. W. Carroll & Co. 1872.

This it will be seen is the fashionable solution of this fashionable problem and will have the approval of all such terrific "doubters" as the ladies who read Mr. Stopford Brooke, and all such tremendous theologians as young curates who are in society. The evangelical mother, we may remark, is hit off as if the author were indeed a young curate of the Establishment with a belief in Convocation and the classics as distinguished from "Prots" and chemistry and low dissenters. This lady thus talks to Rose:

"It's grace you need, Rose, to illume
Your darkened nature. What an age
Since I have seen you in my room!
Though I have nothing to engage
My thoughts, except the sacred page,
And that sweet book which is so clear,
Upon the Beast and his numbered year:—
Yet all the while there 's quite a rage
For some wonderful May-fair novel, I hear.

"And after all I have done for you!—
But daughters are not what they were,
And you are only proving true
What all the Prophets do aver.
O, had you heard our minister
Upon The Signs of the End, and how
The children of the saints shall grow
Still wickeder and wickeder!—
Till all to the Beast and the Woman shall bow."

The work is edited by "I, Herr Professor Künst, Philologus," who has won the love of Hester, and who shows us one and another of the *dramatis personæ* talking, and himself gives us some blank-verse just as each personage is to be introduced. The reader will have noticed the queer little hop-skip at the end of the stanzas. It by-and-by produces as one reads a feeling singularly compounded of weariness, disgust, and ill-natured merriment. A worse device for provoking the fatigue that comes of sameness could hardly have been found.

Mr. George Macdonald's "Hidden Life" is a story which may very well have gratified many a Scottish youth, though opinions might differ as to whether such stories are on the whole profitable. It is of a youth who at early dawn goes out to do his first day's ploughing, he having just been promoted to the post of ploughman. His manly pleasure in his work, his enjoyment of the sights and sounds of nature, are described with a fervor which leaves us in no doubt as to Mr. Macdonald's pleasant recollection of youth amid the heather. As his day's work is done and he is driving home his team a lovely lady, or rather young girl, slips from her horse because of the breakage of her saddle-girth, which the young ploughman mends, and then he reseats her in the saddle.

"Soon his hand and knife
Had set the saddle firmer than before
Upon the gentle horse; and then he turned
To mount the maiden. But bewilderment
A moment lasted; for he knew not how,
With stirrup hand and steady arm, to throne,
Elastic, on her steed, the ascending maid:
A moment only; for while yet she thanked,
Nor yet had time to teach her further will,
About her waist he put his brawny hands,
That all but zoned her round; and like a child
Lifting her high, he set her on her horse;
When like a risen moon she smiled on him,
Nor turned aside, although a radiant blush
Shone in her cheek, and shadowed in her eyes."

This promises a love story; but we are glad to say that Mr. Macdonald holds his hand, and that though what follows is in its upshot "soft" enough, and we fear too much so to suit a palate in its natural, proper condition, it is nevertheless not the old tale, though a common one. The father determines that by saving and sparing he will give his son a liberal education, and the poem goes on to detail, not unsuccessfully, though not with sufficient directness and with blank-verse a little swollen, the course of the boy's education and of the father's affection. The son is destined to die young, however, and his last work before his death is to write a letter to his young lady, in which he tells her how often he had thought of her face and of what value the recollection of her had been to him amid the temptations of youth. The poem closes with her visit to his graveyard.

Other poems in this little volume will please all readers of Scripture. They are hymns and religious poems of various kinds, some being on such subjects as the women of the gospels. They are free and flowing in rhythm, highly religious in sentiment, and not hackneyed in idea.

Mr. Brinklé has made a volume of more than ordinarily clever verses which also are further out of the common track than such volumes of verses are apt to be, though there is a certain amount of remembered eyes, and dreaming after the ball, and of disseverance of lovers. From "A Sunday in Rome" we quote a stanza or two which may show Mr. Brinklé's quality:

"'*Cocchière*, drive me to the Coliseum;
For there I shall escape the pompous *scena*
Of *Miserere*, *Agnus*, and *Te Deum*.—
'Tis vain; for, straying round the vast arena,
"A cowléd train I meet of mendicants,
Who kneel at pictures of the *via crucis*—
Wailing the while most melancholy chants.
Close following in the wake of the recluses,

"Old women fling their arms around the crosses,
And kiss the soil (for martyrs perished there!)
While thoughtful men, who seem to count their losses,
And ragged children, raise their eyes in prayer."

"The Teacher's Dream" seems to us the best of the poems in Mr. W. H. Venable's "June on the Miami," though there is none of them that can be called bad, or in which there is not a greater or less degree of the aroma as distinguished from the substance of poetry. "The Teacher's Dream" ought to be popular in the educational magazines, for it suggests a comforting thought to the conscientious instructor in a despondent mood of no unfrequent occurrence. The schoolmaster is represented as being discouraged because of the little influence he exerts on his boys and girls, and sitting disconsolate in the twilight he unconsciously falls asleep, and dreams of a senate hall, where an orator is speaking, whom, by-and-by, he recognizes as an old pupil, and then of a church:

"The stately senate hall dissolved,
A church rose in its place,
Wherein there stood a man of God,
Dispensing words of grace.

"And though he spoke in solemn tone,
And though his hair was gray,
The teacher's thought was strangely wrought,
'I whipped that boy to-day.'"

The other poems show a preference for descriptive out-door poetry of a very simple and somewhat vague sort, and show also familiarity with some of the elder as well as some of the later descriptive poetry of our tongue. It is good to be reminded of Grongar Hill instead of Mariana's Moated Grange.

Lamartine, sa vie littéraire et politique. Par Charles De Mazade. (Paris. 1872.)—In the last three months of 1870 M. De Mazade furnished to the *Revue des Deux Mondes* some interesting articles on Lamartine—one of the many instances, of which Paris is justly proud, of a devotion to science and literature persevered in through all the distractions of the siege—a devotion that ought to offset in some degree the disgrace brought upon her by her later excesses. He has now collected these articles, and published them under the above title, with a preface which is a melancholy example of the feeling of intense mortification that now pervades France. It commences with a bitter complaint that there are nowadays no men of genius. Where, he asks, are the successors in England of Byron, Pitt, Canning; in Italy, of Cavour; in Germany, of Schiller, Goethe, Humboldt, Kant, Hegel? Even to the men who have conquered his country he denies genius. They are strong, skilful organizers of military operations, which they conduct as they would commercial operations, and they have certain mental qualities which enabled them to succeed in their long-prepared enterprise; but they are not great, for all their astonishing victories; they want that inexpressible something which marks the hero. Frenchmen, no doubt, find this belief consoling, and there is some truth in it; but if to vindicate the superiority of French genius they were forced to recur to Lamartine, they would be sunk low indeed. However, M. De Mazade finds in France the same lack of the higher faculties; and he draws a melancholy satisfaction from the confession that, as usual, France shows in a more concentrated and striking form the general characteristics of the age. The cause he finds partly in the false democratic spirit of the time, which tends to level the legitimate aristocracy of the mind as it has levelled the aristocracies of blood and caste, partly in an overpowering material development, in which spiritual things are entirely lost sight of; partly in the law of alternation, in accordance with which nature has its periods of rest in the moral world as it has in the physical. Lamartine M. De Mazade ranks with the men of genius of the past generation. He cannot of course be blind to his great shortcomings, his vanity, his weakness, his instability, his extravagance, his sentimentality; but he has a right to assert that his hero's poetry, if not manly, was pure, elevated, wonderfully abundant, and, for a time, wonderfully popular; that his statesmanship, if it was at first carried away by the popular impulse, did the greatest service to France by the skill with which it directed the storm and restrained the excesses of the Red Republicans. In the preface, to show that Lamartine had a certain political clear-sightedness, allied to his poetic faculty of insight, M. De Mazade mentions his pointing out in 1840 the danger of the popular Napoleonic apotheosis, and quotes some very striking passages from speeches delivered in 1841 in opposition to the fortification of Paris, in which he predicted precisely what came to pass, their utter insufficiency against the enemy, and the difficulty and final impossibility of restraining the enemies from within.

In truth, a review of Lamartine's whole life puts him somewhat above the

position he has lately held in popular estimation. The failure of the Republic, the painful degradation of his later days, have given the present generation an unpleasant impression of him, as if he had been a mere demagogue, charlatan, and mendicant. It is true that the poetical aspect of any policy captivated him, and that that policy was apt to seem most poetical which offered him the best opportunity of making a brilliant speech or pursuing an eccentric course. Yet he was not visionary, as we use the term; nor unpractical, nor without any convictions; and one praise he certainly ought to have, he never yielded to the French notion of "glory"; he braved some unpopularity in trying to soften the rancorous recollection of 1815, and, if he were now living, would certainly oppose the systematic cultivation of ill-feeling towards the Germans.

Alexander von Humboldt. Eine wissenschaftliche Biographie im Verein mit R. Avé-Lallemant, J. V. Carus, A. Dove, H. W. Dove, J. W. Ewald, A. H. R. Grisebach, J. Löwenberg, O. Peschel, G. H. Wiedemann, W. Wundt, bearbeitet und herausgegeben von Karl Bruhns, Professor und Director der Sternwarte in Leipzig. (Leipzig: Brockhaus.)—This biography, in all respects worthy of its subject, was projected and announced by Professor Bruhns in 1869, on the hundredth anniversary of Humboldt's birth; but its publication was delayed by the war of 1870-71, and also by the labor of sifting and arranging such a mass of material, distributed among so many hands. The plan of the whole is admirable, and the methodical execution of details enables the reader to consult with facility whatever portions of the life and works of the great naturalist may have for him a special interest. The biography is itself a Cosmos. It is in three volumes—the first two are devoted to the life; the third contains essays, by specialists, upon Humboldt's labors in various departments of science. Volume first treats of the youth and early manhood of Humboldt, and also of his travels in America and in Asia, which are given in the form of a narrative, interspersed with scientific observations and results. The whole of this volume is from the pen of Julius Löwenberg, who for many years has made Humboldt's life a study, and who has had at his disposal a large and rich collection of documents, letters, and other biographical materials. These are classified and arranged in sections, which are carefully indicated in the table of contents; and at the close of each part is a summary or review, by means of which the reader can group all the salient points in memory. Carl Ritter's estimate of Humboldt's travels and other minor papers of value are gathered in an appendix. Volume second continues the biography under two principal sections: the first describes his residence in Paris from 1808 to 1826, his scientific studies and publications there, and his intercourse with Bonpland, Cuvier, Deluc, Laplace, Arago, Biot, Gay-Lussac, Lamarck, Etienne and Isidore Geoffroy St. Hilaire, Milne-Edwards, Guizot, and many other eminent men. This part is contributed by Robert Avé-Lallemant. The later life in Berlin, from 1827-59 (with the intervals of the Siberian journey and the second residence in Paris), a life divided between literary work and attendance upon court ceremonies, is pictured by Alfred Dove from intimate personal knowledge and the most authentic sources. This covers a most interesting period of Prussian political history, in which the personal popularity of Humboldt and his practical wisdom were of essential service to two sovereigns. The volume concludes with a bibliographical survey of Humboldt's works, with chronological and classified lists of his minor writings, by Julius Löwenberg. Volume third is composed of eight independent essays upon Humboldt's contributions to various branches of science. 1. Mathematics, Astronomy, and Mathematical Geography, by Karl Bruhns. 2. Terrestrial Magnetism, and certain special physical and chemical researches, by Gustav Wiedemann. 3. Meteorology, by H. W. Dove. 4. Geology, by Julius Ewald. 5. Ethnography, Political Economy, and History, by Oscar Peschel. 6. The Geography of Plants, and Botany, by August Grisebach. 7. Zoology and Comparative Anatomy, by J. Victor Carus. 8. Physiology, by Wilhelm Wundt. Three portraits of Humboldt illustrate the work: the first, at 27, bears a striking resemblance to Mozart; the second, at 45, does not recall any of his familiar pictures, and could hardly suggest him as the prototype of the venerable and noble head, at 81, which adorns the third volume. In the preparation of this work, the editor and his collaborators, the publisher and his workmen, have done all in their power to give it perfection. It will take rank at once not only as the standard biography of Humboldt, but as an authoritative history of the whole development of science in the nineteenth century. Many copies of the original will doubtless find their way to the libraries of American colleges; but it should be made generally accessible through an English translation, by competent hands, and take its place in thousands of private libraries by the side of the "Cosmos."

JUST READY.

A NEW NOVEL BY TURGENIEFF

LIZA: A Novel. By Ivan S. Turgénieff. Leisure-Hour Series. 16mo, $1 25.

"In our opinion he is equal to any living novelist; or, if that estimate be disputed, he is at any rate one of the greatest, and on that account his writings demand attentive consideration."—Nation.

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—London Spectator.

RECENTLY PUBLISHED.

A CONDENSED EDITION OF TAINE'S ENGLISH LITERATURE, FOR GENERAL READERS AND FOR SCHOOLS. Prepared by John Fiske, Assistant Librarian and late Lecturer on Philosophy in Harvard University. Post 8vo, $2 50.

This edition is just what is wanted by that large class of our people who would be glad to read the larger edition if they had the time.

THOUGHTS FOR THE TIMES. Sermons by the Rev. H. R. Haweis, author of "Music and Morals." 12mo, $1 50.

"He aims at nothing less than laying down the first principles of that new liberal theology which is to characterize what he calls the Church of the Future. Mr. Haweis writes not only fearlessly, but with remarkable freshness and vigor."—Saturday Review.

"Apart from the unquestionable cleverness, . . . they have a special interest as exhibiting the treatment which old-fashioned orthodoxy is just now undergoing at the hands of the liberal clergy."—Pall Mall Gazette.

OUTLINES OF HISTORY. By Edward A. Freeman, D.C.L. 16mo, $1 25.

BIOGRAPHIA LITERARIA. By Samuel Taylor Coleridge. Centenary Library Edition, 8vo, 2 vols., $5.

JOSEPH NOIREL'S REVENGE: A Novel. By Victor Cherbuliez. Translated by William F. West. Leisure Hour Series. 16mo, $1 25.

"Outdoes the French novelists with their best weapons. Besides his superiority in the construction of his plots, his treatment of his characters is most able, and his style of the greatest brilliancy."—Nation.

A BOOK FOR THE PEOPLE.

THE ISSUES OF
AMERICAN POLITICS.

A Discussion of the Principal Questions Incident to the Governmental Polity of the United States, embracing the subjects of Civil Service, Force Legislation, Amnesty, Suffrage, The Centralization of Power, Our Money and Currency, The Public Debt, The National Banking System, Reconstruction, The Constitutional Amendments, Tariffs, Taxation, Protection and Free Trade, and other Important Topics. An Exhaustive Treatise upon our National Politics. By Orrin Skinner. Crown 8vo, toned paper, extra cloth, $2 25.

Opinions of the Press.

"The traces of a thoughtful and discriminating intellect, and of no common power of expression and illustration, are plainly visible in the composition of this volume. It is marked by an unusual breadth of view in the discussion of hackneyed topics. . . . We cheerfully accord our tribute to the precision of statement, the dignity and fairness of discussion, and the power of argument which are conspicuous features of his volume."—N. Y. Tribune.

"This is a valuable addition to our political literature. The author has covered his ground well, including in a small space a vast amount of historical matter, with comments thereon, the whole stated in a remarkably clear and succinct manner. . . . The book deserves to take its place with the standard literature of the country."—Philadelphia Evening Bulletin.

"An able and important discussion of the principal questions incident to the governmental polity of the United States. We cordially commend the book as, on the whole, a singularly just and impartial review of the issues entering into American politics, and as furnishing much really valuable information."—Baltimore Gazette.

"It is an excellent treatise, and may be regarded as a compendium of American politics for the last half-century, or in fact from the inauguration of the American system of finance by Hamilton. A copious index, alphabetically arranged, adds much to the value of the volume as a book of reference, a position to which it is eminently entitled."—Hartford (Conn.) Post.

"A work of great political interest, and abundant in instructive suggestions."—St. Louis Times.

For sale by Booksellers generally, or will be sent by mail, postage paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

THE GREAT BIBLE DICTIONARY.

The Unabridged, Enlarged, and Corrected Edition of

DR. WILLIAM SMITH'S
DICTIONARY OF THE BIBLE.

Comprising its

ANTIQUITIES, BIOGRAPHY, GEOGRAPHY, AND NATURAL HISTORY.

Edited by Professor Horatio Balch Hackett and Ezra Abbot, LL.D.

The Original English Edition reproduced without mutilation, text and illustration complete, with manifold textual errors corrected, and important additions made under the direction of the two most competent editors in America. In four volumes 8vo, pp. 3667, with 596 illustrations.

PRICES AND STYLES:

In cloth, bevelled edges, strongly bound, $26; in full sheep, $30; in half-morocco, $35; in half-calf, extra, $40; in full calf, $45.

NEARLY READY.

THE COMEDIES AND TRAGEDIES
OF
GEORGE CHAPMAN,

The Celebrated Translator of Homer (1598-1654).

NOW FIRST COLLECTED.
WITH A MEMOIR OF THE AUTHOR.

These three volumes will contain the complete collection of Chapman's Dramatic Works, reprinted *verbatim et literatim* from the rare original quartos, a set of which could not be obtained for fifty pounds, or obtained at all without long and tedious search. The high place which Chapman already occupies in literature as the first and best of our Homeric translators, and the enthusiastic admiration which the most illustrious writers, including Hazlitt, Shelley, Charles Lamb, and Hallam, have expressed for his Dramatic Writings, make it surprising that his Plays should not before now have been placed within the reach of poetical and dramatic students.

"Of all the English Play-writers, Chapman perhaps approaches nearest to Shakespeare."—Charles Lamb.

"Chapman, where he lays aside the gravity of the philosopher and poet, discovers an unexpected comic vein, distinguished by equal truth of nature and lively good humor."—William Hazlitt.

"He has more thinking than many of the old dramatists: and the praise of one of his critics, though strongly worded, is not without foundation, that we 'seldom find richer contemplations on the nature of man and the world.'"—Henry Hallam

"That full and heightened style of Master Chapman."—Webster.

Small Paper, 3 vols. 12mo, uniform with "Mrs. Behn" and "Mrs. Centlivre," $10; ditto, ditto, ditto, half-morocco, gilt top, $13 75; Large Paper, 3 vols. 8vo, only 100 copies printed, $18; ditto, ditto, ditto, half-morocco, gilt top, $24.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 21, 1872.

The Week.

A DELEGATION of Pennsylvania politicians, numbering about thirty, and headed by Senator Cameron and General Hartranft, went on to Washington the other day in a palace-car, "dispensing an elegant hospitality" (champagne and whiskey-and-water), and marched up to the White House, where they were introduced by Secretary Robeson to General Grant. By the mouth of Mayor Stokely they urged upon the President, as "representatives of the complete Republican organizations of the State of Pennsylvania and the City of Philadelphia, the appointment of George Truman as Postmaster of the latter city." Mr. Truman was a warm friend of the Administration—so the mayor said—had done much to help to re-elect General Grant; a great victory had been obtained, but the organization must be kept up; the Republican party in Philadelphia had not much faith in the civil-service rules; they certainly did not stop to think of them when they were rolling up majorities for Grant and Wilson, and so forth, and so forth. The President is reported as having listened attentively, and then said in reply that he did not see why on this particular occasion he should set aside the rules and regulations of the Civil-Service Commission; the civil-service system was favored by the Republican platform and was supported by the Republican party; he had, therefore, made up his mind to enforce the rules; in the present case two candidates were presented; one of them—Mr. Fairman—had been an employee in the Post-Office for some time, and, as far as he knew, was entirely competent to fill the position of Postmaster; if he was disposed to set aside the civil-service regulations and go outside, he might appoint Mr. Truman; but he could not conscientiously do so. Upon this the delegation withdrew in disgust, and there are intimations that after reaching their hotel some of the less devout among them used profane expressions and said they were sorry they "worked."

According to the explanations given by the Administration journals, this is a *bonâ-fide* case of civil-service reform, and everybody is reminded by it of the rebuff given by General Grant to another set of Philadelphia politicians four years ago, but, for reasons which it is not necessary to mention, the same outburst of popular satisfaction has not ensued, although everybody gives approval. There even are assertions that Mr. Fairman is "a Forney man," and that it is for Forney's sake that General Grant has sent Mr. Cameron to the right-about. But it will not occur to many people that it is necessary to consider this charge seriously. Except General Grant's malignant enemies, everybody who is outside the ranks of the working politicians will pray that the President's hands may be strengthened and that he may keep on as he has begun, and will be glad to credit his action to an honest wish for a reformed civil service, and will pay little heed to the suggestion made in some quarters, that he acted under pressure from Mr. Adolph Borie, Mr. George W. Childs, and Mr. George Stuart. We are happy to add that examinations are now reported as going on at the Custom-house in this city, where applicants for two grades of offices are undergoing examination. There are said to be ninety competitors for the eleven lower offices vacant. Mr. J. P. C. Shanks and his sort to the contrary notwithstanding, we suppose President Grant could do nothing more satisfactory to the people than show them this same spectacle regularly, and perhaps, too, he will find when Congress meets that he has got on his hands a fight big enough and hard enough to satisfy even him. But it is a simple issue, and the people are distinctly not on the side of Shanks.

A letter has appeared in the columns of an evening contemporary of ours which it may be of service to reformers to peruse. "T. W." writes to the editor concerning the men to whose exertions we owe the recent "glorious result" in this city and State, and of all men in the world we find turning up as a public-spirited anti-Greeley man the well-known Mr. Hank Smith, against whom there are we forget exactly how many indictments now pending. Mr. Smith, greatly to his horror, was taken ill as the campaign became warm. His enemies aver that the peculiar complaint which nailed him to a couch of pain was what in Mr. William Tweed's case was known as having "seen a great light" in political affairs. When you see a great light in politics, your sickness and the approach to a better world cause you to get all your anti-nepotists, strikers, shoulder-hitters, reformers, repeaters, rumshop-keepers, thieves, and political followers generally, to renounce the support of the gentleman from whose "headquarters" the great light does not proceed, and to go over, bag and baggage, to the camp of the other man. However that may be (and we do not know that Mr. Smith saw any light; only we know the Grant canvass was conducted with an extraordinary sharpness that would not have disgraced, or would have disgraced, "T. W.'s" best years), whatever may be the truth about the assertions of Mr. Smith's enemies, Mr. Smith was taken sick; he found that he could not give to the Greeley cause that wheel-horse quality of "work" which was confidently expected from him; his physicians forbade it. And as he lay and languished and reflected, a change came over him, and he wrote, says "T. W.," a great many letters—two or three hundred, if we recollect right—which he sent to all his principal political friends, and in which he assured them that could he "go to the front" he should work his utmost to secure the election of General Grant and General Dix, and exhorted them to do the same. The good of our country demanded it, he said. He deserves a great deal of credit, "T. W." says. And so does A. Oakey Hall, he says. Hall did good service in appointing, upon the right kind of representations being made to him, the right kind of men as inspectors. So we may all be pleased, we presume, or more pleased than we otherwise should have been, that Hall has got off clear from *his* indictment. The whole letter is good reading for the Committee of Seventy. "T. W.," we observe, praises Mr. A. B. Cornell also for his services, and Governor Morgan for his, and Mr. Commissioner Davenport for his, and does not, we believe, praise the Honorable Roscoe Conkling for his.

Our attention has been called to an error of statement in our last week's paper. Speaking of the Forty-third Congress, we said incidentally that it would assemble on the 4th of next March. In fact, however, it will not so assemble unless the Forty-second Congress should annul a recent enactment (the act of 1871, repealing the act of 1867), which postpones the meeting of Congress till December. Of this change there is, we are informed, no prospect, and we shall probably adhere to the old plan of bringing Congress together eight months after the beginning of the term—a plan attended by some inconveniences, but, as we suppose most business men will say, productive of little public injury, if not, in fact, a positive benefit. We may add to our remarks on the complexion of this same Forty-third Congress, that in all likelihood Mr. Morton of Indiana will be among its Senators—the Republican Legislative caucus of that State having unanimously put him in nomination, and his success being held to be as certain as anything future can be. This same caucus, by the way, returned its thanks to the Indianapolis *Journal*, which is understood to be Mr. Morton's organ, for its zeal in the right during the late canvass. Upon this the *Journal* thinks that the *Sentinel* (Democratic organ) should also have received the thanks of the Grant men for its services in beating its own candidate, and that thanks are also due "that sloppy little concern, the *News*." But on the whole, the reader will be glad to learn, most of our brethren are pretty civil just now. The *World* wants to get loose, however, and there are lively times in the immediate future.

The Boston papers are somewhat curiously silent in regard to some features of the great fire, but the public begins to understand that the men composing the force of the fire department were excellent, that the *matériel* also was excellent, and that the head of the department and the executive officers of the city government were incapable and unfit for their posts. Of course they were tried by a tremendous test, and one before which most men would have succumbed; but as most men are not paid to be mayors and chief-engineers of the city of Boston, this is no adequate defence. Though for the matter of that, it may well be urged against the city, as it may be urged against most American communities, if not of every one of them, big and little, and about other things than its fire department, that it could spend its money by the hundred thousand upon engines and machinery, but begrudged the comparatively modest sum which would have secured a capable head for the direction of its organization. The chief-engineer's business was to know precisely the character of the buildings in every portion of the city, to make formal and public protest against bad styles of building, to have studied thoroughly and minutely the proper course to be taken in every sort of fire; and the mayor's business was to be cool-headed and peremptory. As it was, both were inefficient. Orders to blow up buildings appear to have been flung about with very great looseness; the engineer injudiciously prevented the use of the sick horses belonging to the Department, as if a hundred horses had not better have been killed than one of the warehouses destroyed; and the mayor appears to have lost his head still more completely. Other cities, while they ponder the questions of getting a full supply of salt water, of having self-propelling fire-engines, of setting on foot a more vigorous supervision of buildings, will do well also to recollect that at the head of their fire brigades they must have as intelligent, educated, and energetic a man as they can get. He needs nearly all the qualities of a well-trained and experienced soldier, and what his political leanings are should have as much to do with his selection and with his retention of his office as his opinions about the dog Anubis or about who killed Tecumseh. But as long as we each year see the Senate, for example, refusing to give to our judges salaries equal to the ordinary gains of an eighth-rate lawyer, and as long as we hear as much noise made about the franking privilege, and "the people's" demand that it shall cease, as we hear about the millions of the railroad rings, we probably shall continue to trust the safety of our cities to cheap men whom we buy extravagantly dear.

One of the immediate effects of the Boston fire has been a sudden exhibition of energy in the fire departments all over the country. The department of this city immediately announced that "civil-service reform" had been adopted, and that politics should not in future be considered as a test of efficiency. Some of our engines at the same time turned out to experiment on the Mansard roofs. The experiment was a complete failure, the water reaching the tops of the high buildings only in the form of spray. The general opinion in the city seems to be that, with a brisk southerly wind, New York would go with a rush. We have not heard as yet, however, of any owner who has taken his Mansard down, or any action of the city authorities looking that way, though there can be no question that a vigorous edileship would be heartily welcomed by the public at large. The owners of the six-story buildings crowned with combustibles would no doubt disapprove of the proper action of the authorities; but as all their neighbors would greatly rejoice in it, those elective officers might, we should say, begin work without fear. For example, some votes would be lost if the roof were ordered off the Grand Central Hotel, a structure to the top of which no engine in the city could send anything like an effective stream of water; but, on the other hand, large numbers of votes would be gained in that immediate vicinity.

Among those losses by the fire that are most to be regretted, if not the one which is the very most to be regretted, is that sustained by Harvard College. The College is poor, and needs assistance at the best of times, but this abatement of its annual revenue by thirty-eight thousand dollars, at a moment when the President and Fellows were considering how they could best cut down this year's expenditures by ten thousand, is particularly severe. Five stores—not nine, as some journals have said—which brought in $38,000 a year in rent, and which it will require about $60,000 apiece to rebuild, were destroyed. These burned stores, with the land on which they stood, were of the assessed value of $562,000, and not more than $100,000 of the insurance will be paid. More than this, the College is called upon for assessments in mutual insurance companies to the amount of $6,300, and will be at once called upon to reinsure in part its buildings, collections, and libraries at an expense of some thousands of dollars. $12,000 for extraordinary expenses will be needed immediately, and some way will have to be contrived to supply the loss of the $38,000 of rental, and for this total sum of $50,000 the college authorities now ask, appealing to "the alumni and other friends of liberal education." Hereafter, the main loss may be made good by further contributions, but the immediate want is to keep the present organization unimpaired for the current year, and retrenchment will have to begin unless the money is in hand by the first days of December. Retrenchment means very bad things. It means, for instance, 20 per cent. taken off the small salaries of all the instructors; it means that even the college yard must be turned over to weeds and stubble; it means that five out of eight of the assistants at the library must go and cataloguing must stop; it means that the chemical apparatus cannot be increased by so much as a new air-pump. Doubtless, the amount will be raised, though not with perfect ease. Already we hear of one gentleman who before now has been a benefactor of Harvard, and who charges himself with the duty of seeing that no young man leaves college in direct consequence of its late calamity; but the men who, apart from the self-denying teachers who have given our foremost university its intellectual rank, have done more than any others to build up the institution, are themselves, to a great extent, crippled by the same event which has partly crippled the college. We should hope that of the aid, foreign and domestic, which has been proffered the city by its friends, some portion, and a large portion, might be given to this particular sufferer. The President and Fellows have a clear right to a good share of it; and they represent about the most impoverished of those who will apply for relief, as well as about the most deserving.

The murder of Anthony F. O'Neil, a detective, by James C. King, on Monday last, was one of the most deliberate assassinations which has ever taken place even in New York. O'Neil had been testifying in a divorce suit pending between King and his wife at the office of Judge Sutherland, referee in the suit. As O'Neil was leaving the office with other witnesses and the parties, the case having just been adjourned for the day, King followed him with a pistol, and fired three shots in rapid succession, mortally wounding his victim, who died almost immediately. King then walked back to the referee, and said, "Here, Judge, I have settled it," handing him at the same time the revolver with which he had just been firing. He made no attempt at resistance, but surrendered himself willingly, and has been, according to all the reports, remarkably cool and composed ever since. There is no particular reason that we can see why he should not be. He killed O'Neil, according to his own story, for undue intimacy with his wife; and the chances of his ever being convicted of murder are very small. He is said to have committed other murders, and if so, he has no doubt studied with care such *causes célèbres* as the Fair and the Stokes trials. The natural result of a study of this class of cases would be to convince any ordinarily sensible criminal that with good legal advice, in any case with a woman in it, he could be reasonably sure either of a verdict of insanity or a disagreement. His self-possession and perfect willingness to be taken perhaps indicate that he took legal advice before getting his pistol.

The London *Spectator* some time since, remarking upon the Pennsylvania judiciary, said in effect that they were as well-known

corruptionists as our New York Cardozos and Barnards. This assertion was at once contradicted by a Mr. Rawle, a resident of Philadelphia, who assured the editor that such an accusation filled Pennsylvanians with wonder; whereupon the *Spectator* says that, in that case, the New York papers from which, as it implies, it got its information, must have been very much mistaken. For one New York paper, we can only say that we have been tolerably attentive readers of our city press for a number of years, and that most certainly we do not remember to have seen even once any charges such as the *Spectator* mentions. That they have not been common or frequent we are perfectly sure. The judiciary of Pennsylvania is known to the people of other States as having long been highly respectable. The public opinion in reference to it is well illustrated by the action of the people, commented on by a correspondent of ours a week or two ago: they have recently committed to the care of the judiciary some of the most important offices formerly elective, and some of the most weighty trusts that could be consigned to any body of men. In Philadelphia the judges appoint the Guardians of the Poor, the Board of Health, the Prison Inspectors, the Board of Education, and the Board of Trusts, which latter is trustee of an immense property. We think the tone of the public press generally, and of our New York press in particular, has fully confirmed the feeling thus manifested in Pennsylvania.

There is a very singular muddle in the political affairs of three or four of the Southern States. Arkansas, Louisiana, and Alabama are all reminding us in a fresh way of a truth which we have too much forgotten of late years, and that is, that it is not the carpet-bagger of whom we hear so much who is wholly responsible for Southern disorder, but that a great portion of the South, the larger portion of it by far, has always been a frontier country, ill civilized to the point of reckless and habitual disregard of law. In Louisiana, Warmoth, the reformer and Liberal, appears to be fighting the Custom-house Republicans by high-handed abuse of his power as governor, backed by support from creatures of his in the judiciary, who use the authority of their courts in his behalf. Everybody is tied up at present by injunctions, and Kellogg, Casey, and the United States marshal and his deputies are watching Warmoth's proceedings with a very good will to levy open war upon him if a chance is afforded them. In Alabama, the holding-over officers of the Legislature, who are Democratic, are said to be trying to prevent a Legislature from getting itself together, and Republicans and Democrats have each set up a House and Senate. In Arkansas, glaring frauds are attributed to both parties, and both claim the Legislature, while the Republican partisans, as in Louisiana and Alabama, are ready to invoke the military interference of the United States. The temptation to interference will be great; but we must recollect what the South always was in the days when the North had not yet felt compelled to assume the moral responsibilities of its neighbors. They fight now disgracefully, but they always did fight.

The French crisis has come at last. The Assembly having come together at Versailles, and having re-elected M. Grévy President by an overwhelming vote, the message of M. Thiers was received and read. This document refers with pride to the extraordinary success of the last loan; shows a deficit of 132,000,000 francs for the past year; prophesies an equilibrium of expenditure and income for '73 and a surplus for '74; alludes to the "cruel dismemberment of the country"; appeals to Republican extremists and doctrinaires to sacrifice everything for the maintenance of order; deprecates a formal proclamation of the Republic by the Assembly, and counsels Conservative Republicanism. The message was well received by the Left. The Conservatives at once united for an attack on Gambetta and the Government together, the means employed being a motion, introduced by General Changarnier, censuring Gambetta for his late inflammatory speeches in the provinces, and referring at the same time, in strong language, to the "laxity of the Government" in dealing with the Radicals. This motion caused a sensation, and the Right tried to provoke Gambetta into replying; bu Gambetta only shrugged his shoulders. M. Thiers then mounted the tribune, protested against being brought to the bar as a criminal, threw out a hint that if the Assembly did not take care it might be sent about its business, admitted that Gambetta's Grenoble speech was offensive, but denied that he (Thiers) was responsible for it; and finally demanded a vote of confidence, which was given by 267 to 117, half the deputies not voting. A full caucus of the Right followed, which called on the President to refrain from interfering in Parliamentary debates, and to appoint a responsible ministry. As we go to press, there is an unconfirmed rumor of the resignation of Thiers, and the appointment of MacMahon as President *ad interim*, and talk of a triumvirate of generals.

The German Government has issued a decree which puts an end to the practice of transporting emigrants and their baggage at low rates over the railroads of the Empire. The motive of the decree is obvious: emigration, it is feared, may have a serious effect on the prosperity of the Empire by diminishing the arms-bearing population. The main object German emigrants have in view in coming to America is to escape military service, while it is one of the main objects of the German Government to keep its people in a state of constant preparation for war. Of course, any large emigration of young men of the military age would render the relative strength of France and Germany very different from what it now is—the French not being an emigrating people. There seems to be in some quarters a disposition to explain this act of the Government as unfriendly to the United States, but there is no reason for thinking so. It does not really discourage emigration, but it orders the railways to stop encouraging it—a different proceeding, and one which even a "free" government like England or the United States might resort to in similar circumstances without any sacrifice of principle. Whether Germany will go so far as to prevent emigrants from leaving the country, remains to be seen. We certainly entertain the devout hope that enough Germans may remain at home to prevent any more sham Corsicans from setting out on the European war-path, and at the same time that enough of them may come over here to prevent Tammany and its congeners getting their heads above water. Bismarck and his "licentious soldiery" are doing good work for the "good cause" in both hemispheres.

Miss Sophia Jex Blake is still pressing her suit against the Edinburgh University, and may yet succeed in getting a degree, though the chances appear to be against her. We do not know precisely what her line of procedure has been, but we suspect from certain indications that it smacks a little of the famous "short cut" method so dear to our own American women, and which consists of a little of that fraud, precipitancy, and contempt for the laws of both God and man which many poets and philosophers since the dawn of history have mentioned as being peculiarly characteristic of the nature of woman. We note, by the bye, that in our own land this little obliquity, to give it a mild name, has got Miss S. B. Anthony and fifteen other ladies—of whom we have no wish to speak otherwise than with all the respect they deserve—arrested by a deputy marshal for illegal practices in connection with the ballot-box. She and her friends overawed the inspectors and got in their ballots, and now they are in the firm grasp of the law, and may find that their favorite "short cut" leads to imprisonment in dungeons and a pecuniary mulct. Miss Blake's counsel argued, we see, that women had formerly had the right to receive degrees from the Edinburgh University, and her opponent argued that if they had ever had the right, it had expired and disappeared by reason of disuse. Subsequently, we are told, "Lord Neaves and the Lord Justice Clerk both made ostensibly comic references to Pope Joan," and the laughter that ensued can be imagined; a hard-headed Scotch lawyer, with a good mediæval belief in the scarletness of the scarlet woman, engaged in trying the case of a woman who wants to be a practising physician, may be depended on to show a tremulous susceptibility to what is known in the Northern Athens as "wut."

A SECTIONAL REVIEW OF THE LATE CANVASS.

THE genesis of the political movement which suffered so signal and complete a break-down on the fifth of November, we owe notoriously to that portion of the country which it is now the fashion to call the Interior; in other words, the Mississippi Valley, the Great West of former times. More narrowly, we owe it to certain politicians of St. Louis, who, for the sake of an alliance supposed to be valuable, consented that the effort to create a new party in ninety days should be known in history as the Cincinnati movement. Whatever enthusiasm attended it in the beginning was confined to those two cities; elsewhere, at least in the North, its results were awaited with indifference, distrust, apprehension, or simple expectancy. Moreover, as the reasonable hopes of its success depended absolutely on the disposition towards it of the Democratic party, the part taken in it by the Missouri *Republican* was second to no other in importance. In fact, the *Republican* came as near as the country came to the nomination of Adams, to being able to boast to-day that a single newspaper had effected an unprecedented revolution in American politics, compelling one party to abdicate, and another to resign the reins of power, all within twelve months from the time when it first opened its mouth. The able advocate of the adoption of the "passive policy" by the Democracy at large only needed a little more sagacity to have really reached this distinction. Probably it miscalculated Mr. Gratz Brown's chances of nomination, thinking them equal to his ambition; and certainly it was blinded by the false expediency of "anything to beat Grant."

Missouri, which thus fathered the reform movement, also strangled it the day it was born. Mr. Greeley's and Mr. Fenton's retainers would have failed of their purpose in the Convention but for the timely interference of Frank Blair and his kinsman, Gratz Brown. In the latter's withdrawal of his own name from the contest, and his recommendation of Mr. Greeley, there was room for several motives. The personal may have been strongest—the fear that Adams's nomination for President would not ensure his own for Vice-President. But possibly we have a right to detect here one of those sectional jealousies which always appear on similar occasions, and to which may be ascribed that measure of implacable opposition in the body of the Convention just necessary to cheat Mr. Adams of his majority. What is indisputable is that both the attempt and the failure at Cincinnati must be laid at the door of the Missourians; that one of their number, Mr. Schurz, had an opportunity to retrieve the disaster, but missed it; that the Ohio members of the Union and Reform Convention, sitting at the same time, had another opportunity, but they too missed it; and that from that moment the control of the movement was taken out of the hands of its originators, and passed from the Interior to another and fatally incapable section of the country.

The representation of the South in the Convention was an error which had already been expiated when the Democratic party was called upon to pronounce for or against the nomination of Greeley. Had the South revolted, with one mind, against this insult to its common sense, the Cincinnati movement would have fallen perfectly flat, and given place to the usual struggle between Republicans and Democrats, with the party lines strictly drawn as ever. The South did not revolt, however, but fell to eating "boiled crow" with a simulation of appetite which decided the Baltimore Convention to recommend the same diet as wholesome, Democratic, and regular. The leadership of the South was consequently confirmed, and its appearance in that rôle changed the color of the campaign, made "reconciliation," and not reform, the chief object of a change of administration, and thus singularly perverted the nature of the reform movement by substituting a very subordinate part for the whole. The grievance under which the South labored was an incident of bad government, and, great as it was, only an incident. The essence of carpet-baggism pervades the whole system of our civil service, having been first introduced by a Southern President, and never having been denounced by any statesman South of Mason and Dixon's line. To expect the North, aware how it is itself corrupted and plundered by the spoils' doctrine of office-holding, to treat the condition of the South as an isolated phenomenon, and as a wholly unmerited misfortune, was to pay a poor tribute to its discernment. No candidate could have been got better calculated to confound these distinctions than Mr. Greeley, who had in perfection the sentimental infirmity which condones evil-doing as soon as the culprit has begun to suffer the penalty of it; who was engaged in the practice and defence of the spoils system down to the very day of his nomination, and promised in his subsequent speeches to maintain it, and who has nothing which rests more heavily on his conscience than his borrowing the "cant" of the civil-service reformers, when he pledged himself to the principles of the Cincinnati platform.

Beyond all question we have seen the last of the South as a political unit and concerted element in our national issues. It has lost the power to conduct a campaign, has no favors to promise and none to exact. It has "betrayed" its ancient ally, the Democratic party of the North, if not to death, at least to that humiliation of dishonor which is worse than death. From that quarter it will receive no further advances. It is divided against itself, thanks partly to the carpet-bagger and partly to the growth of the political sense. Henceforth, it is safe to predict, the Southern States will take sides in Presidential elections exactly as the Northern and Western take sides, from divers considerations, and not from an exclusive reference to "the South." As a province having peculiar institutions and a peculiar creed, it has ceased to exist. Nor, in face of the wide distribution of Grant's majority, can it be said that any province remains in which sectional should steadily prevail over national considerations. The rod of empire is commonly asserted to have passed to the West; but in the very act the West itself melts away into a broader division, in which the diversity of material interests will probably always hinder a perfect unanimity in politics. Yet if any one could point out the line of cleavage between what is Western and what is Eastern in feeling and purpose and interest, the weight of the East will not easily be slighted whenever it chooses to make itself count in the scale. In the late election, every State east of the Alleghanies, from Maine to Maryland, stood shoulder to shoulder, and cast two-thirds of the majority of electoral votes. The "centre of gravity" of population has not, we believe, yet crossed the great Appalachian chain; and until it does, it will always command sufficient respect to enable it to appoint one of the two highest officers in the Government, as has just happened in the case of Mr. Wilson. Meantime, the great colonies on the Pacific Coast and eastward to the Rocky Mountains furnish a daily increasing counterpoise to the influence of the Interior. In short, all parts of the country seem at last happily adjusted in an equilibrium of the highest promise for our national development.

A NEW EXPERIMENT OF CITY GOVERNMENT.

THE District of Columbia is now practically merged in the City of Washington. According to the form and theory of Congressional legislation, perhaps the reverse of this has been done, and the city been merged in the new "Territory." Taking them both, however, for what they really are—a city and its suburbs—they present probably the most curious problem or experiment of city government that can be found at home or abroad.

When the seat of government was moved from Philadelphia to certain farms and forests on the northerly bank of the Potomac, a mile or two below the village of Georgetown, it was intended that a town should grow up which should not be to America what Paris was to France—the controlling centre of power and influence—but which should form the mere habitation of the Federal Government, and be restricted to that one object, much as Oxford and Cambridge are given up to the universities and kept free from the bustle of traffic and in the quiet of university towns. Situated at the head of river navigation, and of a river which first-class sea-going vessels like the old steamer *Baltic* can ascend, at the foot of a canal running back through a fertile valley into the coal regions, surrounded by a cultivated country, and possessing a water-power said to equal

that of Lowell, with railway communication running north and south and west, it would seem as though the will of the founders had suspended the ordinary laws of growth and progress, and that the town had been preordained, notwithstanding its extraordinary advantages, to remain simply the seat of the General Government, and at this day to be without a single manufacturing establishment or a single wholesale business house.

For the last half-century the external condition of the city has been called disgraceful, it being plunged in mud through one-half of the year and enveloped in dust during the other. But it has not been generally known that Congress, with characteristic niggardliness, has compelled the Government of the United States to enter into a petty partnership with the city corporation, whereby the one paved and lighted the avenues and the other the streets. In this arrangement each of the contracting parties seemed to strive not to do more than the other. If a street needed a sewer, and all of its inhabitants petitioned for it and were willing to be assessed for the "improvement," still it would not be done, because the sewer must run down an avenue, and the General Government would get the advantages of it for nothing. If an avenue became an impassable morass, the General Government would do nothing, because the corporation did not pave its intersecting streets. Thus great marble piles of showy public buildings arose, connected by barbaric thoroughfares which would have provoked the scorn of a European peasant.

A class of economical politicians at the same time were not wanting to object to all expenditures for the seat of government. Chief of these was Mr. Greeley, who, before he thought of making Washington his temporary residence, was very fond of giving its inhabitants what he called sound, practical common-sense advice, to go to work and pave and sewer and improve their city, as the people of other cities did, and pay for it themselves, and not expect anything in the way of help from the Government. The citizens of Washington, however, were a peculiar class. Nominally citizens and residents, they were mere temporary sojourners, with homes in the different States from which they came, to which they expected some day to return. Their business was directly or indirectly with the Government, and more or less subject to its political fluctuations and changes. Few of them were born there; few expected to die there; and those who were wise enough to think they might, generally provided that they should be buried somewhere else, choosing, of course, the place which they called home. They knew that they had little more concern in the improvement of the national capital than the other citizens of the country. To such people Mr. Greeley's "common-sense" advice to put their hands in their pockets and pay for making the seat of government a superb city while the rest of the United States looked on, was, like many other of Mr. Greeley's common-sense utterances, so much practical moonshine. The lesser part of the community who really regarded Washington as their home, also knew how small a part of it belonged to them, and how much must be given up to strangers. Thus, if they sought to build a church, they knew that half of it would be for themselves and the other half for persons who never gave a dollar toward its erection, who would not contribute toward its expenses nor take any part in its parochial work. This extraordinary compound of residence without citizenship or abiding interest in one-half of the inhabitants, with utter political hopelessness in the other half, was singularly illustrated in the public officers of the District. When the question of expensive improvements was under discussion, the people of Washington were told that they were like the citizens of other towns, and must pay the bills. But when any of the local offices was vacant, then they were told that Washington was the seat of Government, and that the politicians all over the country were equally entitled with its residents to share in its official plunder. We all know how sensitive Americans are on the subject of local offices, and how they even forbid themselves by law to elect a local officer from without his district. What now would be thought in New York if a stranger from Arkansas were forced upon us as Recorder, and another from Wisconsin as Surrogate? Yet this is just what has been done with the District, and at this time every judge upon its local bench was when appointed a resident of some State unacquainted with the laws and usages of the District of Columbia. Notwithstanding all of these disadvantages to improvement, the city has grown steadily, and of late years rapidly; and since the war a population has flowed into it more Northern in its training and more stable in its intention. With these changes also has come a stronger desire for the improvement of the city; a belief in its success as a winter watering-place for wealthy and fashionable sojourners; the political "rings" that rule some other American cities; and a new form of municipal government.

This new Territorial Government of the District, as it has been somewhat grandly termed, is, as a government, a most singular mixture of much shadow with the smallest possible amount of substance. It has an executive and a legislature, and the executive is solemnly enjoined to see that the laws be faithfully executed, and is empowered to grant "pardons" for offences against the laws of the Territory; but the Legislature has no power to disturb any act of Congress—that is to say, the existing law—while Congress has power to repeal any act of the Legislature. The laws made by Congress remain in fact the irrepealable law of the District, administered by courts of the United States, and not of the Territory, and all real powers of pardon are as heretofore vested in the President. The *jus imperii* is as much in the Government of the United States as it ever was, and calling the municipal authorities of a third-class town, in population not half so large as Brooklyn, and in territory not larger, if so large, as Manhattan Island, a government, is one of the absurd fancies which prefer names to things. The thing in question here would have been better understood if the Governor had been termed a Mayor; the Legislative Assembly, a Common Council; the laws, ordinances; and the power to grant pardons, a power to remit fines and penalties.

In the voting population of the District, as well as we can now analyze it, the Democratic and colored votes are about equal, with a balance of power of from four to five thousand white Republicans. On this basis is reared a paper constitution, with powers as beautifully balanced and distributed as any theoretic constitution-maker could desire. The Executive, the Upper Branch of the Legislature, and certain Executive boards are appointed by an impartial arbiter, the President, and, for greater safety, are confirmed by the Senate. The Lower Branch of the Legislature is elected by the inhabitants of the District. The Governor, therefore, it will be perceived, cannot appoint his creatures on the Executive boards as, for instance, the Board of Public Works; the Board of Public Works cannot raise money except through the Legislature; the Legislature springs from two distinct sources, the Executive of the nation and the people of the District, and the united action of its two parts is necessary to appropriate money. If the Board of Public Works were chosen by the Legislature, then, being its creature, we might fear collusion between them. Coming into power through the selection of the President, it is too remote from the Legislature, and particularly from the popular branch, to allow the idea of collusion between them. Finally, there are provisions for submitting the question of borrowing money and running in debt to a direct vote of the people. The Board of Public Works, an independent body, is the chief administrative agency for disbursing the public funds; but the Governor holds one negative over it, the Upper Branch of the Legislature another, the Lower Branch a third, and the people themselves, in important cases, a fourth. The city government is therefore unlike any other government in this country, and with as many checks and balances as could well be put upon paper.

Nevertheless this new government of checks and limitations, in the single year of its administration, has thrown upon a community of 130,000 persons, without commerce, manufactures, or accumulated wealth, a debt of something like $13,000,000, with direct assessments payable immediately of from $2,000,000 to $3,000,000 more,

The streets from one end of the town to the other have been torn up and regraded and repaved. Some have been so cut down that houses built on the original grade now appear perched twenty feet high in the air. Others have been so filled up that the new pavement is on a level with second-story windows. Property originally valuable has been "improved" and assessed out of existence. Some of the property-holders of the city regard the Board of Works as a second Tweed-Sweeny ring, growing rich by direct collusion with the contractors; a few, of a speculative turn of mind, think the improvements a magnificent public work, causing some temporary inconvenience, but greatly adding to the general value of city property; a third class say that the improvements are not intrinsically bad, but that the general plan was adopted with reckless haste and has been pushed with the utmost extravagance. Mr. Charles Astor Bristed, who witnessed the improvements in Paris undertaken by the Emperor and those in Washington by a board of citizens, has contrasted the two in a published letter, and shown that prudence, economy, and a scrupulous regard for public and individual convenience were on the side of the Emperor, and the reverse of these desirable traits on the side of this American city government.

The explanation of this state of affairs is a very simple one. As in New York so in Washington, taxes are imposed without the consent of those who pay them. The farce was, indeed, played there of submitting the question of a $4,000,000 loan to "the people"; but of course all of "the people" who were to pocket the money after it was borrowed voted in favor of the loan, and all of "the people" who are to pay the debt after it is incurred voted against it; and as those who hoped to be recipients largely outnumbered those who feared to be obligors, the loan was triumphantly carried, and the properties of those who voted against it were pretty effectually mortgaged. It seems a difficult lesson for Americans to learn that the free cities of mediæval times are no longer needed, and that city corporations of the present day are simply corporate bodies for the management of certain public property, and should be controlled by the responsible and not by the irresponsible part of the community. When to this lesson is added a due appreciation of the fact that we cannot expect any high standard of virtue in public offices until society exact it, and that the blessings of free government do not spring from written recipes but from an actual performance of the duties of citizenship, we may hope for better things. In the meantime, we may profitably watch how far the feelings and convenience and interests of a city community may be outraged under the official eye of the President, and within the legislative hearing of Congress.

THE PLATE-ARMOR AND BIG-GUN FARCE IN EUROPE.

THE contest which has been going on in Europe during the last ten years between the constructors of armor-plated ships and manufacturers of rifled cannon is, we are glad to say, reaching the extreme of absurdity. It is a contest of which the well-known New Zealand tourist will doubtless read, when he goes home to his hotel in the evening after sketching the ruins of St. Paul's, with both surprise and amusement. The French led the way in building cuirassed frigates; our war demonstrated the impossibility of meeting armor-plated ships with wooden ones; the British then went into the business, and a considerable portion of the best brains of England, France, Prussia, and Russia has ever since been engaged just in trying how heavily ships might be plated without destroying their buoyancy and manageability, and in inventing guns that would smash the plating. They first produced in England a nine-inch, twelve-ton, two hundred and fifty pounder; then a ten-inch, eighteen-ton, four hundred pounder; then an eleven-inch five hundred and thirty pounder; and at last a twelve-inch seven hundred pounder. But Russia, Prussia, Austria, Italy, and even Spain have provided themselves, or are providing themselves, with guns of precisely the same length and calibre and capacity. This may seem at first sight rather extraordinary, because one would naturally imagine that, as the object of all this gunnery is to enable each nation to smash the ships of its neighbors, they would conceal from each other the character and powers of their newest inventions. But the wonder ceases when we learn that these preparations for instant destruction are not only not carried on in secret, but each power furnishes the others on demand, in the most courteous manner, with full particulars of its latest death-dealing contrivances—drawings, specifications, and all. America, we are happy to say, is declared to have no gun at all worth consideration, and is treated as unworthy of notice. Long may she be counted out of this remarkable game.

Now for the result of this prodigious expenditure of money and science. The innocent spectator, who sees that all the maritime powers are about equally well provided with guns, will probably conclude that at any rate there is some difference between them in the matter of armor-plating; that some have stronger ships than others, or ships which the ordinary Christian guns are unable to pierce, and that they try to conceal from each other the nature and resisting power of their plating. Wrong again; they are as frank and open about it as possible. It would seem as if England could not bear to have better plates than Prussia, or Prussia than Russia. As soon as one discovers any new plan of stopping shot, it generously communicates it to all the others. The consequence is that there prevails the most beautiful equality in the matter of plating as well as in the matter of guns. It appears that the little nine-inch gun, the smallest and feeblest of all the guns, can send a shot right through the armor of every ship in the world, at 1,000 yards, except the Russian *Peter the Great* and *Hercules*, the Austrian *Custozza*, and the American *Kalamazoo*. The French fleet could all be disposed of even by the eight-inch gun, while even the Russian *Hercules* would stand no chance against the ten-inch. The British *thought* they had got something impregnable and unsurpassable in the *Devastation*, their latest plated monstrosity, but the Russians outdid it with their *Peter the Great;* and it now appears that the big twelve-inch seven hundred pounder can go through either of them like pasteboard, and it is said that if anything stronger than *Peter the Great* is produced, there is a fifty-ton twelve hundred pounder in preparation which will give that its quietus also. Having reached this puzzling pass, the inventors have naturally begun to pause and reflect. It is quite plain that a gun can be produced that will pierce any armor that can be made to float, and statesmen are naturally asking themselves, what is the use in going any further? Are we not rapidly approaching, if we have not already reached, the position with regard to ships in which the troops of the seventeenth century found themselves with regard to cuirasses and helmets? In other words, is the armor worth carrying? Will it not make shot more destructive, and will not the crew of an unplated ship be better off if we allow the great shot to pass right through them, and leave them to rely on speed, activity, and buoyancy to get out of the way, and deliver their own fire effectively?

These questions have recently assumed additional importance in England from the fact, that while it is acknowledged on all hands that to be perfectly secure the English fleet must be superior to the combined fleets of any other two powers, it is alleged by Mr. Reed, the late Naval Constructor, that both Prussia and Russia have ships superior to anything in the British navy; and yet, when they read of eleven and ten-inch Prussian guns going through twelve-inch solid plates, backed by a foot and a half of timber, and an "iron skin" five-eighths of an inch thick, as they have done recently, men ask themselves, what use is there in playing this game of guns against armor any longer? So what is to be done? The whole Christian nation—Evangelicals, Broad Churchmen, High Churchmen, Baptists, Methodists, and Congregationalists, with a powerful reserve of Humanitarians—are racking their brains for some new mode of tearing the bowels out of Russians and Prussians, beating their skulls into small pieces, and stripping the flesh off their bones.

Nevertheless, if you were to go to London, St. Petersburg, or Berlin at this moment, assemble all the leading men of the country, and ask them whether they bore any ill-will to

the people of other countries, they would answer no. If you asked them whether it was not the true policy of all nations to live in peace with each other; whether their interests were not really the same; whether the true road to national happiness was not through trade, commerce, and manufactures, they would answer with emphasis that nothing was more certain. If you asked them to explain, then, why England needed guns to punch Russian armor, or Russian guns to punch English armor, they would say that it was in order to be ready for a quarrel; but if you asked them what the quarrel was to be about, not one could give you the least information. In short, you would find that their theories were those of the leading sages and economists of modern times, while their practice is that of Fiji Islanders, and their opinions of each other hardly a whit higher than the Iroquois used to entertain of the Illinois. For instance, at this moment the English are refusing to surrender Gibraltar to the Spaniards, who are the rightful owners, lest the French should wrest it from the Spaniards, and shut up the Mediterranean against the commerce of its enemies. In like manner, they are discontented with the rational and peaceful settlement of the San Juan difficulty, because they fear the Americans will use the island as a basis for "military operations" against Vancouver's Island, or, in other words, a point from which to start on expeditions for plunder and slaughter. The Prussians are lining the Rhine with tremendous fortifications, in order to prevent the French from carrying fire and sword into German farms and villages; and about three millions of men in the flower of their age are at this moment being elaborately trained, on the European continent, in the art of stealing up to other men without being seen, and dashing their brains out, or sticking long spikes into their bellies, and this at enormous expense and to the complete abandonment of all other business.

ENGLAND.

LONDON, Nov. 1, 1872.

WE are—for there is no use in disguising the fact—in a very bad temper at the present moment. The award of the German Emperor in the matter of the San Juan boundary has been anything but soothing to our feelings. We had managed to swallow the decision of the Geneva arbitrators, and even to indulge in a little eloquence on the great moral example set to all nations, though a litigant who has to pay damages is never very much pleased, I imagine, even if he has to pay less than his adversary expected. Whilst we were trying to put as good a face on the matter as possible, the German decision suddenly threw us off our balance. It was not that Englishmen in general knew very much about the merits or had any distinct ideas of the geography of Vancouver's Island, or the strategical importance of the islands whose possession was in dispute. It is my private belief that if it could have been proposed to settle the matter by tossing a sovereign, nine men out of ten would have been ready to accept the offer, and to take either result with equally placid indifference. But now that we have received a kind of judicial rebuff, and are told simply and unequivocally that we are altogether in the wrong, the matter is changed. The difference between two channels, neither of which can be said to have previously imprinted themselves upon our consciousness, suddenly becomes a matter of vital interest to the empire. We have, it appears, been giving away a key which will, on the next war, enable the American burglar to break through and steal in the most disastrous fashion. In short, the British lion within us is aroused and growls very fiercely. We are angry with the American ministers who overreached us, with our own ministers who allowed us to be overreached, and with the German Emperor who, doubtless for some diabolical ends, gave his decision against us. Perhaps it is a little undignified to find fault with an arbitration simply because the result goes against you; and ministers might fairly urge that the objections which are now filling our newspapers should have been made before. This, however, is one of the advantages of newspaper writing. A journalist is not bound to possess the gift of prophecy, but may surely rebuke other people for not possessing it. Therefore, he may applaud ministers for consenting to an arbitration when the result is not foreseen, and abuse them for having consented to it when the result turns out to be unfavorable. Somebody, at any rate, must be made to expiate our losses. And so Government is accused full loudly of having shown disgraceful pusillanimity, and, in fact, conformed to the evangelical precept of turning the second cheek to the adversary instead of carrying out the current British version, and hitting him again. Especially, it is said, the interests of Canada have been disgracefully sacrificed. We gave up their claims arising from the Fenian raids, and we have now spoilt Canada's frontier on the Pacific. The *Times*, whose natural disposition to echo the popular voice is somewhat restrained by its allegiance to the Government, has ventured upon an apology which has not made matters pleasanter. Substantially, it has repeated a good deal of what was said by Mr. Goldwin Smith some years ago: the colonies are, or ought to be, old enough to take care of themselves, and they may set up for themselves as soon as they like. Such advice—whether sensible or not—does not have a very magnanimous sound, and is at any rate far from seasonable. In our sulky humor, we feel that we are open to ridicule for a cowardly retreat executed under a sham pretence of philanthropy. Everybody, it is said, laughs at us and sees through us, and we ought to be supremely discontented with the politicians who have brought us into such a scrape. And now to propose calmly to shuffle out of the difficulty by throwing the whole burden upon Canada is said to be utterly disgraceful. We may have been humiliated by the foolish weakness of our rulers, but the spirit of the nation is not so dead that it would tamely consent to the dismemberment of the empire.

All this and much more which is easily enough conceivable has been said with various degrees of force. What foundation in fact there may be for such complaints is a matter upon which I need not attempt to decide. Neither is it very easy to answer explicitly the question how much of this sentiment is mere party spirit, and how much of it is due to more deeply-rooted discontent. The cry about the British Empire has undoubtedly been very popular of late, and has been swelled by various causes. In the first place, there is the natural feeling that we have become a mere cipher in European politics, and that if we are equally ciphers in the New World it will very soon be worth nobody's while to attend to us. There is much to be said on both sides; but whether our policy of non-interference be right or wrong, it is undoubtedly trying to the national vanity. Then we must allow for what is called the Conservative reaction, so often announced and so long coming, but which seems to be now something of a reality, though greatly exaggerated by party writers. But in addition to this, many who profess and call themselves Radicals have taken up the same cry. The author of "Ginx's Baby," and others who sympathize with him, have succeeded in persuading many of the laboring classes that there is a boundless supply of fertile land in the colonies which would absorb the whole of our surplus population. If those territories were properly administered in the interests of England, every workingman in difficulties would have the power of falling back upon a comfortable homestead, to which he would be transported at the public expense. If this view were systematically carried out, it might possibly happen that our present colonists would find their interests clash with those of the sovereign people at home as decidedly as the interests of certain of their predecessors clashed with those of George III. Meanwhile these various tendencies coincide to make such advice as that given by the *Times* decidedly unpalatable. Of course, the patriotic clamor is of very little importance as regards our probable policy—at any rate for the immediate future. The vision of a vast English federation spreading over the whole globe, and welded together into a homogeneous mass, is not destined to speedy realization, and the attempt to give practical effect to it would bring out a conflict of interests and opinions much more likely to produce a disruption than a closer combination. Some ardent prophets, I know, foresee the day when not only the territories which acknowledge the sway of her most gracious majesty, but also the Republicans of the United States, will be gathered together in one fold. Personally, I do not expect to see that measure carried out. The practical conclusion which I would draw refers to much simpler considerations; and indeed it amounts to little more than recording the fact that there is a storm of angry feeling gathering itself which may possibly lead to some discharges in the course of next session. Our feelings about the Washington Treaty have varied greatly at different times, and it has been alternately a source of strength and weakness to the government. Just now, it is, perhaps, loading them with more odium than ever; and few of the numerous members of Parliament who are enlightening their constituents just now in different parts of the country have referred to the subject without some expression of annoyance, though, of course, the ministerial orators have tried to insinuate some little congratulatory remarks by way of set-off.

One other topic which is just now exciting some attention may have its significance. The recent Church Congress was in one sense a great success. It was attended by a very large number of the clergy, and they made a great many animated speeches. But the impression made upon the minds of most spectators may be inferred from the advice which some of the bishops have recently taken occasion to administer. Their lordships, and the late Speaker of the House of Commons has just followed their example, appear to have

thought it specially necessary to exhort us to harmony and mutual toleration. Bishop Ellicott—who is a shrewd and a very orthodox person—says that of the three great parties in the church, the Broad Church have no importance, as they are rapidly becoming Socinians; but he begs the High and the Low Church men to fall upon each other's necks and be reconciled. I have called the bishop shrewd, and I could perhaps justify the epithet; but certainly he can hardly expect his advice to be taken. The fact of his giving it proves that the difficulty cannot be overlooked, even by the serene occupants of the bench, but it will not tend really to soften matters. The simple fact is, that High and Low Churchmen hate each other more every day, and the best specimens of insolent abuse in contemporary literature (always excepting those flowers of rhetoric which are bestowed upon English statesmen by Irish demagogues) are to be found in the organs of the rival parties. A High-Church paper at which I lately glanced incidentally mentioned its opponents as "a putrescent rabble," and perhaps the High-Church language is rather most decorous of the two. The unfortunate bishops, who have to give satisfaction to clergy of all shades, are naturally alarmed at the prospect before them. The Church Congress seems to have generated so much warmth on all sides as to force the subject upon official attention. The proper remark which is made by persons of an optimist tendency is that their bitterness is really a subject for congratulation, inasmuch as it is the product of a lively interest in church questions. That there is in fact a lively interest in them is undeniable, nor can any one tell to what developments it may lead within a short time. We may, too, if we please, contrast the enthusiasm which now exists upon such subjects with the spiritual deadness which, it is the fashion to say, characterized the beginning of the century. And yet there is one fact which has also to be taken into account; namely, that there is now a very large and very rapidly growing party which looks upon the whole dispute and all the disputants with a mixture of contempt, amusement, and pity. The Athanasian Creed, as the excellent Archbishop of Canterbury acknowledges, must really have something done to it one way or the other; and the spectacle of the fierce passions excited in the clerical bosom by discussions over language which, to the lay mind, seems for the most part to be simply antiquated scholastic gibberish, is not perhaps altogether edifying. Certainly the clergy are more quarrelsome than they used to be; and, to do them bare justice, they are more energetic in the practical discharge of their duty. The two changes may be connected, but that does not necessarily make the quarrelling harmless. Some explosion will happen one of these days, which even pacific bishops will not be able to calm down.

A EUROPEAN SUMMER.—VI.

FROM CHAMBERY TO MILAN.

YOUR truly sentimental tourist can never *bouder* long, and it was at Chambéry—but four hours from Geneva—that I accepted the situation, and decided that there might be mysterious delights in entering Italy whizzing through an eight-mile tunnel, like some highly-improved projectile of the period. I found my reward in the Savoyard landscape, which greets you betimes with something of a Southern smile. If it is not as Italian as Italy, it is, at least, more Italian than Switzerland—more Italian, too, I should think, than can seem natural and proper to the swarming red-legged soldiery who so ostentatiously assign it to the dominion of M. Thiers. The light and coloring had, to my eyes, not a little of that mollified depth which they had last observed in Italy. It was simply, perhaps, that the weather was hot and that the mountains were drowsing in that iridescent haze which I have seen nearer home than at Chambéry. But the vegetation, assuredly, had an all but Transalpine twist and curl, and the classic wayside tangle of corn and vines left nothing to be desired in the line of careless grace. Chambéry as a town, however, affords little premonition of Italy. There is shabbiness and shabbiness, the discriminating tourist will tell you; and that of the ancient capital of Savoy lacks color. I found a better pastime, however, than strolling through the dark, dull streets in quest of "effects" that were not forthcoming. The first urchin you meet will tell you the way to Les Charmettes and the Maison Jean-Jacques. A very pleasant way it becomes as soon as it leaves the town—a winding, climbing by-road, bordered with such a tall and sturdy hedge as to give it the air of an English lane—if you can fancy an English lane introducing you to the haunts of a Madame de Warens! The house which formerly sheltered this lady's singular *ménage* stands on a hillside above the road, which a rapid path connects with the little grass-grown terrace before it. It is a small, shabby, homely dwelling, with a certain reputable solidity, however, and more of internal spaciousness than of outside promise. The place is shown by an elderly Frenchwoman, who points out the very few surviving objects which you may touch, with the reflection—complacent in whatsoever degree suits you—that Rousseau's hand has often lain there. It was presumably a meagrely-appointed house, and I wondered that on these scanty features so much expression should linger. But the edifice has an ancient ponderosity of structure, and the dust of the eighteenth century seems to lie on its worm-eaten floors, to cling to the faded old *papiers à ramages* on the walls, and to lodge in the crevices of the brown wooden ceilings. Madame de Warens's bed remains, with Rousseau's own narrow couch, his little warped and cracked yellow spinet, and a battered, turnip-shaped silver timepiece, engraved with its master's name—its primitive tick as extinct as his heart-beats. It cost me, I confess, a somewhat pitying acceleration of my own to see this intimately personal relic of the *genius loci*—for it had dwelt in his waistcoat pocket, than which there is hardly a material point in space nearer to a man's consciousness—tossed so irreverently upon the table on which you deposited your fee, beside the dog's-eared visitors' record—the *livre de cuisine* recently denounced by Madame Sand. In fact, the place generally, in so far as some faint ghostly presence of its famous inmates seems to linger there, is by no means exhilarating. Coppet and Ferney tell, if not of pure happiness, at least of prosperity and honor, wealth and success. But Les Charmettes is haunted by ghosts unclean and forlorn. The place tells of poverty, trouble, and impurity. A good deal of clever modern talent in France has been employed in touching up the episode of which it was the scene, and tricking it out in idyllic love-knots. But as I stand on the charming terrace I have mentioned—a little jewel of a terrace, with grassy flags and a mossy parapet, and an admirable view of great swelling violet hills—stand there reminded how much sweeter Nature is than man, the story looked rather wan and unlovely beneath these literary decorations, and I could muster no keener relish for it than is implied in perfect pity. Hero and heroine were first-rate subjects for psychology, but hardly for poetry. But, not to moralize too sternly for a tourist between trains, I should add that, as an illustration to be inserted mentally in the text of the "Confessions," a glimpse of Les Charmettes is pleasant enough. It completes the rare charm of good autobiography to behold with one's eyes the faded and battered *mise en scène* of the story; and Rousseau's narrative is so incomparably vivid and forcible, that the sordid little house at Chambéry seems of a hardly deeper shade of reality than the images you contemplate in his pages.

If I spent an hour at Les Charmettes, fumbling thus helplessly with the past, I frankly recognized on the morrow that the Mont Cenis Tunnel savors strongly of the future. As I passed along the St. Gothard, a couple of months since, I perceived, halfway up the Swiss ascent, a group of navvies at work in a gorge beneath the road. They had laid bare a broad surface of granite, and had punched in the centre of it a round, black cavity of about the dimensions, as it seemed to me, of a soup-plate. This was the embryonic form of the dark mid-channel of the St. Gothard Railway, which is to attain its perfect development some eight years hence. The Mont Cenis, therefore, may be held to have set a fashion which will be followed till the highest Himalaya is but the ornamental apex or snow-capped gable-tip of some resounding fuliginous corridor. The tunnel differs but in length from other tunnels; you spend half an hour in it. But you come whizzing out of it into Transalpine Italy, and, as you look back, may fancy it shrugging its mighty shoulders over the track—a spasmodic protest of immobility against speed. The tunnel is certainly not a poetic object, but there is no perfection without its beauty; and as you measure the long rugged outline of the pyramid of which it forms the base, you must admit that it is the perfection of a short cut. Twenty-four hours from Paris to Turin is speed for the times—speed which may content us, at any rate, until expansive Berlin has succeeded in placing itself at thirty-six from Milan. I entered Turin of a lovely August afternoon, and found a city of arcades, of pink and yellow stucco, of innumerable cafés, blue-legged officers, and ladies draped in the Spanish veil. An old friend of Italy, coming back to her, finds an easy waking for sleeping memories. Every object is a reminder. Half an hour after my arrival, as I stood at my window, looking out on the great square, it seemed to me that the scene within and without was a rough *résumé* of every pleasure and every impression I had formerly gathered from Italy: the balcony and the venetian-blind, the cool floor of speckled concrete, the lavish delusions of frescoed wall and ceiling, the broad divan framed for the noonday siesta, the massive mediæval Castello in mid-square, with its shabby rear and its pompous Palladian front, the brick *campaniles* beyond, the milder, yellower light, the brighter colors and softer sounds. Later, beneath the arcades, I found many an old acquaintance, beautiful officers, resplendent, slow-strolling, contemplative of female beauty; civil and peaceful dandies, hardly less gorgeous, with that religious faith in their moustaches and shirt-fronts which distinguishes the *belle jeunesse* of Italy; ladies most artfully veiled in lace mantillas, but with too little art—or too much nature, at least—in the region of the *corsage;* well-conditioned young *abbati*, with neatly-drawn stockings. These, indeed, are not objects of first-rate interest, and with such Turin is

rather meagrely furnished. It has no architecture, no churches, no monuments, nor especially picturesque street-scenery. It has, indeed, the great votive temple of the Superga, which stands on a high hilltop above the city, gazing across at Monte Rosa, and lifting its own fine dome against the sky with no contemptible art. But when you have seen the Superga from the quay beside the Po, as shrivelled and yellow in August as some classic Spanish stream, and said to yourself that in architecture position is half the battle, you have nothing left to visit but the Museum of pictures. The Turin Gallery, which is large and well arranged, is the fortunate owner of three or four masterpieces; a couple of magnificent Van Dycks and a couple of Paul Veroneses; the latter a Queen of Sheba and a Feast at the House of Levi—the usual splendid combination of brocades, grandees, and marble colonnades dividing skies *de turquoise malade*, as Théophile Gautier says. The Veroneses are fine, but with Venice in prospect the traveller feels at liberty to keep his best attention in reserve. If, however, he has the proper relish for Van Dyck, let him linger long and fondly here; for that admiration will never be more potently stirred than by the delicious picture of the three little royal highnesses, daughters of Charles I. All the purity of childhood is here, and all its soft solidity of structure, rounded tenderly beneath the spangled satin, and contrasted charmingly with its pompous rigidity. The little princesses, clad respectively in crimson, white, and blue, stand up in their ruffs and fardingales in dimpled serenity, squaring their infantine stomachers at the spectator with an innocence, a dignity, a delightful grotesqueness, which make the picture as real as it is elegant. You might kiss their hands, but you certainly would think twice before pinching their cheeks—provocative as they are of this tribute of admiration—and would altogether lack presumption to lift them off the ground—the royal dais on which they stand so sturdily planted *par droit de naissance*. There is something inimitable in the paternal gallantry with which the painter has touched off these imposing little ladies. They were babies, yet they were princesses, and he has contrived, we may fancy, to work into his picture an intimation that they were creatures whom, in their teens, the lucklessly smitten—even as he was prematurely—must vainly sigh for. Although the work is a masterpiece of execution, its merits under this head may be emulated—at a distance. The lovely modulations of color in the three contrasted and harmonized little satin petticoats—the solidity of the little heads, in spite of all their prettiness—the happy, unexaggerated squareness and maturity of *pose*—are, severally, points to study, to imitate, and to reproduce with profit. But the *taste* of the picture is its great secret as well as its great merit—a taste which seems one of the lost instincts of mankind. Go and enjoy this supreme expression of Van Dyck's fine sense, and admit that never was a politer work.

Milan is an older, richer, more historic city than Turin; but its general aspect is no more distinctly Italian. The long Austrian occupation, perhaps, did something to Germanize its physiognomy; though, indeed, this is an indifferent explanation when one remembers how well, picturesquely, Italy held its own in Venetia. Far be it from me, moreover, to accuse Milan of a want of picturesqueness. I mean simply that at certain points it seems rather like the last of the Northern capitals than the first of the Southern. The cathedral is before all things picturesque; it is not interesting, it is not logical, it is not even, to some minds, commandingly beautiful; but it is grandly curious, superbly rich. I hope, for my own part, that I shall never grow too fastidious to enjoy it. If it had no other beauty it would have that of impressive, immeasurable achievement. As I strolled beside its vast indented base one evening, and felt it above me, massing its grey mysteries in the starlight, while the restless human tide on which I floated rose no higher than the first great block of street-soiled marble, I was tempted to believe that beauty in great architecture is almost a secondary merit, and that the main point is mass—such mass as may make it a supreme embodiment of sustained effort. Viewed in this way, a great building is the greatest conceivable work of art. More than any other it represents difficulties annulled, resources combined, labor, courage, and patience. And there are people who tell us that art has nothing to do with morality. Little enough, doubtless, when it is concerned, ever so little, in painting the roof of Milan Cathedral within to represent carved stone-work. Of this famous roof every one has heard—how good it is, how bad, how perfect a delusion, how transparent an artifice. It is the first thing your *valet de place* shows you on entering the church. The discriminating tourist may accept it philosophically, I think; for the interior, though admirably effective, has no very recondite beauties. It is splendidly vast and dim; the altar-lamps twinkle afar through the incense-thickened air like fog-lights at sea, and the great columns rise straight to the roof, which hardly curves to meet them, with the girth and altitude of oaks of a thousand years; but there is little refinement of design—few of those felicities of proportion which the eye caresses, when it finds them, very much as the memory retains and repeats some happy line of poetry or some delightful musical phrase. But picturesque, I repeat, is the whole vast scene, and nothing more so than a certain exhibition which I privately enjoyed of the relics of St. Charles Borromeo. This holy man lies at his eternal rest in a small but gorgeous sepulchral chapel, beneath the pavement of the church, before the high altar; and, for the modest sum of five francs, you may have his shrivelled mortality unveiled, and gaze at it in all the dreadful double scepticism of a Protestant and a tourist. The Catholic Church, I believe, has some doctrine that its ends justify at need any means whatsoever; *a fortiori*, therefore, nothing it does can be ridiculous. The performance in question, of which the good San Carlo *fit les frais*, as the French say, was impressive, certainly, but as great grotesqueness is impressive. The little sacristan, having secured his audience, whipped on a white tunic over his frock, lighted a couple of extra candles, and proceeded to remove from above the altar, by means of a crank, a sort of sliding shutter, just as you may see a shop-boy do of a morning at his master's window. In this case, too, a large sheet of plate-glass was uncovered, and, to form an idea of the *étalage*, you must imagine that a jeweller, for reasons of his own, has struck an unnatural partnership with an undertaker. The black, mummified corpse of the saint is stretched out in a glass coffin, clad in his mouldering canonicals, mitred, crosiered, and gloved, and glittering with votive jewels. It is an extraordinary mixture of death and life; the desiccated clay, the ashen rags, the hideous little black mask and skull, and the living, glowing, twinkling splendor of diamonds, emeralds, and sapphires. The collection is really fine, and various great historic names are attached to the different offerings. Whatever may be the better opinion as to whether the Church is in a decline, I cannot help thinking that she will make a tolerable figure in the world so long as she retains this great capital of *bric à brac* scintillating throughout Christendom at effectively scattered points. You see, I am forced to agree after all, in spite of the sliding shutter and the profane exhibitory arts of the sacristan, that the majesty of the Church saved the situation, or made it, at least, sublimely ridiculous. Yet it was from a natural desire to breathe a sweeter air that I immediately afterwards undertook the interminable climb to the roof of the cathedral. This is a great spectacle, and one of the best known; for every square inch of wall on the winding stairways is bescribbled with a traveller's name. There is a great glare from the far-stretching slopes of marble, a confusion (like the masts of a navy or the spears of an army) of image-capped pinnacles, biting the impalpable blue, and, better than either, a delicious view of level Lombardy, sleeping in its rich transalpine light, and looking, with its white-walled dwellings, and the spires on its horizon, like a vast green sea spotted with ships. After two months of Switzerland, the Lombard plain is a delicious rest to the eye, and the yellow, liquid, free-flowing light (as if in favored Italy the vessels of heaven were more widely opened) had for mine a charm which made me think of a great opaque mountain as a blasphemous invasion of the atmospheric spaces.

I have mentioned the cathedral first, but the prime treasure of Milan at the present hour is the beautiful, tragical Leonardo. The cathedral is good for another thousand years, but I doubt that our children will find in the most majestic and most luckless of frescoes much more than the shadow of a shadow. Its frame for many years now has been that, as one may say, of an illustrious invalid whom people visit to see how he lasts, with death-bed speeches. The picture needs not another scar or stain, now, to be the saddest work of art in the world, and battered, defaced, ruined as it is, it remains one of the greatest. It is really not amiss to compare its decay to the slow extinction of a human organism. The creation of the picture was a breath from the infinite, and the painter's conception not immeasurably less complex than that involved, say, in his own personality. There has been much talk lately about the irony of fate, but I doubt that fate was ever more ironical than when she led this most deeply calculating of artists to spend fifteen long years in building his goodly house upon the sand. And yet, after all, can I fancy this apparent irony but a deeper wisdom, for if the picture enjoyed the immortal health and bloom of a first-rate Titian we should have lost one of the most pertinent lessons in the history of art. We know it as hearsay, but here is the plain proof, that there is no limit to the amount of substance an artist may put into his work. Every painter ought once in his life to stand before the *Cenacolo* and decipher its moral. Pour everything you mentally possess into your picture, lest perchance your "prepared surface" should play you a trick! Raphael was a happier genius; you cannot look at his lovely Marriage of the Virgin at the Brera, beautiful as some first deep smile of conscious inspiration, without feeling that he foresaw no complaint against fate, and that he looked at the world with the vision of a graceful optimist. But I have left no space to speak of the Brera, nor of that paradise of bookworms with an eye for the picturesque—if such creatures exist—the Ambrosian Library; nor of that solid old basilica of St. Ambrose, with its spacious atrium and its crudely solemn mosaics, in which

it is surely your own fault if you don't forget Dr. Strauss and M. Renan, and worship as simply as a Christian of the ninth century.

It is part of the sordid prose of the Mont-Cenis road that, unlike those fine old unimproved passes, the Simplon, the Splügen, and—yet awhile longer—the St. Gothard, it denies you a glimpse of that paradise adorned by the three lakes as that of uncommented Scripture by the rivers of Eden. I made, however, from Milan an excursion to the Lake of Como which, though brief, lasted long enough to make me feel as if I, too, were a hero of romance, with leisure for a *grande passion*, and not a hurrying tourist with a "Bradshaw" in his pocket. The Lake of Como has figured largely in fiction of the sentimental sort. It is commonly the spot to which ardent young gentlemen are wont to invite the wives of other gentlemen to fly with them, and ignore the cold obstruction of public opinion. But here is a chance for the stern moralist to rejoice; the Lake of Como, too, has been improved, and can boast of a public opinion. I should pay a poor compliment, at least, to the swarming inmates of the hotels which now alternate gracefully by the waterside, with villas old and new, to think that it could not. But if it is lost to old-fashioned romance, the unsophisticated American tourist may still find delicious entertainment there. The pretty hotel at Cadenabbia offers him at least the romance of what we call at home summer board. It is all so unreal, so fictitious, so elegant and idle, so framed to undermine a rigid sense of the chief end of man not being to float for ever in an ornamental boat, beneath an awning tasselled like a circus-horse, impelled by an affable Giovanni or Antonio from one stately stretch of lake-laved villa steps to another, that departure seems as harsh and unnatural as the dream-dispelling note of some punctual voice at your bedside on a dusky winter morning. Yet I wondered, for my own part, where I had seen it all before—the pink-walled villas gleaming through their shrubberies of orange and oleander, the mountains shimmering in the hazy light like so many breasts of doves, the constant presence of the melodious Italian voice. Where, indeed, but at the Opera, when the manager has been more than usually regardless of expense? Here, in the foreground, was the palace of the nefarious barytone, with its banqueting hall opening as freely on the stage as a railway buffet on the platform; beyond, the delightful back scene, with its operatic gamut of coloring; in the middle, the scarlet-sashed *barcaiuoli*, grouped like a chorus, hat in hand, awaiting the conductor's signal. It was better even than being in a novel—this being in a *libretto*.

Correspondence.

THE OIL PRODUCERS' ORGANIZATION.

To the Editor of the Nation:

Sir: In an article in the *Nation*, of November 7, in commenting upon the plan of organization recently adopted by the Pennsylvania oil producers, you say:

"The plan is to establish a stock company, including producers, refiners, and also railroad lines, under the laws of Pennsylvania, with a capital stock of $1,000,000, subscriptions to be payable not in money but in oil, at five dollars a barrel, the company to be a vast oil bank, distributing or retaining the production of oil at its pleasure."

And again:

"This is the second monopoly of the kind that has been projected within a year or two, the 'South Improvement Company' having failed through the premature assumption of the office of the Chief of the Bureau of Statistics by some unauthorized outsider, the public taking alarm at the statistics and information which he disseminated."

Will you allow me to correct one or two errors into which you seem to have inadvertently fallen?

First: the stock company, which has already received over a million of dollars subscription to its capital stock, is composed of *producers*, and of such persons only as the council may see proper to issue certificates of stock to, and not of "producers, refiners, and railroad lines."

Second: the scheme of the "South Improvement Company," an organization of outside capitalists only, who professed to enrich themselves by "bearing" the crude market and "bulling" the refined, thus bleeding both producer and customer, is very different from the plan of the "Producers' Agency," which seeks only to control the property of its own members, for the advantage of the producer, refiner, and consumer. It is no monopoly in any just sense, for it simply recognizes the right upon which all laws of property are based, of ownership and control of that which the vendor has himself manufactured or produced. That the refiners, who were largely interested in the "South Improvement" scheme, do not regard this as a monopoly is evinced from the fact that the "Standard Oil Company" of Cleveland, the largest refining establishment in the world, has instructed its agents to buy oil only of the "agency," authorizing them to pay $4 75 per barrel, the present "agency" price. The refiners can make a handsome profit with oil at $5; and they profess themselves willing to assist the producers in maintaining a fair and fixed price for crude.

Third: the "South Improvement Company" came to grief through the action of the Legislature, which was forced to revoke the charter it had conferred, and also by the action of Congress, to which body a delegation of the leading citizens of the oil region was sent, representing in both cases that this was a most unjust monopoly, which would sacrifice for the benefit of the refiners alone the whole producing interest of the country, and also lay a heavy burden upon consumers.

Geo. O. Morgan.

Titusville, Pa., November 9, 1872.

A CORRECTION.

To the Editor of the Nation:

Sir: Will you permit me to correct a slight but to us important error in the letter of your correspondent, "Paterfamilias," published in the issue of the *Nation* of Nov. 14, 1872.

The Warren Cooker is manufactured by the *Newport* (not the "New York") Lead Works.

Thanking your correspondent (who is unknown to me) for his letter, and you for publishing it, I am, yours faithfully,

Samuel R. Honey, Gen. Agent.

Newport, R. I., Nov. 16, 1872.

Notes.

Mr. Christern reminds us, apropos of our remarks last week on Rabelais, of Garnier Frères' edition of the "Œuvres de Rabelais," revised and annotated by M. Louis Moland, who also furnishes a life of the author, and illustrated by Gustave Doré. The samples of the latter's designs which accompany the publishers' prospectus are so disagreeably characteristic of Doré, that we feel inclined to doubt the value of his contribution to a work otherwise most beautifully executed. It is in two volumes quarto, and costs one hundred, sixty, or forty dollars, according to the paper on which it is printed.——D. Appleton & Co. will publish the second volume of Herbert Spencer's "Principles of Psychology"; "Hand-book of Social Economy," by Edmond About; "Food and Diet," by Dr. Edward Smith; and "Bressant," a novel, by Julian Hawthorne.——Holt & Williams announce "Outlines of German Literature," by Joseph Gostick and Robert Harrison.——"The Life of Principal Forbes," by Principal Shairp, Sir William Thomson, and Adams Reilly, is announced by Hurd & Houghton.——Lee & Shepard will publish translations of the encyclopædic "Life of Alexander von Humboldt" which we noticed last week, and of the "Memoirs of Baron Stockmar."——We have received from the publisher, Mr. T. Ellwood Zell, of Philadelphia, a "Sketch Map of the Nile Sources and Lake Region of Central Africa," showing Dr. Livingstone's recent discoveries and his and Stanley's routes. We presume it is copied after Mr. Keith Johnston's map of the same nature, which we see announced in England. The route next proposed to himself by Dr. Livingstone is indicated as far as the extreme point reached in his previous journeyings northward—namely, the unvisited lake into which Webb's Lualaba broadens after it has received the waters of Lake Lincoln. The fountains of Herodotus are placed just west of Lake Bangweolo. The map-maker carefully leaves it an open question whether the explorer will find himself at last on the Congo or on the Nile; but cuts him off from Lake Albert Nyanza by a mountain barrier.

—Messrs. Macmillan & Co. have published a new edition of Hardwick's excellent "History of the Christian Church in the Middle Ages," edited by Professor Stubbs. The name of the editor is a guaranty of the accuracy and excellence of the edition; but the maps, by Mr. Keith Johnston, are singularly inadequate. In the first place, they are indistinct, and ruinous to the eyes; but they are not even correct. In No. 2, "Asia at the middle of the Xth Century," the Mohammedan Empire is made to extend from the Danube and the Crimea to beyond the mouth of the Ganges, an extent which it did not reach till centuries after. In No. 3, "Europe at the middle of the XIth Century," the Mohammedans have lost ground, only holding Greece and to the Danube a little above its mouth, an empire, we need not say, as mythical as the last. The worst feature of the maps is the anachronisms. We have Switzerland upon a map of the XIth Century; and such combinations of names on the map of the IXth century as Rotomagus and Burdigala by the side of Coblenz and Strasbourg. But there are also stranger omissions:

Milan, Cologne, Frankfurt, Worms, Saxony as a duchy, and Lotharingia are omitted; and Venice and Florence on the map where one would not look for them. Again, the maps undertake to indicate Bishops' Sees by a special mark; but Mentz, Trèves, Rheims, Salzburg, and Münster are not thus marked, while Lüttich, Metz, Worms, Spire, and Cologne are not given at all. The map of the British Isles is a serviceable one, but the others we should hardly think would be of any use to any one who wants an historical map at all.

—"The Pulse of Health" is the title of an interesting little periodical publication, which calls itself "an exponent of cumulative exercise and general hygiene," and is published by the Health Lift Company of this city, and edited by Frank W. Reilly, M.D. The publishers, with a most commendable and at the same time remarkable honesty, announce that as they are manufacturers of one of the numerous machines in the market for use in this exercise, and so "open to the charge of ulterior motives," they wish to "emphasize the distinction between the system of exercise and any or all machines." "They believe that they have the best and cheapest machine, and that by liberal and judicious advertising," etc., etc., etc. With similar frankness we may say that we know little about the merits of the various machines now in the market, but we do think that this new kind of exercise deserves all the attention on the part of the public which is asked for it. The advantage over other forms of exercise which it is said to possess, is that while they fatigue and exhaust, this invigorates and refreshes. In walking, riding, running, or in exercises with rings, bars, dumb-bells, or clubs, a few muscles are used over and over and over again in overcoming a constant or uniform weight or resistance, and, moreover, the absolute contraction of muscular tissue is the same, whether the time be long or short. In cumulative exercise, on the contrary, additional muscles are brought into use successively, by a successive increase of the amount of weight or resistance, the result being a "perfect and complete exercise of the entire muscular system." In all the machines of which we have seen any notice, the method employed is that of lifting. The effects of cumulative exercise, indicated by the sphygmograph—pulse-tracer—are a "reduction of the rate of the pulse, and a corresponding increase in force, volume, and regularity"; while the ordinary forms of exercise make the pulse frequent and irregular—the frequent motions of a few muscles "creating a demand for fresh blood *from* the heart, whilst their contraction is not sufficient to send *venous* blood *to* the heart in sufficient quantities to supply the demand, and, consequently, the heart beats oftener, throbs violently, and sometimes irregularly"; a statement which every one of moderate strength, accustomed to gymnasiums, will probably corroborate. Another good effect is the muscular absorption of oxygen caused by cumulative exercise—much greater in amount than that absorbed in ordinary exertions of the muscles. This oxygenation explains the "sense of invigoration, freshness, and buoyancy of body and mind" which follows the use of health-lifts. Perhaps no one can speak with authority on the matter, until the new kind of exercise has been in use a sufficiently long time among a sufficiently large number of people to afford means of general comparison. The Germans are a stalwart people, yet they are a nation of gymnasts; the English are strong also, and they are a nation which exercises itself in out-door sports.

—One thing is evident, that as life becomes more and more artificial, exercise must be more and more scientifically studied. For those who till the ground, or engage in other occupations which require an open-air life, artificial systems of exercise are unnecessary; but for the vast and constantly increasing numbers of those who lead sedentary lives in towns and cities, exercises of all kinds will probably have to be discovered, adapted both to professional and to individual peculiarities. If many of our lawyers, merchants, editors, publishers, and clergymen had time enough for such athletic sports as most Englishmen of the well-to-do classes have, they could probably get through the year better than they now do. But they have not time. We at this moment hardly recall a single acquaintance, out of college and professional schools, between the ages of twenty-one and thirty-five, and engaged in the pursuits of active life, who habitually either rides a horse, rows a boat, plays ball, boxes, or fences. The men engaged in business, trade, art, manufactures, or professional life are too closely confined during the day, and too tired when the day is over, to think of manly sports—or indeed anything but rest. The exercises of such men cannot be those which are adapted to classes happily possessed of leisure. The study of gymnastic exercise is for this reason more important for Americans than for almost any other people. The sacred flame which the great principle of "cumulation" has kindled in the breast of the editor of the "Pulse of Health" seems to be oxygenated, to put it scientifically, by the true spirit of reform.

—By the death last week (Thursday, Nov. 14) of Professor James Hadley of Yale College, American scholarship has sustained a most deplorable loss. Those who knew him well did not hesitate to rank him as the first of American philologists—first, for the comprehensive variety of his acquisitions, for the minute accuracy of his learning, and his ready and complete command of all its resources, for his philosophical spirit, critical acumen, and sound judgment, and for his power of easy and lucid expression. Greek was his specialty, but it was far from being the only branch in which he was profoundly versed. He was a general student of language; he had mastered comparative philology, tested its methods and garnered its results; besides the classical and the usual modern languages, he had acquired the Gothic, Welsh, Armenian, Sanskrit, Arabic, and Hebrew; he was as familiar with the history and etymology of English as of Greek. Indeed, in other departments of knowledge he had shown equal ability; his lectures on the Roman law had been given with great acceptance at Harvard as well as Yale, and at the latter college were a part of the regular law course; and in earlier life he had indulged for a time a predilection for mathematics, and given promise of great eminence as a mathematician. He had been at his post in Yale twenty-seven years, commencing as tutor in 1845. Recently he had been giving himself more and more to the higher instruction of graduate students in the school of philology, of which he was a principal support, and his activity as teacher would probably have been hereafter mainly exerted there. To the school and the college his death is a very severe blow. Probably Yale has never felt a severer; for its great men have generally been taken away in the fulness of years, while he was but fifty-one, and in the very prime of his strength and usefulness. During his long term of service he had found his satisfaction, more than some do, in the results of his teaching, limiting his ambition chiefly to that which, joined with an innate modesty, an invincible disinclination to attract attention to himself, has caused him to leave for the world a less full exhibition of his powers than were to be wished. His Greek grammar, founded in part on that of Georg Curtius, yet virtually an independent work, is the most elaborate of his productions; nothing better and abler of its class exists in any language. His "Brief History of the English Language," forming a part of the introduction to Webster's Dictionary (editions of 1865 and later), has been successfully used as a manual of English study in Yale and Harvard, as well as elsewhere. He has long been an active member of the Oriental Society, and secretary of its classical section, and has presented at its meetings many valuable papers, which are in part published in its Journal, in part in other periodicals. For two years he has been President of the Society, and his fatal illness began the day but one after he had conducted its autumn meeting in New Haven. From the foundation of the Philological Association he has had a leading voice in its councils and proceedings, and held this year the office of vice-president; all its volumes of transactions have important articles from his pen; the most elaborate, "On English Vowel Quantity," appeared this summer. Others of his essays are to be found in the *New Englander*, the *North American Review*, the Transactions of the Connecticut Academy, and in our own columns, where, far less often than we wished but not infrequently, he gave our readers the benefit of his great knowledge, his good sense, and his discriminative taste. It is to be hoped that his essays will be collected and published; and probably his lectures on the civil law, already referred to, would prove a useful text-book for our law schools in a branch of study which is generally acknowledged to receive less attention than it deserves from English and American students. Professor Hadley commanded as much respect and admiration as a man as was paid him in his capacity of scholar; in every relation of life he was irreproachable. His personal friends will indeed mourn his loss, for he was no less deservedly loved than respected.

—In "Paradise Lost" (i. 567–571), Satan reviewing his legions,

> —"through the armed files
> Darts his experienc'd eye, and soon *traverse*
> The whole battalion views, their order due,
> Their visages and stature as of gods;
> Their number last he sums."

The earlier editions have a comma after "views." Newton, Bentley, Todd, and nearly all modern editors of Milton put a semicolon there. Thus pointed, "traverse" is manifestly an *adverb*, and "battalion" is the object of "views." But when Johnson was compiling his dictionary, he used an edition of the "Paradise Lost" in which, by carelessness of a printer, the comma after "views" was omitted. Misled thereby, he regarded "traverse the whole battalion" as an adverbial phrase, and made "traverse" a preposition. His first folio gives:

"TRAVERSE, *adverb* (*à travers*, French), crosswise, athwart."
"TRAVERSE, *prep.*, through crosswise."

For the latter definition he cites as his only authority the mispointed lines of

Milton. This blunder reappears in subsequent editions of his dictionary, and has hitherto escaped detection by any of his editors. Todd, who in his edition of Milton inserts the comma after "views," omits it in his edition of Johnson: and almost every English lexicographer has conceded to "traverse" the place which Johnson gave it among prepositions. Ash cites "Milton" and copies Johnson's definition, but makes a blunder of his own by inserting a comma between the two words, "through, crosswise." Sheridan emphasizes this mistake by making the comma a *semicolon*. Walker and Webster's quarto of 1828 have "through crosswise," and the latter borrowed from Johnson the misquotation from Milton; but the "University edition" of Webster, 1847, adopted Sheridan's semicolon ("through; crosswise") for the definition. And so on. In 1855, an American contributor to *Notes and Queries* (vol. xi. p. 24) called attention to this curious sequence of errors—the accidental omission of one comma having given a new preposition to the language, and the improper insertion of another having led half a dozen lexicographers into the absurdity of defining a supposed *preposition* by an *adverb*, "crosswise." Worcester, in 1859, and the revisers of Webster, in 1864, excluded the Johnsonian "traverse, *prep.*" from the vocabulary, and the former gave the lines from Milton, correctly pointed, under "traverse," adverb. But Dr. Latham's new dictionary founded on Johnson's retains Johnson's error, and the old misquotation reappears under

"TRAVERSE, *prep.*, through crosswise."

—Mr. John Camden Hotten sends us a note in which he asks us to give as full an abstract of his reply to "Mark Twain's" recent attack upon him as we gave of "Mark Twain's" letter making the attack. We will do as well as we can, though we do not think we fully understand the reply in question. Mr. Hotten begins by saying to the editor of the *Spectator* that in June last the said editor allowed him to say in substance this: a so-called "revised edition" of Mark Twain's sketches was not truly a revised edition nor an "author's edition," but was merely a slightly altered reproduction of an edition which Mr. Hotten had himself scraped together from American journals. Secondly, says Mr. Hotten, "Mark Twain" charges that five papers added to his admitted work are of Mr. Hotten's composition and not at all of his. To this Mr. Hotten answers that he certainly did not compose them; that three of them appeared in Mark Twain's own paper, the Buffalo *Express*, and the others were very generally circulated under his name, without a single denial appearing. Thirdly, "Mark Twain" says he is not "Carl Byng" and by implication that he did not write "Carl Byng's" productions; and to this Mr. Hotten says that in that case "'Mark Twain's' brother journalists in New York State must be laboring under an extraordinary delusion," for they always treat "Carl" as "Mark," and "Mark" has never once corrected them. Mr. Hotten remarks, by the way, that it is always in the Buffalo *Express*, again, that "Carl Byng's" efforts appear. The argument appears to be that "Mark" denies the Byngisms now because he desires to keep on saying that he did not write the above mentioned five sketches, but that really he is the veritable "Carl," and never denied it till just now. This argument Mr. Hotten proceeds to strengthen by narrating an incident tending to show that "Mark" has a diseased and morbid fondness for *noms de plume*. The other day he was in Mr. Hotten's shop "with one of the greatest humorists of Fleet Street," and Mr. Hotten welcomed him as "Mr. Clemens, the famous Mark Twain," upon which he observed Mr. Clemens "looked glumpy," and by-and-by "one of the greatest humorists in Fleet Street" took Mr. Hotten aside and said that Mr. Twain preferred to be called "Mr. Bryce." Thus instructed, Mr. Hotten thereafter addressed him as "Mr. Bryce," to the evident great satisfaction, not to say delight, of Mr. Clemens. We confess had we been in Mr. Hotten's place we should have suspected that Mr. Mark Twain and his Fleet-Street friend were making game of us. The story reminds us of Mr. Artemus Ward's experience with Mr. Daniel Setchell. Those two gentlemen were driving together in Maine, and the custom was for one to bind the other with cords, then going up to some farm-house door profess to be the keeper of a dangerous lunatic, who could only be quieted by profuse libations of milk, or cider, or what not. Being ministered unto by the farmer's wife or daughter the pair drove away, and then the cord being transferred from the lunatic to the keeper they were ready for the next farm-house. "Mr. Bryce's" anxiety about his name we take to have been something similar to the mental alienation of Mr. Ward and Mr. Setchell. Finally, Mr. Hotten having made his assertions as regards Mr. Clemens's fondness for pseudonyms; as to "Carl Byng's" being one of these; and as to Mr. Clemens's consequent responsibility for the five disputed sketches, adds that he has thrice written to Mr. Clemens and got no answer, and that he is always willing to pay any American "who may write or edit" for him, but that if it is left to him "to gather up manuscript trifles cast off and forgotten," and afterwards find a market for them, he is "not prepared to pay anything," especially as he runs the risk of another publisher's putting out an edition at one-sixth of the price of his own. Perhaps Mr. Hotten ought to have reflected that some writers resent as an injury the gathering up of unconsidered trifles which they choose to disown and forget; and that being angered thereby they decline to answer his letters, and think it fair to attack him in ways not sanctioned by the usual laws of war. We do not know, but we suggest this as a solution of Mr. Clemens's indignation.

—As we are considering Mr. Hotten's case, and now that we have complied with his request for a full hearing, we will go on to tell him that we learn, from an advertisement of his printed in the *Spectator* of October 12, that "the New York *Nation* is struck with Dod Grile's wit and delightful badinage, every line in the most forcible English"; as to which we would say that we have not been struck by Dod Grile; that his wit, and his delightful badinage, and his forcible English are all entirely unknown to us; that we never heard of him or them till we saw Mr. Hotten's advertisement, and that we should like to know why we are quoted as having been struck with the powers of Mr. Grile. Furthermore, we may say while we are on the topic that we are now informed by a person who knew Mr. Hotten in his childhood, and whose parents were friends of Mr. Hotten's parents, that he is not of American birth as we stated the other day, but of English. And finally, Mr. Hotten himself tells us that he has made a certain covenant and agreement with that serpent, that hardy blasphemer, that foe of all the gentler feelings adorning our nature, that prodigious and frontless contemner of virtue and morality, the San Francisco *News Letter's* "Town Crier." In consideration of a sum of money to him in hand paid, this enemy of man and worse enemy of woman has bound and obligated himself to gather together his compositions into a book—a sort of cynic's *vade mecum*, a *Delectatio Demonorum* and "Fiends' Delight," which Mr. Hotten will publish. Should he do so, the reading public will see a specimen of "American humor" as unlike that of any of the other American humorists as the play of young human merry-andrews is unlike that of a young and energetic demon whose horns are well budded.

—Nearly two years have passed since M. Jules Simon, as Minister of Public Instruction of the short-lived Government of National Defence, made a spasmodic attempt to improve education in France by means of a circular addressed to the heads of academies, and by other measures of a more popular nature. He has again, with M. Thiers to back him, but on his own responsibility, and, it is said, somewhat illegally, made a vigorous start towards educational reform, having special reference to those prison-houses called *lycées*, of which there are sixty-three (including Algiers), and to the communal colleges, which number two hundred and twenty-five. To the already overcrowded course of studies in the former, M. Simon adds general gymnastics, fencing, and horsemanship, putting these exercises in the front rank, with an evident eye to the importance attached to them in Germany, where, however, they make rather more of a figure in the programmes than in actual observance. Along with this, he bestows more freedom on the professors in the choice of text-books and modes of teaching, and endeavors to make their relations with their pupils much more intimate than they are now. Of the graduate he exacts one thing—that he shall be proficient in at least one living language, preferably English or German. For the present, reforms in primary and university education and normal training, as well as in the pay of teachers, are postponed; but they can hardly come too soon.

SKINNER'S AMERICAN POLITICS.*

AT the present juncture in our politics, when party ties are being rapidly effaced, and new issues are forming and fast superseding the old, nothing could be more timely than a comprehensive survey of the situation, and a full discussion as well of the past issues as of those that are now coming into prominence. It is a task of great difficulty and delicacy, and whatever his success in performing it, Mr. Skinner deserves commendation for the courage and industry with which he has set about it. We cannot but think, however, that he began the work on too extended a scale, and was obliged to curtail his plan somewhat towards the end; or it may be that he was anxious to have the book out before the election, and for this reason hurried it at the last. Whatever the cause, the last chapters are as a whole far less satisfactory than the early ones, and this not by reason of the views supported, or the arguments advanced, but because the treatment is comparatively slight and hasty. In the closing chapters, too, we find a departure from the calm and impartial tone of the earlier portions of the book, and a bitterness of language in speaking of the present Administration, which we

* "The Issues of American Politics. A discussion of the principal questions incident to the Governmental Polity of the United States. By Orrin Skinner (of the New York Bar.)" Philadelphia: J. B. Lippincott & Co. 1872. 12mo, pp. 581.

can only characterize as partisan. It was at once unbecoming and inconsistent with the character and purposes of the treatise to introduce in this way expressions which bear only upon this present election of 1872.

Apart from this, the book deserves high praise. The first feature which strikes the reader is the clearness and felicity of the definitions and statements; Mr. Skinner has a genuine power of statement. For example, in the discussion upon the suffrage, p. 521: "There is not an instance of private policy, from walking the tow-path of a canal to the superintendence of the delicate machinery of finance or the practice of the liberal professions, in which a certain degree of *acquired fitness* is not demanded of the one who essays the performance of these simple and intricate trusts." It is all the more strange, therefore, in a writer who can express himself so clearly and well, that we meet with such incomprehensible sentences as the following, p. 552: "There are certain questions of governmental polity which, from their peculiar nature, will never receive the seal of even temporary settlement until the highest order of civilization shall have laid its hand upon every member of the human brotherhood that shall be allowed a voice in the direction of human affairs"; or the entire paragraph, p. 222, which introduces the discussion of the Fourteenth Amendment. There is also an extreme fondness for rare and technical terms—such as joinder, sequential, facture, suppletory; and not infrequently words are used in a way quite incorrect—as a clan (of two persons); an ingot of gold-bearing quartz; trite, apparently for terse (p. 571); will for shall (p. 537); suffragan for pertaining to the suffrage. Protection and free trade are spoken of as institutions; and a boy is wonderfully called "the insignia of uncompromising noise." Another affectation of style is the fondness for variety of expression, even where sameness would be more appropriate. Thus, the introductory remarks to the entire treatise and the four several books are headed respectively "Introductory," "Explanatory," "Inductive," "Preliminary," and "Preparatory."

In spite of these curious tricks of expression, the work is, in the main, written in a clear and forcible style, and contains a series of able discussions. The First Book treats of financial questions—the National currency, the National Bank system, and the public debt—and is introduced by a chapter upon money and currency, one of the best in the volume, but of a scope more suitable to a work on political economy than a treatise like this. We can hardly think that this Book would have been so extensive if the author had laid out his work with sufficient care. The Second Book treats of questions of polity, such as Reconstruction and Civil Service; the third, of Tariffs and Taxation; the fourth takes up subjects of a more general nature—Suffrage, Personal Representation, and Centralization. We have already remarked that these last discussions are unsatisfactory, with the exception of that upon suffrage, which is admirable; although even this might advantageously be a little expanded. The treatment of personal representation is very inadequate; that of centralization hardly better. And it should be remarked that several very important topics are omitted entirely—foreign relations, public lands, the Indian policy, internal improvements, the fisheries, and national education among others.

The Second Book will attract the most attention, although it treats mostly of past issues—perhaps for this reason, because they are the ones upon which the community is best informed. The chapter upon civil-service reform—the one of most immediate practical importance—contains an excellent criticism of the present method of administration, exposing its iniquities and absurdities with great force. When it comes to proposing a remedy, however, we cannot think that Mr. Skinner's plan would accomplish the desired end. It is too complicated, depends too much upon legislation, and much of it legislation which is in the direction of present abuses. The one essential thing in civil-service reform is to reinstate the old popular sentiment in regard to the matter. Before Jackson's Administration there was no need of laws upon this subject, because public opinion was sound; and in a matter like this, which cannot be absolutely controlled by statute, the only adequate guaranty for honest and efficient administration is public opinion. At present public opinion is debauched by the long practice of every party; hardly any persons now in active life can remember the time when public business was conducted on the safe and honest principles of private business, and it is simply because the majority of people cannot conceive of things different from what they are used to, that it has been so hard to start a reform. All that legislation can do is to give a respite from the present misgovernment long enough to let a new generation grow up without knowledge of the old bad way. Meantime the discussion that has been going on ever since Mr. Jenckes first brought the question prominently forward, has been very effective in educating the popular mind. It is safe to say that a reform is now demanded by the entire body of thinking men, with the exception of professional politicians; while five years ago the abuses were only a matter of private lamentation among a few.

Now we have no more faith in competitive examinations as a panacea for the evil, than Mr. Skinner has; all they can do is to ensure the possession of certain necessary qualifications, although not of the essential ones. But they do at all events help to accomplish two things: first, to excite thought upon the matter, and interest the community in reform; secondly, to remove the subject from the realm of politics, even if inadequately and but for a time. Mr. Skinner's plan proposes a machinery which shall control the matter permanently; perhaps it would, as he asserts, result in an efficient and honest civil service; but it would be at the risk of certain decided disadvantages, and, more than that, it aims to accomplish by machinery what can only be accomplished by political morality. He is entirely right in his view that any method, to be successful, must act above all by "removing the cause which generates the motive, by changing the springs of action which control the management of the service" (p. 362). And if we thought that the only way thus to remove the cause was the one he proposes, we should at once assent to it, little as we like some features of it. But on its own merits, we are entirely opposed to his first proposition to prohibit the re-election of a President. Our system is wasteful enough as it is, in relegating to private life for the rest of his days every person who has risen to the post which requires the widest experience and the greatest knowledge of public affairs; we should be sorry indeed, if we ever have another Washington or Lincoln in the Presidential chair, not to be suffered to retain him there. Neither do we believe that it would accomplish the desired end. It is not the power of the executive under which the country is now suffering, but of the *party;* it is because he has suffered himself to be a tool in the hands of party managers that General Grant has been condemned; not because he had undue ambition on his own behalf. And if he were ineligible for re-election, do we not suppose that Messrs. Conkling, Morton, Chandler, and Cameron would have just as efficiently manipulated the nomination of his successor as they have his own? The same reasoning will apply to making heads of departments, etc., ineligible for office for the next Administration.

Other features of the plan are equally objectionable—removal of members of the service by the next Administration, apportionment of certain offices among the States, and election of certain others by the people of several localities; *appointment* by governors, mayors, and selectmen might not be so objectionable. Certain other features are excellent—the prohibition of members of the civil service from taking an active part in State politics, the forbidding of political assessments, and the increase of salaries, etc.; as to the recommendations of members of Congress, that would take care of itself, if the matter were properly regulated otherwise.

We had marked several other points for consideration, but our limits will not allow it. We will say that the chapter upon Protection and Free Trade contains as good a statement of the argument for protection as we have ever seen. We cannot say as much for the author's historical illustrations, especially where, on p. 511, he says that "civilization, for the purposes of government, passes through four *principal* reformatory stages—democratic, monarchical, aristocratic, and republican or representative," giving as illustrations of the first three respectively "the deplorable condition of ancient Athens, the miseries of Rome under Cæsar or France under Charlemagne, and the hardships of the English people under William of Normandy and his nobles." It would be hardly possible to find worse illustrations. Ancient Athens certainly did suffer from some of the evils of democracy, but on the other hand enjoyed a constitution in which democracy was tempered and checked by some of the most remarkable and sagacious provisions in constitutional history. Rome under Cæsar—or rather in his time—was badly enough off, it is true; but its evils were the fruits not of monarchy but of lawless democracy. As for Charlemagne, his firm, wise reign is the one bright spot in many generations of misgovernment and anarchy; while if there ever was a king who kept the reins of government tightly in his own hand, it was William the Conqueror.

The general tone of Mr. Skinner's political philosophy is that of a liberal conservatism, with an occasional incongruous dash of radical democracy, as in the propositions above cited with regard to the re-eligibility of the President and Cabinet officers, and the election and distribution of members of the civil service; the doctrine (p. 367) that "rotation in office is one of the fundamental elements of republican government"; and the irreverent mention of Sir William Blackstone and Sir William Hamilton without the sign of their baronetcy.

Mr. Skinner's faults as a writer appear to be mainly due to his leaving the simple and straightforward style of expression which is natural to him, and straining after some compact and allusive form of words which shall contain a great deal of meaning, even if the meaning has to be searched for; as where, under the head of the circulating medium, he speaks (p. 110) of initiate and consummate convertibility—the latter very essential, the former not at all so. He forgets that the first requisite of

style is perspicuity, and that profundity should be in the thought rather than in its expression. In spite of these defects, he has, by this volume, earned for himself an honorable position among American political writers. If he will rid himself of these faults of style, and cultivate those powers which he possesses in so striking a degree, we may look for valuable works from his pen. Should this present pass to a second edition, we hope he will correct a material error copied from the *Nation*, though duly rectified by us. The expenses for one year of the Louisiana Legislature were $900,000 only, and not $9,000,000.

JOHNSON'S ORIENTAL RELIGIONS.*

IT was not without a shade of misgiving that we opened a volume so bulky as this, treating of the Hindu religion. Considering how much is still obscure in the history of that religion, considering of how much loose disquisition, and daring reconstruction, and empty declamation it has been made the subject, one cannot help being suspicious in advance of the soundness and moderation of an author who can spread himself over eight hundred pages upon it. Unless, indeed, he were an original scholar, bringing new materials to light, or applying to those already gathered a closer criticism and a more acute penetration; for there is no end to the work still requiring to be done in that way. Mr. Johnson lays no claim to being such a scholar; he has access to the sources only at second-hand; he writes as a general student of religion and of religions, to whom a part of the field so rich in attractions as the Indian could not but be a theme of absorbing interest. He has made it, as he assures us, for more than twenty years his study; his notes and references abundantly show that he has resorted to the best sources, old and new, down to the newest; and he has produced a picture of the religious development of India which is faithful in its main outlines, lively and engaging in its style, and inspired throughout with a keen and even enthusiastic appreciation of the beauties of its subject. His spirit is that of an advanced liberal; he has no blinding prejudices in favor of the faith which is popular here, and holds no theory of inspiration which should prevent his classifying together all the records of religious thought and teaching, as containing truth from God, mixed with error and weakness for which man is responsible. This is well for the fairness and impartiality of his work; it would be hard to do Hinduism real justice, if approaching it in the spirit too often shown toward a heathen faith by an aggressively Christian enquirer. But impartiality may be so upright as to lean backward; and of this failing many will not hold our author guiltless. To expect of the remote past and of the Orient the wisdom of modern Christianity and the coherence of modern thought, would be palpably unjust; but it is a different thing to observe and point out where the former fail in moderation, in concinnity, in sound sense, in that solidity which, when soaring aloft, never loses connection with the earth.

We had thought the time gone by, thirty years ago, when any one could write, for example, of the Bhagavad-Gita in the strain of almost unmixed exaltation in which Mr. Johnson describes it. Its lofty doctrines are weighed down with infinite pettinesses, its religion with superstition, its profound reasonings with paradoxes and transparent sophistries; it lacks altogether that quality of practicality, of adaptation to the realities of human nature and circumstance, without which no religious doctrine can claim our high admiration. So also with the Hindu philosophies; as themes for careful historical study, which shall work out their underlying principles, and see what of wholesome sense and sound thought they cover and disguise, they are full of interest; we are ready to wonder at them as examples of acute and hair-splitting subtlety; but we would fain see a man of European culture in the nineteenth century hold himself a little more independent of them and above them than does our author. One who has studied the earliest phase of Hindu religion, as it was before the Aryan hue had faded away from it, with its human and hearty worship of the powers of nature, its enjoyment of life and of the good things of life, its simple belief in immortality and happiness beyond the grave—such a one can hardly help lamenting and regarding as an unfortunate distortion its later development: the artificial isolation of an iron-bound caste system; the supremacy of a hierarchy; the dominion of a ceremonial that had become empty of intelligence and faith; the unquestioning acceptance of the weary round of births, in all orders of animate existence; the consequent disgust at life, and longing for that which, if not extinction, differed from it only by a metaphysical definition; the credited means of salvation in the cognition of the absolute, and in the complete crushing out of the desires and affections that make up the best parts of man's nature. The supreme effort of Hinduism is to enable a man, as it were, to jump off his own shadow; to strive constantly after happiness by annihilating the craving for happiness. Its model saints are men who curb their passions, deny themselves, and meditate on the ineffable during thousands of years, with the purpose steadily in view of rising at last above humanity, and wielding a power superior even to that of the gods; and the same career is open also to demoniac natures for the basest ends. Perhaps our hard-headed and materialistic age needs a liberal dose of the dreamy introversion of the Hindu to keep it from growing too earthly; but the administration requires to be very cunningly made of a remedy so little to the taste of the patient.

We have sufficiently indicated the principal and pervading fault which we are inclined to discover in Mr. Johnson's volume. Less of approving enthusiasm, more of coolness of judgment, of sceptical and even destructive criticism, would appear to us desirable in one who undertakes his task. The very first chapter, on "the primitive Aryas," strikes the key-note of the whole work, and of our imperfect sympathy with it; the picture is overdrawn and overcolored; it is rather poetic than soberly truthful. Those remarkable "Aryas," we are told, recognized soul "as not merely vital breath, but thinking being." They had "made a distinction between concrete existence and abstract being"—a distinction too fine-drawn for most even of their cultured descendants to appreciate. They "venerated a mountain plant, and used its sap as a symbol of life renewed through sacrifice"—rather an embellished account of what was probably the mere deification of an intoxicating juice. Their "primitive monotheism, more or less vaguely defined," is, in our view, much too vaguely defined to allow of even its dimmest outlines being discovered. Through all the chapter, and elsewhere, Mr. Johnson reposes undue confidence in Pictet, the wildest and most unsafe of guides in this direction. He even reports approvingly the lively Frenchman's curious opinion that if the Hindus did not, like some of their neighbors, invent an alphabet, it was only because they had risen, by the wonderful development of the powers of the memory, superior to the need of such an external aid. No one in our author's position is to be fairly blamed for sometimes placing his reliance on the wrong authority; but we might almost have expected that he would perceive Renan's attribution of Prakrit speech as a special consequence of the peculiarities of the female organization in India, to be an almost laughable blunder; and that he would refrain from making it still more ridiculous by suggesting that the gradual supplanting of the Sanskrit by this woman's-Prakrit illustrates the "conspicuous stamp of female influence in the historical development of Indian speech," the prosaic fact being that the women in the Sanskrit dramas talk Prakrit (along with the lower male characters) simply because it is the uncultivated vernacular, and they are uneducated and unlearned. It is, on the other hand, from a Hindu etymologist that Mr. Johnson takes the absurd explanation of *putra*, 'son,' as meaning properly 'a deliverer from the hell called *pût*.' And we hope he has some one upon whom to put off the responsibility of his interpreting the famous and important word *nirvâna* to signify not 'extinction,' but 'no more waving as from presence of wind, no more restlessness and change.'

We have, as was natural, dwelt rather upon those aspects of Mr. Johnson's volume with which our own views are at variance than upon its obvious and indisputable merits, which are many, and which, in conclusion, we desire heartily to acknowledge. It is creditable to his industry, learning, catholicity of spirit, and kindly enthusiasm; and it will be found good food by many minds; more palatable and nourishing, doubtless, than if it proceeded from a cooler and more cautious spirit.

* "Oriental Religions, and their Relation to Universal Religion. By Samuel Johnson. India." Boston: J. R. Osgood & Co. 1872. 8vo, pp. vi., 802.

A NEW LATIN DICTIONARY.*

THE publication of a lexicon is so formidable an undertaking that our lexicography is always more or less behind the times. This has been particularly so in Latin. The remarkable excellences of Dr. Andrews's work have satisfied students for many years, and have made them forget the date of its publication. But since the appearance of "Freund's Lexicon," of which Dr. Andrews's is a translation (1834–45), an almost entire revolution has taken place in many branches of lexicography from the study of comparative grammar, to say nothing of better textual criticism, improved orthography, and new interpretation. Of these thirty years of an activity in this direction only comparable with that at the first great revival of letters, the American student can find in his books of reference not the slightest

* "A Latin-English Dictionary. By the Rev. John T. White, D.D., Oxon., and the Rev. J. E. Riddle, M.A." Fourth edition. Boston: Ginn Bros. 1872.
"A Latin-English Dictionary. Abridged from the larger work of White and Riddle. By John T. White, etc." Third edition. Boston: Ginn Bros. 1872.
"A Latin-English Dictionary, for the use of Junior Students. Abridged from the larger work of White and Riddle. By John T. White, etc" Fifth edition. Boston: Ginn Bros. 1872.

trace. Dr. Andrews's work ought long ago to have been revised and kept up with the times, just as the English editions of Liddell and Scott have been. But as this has not been done, we ought to be indebted to a publisher whose enterprise has brought within reach a series of dictionaries like those of White and Riddle, published by arrangement with Longmans & Co. by Ginn Bros., Boston.

The series embraces three books; a complete lexicon in two volumes (2,128 pp.), a college dictionary in one volume (1,048 pp.), and a junior student's dictionary in sq. 12mo (600 pp.) All of these profess to give the latest settled results of comparative philology, as well as suggestions on points which are still undetermined. And, in general, the etymologies are trustworthy, so far as we have been able to examine. For instance, even in the smallest work, the two verbs identical in form, but different in origin and meaning, DO *to give*, and -DO *to place*, found in *condo*, etc., are recognized. So, also, a student can discover under *credo* why it has in the perfect a reduplication in the middle. Under *nascor* and *gigno* the real relation of those words with each other and with γίγνομαι is clearly indicated. So under *suavis*, instead of "probably sibilated from ἁδύς, ἡδύς," we find "for *suadvis*; akin to Sanskrit, *svâd-u* from the Sanskrit root SVAD *gustare delibare*; also akin to Gr. ἡδύς ἁδύς." *Suadeo* is referred to the same root. On the other side, the French and Italian phonetic equivalents are given under each word, instead of at the end of the book, so that a boy finds *conquérir* under *conquiro*, *abeille* under *apicula*, and the like, and so has constantly before him the historical side of the study of language. Of course this in one sense is no positive merit in a book; we ought to have had the same thing twenty years ago; but it is a thing absolutely essential, and is not to be found in other books of reference.

This part of the work is not so good as it ought to be. There are many omissions and some errors, but not, we think, enough to impair the usefulness of the books. For instance, under the letter *s* that letter is said to be "*prefixed* to some Greek words which have the smooth breathing," an error more suitable for the time of Varro than for A.D. 1872. In orthography there is still much to be desired. *Quum* still stands as the normal form of that particle, *coniveo*, *conitor* retain the double *n*, and *conicio* has a *j* more than the Romans could afford it in their version. In the stock of words and their meanings, the very great excellence of Andrews's work, upon which, with Freund's revision, the books are founded, makes the possible improvement less conspicuous. Still it would seem that the whole has been carefully worked over. There are a few words which are rare, or found only in inscriptions, many new proper names, and a large body of words and meanings belonging to ecclesiastical or law Latin. It is the last class that most swells the bulk of the larger edition. Though it appeals to a smaller number of scholars, yet to these it is of great value.

The arrangement of meanings in a kind of *catalogue raisonnée*, which forms so valuable a feature of the original work, is carried out still further, and in many cases recast and improved. The student will recognize many new meanings which he has had to look for in other sources than his dictionary. The reader of Livy can now have authority for "*Saltus*, a mountain pass," as he has been obliged to translate it for many years. Some particles are greatly improved, especially *iam*. On the whole, the additions are considerable in amount and valuable in kind. The difference between the editions is produced by the omission of late words and meanings, and in the smallest size, by the omission of citations, though the authorities are retained. On the whole, though the series might be improved, yet, as there is nothing so good elsewhere, we should say no student could afford to be without the work in one of its forms.

Wonders of the Moon.—Translated from the French of Amédée Guillemin by Miss M. G. Mead. Edited, with additions, by Maria Mitchell, of Vassar College, New York. (New York: Scribner, Armstrong & Co. 1873.)—Our literature has long wanted a convenient little hand-book concerning the moon. Our greater luminary has had a library of popular works, but there has been no convenient source of general information concerning the earth's satellite open to the general reader. This want is well met by the translation of M. Guillemin's little treatise; it is only surprising that it has not been given to us before, for it is a very model of its kind. Perfectly clear and simple, without any trace of the catchpenny nonsense or cheap philosophizing of some more renowned of his fellow-workers in the field of popular science, M. Guillemin's style has the imprint of a scientific spirit. His book is quite trustworthy and well calculated to give the general reader a good idea of the structure and general relations of the moon. The translation is reasonably well made. The task of the editor has not been great, the additions amounting to a page or two of text, giving only a part, a rather small part, of the work of astronomers and physicists on the moon which has been done since the publication of Guillemin's book. A number of the excellent figures in the original work have been omitted in the reprint; those which remain have suffered dreadfully in the reproduction. The new diagrams are in some cases additions, though rather coarse and inaccurate.

We must protest against the change of title. M. Guillemin has a clear right to the name of his book; it pleased him to call it simply "The Moon." In taking against his express request the child of his pen, the American publishers have made the matter worse by a lame attempt at rechristening.

HISTORICAL AND MISCELLANEOUS WORKS.

BY JAMES ANTHONY FROUDE, LL.D.

READY IN A FEW DAYS:

FROUDE'S IRELAND.

THE ENGLISH IN IRELAND DURING THE EIGHTEENTH CENTURY. Volume I. By JAMES ANTHONY FROUDE, M.A., author of "History of England," etc. One volume crown, 8vo, uniform with the Library Edition of the "History of England." Price $2 50.

Mr. Froude's lectures have given the American public glimpses of the conclusions at which he arrives in the History of which this is the introductory volume, but they indicate only faintly the thrilling interest which invests every page of the work. Private and public documents, a large part of them secret, have been freely thrown open to Mr. Froude, and from these he has worked out a narrative with all the freshness of a story never before told, and with all the vividness of the most powerful drama. The events described are comparatively so recent, and in their consequences are so closely connected with our own times and our own country, that a thorough acquaintance with them is indispensable to every American at all interested in public affairs.

N.B.—This work will be completed in another volume.

NOW READY:

THE CHELSEA EDITION OF

FROUDE'S HISTORY OF ENGLAND.

A NEW AND ELEGANT EDITION.

Complete in 12 volumes 12mo. In half roan, gilt top, $21 per set.

LIBRARY EDITION.

Crown 8vo. Price in cloth, $30; in half-calf, extra, $50.

POPULAR EDITION.

12mo, $1 25 per volume, or the twelve volumes in a neat case for $15; the same in half-calf, extra, $36.

SHORT STUDIES ON GREAT SUBJECTS.

IN TWO VOLUMES.

LIBRARY EDITION.

Crown 8vo, per volume, in cloth, $2 50.

POPULAR EDITION.

12mo, per volume, in cloth, $1 50.

Any or all of the above volumes sent, prepaid, on receipt of the price by the publishers,

SCRIBNER, ARMSTRONG & CO.,

No. 654 Broadway, New York.

JUST READY.

A NEW NOVEL BY TURGENIEFF

LIZA: A Novel. By Ivan S. Turgénieff. Leisure-Hour Series. 16mo, $1 25.

"In our opinion he is equal to any living novelist."—Nation.

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—London Spectator.

RECENTLY PUBLISHED.

JOSEPH NOIREL'S REVENGE: A Novel. By Victor Cherbuliez. Translated by William F. West. Leisure-Hour Series. 16mo, $1 25.

A CONDENSED EDITION OF TAINE'S ENGLISH LITERATURE, FOR GENERAL READERS AND FOR SCHOOLS. Prepared by John Fiske, Assistant Librarian and late Lecturer on Philosophy in Harvard University. Post 8vo, $2 50.

THOUGHTS FOR THE TIMES. Sermons by the Rev. H. R. Haweis, author of "Music and Morals." 12mo, $1 50.

OUTLINES OF HISTORY. By Edward A. Freeman, D.C.L. 16mo, $1 25.

HOLT & WILLIAMS,

25 Bond Street, New York.

A BOOK FOR EVERY AMERICAN.

JUST ISSUED.

A BOOK FOR THE PEOPLE.

THE ISSUES OF
AMERICAN POLITICS.

A Discussion of the Principal Questions Incident to the Governmental Polity of the United States, embracing the subjects of Civil Service, Force Legislation, Amnesty, Suffrage, The Centralization of Power, Our Money and Currency, The Public Debt, The National Banking System, Reconstruction, The Constitutional Amendments, Tariffs, Taxation, Protection and Free Trade, and other Important Topics. An Exhaustive Treatise upon our National Politics. By Orrin Skinner. Crown 8vo, toned paper, extra cloth, $2 25.

Opinions of the Press.

"The traces of a thoughtful and discriminating intellect, and of no common power of expression and illustration, are plainly visible in the composition of this volume. It is marked by an unusual breadth of view in the discussion of hackneyed topics. . . . We cheerfully accord our tribute to the precision of statement, the dignity and fairness of discussion, and the power of argument which are conspicuous features of his volume."—N. Y. Tribune.

"This is a valuable addition to our political literature. The author has covered his ground well, including in a small space a vast amount of historical matter, with comments thereon, the whole stated in a remarkably clear and succinct manner. . . . The book deserves to take its place with the standard literature of the country."—Philadelphia Evening Bulletin.

"An able and important discussion of the principal questions incident to the governmental polity of the United States. We cordially commend the book as, on the whole, a singularly just and impartial review of the issues entering into American politics, and as furnishing much really valuable information."—Baltimore Gazette.

"It is an excellent treatise, and may be regarded as a compendium of American politics for the last half-century, or in fact from the inauguration of the American system of finance by Hamilton. A copious index, alphabetically arranged, adds much to the value of the volume as a book of reference, a position to which it is eminently entitled."—Hartford (Conn.) Post.

"A work of great political interest, and abundant in instructive suggestions."—St. Louis Times.

MARY QUEEN OF SCOTS,
AND HER
LATEST ENGLISH HISTORIAN.

BY JAMES F. MELINE.

One volume crown 8vo, cloth, $1 75.

PUBLISHED BY THE
AMERICAN NEWS COMPANY, NEW YORK.

Sent by mail, post-paid, on receipt of price.

"It is the duty of those who have surrendered their judgments to Mr. Froude, and who have formed their opinions of historical characters under the influence of his seductive rhetoric, to read this book."—Prof. Goldwin Smith. "An achievement of well-deserved literary flaying alive."—The Nation. "Mary Stuart was never more thoroughly beheaded by the axe than Froude by the pen of Meline."—Providence Press. "We are constrained to admit that Mr. Meline has made out his case."—The Scotsman (Edinburgh). "Its positions are so damaging that if they are not turned, implicit confidence in Mr. Froude as a historian is gone entirely. If Mr. Meline is sustained, Froude is a fraudulent writer of history."—Ch's Dudley Warner (Hartford Courant). "We should very much like to see Mr. Froude's answer."—Saturday Review. "The case made against him by Mr. Meline's work should not be left to stand if Mr. Froude places even a moderate value upon his good name."—N. Y. Ev. Post.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 28, 1872.

The Week.

THERE has been great excitement among the brokers over the "corner" in "Northwestern Common" and the simultaneous arrest of Jay Gould for fraud by the Erie Railway, the corporation suing him for the enormous sum of $9,726,541 26. The history of the case, in brief, is this: When Fisk and Gould got the Erie road into their hands, four years ago, Gould formed a partnership with three men, one of whom was Henry N. Smith, under the firm name of Smith, Gould, Martin & Co. The ostensible object of the partnership was banking and brokerage, but the main if not the only real design of the partners was to steal money from the Erie Railway. This they did in the simplest way, Fisk and Gould acting as the railway and issuing stock; the firm taking it and converting it into cash, and then dividing the proceeds; the transaction being wound up by fraudulent entries in the company's books. In short, Gould and his firm stole about $10,000,000 from the road in an incredibly short space of time, and, together with Fisk, reduced the Erie treasury to such a condition that when the new board came in under the influence of the "Erie Reform" movement, the road was in a state of hopeless bankruptcy. Proceedings were immediately begun by the new President, Mr. Watson, an experienced railroad man, and the reform board of directors, to recover the stolen money, the company giving out that they were acting in good faith, others asserting that part of the arrangement by which they had obtained possession of the road from Gould was that the latter should be let off scot-free. The truth of the matter now turns out to be that Gould gave up the road to the reformers, as they supposed, unconditionally, but in reality he got, as *quid pro quo*, a release from the road of all claims against him from the beginning of the world down to the 31st of October, 1871. Of this release Mr. Watson and the counsel of the road had no knowledge at the time, and now disregard as worthless in law on account of fraud. Its existence may perhaps be explained by the fact that General Sickles acted as intermediary in the matter, and we hinted at it pretty broadly at the time.

Smith and Gould, as the way is among thieves, by-and-by fell out. Gould determined to ruin Smith, and Smith to ruin Gould. Both of them thought they saw in the stock of the Chicago and Northwestern Railroad a good field of operations. The road, the stock of which is commonly known as "Northwestern," runs from Chicago to Omaha, and, with its connections, has about 1,600 miles of track. The common stock pays no dividends, and its ordinary market value is from 70 to 80. The number of shares in existence is not accurately known, but is supposed to be about 150,000. The importance of the road arises from the fact that it forms part of one of the highways from the Atlantic to the Pacific, being a link in a line of communication which takes in the Central and Union Pacific, the Lake Shore, and the New York Central. These roads, with the exception of the Central Pacific, the "Vanderbilt party" controls, and it was of course for their interest to obtain possession of the Northwestern line. For this purpose they determined to "corner" the stock, or, in other words, get possession of the road without paying for it; and to assist them in their undertaking, they formed an alliance with Gould, Gould's old pal, Smith, forming an alliance at the same time with Daniel Drew, to gamble on the other side for the simpler object of money and ruining their foes.

A "corner," we must explain, for the benefit of our less sinful readers, is an operation of this kind: A and his friends buy all the stock of a road, and having by this means forced the price to a high point, go on buying, or rather making contracts to buy, more and more stock at the market rates, which gradually rise until they reach some extravagant figure, and then A and his friends, buyers, and B and his friends, sellers, draw off. Those who have contracted to deliver cannot do it, because they are "short" of the stock, having contracted to deliver twice as much perhaps as there is in existence. If they could deliver, the other side could not pay. The A party therefore says to the B party: "You see you are in a corner; you cannot deliver this stock; we cannot pay for it if you could; pay us so much for each share you have agreed to let us have, and we will cancel the contracts." The contracts are then settled at some rate agreed upon, the A party remains in control of the stock, which it has paid for with the proceeds of the cancellation of the contracts. This is a successful corner. The corner "breaks" and is unsuccessful when the cornering party has not money or pluck enough to go on to the end, but begins to settle or sell stock. Then the price falls, the "short" party are able to fulfil their contracts, and the cornerers are themselves cornered.

The corner has produced a wonderful amount of interviewing and of card-publishing, and some of the concomitants have been very amusing. One interviewer admits that, being "a discreet person," he took himself away with some speed from the office of Mr. Watson, the President of Erie, Mr. Watson having given him the mild intimation that if he, the reporter, had his suspicions that his, Mr. Watson's, lawyers, Messrs. S. L. M. Barlow, La Roque & Co., were engaged in an underhand game of deception, he, the reporter, doubtless knew where the office of those gentlemen was, and could go there and make his enquiries. Thereupon followed the withdrawal above-mentioned. Mr. Jay Gould's case is particularly good. A gentleman of the press going to him and announcing that there was to be an interview, was at once put in the position of the interviewed and asked by the simple-minded Gould what the papers were saying. In his relations with Mr. Cornelius Vanderbilt, also, Mr. Gould is amusing. Mr. Vanderbilt having been charged with being one of the confederacy which was "cornering" in company with Mr. Gould, comes out in a card, in which he asseverates that he has not been engaged in any such business, that he has never but once had anything to do with Mr. Gould, and never will have again, "except to defend myself," as he puts it, his instincts as to the nature of Mr. Jay Gould's habits—whether they are graminivorous, for instance, or, on the other hand, predatory and carnivorous—being apparently quite vivid. He adds that since his one transaction with the gentleman in question, "I have always advised all my friends to have nothing to do with him in any business transaction. I came to this conclusion after taking particular notice of his countenance." Mr. Vanderbilt goes on to declare that his name is not used in speculative Wall Street operations by any authority of his, and that he is injured and disgusted by the constant association of his name and Gould's, and that he is so far from a speculator that he does not see Wall Street three times in a twelvemonth. All things considered, this has been a great year. Let any man go over the number of men and things that have gone unto their own place since last November; and observe how virtue now exalts her horn, and say that a national thanksgiving is out of place.

The correspondents have got hold of General Starring's report in the case of Mr. George H. Butler, and a nice report it is. It appears that Butler went out to Alexandria, not, as some charitable people have supposed, because he was fond of drunkenness, loose women, laziness, and change of scene, but for these only incidentally; primarily he was what the gentlemen of his intimacy call being "on the make." He intended to get all the money he could. To this end he no sooner got to Egypt than he dismissed every agent or servant of the consulate, and let it be

understood that the highest bidder—Christian, Turk, Jew, or pagan—could have a place if he had the money. The privilege of being an American or European deputy consul or consular agent in Eastern countries is very highly valued, especially by men who have means and prefer to keep them. Ex-territoriality is an incident of consulship, and the house of a consular agent, while he holds his commission, is a strip of American soil upon which no bastinado can enter—at least if intended for the consular agent. Many elderly gentlemen, then, resorted to Mr. Butler and were accommodated with commissions, for which they paid sums of various sizes; and not only was Mammon unduly worshipped by Mr. Butler, but, as was inevitable, he went on to hate godliness, and made public remarks about our missionaries in Egypt which procured for him the just indignation of those gentlemen, who were in addition not only scandalized as Christians by his conduct, but greatly mortified as American citizens, and who were obliged to protest strongly. For reply, Mr. Butler expressed his desire to have their heads shaven, and them so despatched out of the Orient to America again.

To the first charge Butler in a note replies that he never has done nor would do such things; but General Starring says yes he did, and produces the evidence of the go-betweens who carried the napoleons from the piazza where the consular agents in expectancy used to be waiting to the room where the consul-general used to receive the rouleaux. One of these go-betweens, by the way, had to pay to prevent his being supplanted by the other. As to the well-known dancing-women story, Mr. Butler says that if he is to be condemned, so must the ex-Empress of the French, the Prince and Princess of Wales, Mr. George Wilkes, and many missionaries who have witnessed the time-honored dancing of the Almehs. But General Starring says that the dancing of these women is not "*necessarily* immoral"—the italics being the General's, and perhaps signifying that if it was Mr. George Butler and his party who composed the audience, nothing was done that very closely resembled the Fulton Street prayer-meeting. Moreover, he has a word to say about the purchase by Mr. Butler of some half-grown slave girls from the up-country. Altogether, we are glad that we are to have an attempt at a civil-service reform, and shall try as hard as we can to believe that the system which gives us the Butlers and Strologos and Thomas Murphys is now at an end.

Mr. Henry M. Stanley arrived in this city last week, and on Friday night was received at the Lotos Club by Mr. A. Oakey Hall and others, and distinguished himself by what the *Tribune* of Saturday called "sufficiently pungent and thoroughly frank and natural talk about the English geographers and their treatment of him," and by "the frank and cordial irreverence" ("to the last degree amusing") with which he treated "the Royal Geographers." That is to say, he indulged for the third or fourth time since he was honored by the Royal Geographical Society with its medal for 1873 (anticipated) in uncalled-for and unjustifiable abuse of that body, for imaginary injuries which, were they real, have been fully atoned for—confessedly so by his acceptance of the honor conferred. This continued exhibition of ill-breeding lends fresh interest to the enquiry whether Mr. Stanley is a native American. In England, he seems to have made the impression that he was a Missourian, but in his confidences to American representatives abroad in past years he has, as at Constantinople, represented himself as the son of a New York merchant; or in Crete, as the son of a clergyman on Long Island. Meantime, none of his relatives in this country have ever appeared to claim him, nor have any of his instructors, playmates, or neighbors; while the allegation that he is a Welshman has received confirmation from several quarters. We hope it will not be considered insulting, now that he is on his adopted heath, to ask Mr. Stanley to gratify the reasonable curiosity of his countrymen. If he will take our advice, his response will not be excessively "frank and natural." We think, too, that so far from its being true, as he insinuated at the Lotos Club, that the attentions he received in England were less than they would have been had he not been an American, the reverse is the case; and that he made it exceedingly difficult for the prevailing desire to be polite towards this country to manifest itself in the face of his peculiar behavior.

Mr. Froude has been undergoing in Boston a somewhat ludicrous experience of the difficulties of the mission which he has imposed on himself, of bringing Americans to a right understanding of the nature and causes of Irish discontent. The Irish servants of the gentleman at whose house he was staying refused to remain if Mr. Froude remained, and the host was still further threatened with a combination of the "intelligence offices" against him which would leave him permanently destitute of "help." Under these untoward circumstances, the unhappy Saxon had to beat a retreat and leave the servant-girls mistresses of the situation. The more Mr. Froude lectures, too, the more excited does the Irish population become. He is, we believe, surprised and disappointed at the small amount of support he receives from the native American press and society, and must be naturally chagrined to find how much he has done to feed the flames of Irish Anglophobia, and what a large part he has played in giving Father Burke his crowded and enthusiastic audiences, and in obtaining for that eloquent and poetic gentleman the honor, in the eyes of his countrymen, of being a real historian engaged in exposing a pretender. All this is melancholy. But if Mr. Froude, before announcing his subject, had taken the precaution to make even a very cursory examination of the state of American opinion about Ireland, and of the conditions of social life in the United States, we are sure he would have chosen a different one. We have only to repeat our opinion, that the longer he persists in treating it, the more he will do to defeat his own object, and to give Fenianism and other Irish follies a much needed stimulus.

The most interesting of the October elections was that in Illinois, where, for the first time in that State and in this country, the cumulative system of voting was applied to the election of members of the Legislature. We have already had occasion to remark on the two defects of this system of minority representation—its uncertainty, and the waste of votes which it involves; to which, in the case in hand, we may add another—the small chance given to the lesser minorities, in consequence of each district returning only three representatives. The result shows, however, that there being two only or at most three parties in the field, the fewness of the candidates to be chosen makes the waste practically nothing, and the injustice to feeble minorities also of small account. That is to say, the wants for which the cumulative vote provides, or seeks to provide, are not yet felt, and meanwhile it is of undoubted value as a means of preparing the people for something better. It preserves party organization intact, and has left the dominant party in Illinois with a good working majority. The fact that in every district one Republican and one Democrat were returned, so that the contest was only over the third representative, and that he was in many cases elected on account of his personal merits, is the most gratifying feature of this election. We believe, too, that the lower half of the State sent Republican delegates, and the upper half sent Democratic delegates, for the first time, thus completely destroying the sectional complexion of the two parties.

Whether Bostonians have done well or ill in refusing so largely as they have the aid that was tendered them by other cities, they appear at this writing to think of taking action as regards receiving help from the Legislature and Congress, which we predict but few will a twelvemonth hence consider open to question. They seem in fact to be rather sorry that in the first confusion the extra session of the Legislature was thought of at all. One plan proposed since

the fire was that the city government should ask to be empowered to issue fire bonds in assistance of such owners as had lost buildings and wished to build again at once. Another was, that when Congress met, legislation should be asked for similar to that applied to the relief of Chicago last year, when Congress admitted duty-free all articles except lumber used in the construction of houses. Now both these plans appear to be looked on with growing disfavor. Mayor Medill has been written to for his opinion and experience, and has replied in a letter, in which he says that the issue of fire bonds would, in his judgment, be very detrimental, and the admission of materials duty free would be but little help. Chicago, he says, found the latter measure of almost no advantage. It will be remembered that the lumber interest was too strong in Congress last autumn to include foreign lumber among the articles admitted, and Michigan and Wisconsin succeeded in shutting out from Chicago the Canadian lumber which would have cheapened their own; except in the case of some comparatively unimportant articles, such as plate-glass, Chicago rebuilt herself with almost no assistance from the custom-houses. Boston would not fare better this autumn at Washington than Chicago fared last autumn; and moreover, Boston, building, as she intends, of brick, stone, and iron, has less use for wood than the western city has had. As for the fire bonds, Mayor Medill declares that nothing would have been able to prevent great frauds had the State attempted the policy of lending its credit. Fraudulently asked for in many instances, fraudulently lent in many, and the loan imperfectly secured in very many, loss and disaster would have ensued.

For the rest, the Legislature proceeds but slowly, no Massachusetts Legislature having, to our knowledge, proceeded rapidly of late years. The business, so far, relates mainly to insurance and the destruction of the Old South Church. Feeling is strong on both sides of both these questions. An amusing incident of the latter is the reply to Mr. R. H. Dana of an aged deacon, who was asked how it happened that Trinity Church could be filled each Sunday, and Park Street Church also, if it were true the Old South could not; the Old South was in much the same locality as the other two. To this the deacon made answer that, as he understood it, the Park Street Church has a sensational preacher, and the parson at Trinity is not a married man—which elucidation "created laughter."

It appears as if Gov. Henry C. Warmoth had about reached the end of his tether. Some merchants of Galveston, as the story now goes, recently applied to the Treasury Department for a refunding, in pursuance of a recent act of Congress, of a tax levied upon them in 1867 by Warmoth when he was a special cotton agent. Reference to the books is alleged to have shown that Warmoth, *more suo*, paid over only "a small moiety" of the tax collected. For this, instructions are said to be now out for his prosecution in the United States Court, and heaven may actually have it in mind to vouchsafe us the spectacle of this once eminent Republican statesman and more recent Liberal Reformer and Reconciliationist in striped clothes. We confess that it sometimes strikes us as a curious phenomenon of these cases of exposure that the innate badness of a man's general character is discovered coincidently with the commission of some act of party wickedness. Warmoth, for example, has just been making things extremely hot for Messrs. Kellogg and Casey. Being an audacious fellow, and having in former years been clothed by Republicans with a nearly unlimited power to cheat at the polls, he has all but succeeded in setting aside the Custom-house victory—or alleged victory, and probably real victory—and securing for himself the United States Senatorship. As we have often said, however, in the course of the last six months, the stablest thing in the whirl of Louisiana politics has apparently been the New Orleans Custom-house; and perhaps it has been, on the whole, the best and most decent thing. At any rate, the Custom-house wing of the party, led by Casey and Kellogg and their friends, has now brought before a United States court affidavits which are reported as proving that 6,000 votes of Grant Republicans were rejected in certain precincts by Warmoth's inspectors, and it is professed that 8,000 were driven away in other precincts. Grant, then, will get the electoral vote of Louisiana, and perhaps the Treasury Department will follow up Warmoth. We see, by the bye, that Paymaster Hodge, whose pardon has been severely animadverted upon, was let out, it is now asserted, in order that he might testify against the brokers who invested the funds for him. The release is a certain good to Hodge; the benefit to the Treasury is contingent upon a result that seems rather remote. It may come, however.

M. Thiers has not resigned, but there is no knowing how long this statement will hold true. The opposition to him has gone on strengthening and developing during the week; the superiority of the Assembly to the President, as of creator over creature, has been plainly intimated; the Right is firm in demanding a responsible ministry without Presidential interference on the floor of the house; and the "tension" is felt to be very near its height. If M. Thiers appears to have cried wolf once too often, on the other hand the indifference of the Opposition to his threat of resignation may not impossibly have braced him up to the resolve to stick to his post, and find or fight a *modus vivendi*. The situation is justly deemed grave, but the real gravity of it is that nothing has occurred to show that the peace of the country is not still dependent on the temper, wisdom, and very existence of the vain old man whom it is now sought to displace.

The Prussian Government is reported to have resolved on altering the complexion of the Upper House by the addition of new peers favorable to the Districts Administration Bill. Of this right it freely availed itself in 1854, at the height of the reaction against the Revolution, as a conservative measure. That it now finds the chamber which, in all Continental countries, is the express safeguard of monarchy and the counterpoise of popular suffrage, an obstacle to the free development of the country—and an obstacle so grave that it must be in effect abolished—is one of the most striking incidents of the day. It is even more striking than the similar tendency in England; and it proves that the fears of those who looked for a restriction of liberty in Germany as one of the consequences of the military conquest of France were unfounded, if not unreasonable. Equally unfounded, it appears, were the expectations that the overthrow of Napoleon would at once restore all their liberties to his subjects.

Bismarck and his canting Emperor not long ago gave the world new evidence of their hypocrisy by issuing an edict forbidding the continuance of public gambling in Germany. At Baden-Baden, roulette and rouge-et-noir have come to an end; and in a short time public play throughout the Empire will be done with. The gamblers themselves, except the low sharpers, have had no so very great reason to regret it. Of late years they have not found the tables much to their taste. Play has sadly degenerated, the class of people who frequent the tables not being any longer exclusively rich marquises and marchionesses, princes and princesses, kings and queens, and well-bred rooks, punters, and sharps. Valets, chambermaids, and, alas! even cooks have learnt to stake their wages upon the red or the black, and the honor of the tables, once unsullied even by suspicion, is no longer pure. There is disorder and confusion when large amounts of money change hands. Sometimes players have to get very near the tables to see that their money is not misappropriated. A general row was expected when the tables at Baden were closed, and scenes have frequently occurred there not unlike, in a smaller way, those which happen in Wall and Broad Streets on Black Fridays or when Gould and Drew begin to gamble. According to an English correspondent, the crowd in the Baden rooms on the closing night was very "mixed," and the groom of the chambers nearly broke down in speaking to him of the good old times and the changes.

WHAT NEXT?

THERE will be, of course, during the next three months, a good deal of speculation as to what it is proper to demand of Congress and of the Administration, and as to what Congress and the Administration will do. We presume nobody supposes seriously that the late election was simply a sweeping expression of confidence in the Administration, and a sweeping repudiation of the outcry about reform which led to the Cincinnati Convention. What the election has repudiated is, according to our understanding of it, not the discontent which produced the Convention—for that a very large proportion of the public shared—but the remedy which the Convention provided. We suppose very few indeed now venture to deny that had Mr. Adams, or some others whom we might name, been nominated, the result would have been very different. Victory might, indeed, not have been achieved by the Liberals, but their defeat would have left the Republican managers nothing to boast of and very little they would care to talk about. Or even, if after Greeley's nomination had been made, Mr. Schurz had had the presence of mind to leave the mob to bawl over their folly, and had gone into an adjoining building and promptly rejected the nomination, and made another, and arrayed the Germans in support of it, the Baltimore farce would never have taken place, and both he and Mr. Greeley would be happier and stronger men than they are to-day, and General Grant would feel vastly less secure. In short, what has brought ruin on the Liberal Cause is neither more nor less than the Liberal Cure. The mode of conducting the campaign which the Greeleyites adopted, and the numerous defects of their candidate, and the bad character of much of his following, towards the close revived a good deal of enthusiasm for General Grant in places in which it had long died out; but this will, under the most favorable circumstances, not long survive the election. We venture to predict that by the 1st of March next men will be saying once more about national needs and governmental duties what they were saying on the 1st of March last. In other words, "the Greeley movement" out of the way, reformers must go to work again on the old line and with the old aims.

But we believe that they will go to work with better prospects, and for two reasons: one is, that, as we tried to show three weeks ago, the President will probably be far more disposed to give ear to their plaints, and far less disposed to confide in their enemies, than he was during at least the last two years of his present term. Even if he be no better than he was, he is certainly somewhat wiser; and that he is a man to profit by experience his most embittered opponents do not deny. The one great danger which the country now feels as regards him is that he may for a time take his re-election for a general condonation of his shortcomings, and thus be slower in getting rid of some of the worst of his counsellors than his own fame may require; but that he *will* get rid of them eventually, and soon enough for all practical purposes, we shall continue to hope. If he persists in carrying out the measure of civil-service reform on which he has apparently entered, for instance, there will soon be no place left for the Murphys and Caseys; and with no renomination to provide for, the Mortons and Camerons must decline in influence. They will not be useful men for any object he is now likely to have in view.

The other reason is one which it is difficult to state without seeming to bear hard on Mr. Greeley, after he has frankly confessed his defeat and formally and finally retired from the field. It is that he represented an element in society and in public opinion which, as long as it was really powerful and influential, made the kind of reform which the country now needs—that is, administrative reform—practically unattainable. He won his weight in politics, and built up his paper, in some of the coarsest, rudest work in which a politician could engage, viz., the extirpation from a civilized community of a grossly barbarous and inhuman custom, but one or two degrees above cannibalism in its theory, and not many degrees above it in some of its manifestations. It was work that required earnestness, and persistence, and vehemence, and courage; and though Mr. Greeley was not among the first to begin it, after he began it he did it well. It would be ungracious, and just now very tedious and unnecessary, to enumerate the various qualities of mind and character which that work developed in him. They have been described at considerable length in various newspapers and speeches during the last six months. That he has been among the civilizing influences there is no doubt. He diffused juster conceptions of social relations, greater faith in discussion, greater respect for opinion, and a higher appreciation of elementary education, through many half-barbarous regions. But he has, on the other hand, been the determined foe of nearly everything in education, manners, and policy which is now most needed to make this Government a really effective instrument of national happiness. He has represented more prominently than any other man in the country the theory to which we owe nearly all that is wrong in our politics: the deterioration in the bench and the bar, the decline in the character of public men, and the abuses of the civil service; the contempt for training and experience, and the low appreciation of mind as an instrument of progress; the dislike of discipline, and the readiness to rely on good luck, rather than on vigilance and efficiency, as a safeguard against trouble.

It would be unfair and untrue to say that Mr. Greeley has not declaimed vigorously against all concrete abuses of politics and society, but his declamation has done little good, because he has all the while been fostering the spirit which has bred them. He had become before his recent nomination the prophet of a large body, consisting, as we recently pointed out, of elderly men with bees in their bonnets, underdone young men, and of persons of all ages, sizes, and sexes who do not allow their mental processes to be controlled either by the teachings of experience or the rules of reasoning, and who, in all their efforts to do good, are haunted by the notion that there is in morals and in politics something in the nature of a philosopher's stone, or panacea, which a hodman is just as likely to discover as a philosopher, and which, once discovered, would put an end to human ills, and relieve us of the necessity of learning, of accumulating, of comparing and inferring. Almost every one of them has a nostrum of his own; with some it is unbolted flour, with others easy divorce, with others carelessness about their clothes, with others vegetable diet, with others the destruction of colleges, with others an increase in the number of newspapers and lectures, with others a more equal distribution of money, and with others a better time for the lazy and the idle and improvident. All are armed with phrases of greater or less mystery. Some want a "larger life," others a "deeper insight," others a "broader view." We do not say that all these people wished to see Greeley President, but Greeley's spirit was in them. He was to them the harbinger of a state of things in which men would know things without learning them, talk without being questioned or contradicted, and in which states would be ruled by the soft impulses of loving hearts. The war and its results—we need not point out why—enormously stimulated their activity. After the overthrow of slavery, all things seemed to them possible—no dream incapable of realization; and they began to think that the government of the country was almost within their reach, and that the "New Society" could now be founded on American soil, and the long-deferred triumph of the Babes and Sucklings over the Wise Men be at last achieved. Greeley's nomination at Cincinnati was the result of this delusion; it was precipitated by what proved to be a grand mistake—the notion that the farmers and laboring men thought that the great requisite of a statesman was to have worked with his hands, and to be indifferent about bathing and clean linen.

We do not think we exaggerate when we say that the bursting of this bubble marks the beginning of a new era in American politics. It opens up a field to reformers such as they have not had since the belief grew up that, if you sufficiently widened the seat of the sovereignty, the machinery of government would be sure to run well. It offers us a fair prospect of seeing institutions based on the facts of human nature, instead of on dreams and visions. We shall

not be told so frequently as we have been told, when the facts are against a theory, that facts are impious, cynical, and degrading, and ought to be disregarded; that God Almighty has communicated to some popular editor, or lecturer, or preacher the secret of human society; that history, and statistics, and political economy are vanities; and that the affairs of a great community can be properly administered when one of the principal functions of their government is to furnish, like a horse-race, stakes and excitement to a herd of gamblers.

THE PENNSYLVANIA CONSTITUTIONAL CONVENTION.

THE State of Pennsylvania is now adding one to the long list of "Constitutional Conventions." The power of these conventions goes to the very root of our civil rights, and with any other people their sittings would be regarded as a serious and eventful time. With us they come and go, awakening rarely more than torpid interest, causing little discussion, producing less of intelligent research or profound reasoning. Occasionally, as in the New York Convention of 1846, or the Illinois Convention of 1870, a party or a "movement" has some decisive change in view, and proceeds to effect it with something like faith and energy; but, ordinarily, the public mind has come to regard their work as mere experiments. When a State like New York deliberately provides that the foundation of its laws shall be upheaved every twenty years, it is evident that its constitution is deemed merely an experiment, and that there is no great confidence felt as to its success; and when we call to mind the number of the States which compose the Union, and the number of conventions which some of these States have held in the course of the last eighty years, it is plain enough that, with anything like intelligent statesmanship, these experiments should have given us by this time something like perfection in government. That they have not; that the people of to-day are no better satisfied with their methods of government than were the people who framed constitutions at the beginning of this century; and that no man feels as safe in his person, or as secure in his property, as did the majority of Americans at that time, are assertions which few of our readers will quarrel with. Those who believe that mankind has grown better, the means of happiness greater, and that the intelligence and liberality of the public mind have greatly advanced, still confess that in the administration of our State governments we have gained nothing, and that the American portion of mankind was as well governed then, and with quite as scrupulous a regard for all that appertained to their civil and personal rights, as to-day. Undoubtedly, in certain general principles these constitutions have kept pace with the advancing ideas of our civilization, one abolishing slavery, another imprisonment for debt. But in the forms of government, the methods of administration, the practical results which affect the well-being of society, does any one contend that they are more successful than those which they supplanted?

If we turn to these constitutions, past and present, we find one principle, so to speak, running through all their various forms and changes—the constant curtailment of legislative power. Whatever changes may be made in the executive or the judiciary or the forms of government, it is almost always evident that the chief work, and indeed the chief object, of every new convention is to place some fresh restriction upon the representative bodies of the people. It would seem that the representatives of the people, elected annually or biennially or, at most, quadrennially, of all others would have been the last to be restricted. The right of the people to make laws through their lawfully-chosen representatives has been deemed the very essence of constitutional liberty, and yet here we have the people constantly abridging and restricting the power and discretion of their own immediate agents.

It is also astonishing how much of the work of these conventions has been mere legislation—work which in other countries would have been done by the law-making power, without a thought of its involving a change of the organic law, but which our legislatures, through inability or inefficiency or timidity, have left undone. Indeed, it seems as though there had been an unconscious policy in the American mind to elect ordinarily as legislators men incompetent, incapable, untrustworthy, and once in twenty or thirty years to call out those of real character and power to undo much that the others have done, and to effect those things that the others were too weak or ignorant or venal to effect. New York, for instance, needed law reform, and much less of it than England did when Brougham began his crusade. But the State exterminated its courts of equity, and tore up its whole judicial system from the lowest court of record to the highest appellate tribunal by a single act, recklessly instituting an experiment which on the one hand was practically beyond its power of recall, and on the other affected every acre of land and every dollar of property and the rights and liberties of every member of the community. Such gigantic legislation, effected during the brief period of a convention, is not philosophical advancement in the science of government, nor does it receive any sanction from either the experience or common sense of mankind. Our legislatures form, indeed, the weak point of our American system. The fact is seen by many, and must be acknowledged by all. If our law-making power is a failure, where is the failure to end? To make laws and impose taxes through their representatives was the one thing for which our fathers with solemn deliberation entered into the war of the Revolution. Does it not seem as though we have been deliberately trading away that great advantage, as it was supposed to be? Why is it that the American legislation has retrograded, when the legislation of all other constitutional governments has improved?

Turning to the conditions which have been imposed upon American legislation, one that must immediately strike an enquirer is the extraordinary number of legislators. We have, including Congress, the Territories, and the District of Columbia, forty-eight legislatures in the United States. Allowing to these an average of one hundred and twenty-five for both branches, *we have six thousand legislators* as the law-making power of the American people.

Whether such a legislative system can be of high character is the problem. Undoubtedly we have among our millions six thousand men of requisite integrity and capability. But the political duality of the country requires that the number be doubled; to give and maintain high character in our legislatures we need twelve thousand unexceptionable candidates. Even this number might be procured at the outset, and, relatively, in the early days of the country it was forthcoming; but the effect of such a number must be sooner or later to make the positions in popular estimation "cheap."

It should therefore have been the policy of the American people to uphold the dignity of the legislative position by all the means within their power. Unfortunately, the reverse has been the policy, if it can be called a policy. The number, by the multiplication of "towns" and the growth of population, has sometimes been allowed to increase; the tenure of the office has often been shortened; and the "district" system has been introduced. To Pennsylvania these remarks are not altogether applicable; the Senators hold for three years, and the House of Representatives is limited to one hundred members. As to legislative districts, the system in Pennsylvania is singularly mixed, Philadelphia being cut up into eighteen single districts; one of the large counties, Lancaster, sending four members, and in other cases several counties being put together to form a district, which is then represented by two, three, and, in one case, four members. It is to be hoped, therefore, that if the Convention propose changes in the legislative system, they will be changes in the right direction, tending toward the increased dignity of the individual legislator, and that the "single district system," whose pernicious effects were instantly observable in New York and Massachusetts, will receive no favor.

But the cry will doubtless go up from Pennsylvania that holding on to the existing system and trying by some slight means to raise the dignity of the individual legislator, is insufficient; and this is true. The legislatures of Pennsylvania have never stood high in public estimation. They have been commonly associated

with divorces and repudiation, and supposed to be peculiarly under the control of great corporations. They are not well thought of by their own constituents, if we may believe a small part of what is said of them; and the problem the public mind has set itself to work out is not, How shall we make the legislature better? but, How far can we do without the legislature?

The effort to do without legislation has succeeded in no State where it has been attempted. Some of its incidental reforms have been well enough, as the substitution of general laws in the place of special acts and charters; but for the reason that they have been steps toward the simplification of the machinery of government. It is well to reduce the power of legislatures to the simple task of making laws, but there the reduction, of necessity, must cease. We must have laws in the future, and the great object of laws is the repression of evils. How can society expect peace, security, or prosperity if that power is to be deliberately left in unworthy hands?

In Pennsylvania there now seems to be an effort to take from the legislature its power, and of course its discretion, in regard to the local affairs of cities. It is said that the worthless set known as professional politicians now compose the delegation which annually goes up from Philadelphia to Harrisburg, and that there they control the city's interests to their personal profit and advantage. It is argued that local interests should be managed by local authorities, and it is inferred that if this power of evil could be wrested from the legislature, it would probably expire. But if these same politicians can control the caucuses that annually send them to Harrisburg, will they not be able to control other caucuses which will send them to the local board or council that succeeds to the powers of the legislature? In New York, the respectable part of the community have more than once appealed to the legislature for its intervention, and looked to it as the only means of protection against their own municipal authorities. Turn this matter round as we may, it comes back to the necessity of upright, intelligent, responsible law-makers. If we cannot sooner or later secure them—if our American society has not enough of virtue, integrity, and intelligence to choose such, it being already invested with the power, then our American system of government must fail.

To accomplish that result is the end which every conscientious member of the convention should keep in view. There are certain means toward it of which it is hardly necessary to remind our readers, so often have they been discussed in our pages. There is the wearisome frequency of the annual election, keeping up steady employment for bands of trained politicians, and wearing out the patience of that part of the community which has work of its own to attend to. And we may note here that the biennial system is highly spoken of by sound observers where it has been tried. Then there is the fearful multiplicity of elective offices. And it must be remembered that the great host of office-seekers in this country is largely caused by the fact that our short tenures keep these offices substantially always vacant. Not till the tenure of all offices except the chief executive and legislative is during good behavior, will this evil be removed. It is idle to hold before men the chance of filling an office, and then expect them not to seek it. And it makes little difference whether the offices are filled by election or appointment, so long as they are always open, inviting applicants. We may next note the reform of city, county, or village corporations, by treating them as corporations having the care and management of certain property held for the common good, and treating those who contribute to it, *i.e.*, the taxpayers, as the stockholders. Lastly, there is minority representation, and such a system as will enable men to concentrate their votes upon the most deserving candidates.

The executive branch of the government, we think, will receive little attention except in the matter of making one officer elective by the people. As to the judiciary, it is elective, but the term of the judges of the Supreme Court is for fifteen years, and they command the respect of the people. The judicial system of Pennsylvania is remarkably simple, and, when compared with that of New York, it must cause surprise that so few judges and courts can dispose of the litigation of so large a manufacturing and mining community. The most practicable reform likely to be accomplished is to lengthen the term of office of all the judges, and especially those of the inferior courts. We trust it will be borne in mind that any judicial system which will bring the most eminent lawyers to the bench cannot be very far from a good one.

THE FATE OF AN HISTORIC EDIFICE.

"But yet the pity of it, Iago!—O, Iago, the pity of it, Iago!"—*Othello*, IV. 1.

OUR country is not rich in historic buildings around which cluster our few traditions. Of those we have, the work of preserving an unequal proportion rests with the inhabitants of a single city, and that city, it is almost unnecessary to add, is Boston. Almost the first enquiry made, when the news of the great fire spread over the country, concerned the fate of these famous edifices, and the expression of relief and gratitude became universal when it was known that all of them were spared. The fire stopped at the threshold of the Old South Church. The explosions of gunpowder had destroyed its windows, but walls and belfry and spire stood intact. Scarcely, however, have the press of other cities found time to congratulate their elder sister that her great loss included nothing beyond the power of money to replace, when it is formally announced that those most immediately concerned by no means regard this as matter for felicitation. The single fault they have to find with the fire is, that having gone so far, it did not go one step further, and include their most venerated church in the long list of its victims. Having failed to do so, they now propose to complete its unfinished work, and level one more historic monument to the ground.

That such an act of sacrilege and breach of trust to the whole American people should be thought of, much less actually perpetrated, reflects no credit on the Bostonians of to-day. The Old South is unquestionably the oldest and most venerated church in their city; if not, indeed, in all America. Few strangers from the newer portions of the country visit the old town without pausing amid the throng of Washington Street to read the inscription on the unpretending belfry—so plain, so solid, so typical of the generation which erected it—which tells in fewest words the history of the church. That history has been part of the history not of Massachusetts and Boston alone, but of the common country.

Built in the year 1729, during the administration of Gov. Burnet, son of the famous bishop and historian of William and Mary's reign, it was within the walls of this church, not less than within those of the Old State House or of Faneuil Hall, that the early spirit of independence found eloquent expression. It was through the pulpit window of this very building, then thronged with British uniforms, that Dr. Joseph Warren made his entrance by a ladder on March 5, 1775, to deliver his oration on the Boston Massacre. Tradition says that while he spoke, an officer, sitting on the pulpit steps before him, significantly amused himself by playing with two musket-balls, tossing them carelessly from hand to hand. The next year saw the sacred building turned into a stable and a riding-school for the British cavalry. More recently, it has been in this church that for many years the legislature and executive of Massachusetts have listened to those election sermons with which, from time immemorial, the government of that State has begun its annual labors.

The best poetry and fiction of America have also freely contributed to the interest which clusters about the building. It was "the knell of midnight from the steeple of the Old South" which Hawthorne tells us mingled with the "dismal strains" of music and the roar of rebel artillery, to the accompaniment of which the weird procession vanished from before the Province House, on the night of "Howe's Masquerade." It was this same bell which was ominously tolling a death as Lady Eleanore Rochcliffe descended at the gate of Gov. Shute's mansion; while it was in a chased silver goblet belonging to "the communion-plate of the Old South Church" that her crazed lover offered the sacramental wine to the wearer of the fatal mantle. Indeed, Bow-bells are not more associated with London, or more familiar to London ears, than the bell of the Old South has been to many generations of Bostonians. It rang out glad peals from its present belfry at the coronation of kings, while Boston was yet the capital of a province; and it rang yet gladder peals for peace in 1783, and again in 1815, and once again in 1865. It tolled sadly for the victims of the Boston Massacre, and for George Washington, and for Abraham Lincoln. For more years than we can now name, "the clock of the Old South has thrown its voice of ages on the breeze, knelling the hourly knell of the Past, crying out far and wide through the multitudinous city, and filling its ears with its reverberating depth of tone."

Under these circumstances we are almost inclined to coincide with its

pew-holders, and to express a sincere regret that the fire did not save the ancient edifice from desecration at their hands. Had it gone down on the night of November 9, it would at least have met an end not unbefitting its great history. As it is, it seems doomed to drag out its final years as a post-office, rented to the United States at the rate of $23,000 a year, or any part thereof, exclusive of taxes. The British officers had better taste. The riding-school was at least more dramatic.

Considering the history of the building, the fire, and all the circumstances of the case, there is, indeed, to persons at a distance, a bathos about the whole thing which is not ludicrous simply because it is sad. Outside of a small Boston circle, it seems scarcely possible that any body of average men and women could take so narrow a view of a matter of such general concernment. Here are some twoscore persons who, by mere accident, find themselves the trustees of an edifice of first-class historical interest. Instead of jealously guarding and preserving it, they are wholly unable to see anything but the inconvenience to themselves and their families of attending religious services in it once a week. With the utmost complacency, and with a tone which shows how wholly they fail to appreciate the attitude they occupy before the wondering gaze of their countrymen, they announce that they have "no veneration for walls, but they do revere Christ, their Lord"; and then they vary this delectable statement by the introduction of some business principles into religion, announcing that "no veneration is due to bricks and mortar, but that the great principle involved is the best care of the society's funds." "Bricks and mortar"! "Society funds"! Undoubtedly the pew-holders of the Old South Church of Boston are most respectable persons, but to dwellers at a distance they do seem a little singular. They evidently belong to that class of New Englanders whom Hawthorne knew so well, and towards whom he felt such an instinctive antipathy—"excellent, but exceedingly matter-of-fact sort of men, sturdily accustomed to take what is called the common-sense view of all matters that come under their consideration. With hearts about as tender as other people's, they have heads as hard and impenetrable, and, therefore, perhaps as empty, as one of those iron pots which it may be a part of their business to sell."

One can imagine a committee of these worthy persons visiting Europe, with a view, perhaps, to picking up some hints on church architecture wherewith to grace the edifice which is to replace the Old South. With what indignant, outspoken contempt they would regard an effete race which allowed such piles of "brick and mortar" as St. Paul's Cathedral or Westminster Abbey to occupy two of the best business sites in London—sites, too, either of which would command a rental much exceeding $23,000, and taxes, per annum. Their location also is wholly undesirable for places of worship; they are miles away from Tyburnia, or May Fair, or the West End; indeed, in the eyes of our committee their longer preservation would seem such an unjustifiable use of "the funds of the society" that they could not but shake the dust of London from their feet and go over to Paris. There the towers of St. Jaques and Notre Dame would renew their disgust; yet even the Commune spared to France its old religious sanctuaries; moved thereto, perhaps, by what one of the committee characterized at home as "a mere reminiscence." Doubtless, however, Rome would occasion our friends the severest shock of all. We can easily imagine these worthy, matter-of-fact gentlemen standing in the Coliseum and measuring with their eyes that useless quarry of building materials. They would see in it a vast space, adapted only for games of the circus or the conflicts of gladiators, but now preserved as a church. It is wholly unfit for purposes of worship; it is far removed from the residence quarters of the city; while, so far as circuses are concerned, it is never utilized for entertainments of that nature; and, as to gladiatorial conflicts, they are "a mere reminiscence" and wholly repugnant to the spirit of modern improvement. Yet to the great detriment "of the funds of the society," no doubt, this useless pile of "brick and mortar" is preserved, and even venerated. Truly, the peoples of Europe are indeed benighted, but *nous avons changé tout cela.*

It is absurd to be angry with men like those into whose hands the Old South has unfortunately passed. They act according to their lights, and it was long ago conceded that against stupidity the gods themselves contend in vain. The power is in this case theirs, and doubtless they will exercise it. They will, out of the market value of the Old South, construct a more comfortable and showy edifice in the fashionable quarter of Boston, and there, doubtless, they will hereafter worship after the fashion of their creed, hugging themselves in the fond belief that in trampling on "a sentiment" they have advanced the cause of religion. With them it would be useless to reason. An evil chance placed in their hands one of the very few buildings of which America can boast as enjoying almost a world-wide fame, and they conscientiously destroyed it. Of one thing they may rest assured—the next generation of Bostonians will not forget them, for their work can never be undone.

This proceeding, however, is not likely to stop with the Old South. Undoubtedly the convenient principle that mere "sentiments" of "veneration" must not be allowed to protect piles of "brick and mortar" will find other subjects of application. In Boston, as we have said, it so happens that an unusual proportion of our more famous edifices are found. Three of these we have already alluded to—the Old South, the Old State-House, so famous in early Revolutionary history, and, lastly, Faneuil Hall, the "Cradle of Liberty." Of these the Old South is doomed, and the Old State-House has long been threatened. The one represents too much money in the shape of a corner lot peculiarly available for business purposes, the other stands in the way of certain public improvements. Temple Bar has, it is true, stood in their way somewhat longer, but, fortunately for "sentiment," Temple Bar is not in Boston. Both of the other quaint memorials of bygone times and famous deeds of famous men will soon be gone beyond recovery; how long will Faneuil Hall outlast them? It unfortunately occupies a space which might be far better utilized as a public square—a most needed convenience in that part of Boston, for the Hall is now very much in the way of market wagons, the number of which is said to be constantly increasing; it is, besides, even more inconveniently placed than the Old South for those purposes of public meeting for which it was constructed. The argument is very strong, and will doubtless commend itself to the pew-holders of the Old South. Having finally disposed of one pile of "brick and mortar" around which, in all minds but their own, an unusual degree of "veneration" and "sentiment" had unfortunately gathered, they can next turn their destroying energies to another, though hardly more famous structure.

MADAME RECAMIER.

PARIS, November 8, 1872.

A NIECE of Madame Récamier, the widow of M. Charles Lenormant, of the French Institute, published in 1859 two volumes, under the title of "Memoirs and Correspondence, from the Papers of Madame Récamier." She has just added a volume to these valuable memoirs, under the name of "Madame Récamier—The Friends of her Youth." No person has played so interesting a part in French society as this lady, whose name is intimately connected with the history of the French Revolution, of the Empire, and of the Restoration. When she was getting very old, though she preserved her beauty nearly till the end, she once said to a friend who complimented her on the preservation of her charms: "Alas! you cannot deceive me. The little chimney-sweeps don't turn their heads any more in the streets." It is not so with her memory. Even now, amidst the excitement of politics, in the confusion of so many momentous events, the name of Madame Récamier still attracts the attention of the public. She is, so to speak, a representative person, and she represents a thing which is by degrees becoming a thing of the past—the refined sociability for which France was once so famous.

From the days of her youth to the days of 1848, Madame Récamier was the queen of what the French call a *salon.* She was the first after the stormy days of the Revolution to open an elegant asylum to all those who had escaped its fury, as well as to some of the most distinguished personages whom the Revolution had brought to light. The *parvenus*, the sons of '89, the generals who had won great victories for France, the representatives of the new principles of equality, mixed in her house with the members of the old aristocracy whom the fury of the Terrorists had spared or forgotten, who came back from the emigration, or who had concealed themselves in the ranks of the army. Madame Récamier could probably not have played under the ancien régime the rôle which she assumed; she had no title, no rank; her husband was a rich banker, and the financiers were not much thought of before the Revolution. The noblemen, as we see in the comedies and memoirs of the time, were quite willing to associate with them, to receive their sumptuous hospitality; but their wives did not see the wives of the *fermiers généraux.* Madame Récamier was not, as Madame de Sévigné, Madame Dudeffant, and so many others, a person of brilliant wit; her letters are somewhat dull; they are characterized by prudence and discretion more than by any positive qualities; but she was imbued with good sense and caution, and she seems to have understood at once, more by instinct than by any chain of reasoning, the very peculiar characters of French society as it emerged from the storms of the Revolution. She perceived very well that the power of an aristocracy, long after it has been politically destroyed, continues to exist as a power of imagination. She not only felt a natural sympathy for the victims of the Revolution; she knew that, socially speaking, the members of the ancient aristocracy were still, or would soon be-

come again, a great power in France. It would be a vulgar accusation to accuse her of any servility towards birth or rank; she simply recognized the influence resulting from centuries of the highest culture then known in Europe and recognized by all foreign nations. But with all her advantages, her fortune, her extraordinary and almost divine beauty (the two pictures by David, one of which is at the Louvre, give me more the impression of a Greek goddess than of an ordinary woman), she would probably never have become the intimate friend of such men as Mathieu de Montmorency, of the Duc de Laval, and others, if the French Revolution had not loosened all the old social ties. Madame Récamier felt herself that she owed something to the Revolution; she did not compose her *salon* exclusively of members of the old aristocracy; she was careful to mix them with the Bonapartes, the Bernadottes, the new generals and marshals, the statesmen of the new times. Her house was a sort of neutral ground where all parties could meet; it required no small dexterity to avoid all collisions, to harmonize so many elements; but Madame Récamier was eminently fit for such a work. She had no strong political passions, she was not a politician herself; and, when all rules had become uncertain, she only strictly adhered to the rules of friendship and of courtesy; in times when all loyalty was extinct, she was a loyal friend. Her fidelity to her allies was a sort of religion. When force rules the world, man is thrown back, as it were, on the most simple and natural elements of society. There was, no doubt, some coquetry (I use the word in the French sense) in the conduct of Madame Récamier towards her friends. She took pride in preserving in her court, as devoted, humble, constant friends, all those who, one after another, attracted by her charms, had first been ardent and suppliant lovers. She was herself a vestal at a time when the uncertainty of life, the dangers of the future, the traditions of the court of Louis XV. and of the end of the eighteenth century, which had survived even the horrors of the Terror, allowed much liberty and even license. She inspired love and enjoyed her power, but she never felt love herself; at least, she never succumbed to it.

The history of her marriage is well known. The passion of love which was stifled in her, under circumstances which need not be dwelt upon, was transformed in her into a sort of passionate friendship. She inspired the most constant and the warmest attachments, and all her life was spent in efforts to satisfy her friends, whether young or old, illustrious or obscure. For it must be said that if she required from her followers a certain sort of moral refinement, of mental culture, she was really indifferent to power, fortune, even glory. She treated poor Ballanche, young Ampère, young Loménie, with just as much consideration as Chateaubriand or Prince Augustus of Prussia, who offered her his hand. She had at an early age seen all the vanity of human affairs; she had learned to hate and fear the modern Cæsar when he was at the height of his glory; she had seen the sons of the oldest families exiled or destitute; she had patronized queens and kings. Madame Bernadotte, a very humble woman and very timid, was glad to have a place in her salon when her husband was already a king. Madame Récamier had known familiarly Murat and Queen Hortense; and she had learned to appreciate men not by the rule of success but by the delicate rules of morality. The manners of French society were in her time very different from what they have become since. Money was not the standard either of the old noblesse or of the parvenus of the Empire. Many ancient families had been completely ruined; young generals who were poor to-day might return to-morrow enriched by an Imperial dotation. Society was, in many respects, less vulgar. Very few people would consent to live now in the rooms which Madame Récamier occupied in the Abbaye-aux-Bois. Gentlemen had not yet made themselves the slaves of valets. They could arrive on foot, with umbrellas, in cabs; they entered, without being announced, rooms which were lighted only with a lamp. There were no refreshments but a few g'asses of syrup. The men left without noise or any formal adieu, taking what is still called in England "French leave." The ladies were generally in the simplest toilettes. Madame Récamier during all her life never wore anything but white muslin gowns. There was no coarse screaming at the doors and in the ante-chambers, "The Duchess of X's carriage stops the way," and so on. Even in the old Faubourg St. Germain, the end of an evening in one of the hotels of the nobility resembles now somewhat the sortie from the opera. There are very few *salons* now left—places where a lady receives sometimes once a week, sometimes even every night, all those among her friends who choose to come in for an hour, to bring the news of the day, to discuss the last book, the last piece, the last speech.

Such a constant and easy intercourse used in old days to become with years real friendship. It is very curious in Madame Récamier's letters, and in those of her friends, to notice that the *habitués* of her *salon* called themselves by their Christian names. She was for all of them Juliette, the incomparable Juliette; Mathieu de Montmorency was Mathieu, and so on. You would no longer find now so much liberty, so much intimacy. A *salon* in those days was in fact a small club of gentlemen and ladies; a club where all the members knew each other so well that they never attempted to play any part, any rôle, to deceive each other. They paid their contribution in conversation, in wit, in friendly offices. Most gentlemen belonged to several *salons*, as they do now to various clubs; but there was, of course, one where they felt most at home. It has been said of the *salon* what is said now of the club, that it destroys the spirit which builds up the family home. Madame de Chateaubriand very seldom went to Madame Récamier's, while the Marquis was to be found every night by the side of the adored Juliette. Our modern routs and balls, expensive, gorgeous, and, in a certain sense, vulgar as they are, have at least, it is said, this advantage, that they do not so much separate husbands and wives. I have met for years, in some old-fashioned houses, gentlemen whose wives I have never seen; many a man even now goes every night from place to place paying his court to the Duchess —— and the Countess ——, while his wife leads the life of a Roman matron. Do not infer from this contrast that these husbands are bad husbands; their wives are often perfectly contented with their lot. The world can do nothing for them, while it can promote the fortunes of their husbands, whether they are engaged in literary or in political work. It is a very common thing in France to see such men as Taine and About without their wives, though they are very good husbands. Renan, who is a reformer, would not, on the contrary, go often where he would be asked alone. It is much to the credit of M. Thiers that he always carries in his orbit not only Madame Thiers, but her unmarried sister, Mademoiselle Dosne, who has always lived with him.

It is very difficult, I suppose, in all countries to perceive exactly the shades of social life. In France, it is perhaps more difficult than anywhere else, on account of the changes made by so many revolutions. Madame Récamier represents a society which is now nearly extinct. I have known intimately some of her friends, and they certainly were not only remarkable by the refinement of their manners and by their high culture, but by a certain sort of moral elevation, which I am afraid is becoming more rare. We cannot help smiling at some expressions of sentimentality which we find in the letters of Madame Récamier's friends; this perpetual looking in each other's hearts is somewhat tedious and ridiculous, as well as these effusions which offend our modern shyness; but one may well envy the nobility of thought which is felt in the pages of the "Mémoires d'Outre-Tombe," in the last works of Ampère, in the correspondence of Madame de Staël, in all the pages which were written for the eyes of the "incomparable Juliette." One may envy also the delightful simplicity, the easy intercourse, the frugal elegance, and, if I may say so, the *ideal* worldliness of the Abbaye-aux-Bois. Whatever may have been the defects of this extraordinary circle, those who were received in it only paid their tribute to beauty and to genius; they had some of the qualities if they had some of the affectations of the Hôtel de Rambouillet; they represented the better part of the French nation—the least frivolous, though they were not austere, the most independent of the rulers of the day, of the tyranny of wealth, of political dictatorship; they formed a sort of social oasis, peaceful, serene, enchanted by the presence of one who was the most wonderful type of beauty and of purity, placed above all parties, above all classes, in the realm of mind.

Correspondence.

MR. CAMERON AND THE PHILADELPHIA POSTMASTERSHIP.

TO THE EDITOR OF THE NATION:

SIR: The Washington despatches and of om of the stronger Administration papers, together with the editorial comments thereon, in speaking of the visit of Pennsylvania politicians to the capital to "see" the President about the postmastership of this city, either knowingly or not mislead the public in conveying the impression that Gen. Grant appointed Mr. Fairman *against* the wish and advice of Senator Cameron. I happen to know that quite the contrary is the case. Mr. F., and no one else, was from the very first Mr. Cameron's choice.

F. was some years ago selected by Postmaster Bingham for secretary of his private office on account of his quickness of penmanship and general "smartness." He has proved so valuable in a number of ways to the postmaster and to his brother James, who is cashier of the office, that, when Gen. Bingham, last October, was elected to a lucrative municipal office, F., by his advice and strong assistance, and backed by Cameron, at once became the most prominent candidate for the postmastership.

In what connection Gen. Bingham and his brother James stand to Senator Cameron you can easily ascertain from any one at all familiar with Philadelphia and Pennsylvania politics.

Mr. Fairman's character may be as good as it should be. I for one have

no reason to say that it is not; and it may no doubt be said that it was eminently fit and proper that one of the subordinates of the office should be promoted to its head. What I wish to protest against is the assertion that the appointment of Mr. Fairman furnishes any proof that President Grant has sent the Camerons to the right-about. Very respectfully yours,

ALTKLUG.

PHILADELPHIA, November 22, 1872.

THE SUPPORTERS OF WOODHULL & CLAFLIN'S WEEKLY.

TO THE EDITOR OF THE NATION:

SIR: I have just finished the perusal of *Woodhull & Claflin's Weekly*, on which have been based the prosecutions now pending for the dissemination of obscene literature. As this is the first time that I have had an opportunity of weighing for myself the utterances of these missionaries of Cotytto, you can understand what a revelation this apotheosis of nastiness has been to me.

The surprise has been heightened by observing the class of advertising patrons who are not ashamed to support the *Weekly* by contributing to it their advertisements. Ought Messrs. J. J. Cisco & Son, Henry Clews & Co., Fisk & Hatch, A. Belmont & Co., Clark, Dodge & Co., Geo. Opdyke & Co., and others of the same high standing, to be allowed to escape their share of responsibility for the maintenance of such a moral lazar-house?

Very respectfully, etc., L.

PHILADELPHIA, November 18, 1872.

[There undoubtedly was a very culpable and reprehensible easiness on the part of many men and women who should have been above it in tolerating these creatures; but apparently "L." is not fully informed as to all the circumstances of the case. Woodhull & Claflin began by publishing a newspaper in which they did indeed promulgate doctrines which, as everybody should have seen, embodied a theory upon which, however it may be with saints and angels, ordinary men and women cannot act without unduly encouraging the brute-beast part of their natures, and which will be openly acted upon when society goes to pieces, and not before. But they published this sheet of theirs ostensibly to "discuss social problems"; to make philosophical remarks about "the reform"; to establish a "pantarchy;" to bring into use Mr. Stephen Pearl Andrews's "Alwato" or universal language; and as liberty of discussion is dear to the American people, this dirty crime against liberty was carelessly allowed to be committed in liberty's name. Respectable men who did not well know what this precious pair were doing, who were wheedled or bored into subscribing and advertising, had a notion that the paper was wild-headed and unpractical, but that it was only doing some of the regular "long-haired" sort of nonsense, and so permitted it to go on publishing their advertisements—very wrongly permitted it, we think, but not exactly as "L." supposes. Again, the *Weekly*, as a philosophic and pantarchical journal, with its "social discussions" and Stephen Pearl Andrewsisms, was dead, we may say, from the beginning; it never paid for itself, and by-and-by Woodhull, Claflin, and Blood had to discontinue its publication. The edition of which "L." has seen a copy was *sui generis*. Being in pressing need of some social reform, as they say, they resuscitated their paper after it had been some months dead, and published one number which was of an open and shameless rascality never before ventured upon by them. The advertisements which it contained were probably there either in consequence of unfulfilled contracts, or were downright "padding," wholly unauthorized by the advertisers.—ED. NATION.]

Notes.

ESTES & LAURIAT, Boston, announce a new edition of Murphy's "Critical Commentary on Genesis"; a "Hand-book of Hardy Trees, Shrubs, and Herbaceous Plants," by W. B. Helmsley; and "Our Common Insects," by Dr. A. S Packard, jr.——Specimen order-books of Mansell & Co.'s photographs of objects in the British Museum, to which we alluded a few weeks ago (*Nation*, No. 378), may now be seen at E. & H. T. Anthony & Co.'s establishment, No. 591 Broadway, or catalogues will be sent on application, stating price per set and singly, mounted or unmounted. Classic, Egyptian, Assyrian, and prehistoric art and industry are here vividly depicted, from the best remains. The prices are moderate, and within the means of all who purchase pictures for instruction or household adornment.

—It has been suggested to us that we misapprehended the meaning of the New York correspondent of the *Messager de Paris* in regard to the choice of Presidents by "the Senate and House of Representatives in convention"; and that he referred to the Congressional caucuses which, prior to 1825, regularly *nominated* the candidates afterwards voted upon by the people. Referring again to his language, we judge that this was probably his meaning, though he speaks of such nominations as having been the *right* of Congress, and would, we think, leave the impression on the minds of his French readers that that body elected as well as nominated the President. He is certainly entitled to the benefit of the doubt. We must add that we overlooked Jefferson's election, for his first term, by the House of Representatives, in circumstances somewhat different from those of John Quincy Adams's.

—"Sketch of Anti-Slavery Opinions before the Year 1800" is the title of a learned and interesting essay by Mr. William F. Poole, of the Cincinnati Public Library, published in the Cincinnati *Gazette* of November 18. Its merits are such as to make it highly desirable that it should be printed in book form for permanent preservation. The sketch opens with a curious description of Washington's library, now in the possession of the Boston Athenæum (of which Mr. Poole was formerly librarian), and in particular of a rare pamphlet comprised in it, being, to give the title in full, "An Oration upon the Moral and Political Evil of Slavery, delivered at a public meeting of the Maryland Society for Promoting the Abolition of Slavery and the Relief of Free Negroes and Others unlawfully held in Bondage. Baltimore, July 4, 1791. By George Buchanan, M.D., member of the American Philosophical Society. Baltimore: Printed by Philip Edwards, 1793" (20 pp. 8vo). Copious extracts from this very plain-spoken discourse are followed by an enquiry into who the orator was, and who were some of the obscurer negroes alluded to by him as having shown remarkable mental ability. This leads naturally to Jefferson's opinion of the capacity of the colored race as expressed in his "Notes on Virginia," which, Mr. Poole thinks, would have been materially modified (perhaps we should say strengthened) had Jefferson been aware of the geniuses instanced by Dr. Buchanan. In 1785, writing to Dr. Richard Price, of London, he used this remarkable language:

"Southward of the Chesapeake your book will find but few readers concurring with it in sentiment on the subject of slavery. From the mouth to the head of the Chesapeake the bulk of the people will approve its theory. Northward of the Chesapeake you may find, here and there, an opponent to your doctrine, as you find, here and there, a robber and murderer. Emancipation is put in such a train that in a few years there will be no slaves northward of Maryland. In Maryland, I do not see such a disposition to begin the redress of this enormity as in Virginia. These [the inhabitants of Virginia] have sucked in the principles of liberty, as it were, with their mothers' milk, and it is to these I look with anxiety to turn the fate of this question."

—Mr. Poole goes on to note the progress in anti-slavery sentiment from the date of this letter to the delivery of Dr. Buchanan's oration; and, using, we presume, as his main authority Mr. Edward Needles's "Historical Memoir of the Pennsylvania Society for Promoting the Abolition of Slavery" (Philadelphia, 1848), describes the formation of similar organizations in New York (1785), Rhode Island (1789, incorporated 1790), Maryland (1789), Connecticut (1790), Virginia (1791), New Jersey and Delaware (1792), and quotes from the memorials which they from time to time addressed to Congress. We may remark here that in explaining why Massachusetts, in which slavery had already ceased rather than been abolished, had no abolition society like Rhode Island and Connecticut, he omits to mention the fact that among the incorporators of the "Providence Society" 68 were persons belonging in Massachusetts (in Rhode Island 117, in Connecticut 3, in Vermont 1), making it really a New England Anti-Slavery and Freedman's Aid Society. Mr. Poole next argues, from the insistance of South Carolina and Georgia on the insertion of the pro-slavery compromises in the Constitution, that "the popular idea that the political anti-slavery agitation was forced upon the South by the North, and especially by Massachusetts, is not a correct one," and shows that the South again took the lead "in the second period of excited controversy, from 1821 to 1830." He states, on the authority of Benjamin Lundy, that "in 1827 there were 130 abolition societies in the United States," of which 106 were in the slaveholding States (many the result of the personal labors of Lundy himself) and only four in New England and New York. It may be questioned how widespread an anti-slavery sentiment is implied in the number and respectability of the anti-slavery societies formed prior to 1800. At the very time when Jefferson was writing so hopefully of Virginia's impulse towards emancipation, John Wesley's humane Bishop Coke was preaching in that State:

"When this obnoxious subject [slavery] was omitted, he was caressed

and received with all the veneration and respect which a delegate from heaven could claim; but on other occasions, when this fatal chord was touched, it instantly vibrated discord through the congregation, and applause gave place to execrations. In some places the members of the society were disgusted, and many withdrew. While he was preaching in a barn in Virginia, on Sunday, the subject was introduced; much provocation was felt by some of the congregation, who withdrew and prepared to offer him personal violence, stimulated by a fashionable lady, who offered the mob fifty pounds in case they would seize the preacher and give him one hundred lashes. On leaving the house, he was instantly surrounded by a ferocious party, who were proceeding to put their threats into execution, but he was rescued by a magistrate and escaped in safety" (Needles, p. 19).

It would also be pertinent to enquire how far the Southern anti-slavery societies of that early period were in the hands of Quakers. Mr. Poole mentions the "Pennsylvania Society" as the first formed *outside* of that denomination; but Needles expressly says (p. 16): "The members of this little association were mostly or perhaps all of them members of the religious Society of Friends." The only names given by Mr. Poole in connection with the Maryland Society would justify a similar inference as to its membership.

—Such a conflagration as that which so lately destroyed a whole quarter of Boston is sure to touch every inhabitant of a great city directly or indirectly. All must wince, for the withers of none are unwrung. One man has lost a store and the goods which it contained; another, till now a millionaire, finds himself *reduced to affluence*, and feels as if he were beggared; another, though his property has escaped, suffers in sympathy with his friends, whose losses he feels as his own. Some there are who have lost works of art, more or less valuable in themselves, but, when least so, often most so to the owner, as connected with tender memories of which they are the visible signs. In one case which we have more especially in mind, a loss of this kind, resulting from the Boston fire, has fallen heavily on us all, as it involves the crippling of a project very dear to the originator, which, had it been carried out, would have been a source of great pleasure and interest to the public. We allude to the destruction of the collection of armor made by the late Col. T. B. Lawrence, and bequeathed to the Boston Athenæum. It was to have been eventually arranged in the new building of the Museum of Fine Arts, where a room was to have been fitted up and decorated to receive it by Mrs. Lawrence as a memorial to her husband. When the majolica, carved furniture, and Oriental armor given by Mrs. Lawrence for this purpose were removed to the Athenæum last spring from the now destroyed store in Milk Street, there was a question whether the mediæval armor should not also be taken. Unfortunately, though as it seemed at the time wisely, it was decided in the negative, and this both for want of room at the Athenæum and because there was at the moment no competent person on hand to clean and mount the suits. Bound together in an upright position, at the end of a long dimly lighted hall in the upper story of a granite building, these cast-off shells of the brave old knights were, therefore, left to meet their doom on the 9th of November. Helmet and shield and breastplate availed naught against the devouring flames, which speedily reduced the building and its contents to a blackened and mouldering heap. The Lawrence room was to have been decorated in harmony with its contents. A suit of armor complete for man and horse would have been mounted like those in the Musée d'Artillerie at Paris, or those in the splendid armory at Turin, and placed in a conspicuous position. The other suits would have been ranged at intervals along the walls, with trophies hanging above them; and the mediæval cabinets, majolica, carved chests, and panels would have been so disposed as to vary and enrich the general effect. It is to be hoped that, though it is no longer possible to carry out this scheme as originally intended, it will not be altogether abandoned. Every day we hear of other artistic losses of a painful character. One gentleman has lost his library with 10,000 engravings, mostly proof impressions, choicely bound, together with some interesting paintings and old furniture. Another has lost a number of family portraits by Copley. Another, a portfolio of original drawings by Copley, with pictures and carved furniture, the accumulation of years. Several eminent Boston artists, such as Hunt, Wild, Young, and Bellows, have lost all their pictures and sketches, and must begin life over again with such courage as they can muster. In short, artistic Boston as well as business Boston is under a heavy cloud, and, although every one bears his troubles in a manly spirit, all hearts are heavy.

—Linguist, or at least speaker of many tongues and dialects, economist, poet, politician, logician, political philosopher or philosophizing politician, editor, traveller, hymn-writer, commissioner for the negotiation of commercial treaties, philanthropist, benefactor of the Manxmen and Maltese, who both gave him services of plate as well as official thanks, an expert in currency, ambassador, Governor of Hong-Kong, minister plenipotentiary of the Hawaiian crown to all the countries of Europe, ambassador to Siam, translator of Bohemian literature, of Russian, of Magyar, of Spanish, of Portuguese, of Polish, of Servian, of Batavian; author of treatises on decimal coinage, on the people of Siam, on the statistics of Tuscany, on good manners for children and youth, on the commercial relations between Great Britain and France—the late Sir John Bowring, just dead at the age of eighty, was assuredly a very remarkable man, a man to be wondered at. He was born near Exeter on the 17th of October, 1792, and was of an ancient family. That he was of any university we are not informed; but whether he was or not, his multifarious acquisitions of all sorts and descriptions and his indefatigable application and activity would speedily have covered out of sight any results which so acquisitive a brain might have secured from an academic education. It happened to him, also, to fall early under the complete influence of Jeremy Bentham (of whose works he was afterwards the editor), and at whose feet he sat beside Mr. John Stuart Mill, and our own half-forgotten countryman, John Neal of Portland, who, by the bye, we suspect of entertaining exceedingly hearty and downright hatred and contempt for much that was in the character of both these gentlemen. "Cunning, timid, politic, without originality, wholly destitute of imagination," are some of the terms which our valorous and enthusiastic countryman has applied to Mr. Mill, and, if we recollect, Bowring fares very much in the same way. He has, however, been a useful as well as a busy man in his day, though probably his best chance of being remembered is that afforded him by some of the hymns of his writing or translating, which are sung "in all the churches," and which, doubtless, will echo in many a church next Sunday from Texas to Labrador. For example, the hymn beginning—

> "Watchman, tell us of the night,
> What its signs of promise are"—

will probably be sung by many a country choir who will know nothing of the Benthamite decimal currency writer, and ambassador to Siam, and benefactor of the Manx.

DE TOCQUEVILLE'S CONVERSATIONS.*

I.

ON the 30th November, 1851, Mr. Senior wrote to De Tocqueville as follows:

"We are all looking anxiously across the Channel. Your conversations have so much prepared me for the events which have passed since May, that I seem to be looking at a play which I have read in manuscript. You did not, however, reveal the *dénouement*, but your fears as to the result of an alliance between the President and the mob have often occurred to me."

Two days after this letter was written the *coup d'état* provided the *dénouement* of the drama, and justified De Tocqueville's predictions. On the 24th of February, 1848, De Tocqueville addressed the Chamber of Deputies:

"It is supposed," said he, "that there is no danger because there is no collision. It is said that as there is no actual disturbance of the surface of society, revolution is far off. Gentlemen, allow me to tell you that I believe you deceive yourselves. Without doubt, disorder does not break out in overt acts, but it has sunk deeply into the minds of the people. Look at what is passing in the breasts of the working-classes, as yet, I own, tranquil. It is true that they are not now inflamed by purely political passions in the same degree as formerly; but do you not observe that their passions from political have become social? Do you not see gradually pervading them opinions and ideas whose object is not merely to overthrow a law, a ministry, or even a dynasty, but society itself? . . . Do you not believe that when such opinions take root, till they have become general, when they penetrate deeply into the masses, they must lead sooner or later—I know not when, I know not how, but that sooner or later they must lead to the most formidable revolution? Such is my deep conviction. I believe that at the present moment we are slumbering on a volcano. Of this I am thoroughly convinced."

The speaker's audience thought him an alarmist, but before thirty days had passed the volcano burst forth, the Chamber of Deputies was destroyed, society was thrown into the throes of a revolution, and De Tocqueville was felt by friends and foes alike to be a political prophet. His conversations even more than his books show that he possessed a kind of prophetical foresight. They suggest two enquiries. What, in the first place, was the origin and nature of this foresight? what, in the second, were the limits by which it was bounded? Both questions have an individual and a general interest, for the answer to them throws light both on the character of the greatest historical writer whom this century has produced, and on the problem how far analysis of the past will enable men to predict the future.

The source of De Tocqueville's foresight is the same as the origin of his greatness as a theorist. In both cases, his strength lies in an unrivalled capacity for critical analysis. This becomes apparent the moment you attempt to discover the distinguishing trait of his historical works. He is not exactly

* "Correspondence and Conversations of Alexis de Tocqueville with W. Nassau Senior." London: H. S. King & Co.

a great historian, for he certainly neither possessed nor supposed himself to possess the gift of painting past scenes which distinguishes such writers as Macaulay. He is not, again, one of those men who, like Sir Cornewall Lewis, exhibit a peculiar talent for weighing historical evidence, nor can it be said that De Tocqueville's knowledge, even of the portions of history which he specially studied, was anything in itself extraordinary. His acquaintance with general history does not appear to have been very large. He was well read in the histories of France and England, and towards the end of his life was accumulating stores of information about the state of French society before the Revolution. Yet it may be suspected that even on his special topics he might to the last, as far as mere knowledge of facts went, have been surpassed by German professors whose names will never be known beyond the circle of their own universities. But if De Tocqueville was in some points of view not a great historian, he was a great critic of history, and he himself exactly understood his own powers. He did not propose to himself to narrate the transactions of the past, but to explain them. All events in human history at once presented to his mind problems to be solved. To suggest solutions for these problems was the labor of his life; to have been able to point out solutions in accordance both with the facts of the case and the well-known principles of human nature, is his peculiar glory as an historical speculator.

Nothing shows more clearly his view of history and the contrast which it presents with that taken by writers whose excellence lies in narrative, than an enquiry which he asks Mr. Senior to put to Macaulay:

"In France," he writes, "and over the whole Continent the feudal system produced a caste, in England an aristocracy. How is it that the word *gentleman*, which in our language denotes a mere superiority of blood, with you is now used to express a certain social position and amount of education independent of birth, so that in two countries the same word, though the sound remains the same, has entirely changed its meaning. When did this revolution take place, how, and through what transitions? . . . If I had the honor of a personal acquaintance with Mr. Macaulay, I should venture to ask him these questions. In the excellent history which he is now publishing, he alludes to the fact, but does not explain it—but he does not try to explain it; yet there is none more pregnant or containing within it so good an explanation of the difference between the history of England and of the other feudal nations in Europe."

Whether the enquiry was ever put to Macaulay does not appear; if it was, the answer to it must, it may safely be conjectured, have been unsatisfactory. For the question marks out the exact difference between the French and English writer. Macaulay's whole object was to narrate the history of England; the aim of De Tocqueville was not to narrate events but to explain them. Where the one writer saw a mere fact, the other perceived a problem. The one is an historian, the other a critic. Now De Tocqueville applies exactly the same powers of mind to the solution of all questions affecting the conduct of mankind, and criticises the state of society under Louis Philippe, or the condition of affairs at the time of the Crimean War, in exactly the same spirit of analysis as that in which he surveys the downfall of the ancien régime or the spread of democratic feeling in the United States or in modern Europe. To say the truth, it seems in some respects to make little difference what were the objects of his criticism. He writes of the ancien régime like an observant contemporary of the courts of Louis XV. and of his successor. He speaks of the fall of Louis Philippe and of the errors of Louis Napoleon with the calmness of a man writing fifty years hence the history of the Revolution of 1848. In each case he applies certain principles to the solution of the difficulties presented by certain events submitted to him for explanation. Thus the prediction of Louis Philippe's downfall is in no sense a mere happy conjecture. Its sudden fulfilment impressed it on the public imagination; but its merit does not really depend on its immediate fulfilment. Its peculiarity lies in its being a prophecy grounded on a consideration of causes which sooner or later were certain to produce the effect foretold. It would scarcely have lost anything of its real interest even if Louis Philippe had, as he probably might have done, suppressed the movement of February 24, 1848, by a free use of grapeshot, and preserved his throne till his death. Indeed, De Tocqueville's language with regard to the Orleans dynasty affords some of the most notable instances of his calm critical sagacity. With the fall of that dynasty vanished, in his judgment, the last chance for the establishment of constitutional government in France. Its overthrow led indirectly to De Tocqueville's banishment from political life; but neither regret for a form of government which he valued perhaps even above its merits, nor bitterness engendered by the *coup d'état*, concealed from him that Louis Philippe's government, if in one sense it fell by accident, was yet foredoomed to ruin by its inherent defects.

"The great and real cause of the revolution (1848) was the detestable spirit which animated the Government during this long reign. A spirit of trickery, of baseness, and of bribery which has enervated and degraded the middle classes, destroyed their public spirit, and filled them with a selfishness so blind as to induce them to separate their interests entirely from the lower classes whence they sprung. . . . This is the root of the matter; all the rest were accidents, strange and violent in themselves, I confess, but still insufficient to produce an effect."

Exactly the same calmness marks his judgment of Louis Napoleon. At first, indeed, he, like almost all men of the time, slightly underrated the President's capacity, and during the years which immediately succeeded the *coup d'état* overestimated the chances of his fall. But the later years of the Emperor's reign have shown that the contempt felt for his intellect in 1850 was certainly not more exaggerated than the admiration entertained in England at least for his supposed genius in 1860; and if De Tocqueville found it difficult to convince himself that his fellow-countrymen would endure a tyranny for more than two or three years, he yielded to the evidence of facts when they showed him that his contemporaries did not share his own love of freedom. In 1858, he seems to have acquiesced in the opinion that Louis Napoleon was a man whose great moral merits were "kindness and sympathy," who was a "faithful and attached friend," who wished "to serve all who came near him"; whilst his greatest moral fault was his ignorance of the difference between right and wrong. But De Tocqueville added to this judgment a remark, the acuteness of which no one will now doubt. "Your informant has not, perhaps, dwelt enough on his indolence; probably as he grows older the effects of his early habits tell on him; it increases; I am told it is difficult to make him attend to business."

In 1857, Mr. Senior enquired whether Louis Napoleon was likely to hold power until his death, and he succeeded by his son. "I expect both events," answered De Tocqueville. "It is impossible to deny that Louis Napoleon has shown great dexterity and tact. His system of government is detestable if we suppose the welfare of France to be his object, but skilful if its aim be merely the preservation of his own power." Here, it may be said, De Tocqueville's foresight failed him; we hardly think so. Any one who recalls the events which preceded Sedan will see that the Emperor's power was rooted more firmly than was believed either by his foes or by himself, and that a slight amount of good luck or of prudence on his part might have enabled him to fulfil De Tocqueville's prediction to the letter. Yet, if the latter expected Louis Napoleon to remain in power, he certainly exhibited a marvellous insight into the causes by which, if he fell, his fall would be produced. Again and again, in the course of these conversations, it is pointed out that the Emperor could neither prosper without war nor bring a great war to a successful termination.

"I sympathize," says De Tocqueville, "with Thiers's fears as to the result of the war. I do not believe that Napoleon himself, with all his diligence and with all his intelligence, would have thought it possible to conduct a great war to which his minister of war was opposed. A man who has no heart in his business will neglect it, or do it imperfectly. His first step would have been to dismiss ——. The real prime minister is without doubt Louis Napoleon himself; but he is not a man of business, he does not understand details. He may order certain things to be done, but he will not be able to ascertain whether the proper means have been taken. He does not know, indeed, what these means are. He does not trust those who do. A war which would have tasked all the powers of Napoleon and of Napoleon's ministers and generals, is to be carried on without any master mind to direct it, or any good instruments to execute it. I fear some great disaster."

These words were spoken in 1854, and might seem disproved by two successful wars conducted by Louis Napoleon within the ten years which succeeded their utterance. But every one now perceives that De Tocqueville's prediction was profoundly true. His words, though referring to the Crimean expedition, read now like the reflections of a philosophic observer uttered a few days before the disaster of Sedan. Few persons can read them without acknowledging the speaker's foresight and recognizing its source. His predictions are the predictions of a critic whose firm hold of definite principles enables him to analyze both characters and events. Yet the most profound admirer of De Tocqueville's genius can hardly fail to perceive that his foresight was subject to certain limitations. As a statesman, his career was marked throughout by failure. He played a part, though happily but a subordinate part, in the commission of the greatest error ever committed by French diplomacy, for he sanctioned, if he did not exactly approve, the expedition to Rome; and, what is more wonderful, never appears to have seen the extent of this criminal mistake. That in some respects his insight failed is clear. The cause and extent of its failure is a subject well deserving separate consideration.

THE MAGAZINES FOR DECEMBER.

"SEEING that the little garrison was stunned by the heavy fire of the dismounted Indians, and rightly judging that now, if ever, was the proper time to charge them, Roman Nose and his band of mounted warriors, with a wild, ringing war-whoop, echoed by the women and children on the hills, started

forward. On they came, presenting even to the brave men awaiting the charge a most superb sight. Brandishing their guns, echoing back the cries of encouragement of their women and children on the surrounding hills, and confident of victory, they rode bravely and recklessly to the assault. Soon they were within the range of the rifles of their friends, and of course the dismounted Indians had to slacken their fire for fear of hitting their own warriors. This was the opportunity for the scouts, and they were not slow to seize it. 'Now,' shouted Forsyth. 'Now,' echoed Beecher, McCall, and Grover; and the scouts, springing to their knees, and casting their eyes coolly along the barrels of their rifles, opened on the advancing savages as deadly a fire as the same number of men ever yet sent forth from an equal number of rifles. Unchecked, undaunted, on dashed the warriors; steadily rang the clear, sharp reports of the rifles of the frontiersmen. Roman Nose, the chief, is seen to fall dead from his horse, then Medicine Man is killed, and for an instant the column of braves, now within ten feet of the scouts, hesitates—falters. A ringing cheer from the scouts, who perceive the effect of their well-directed fire, and the Indians begin to break and scatter in every direction, unwilling to rush to a hand-to-hand struggle with the men who, although outnumbered, yet know how to make such effective use of their rifles. A few more shots from the frontiersmen, and the Indians are forced back beyond range, and their first attack ends in defeat. Forsyth turns to Grover anxiously, and enquires: 'Can they do better than that, Grover?' 'I have been on the Plains, General, since a boy, and never saw such a charge as that before. I think they have done their level best,' was the reply. 'All right,' responds 'Sandy'; 'then we are good for them.'"

This is from an account by General Custer, writing in the *Galaxy*, of a fight which took place in September, four years ago, between eight hundred Indians and a party of fifty frontiersmen, under command of General George A. Forsyth. The whites were in a measure protected by the bodies of some of their dead horses, and also, as the fight went on, by earthworks which they managed to throw up with their case-knives and pocket-knives, after the fashion learned by our soldiers in the late war. Thus entrenched, they held the Indians at bay for seven days, some of these occupied by hard battling, until they were relieved by a detachment of regular troops sent to their aid from a distance of a hundred miles. The loss of the white men was six killed, eight disabled for life, and twelve others wounded—more than one-half the total force engaged figuring in the list of casualties. This, however, was not wonderful when we consider that the Indians were seventeen to one; that unscrupulous wretches of white men had kept these barbarians supplied with the best firearms and ammunition; and that the white man fighting Indians knows that there is absolutely no hope for him but in his own death or theirs. The story of this particular struggle General Custer tells effectively throughout, and his article will interest all his readers. We hope he may find it convenient, before his series of articles is done, to pay his respects to the Indian Ring crew. A plain tale of their infamies would be good reading for philanthropists. We suppose that the history of recent mankind nowhere shows a parallel in base swindling, in bloody outrage, to the annals of this Ring; and it is they who throw upon the soldier most of his labor and most of his odium.

Another good article in the December *Galaxy* is Mr. Gideon Welles's. The Ex-Secretary gives us a piece of history, and shows how the design to emancipate the negro made its progress in Mr. Lincoln's mind. For a long time he clung to the hope that the Border States would voluntarily set their slaves free, accepting a money compensation for them, and thus dispense him from taking up the controverted and contested plan of Federal action, "warranted alone by military necessity." The precise date when he abandoned this hope has been much discussed, says Mr. Welles, by Mr. Lincoln's historians; but in his judgment—and he had excellent means of knowing—the fact is that "no specific day or influence can be named." His last ineffectual appeal to the Border-State Congressmen he made in an interview which took place on the 12th of July, 1862, just after he had returned from McClellan's headquarters at Harrison's Landing. Those gentlemen could not be made to see their true position, and Mr. Lincoln, abandoning further care for the compromises of the Constitution, determined on fighting the devil with fire. "For more than a year after his inauguration," says Mr. Welles, "he resisted the appeals and the threats of his ultra supporters, who urged him to use the war necessity and strike the fetters from the slave. . . . But gradually the conviction dawned upon him that the cause which led to the rebellion must be removed before harmony could prevail." Many and diverse influences may, Mr. Welles thinks, have tended to confirm the President in his purpose, but the origin of his purpose was simply that under the pressure of military disaster he came to think that "to confer freedom on the four millions who were in bondage would be the most fatal blow he could strike against the rebellion." He was all ready to issue his preliminary proclamation in the first week of August, and called a Cabinet meeting, at which the rough draft of it was submitted to the Secretaries. Secretary Seward made the objection that if issued then it would be regarded as a shriek for the Administration rather than for freedom. Mr. Welles does not make it perfectly clear whether Mr. Seward meant that the October elections would be unfavorably affected by the proclamation, or whether his notion was that military operations under Halleck and Pope, from whom much was just then expected, might make emancipation needless, but he rather indicates that the latter was Mr. Seward's basis of objection. At all events, the President forthwith put the documents into a portfolio.

"Among others who were impatient under what they considered the inexcusable neglect and inaction of the President was Horace Greeley, the editor of one of the widest circulated and most influential journals in the country. Uninformed, like others, of the purposes and contemplated movements of the Government, but filled with patriotic fervor, such as a year previous had led him, and men like him, possessed of more zeal than military knowledge, to insist that the army should, while not duly prepared, move on to Richmond, he now, on the 19th of August, addressed a letter, earnest but dictatorial in tone, to the President, admonishing him of public sentiment and of his duty. This letter was not sent through the mail as a friendly epistle, with the friendly suggestions and advice of a friend, but for some reason, good or bad, was published in the New York *Tribune*."

Everybody will recollect the President's reply to this letter, and it is well to recollect also—what he could not say—that at the time of writing it he had already prepared the proclamation desired and demanded. The next Cabinet meeting in relation to the subject was held on the 20th of September, and on that occasion every one of the Secretaries, except Mr. Montgomery Blair, was in favor of promulgating the provisional decree. Mr. Blair, although he approved of the principle of the measure, thought the time inopportune, as he feared its effect on the Border States, and he placed his objections on file. It is here related that at this memorable meeting, Mr. Lincoln told his advisers that he had taken counsel of Providence in reference to the business in hand, and had made a vow to regard a favorable event of the impending battle of Antietam, as we make out, as the Divine approval of the new policy. Mr. Bates was urgent for the deportation of the freedmen, and Mr. Welles glances at "a speculating operation" in the shape of a scheme for colonizing our negroes in Central America, and he appears to have been instrumental in killing it. On the 30th and 31st of December, the proclamation was finally revised, Mr. Seward making two or three mere verbal changes, and Mr. Chase suggesting "the felicitous closing paragraph" which asserts the sincerity of the Executive and invokes the considerate judgment of mankind. On the 1st of January, 1863, as all the world now knows, the paper was signed and published.

Mr. De Forrest's story called "The Wetherel Affair" opens takingly, and promises to be one of the cleverest things which this writer has done. It will be a hardened novel-reader who shall not find this story bright and fresh. Good, too, is Mr. John Durand's "French Scenes, Customs, and Characters," and readable is Mr. Justin McCarthy's "Gossip" about Lord Westbury, Sir Alexander Cockburn, and other "Great English Lawyers," though perhaps he might have well bethought himself that to readers of the *Galaxy* the anecdotes and stories about these men of whom he writes would all be new, however stale in London club-rooms.

Mr. Durand points out how much easier, more reasonable, and more civilized is daily life in Paris than in our American cities, and he explains by a number of particular instances "that wonderful adjustment of rights and duties which makes the French social scheme a marvel to all who will take the trouble to analyze it. Compare, for example, with the common incidents of Mr. Morton's "best civil service in the world" this incident: Mr. Durand one day received a letter regularly prepaid at home, but on which the French post-office demanded sixty-four sous as a double rate on a double letter, the American postage going for nothing. Inexperienced in such matters, he took the letter to the nearest post-office bureau and asked to have the excessive charge accounted for. The clerk examined the letter, weighed it, and found it just on the balance of a double letter, and therefore subject to the amount charged. "You are aware, monsieur," said he, "that when a letter is insufficiently paid in America, the stamp used goes for nothing here, and that the postage is double rates according to law. This letter is exactly on the balance, and probably made a double one by the weight of the stamps put upon it. You had better send it to the *Directeur des Postes*, who will settle the matter." Thanking the clerk for his polite explanation, Mr. Durand wrote a note to the official named, and in a few days received a note containing an elaborate explanation of the facts and concluding as follows: "All I can do under the circumstances is to request the Post-Office Department of the United States to authorize me to reimburse you the value of the stamp uselessly employed by your correspondent in the postage of the said letter. I will communicate to you the result of the proceeding. Accept, monsieur, the assurance of my distinguished consideration, etc., etc." Mr. Durand paid no further attention to the matter except to be amused for a moment at the idea of two governments corresponding about fifteen cents; but at the end of a month he is still further amused by finding that the *Directeur des Postes* has "the honor to transmit a warrant for the reimbursement of seventy-five centimes, the value of postage stamps," etc., etc. Mr. Durand rightly enough regards this, trivial as it was, as a significant

sign of the high civility of the French capital; and perhaps might be justified in regarding his feeling of amusement at it as significant of the lack of such perfection of civilization in our American cities. When we get so that we care for the seventy-five centime sums; when we get to be so numerous as to be obliged to take thought to secure all possible advantages, we shall neither suffer our Tweeds nor our Fairs nor many another person and thing whom in our strength and wealth we heedlessly suffer now. The gods sell their gifts, and we do have to pay a price for living in a country where everybody is allowed to do that which is good in his own eyes, because everybody has so much room to wax fat and kick that no one cares to look sharply after those friction-saving arts and devices which elsewhere are a necessity. The thing has its good as well as its bad side, and perhaps we are all too much inclined to fasten our attention upon the bad; or at least always upon one to the exclusion of the other.

Some thoughtful verses by Miss A. M. Wellington are not a little unlike the usual magazine poetry. The subject we may speak of as being better than the treatment—the merely mechanical treatment, that is to say. Great poets have made blank verse with the fault of having an insignificant and weak word at the end of the verse to receive the stress of the voice and so produce an effect unpleasant in all ways, notably one great poet has done so, and perhaps on this account, obvious as the error is, it may be worth while to say a word on the point to a writer who shows the capabilities of this one.

"Saved from the Mormons," we regret to say, we have not faith to receive as gospel truth.

First and last, we have read, we suppose, some hundreds of descriptions of Rocky Mountain scenery, but we have not read any so provocative of a desire to wander in that region as an illustrated article in the new *Harper's*. Not that it is a specially well prepared article either; or rather, not that it is very highly finished, but the writer makes you feel the scenery and breathe the air of the region described.

Other illustrated articles are about Malta; the Library of Congress; the latest edition of Marco Polo; some chapters of Miss Thackeray's "Old Kensington"; the first part of an endeavor at reconstructing the daily life of the ancient Romans; and three chapters of Wilkie Collins's new novel, "The New Magdalen." Mr. Charles Reade's story, "A Simpleton," we do not find very striking, and have ceased reading it till we shall get it all together; but his publishers promise a new one, which will turn upon the decision of an Irish *cause célèbre* of the last century, and which bids fair to be a fine novel, not of his very best sort, but of a very good sort nevertheless.

A love story, which we confess is not of herculean strength, is prettily told by Francis M. Peard, who exhibits a refinement unusual among the writers in *Harper's* of this kind of stories, which are a regular manufacture. Very many of its products have appeared to be the work of the farmer's daughter who might better have been down in the kitchen or out walking than up in the north chamber cultivating literature. Some, indeed, have been worse than this, and such as to make these seem very well worth the space they have filled; but Miss Peard's, or Mrs. Peard's, is a great deal preferable to either.

The "Easy Chair" talks of the recent festival at Plymouth Church in Brooklyn; of the English lecturers; of the late Julian Fane, a gracious youth, of whom, however, we hear most from a friend or two whose judgment would be likely to be kind rather than clear; and, finally, of a children's party, at which the children were bedizened with disgraceful and cruel extravagance. The latter evil we suppose to be a real evil, and a very unfortunate one; but we take it to be somewhat exaggerated in common speech. It is as natural for a mother, be she ever so sensible and reasonable, to take delight in the beautiful apparelling of her children as for the child itself to dress her doll in gorgeous array; and once in so often the mother will overdo it. Too often even once may be; but not all the boys and girls who are allowed to be seen at these rather senseless and pernicious "children's hops" are going to be brainless fops and flirts. The mud pie will never fail from among men.

"The Fight of a Man with a Railroad," which opens the December *Atlantic*, relates a long legal battle fought by Mr. John A. Coleman of Providence against the New York and New Haven Railroad Company in the Massachusetts courts. It is sure of sympathetic perusal, for that railroad corporations are tyrannical the general public fully believes, as juries are very apt to show whenever an individual brings suit. Mr. Coleman's case was this: Three years ago, when going from New York to Providence, he had in his possession, left over from a previous journey, a ticket-coupon good for a passage from New Haven to New York. This, as he believed, ought to be good for a passage from New York to New Haven. The conductor of the train was of a contradictory belief, and Mr. Coleman, after a pretty determined resistance, was removed from the train at Stamford, and that with such violence that he was very seriously injured. For these injuries he brought his suit, and the jury awarded him damages. The railroad company fought him tooth and nail, in the spirit indicated by this remark of one of its officials, with which Mr. Coleman prefaces his article: "The road has no personal animosity against you, Mr. Coleman; but you represent the public; and the road is determined to make it so terrible for the public to fight it, right or wrong, that they will stop it. We are not going to be attacked in this way." But after four years of litigation and five trials Mr. Coleman comes out victorious with the verdict of the first jury confirmed. That Mr. Coleman's view of the law as regards his particular case (outside the brutality of the assault made upon him) is a sound one, we should not like to say. Circumstances may easily be conceived of under which it might be very unfair and inexpedient that a ticket good on a certain day for passage over a certain distance from west to east, should at any and all times thereafter be equally good for the same distance from east to west. But there can be no doubt that our railroad corporations and their employees are often the hard masters of the public, instead of the courteous servants that they ought to be. Mr. Coleman's article will do good in keeping at the right heat a public feeling which is becoming very healthily warm.

Nothing else in this number of the *Atlantic* calls for much remark except the painful realism of the sketch called "Shaker John" and the scientific editor's remarks on the Schoeppe trial. These are of interest to those wise heads who, after a conflict between an ignoramus and a man of science who knows his business, may always be depended on to enquire, "Who shall decide when doctors disagree?" and to doubt the existence of experts and the value of their testimony. With the art critic we see that we have on our hands a most deadly and ferocious quarrel, to which we shall shortly attend, to the great discomfiture and shame, as we trust, of the opposing critic. Meantime we will call his attention to the fact, already stated by us, that the criticisms upon Mr. Ward's work, made in a journal called the *Fine Arts*, were not made by the *Nation's* critic. The two criticisms are in no possible way or manner connected with each other, and wilfully connecting them—in spite of information received that to do so was to make an error—has only the result of causing a certain portion of the *Atlantic* critic's latest article to fall useless to the ground.

"A Comedy of Terrors" comes to a too late end with this twelfth part, in which, by the way, the author has the coolness to speak of "an amazing coincidence," as if the story had not been from the beginning a mass of bald impossibilities. They have been unrelieved, too, by anything of thought, or wit, or fun, or good feeling, or character drawing, or anything else that could redeem its nonsense or save its reader from a certain shame that such things could be either written or read.

"The Poet at the Breakfast Table" also is ended in this number. Mr. Parton has his say about Alexander Hamilton, who, as he knows, was made wholly in vain, and whom he cordially detests; Mr. De Forrest makes a coarse but not wholly ineffective caricature of a Connecticut lobbyist; there is a denunciatory article on our methods of ornamentation in house building and furnishing, and the usual amount of book-noticing.

We commend to the readers of *Lippincott's* Dr. Weir Mitchell's essay, entitled "Nurse and Patient"—a discussion of a most important relation, which we commend particularly to the attention of women, unmarried or widowed. The well-illustrated paper of Peruvian travel, "Searching for the Quinine Plant," is also worth attention. "The Strange Adventures of a Phaeton" are brought to a close in Edinburgh, and Miss Bell, we take pleasure in announcing, becomes the beauteous bride of the highly glorified and anti-Gallican young Uhlan—a Prussian such as is only born, we suspect and fear, in lands foreign to Prussia, and since novelists and other people took sides for and against the French in the late Franco-Germanic war.

Scribner's is very full of matter of the usual kind, and some of a kind a little unusual for *Scribner's*, but not necessarily the worse on that account. Of this latter sort is Mr. M. D. Conway's "Demons of the Shadow," which deals with the genesis of the Devil and all his hosts. A Mr. J. Hotchkiss writes about the Chesapeake and Ohio Railroad, and takes us interestingly through a large and interesting part of Virginia. It may literally take some of us through or to Virginia, for we should think articles of this sort might do much to encourage immigration along the line of the described railroad.

Mr. Robert Buchanan, whose business it appears to have become to put into verse whatever is momentarily attracting the attention of the public, has been utilizing the Irish question, and in a poem called "Murtough"—which treats of the hanging of a "Boy"—he surpasses even himself in false pathos and commonplace thought. As for the verse and diction, most Englishmen and Scotchmen who have undertaken the imitation of Irish dialects—most of them, by the bye, being ignorant that there are more dialects than one—have succeeded in making themselves a spectacle to gods and men; but

Mr. Buchanan, when he comes, slaughters and exterminates patience once for all and dashes forbearance into flinders.

Appletons' *Popular Science Monthly* is, as usual, principally made up of extracts from foreign journals. The quality of the articles not credited to such sources does not encourage the hope that the requisite quantity and quality of matter could be obtained in any other way. But we should suppose that by a careful and sufficiently free expenditure of money the department of original matter might be secured from our own scientific men to make this department of it equal to the eclectic portion, which is well managed and readable. We know the difficulty of inducing hard-worked American scholars to write, but it can be done. It is a curious fact that any one desiring popularized accounts of the works of our scientific men, or the proceedings of our scientific societies, will have to seek for them in European publications. We have had little or nothing to correspond to the journals of popular science which are so numerous in England, France, and Germany, and we must now warn any one who takes the *Popular Science Monthly* with the idea of finding accounts of the progress of science in America and of the researches of American men of science to compare in point of fulness and ability with those in *Nature*, that he will be disappointed.

The Human Race. By Louis Figuier. Illustrated with 243 engravings on wood and 8 chromolithographs. (New York: D. Appleton & Co. pp. 548.)—The title-page of this work does not credit the prolific M. Louis Figuier with his antecedent labors. It may be well to call the roll of his book achievements before we examine specially "The Human Race," the last in time, and it is to be hoped in fact, of this remarkable series. In any enterprising book-store may be seen the following array of octavo volumes, each illustrated with from two hundred to five hundred engravings, and labelled with the now formidable name of Louis Figuier, namely: "The World Before the Deluge," "The Ocean World," "The Insect World," "The Vegetable World," "Earth and Sea," "Reptiles and Birds," "The Mammalia," "Primitive Man," and "The Human Race"—nine huge volumes. "The To-morrow of Death" not having attained to the stature of an octavo does not appear among them, but it will be produced, on call, as a genuine production of the same inexhaustible and irrepressible "Louis Figuier."

Who is this scientific Hercules? we ask in some amazement—the inventor of this new machine for turning off science by the yard-stick? Is he a myth, or some veritable Frenchman; or, which seems more probable than either, the shadow of an organized junta of book-makers, with fair libraries to draw upon, and satisfactory connections with great publishing houses in Paris, London, and New York to push the results of the manufacture?

We make haste to say that we do not believe in M. Figuier nor in his methods of treating the serious and hard-won facts of science. We even doubt the existence of this pretended author, the reputed father of these sensational works. Science cannot be furnished, cord measure, by a single brain, nor even compilations of universal science; whence our conjecture of a conspiracy of book-makers and book-publishers to seize and settle the sum and substance of human knowledge, and to stamp it, in the name of M. Figuier, upon the French, English, and American minds. It must have required such a combination of writers and publishers first to make and then to float the series, which has resulted in bringing upon us this Figuierian deluge. Pursuing this lead a step further: if sensational novels are discredited, what shall be said of sensational treatises upon scientific subjects? Does it indicate a leprosy among the publishers—a rottenness in the quest of gain? These productions cannot be classed among works of science. Whilst they are compilations from works of acknowledged reputation, they are interlarded with observations unwarranted by the facts, and with speculations embodying the most glaring absurdities. As a whole, they are desecrations of science. Knowledge, unfortunately, must follow the law of merchandise in reaching mankind; but the publisher who endorses and vends a spurious article, knowing it to be such, under a genuine brand, is chargeable with—a want of proper respect for the public.

The work on "The Human Race" requires but a brief notice. It cannot be excepted from the foregoing remarks. In a scientific sense, it is of no value; and besides this, it is an extremely superficial presentation of a great subject. As an attempt at pictorial ethnology, the engravings are too coarse and characterless to fix particular types of men. Even as a "Tour du Monde" it furnishes but a limited amount of not well selected general information. In the first and second chapters the scientific expositions are given. M. Figuier believes in the permanence of species (p. 15) and in the special creation of man (p. 8); and thus, by two triumphant acts of faith, he frees his subject at once from all troublesome complications. By a simple declaration he settles peremptorily the question of questions in modern science. Neither the great doctrine of evolution, nor the more special and definite Darwinian theory, has ruffled the meditations or disturbed the placid wisdom of our science-monger. He proceeds to found his classification of mankind upon the color of the skin, a basis long since abandoned as untenable, and only suggested in the earliest stages of the science of anthropology. "Around the table-lands of Asia," he remarks, "are found the three organic and fundamental types of man, that is to say, the white, the yellow, and the black" (p. 9). To these he adds the brown and the red. But he does not hesitate to violate his fundamental canon of classification whenever it becomes more convenient to place a white stock in a yellow family, or a brown in a red. In forming his family groups linguistic disconnection presents no obstacle. A philologist will be edified to discover the Finns and the Magyars in his Slavonian family (p. 113), and perhaps be startled by the information that the Jews, that remarkable historical race, have "an affinity with the Semitic family" (p. 184).

But we will not pursue further the ungracious task of finding fault with a writer who, by attempting too much, has come short in so many particulars. It is but just to say that M. Figuier writes in a genial spirit, and that his volumes are not without valuable suggestions of his own. We will venture the further remark, that if these works were emasculated of the worst elements of Figuierism by some competent editor, and a plain and simple theory or exposition of the facts were substituted, so that they might be republished, under proper titles, as contributions of scientific information compiled from the works of eminent authors, they would serve a highly useful purpose in spreading abroad, in a popular form, a large amount of valuable knowledge.

Finally, we wish to except from these remarks, in a limited sense, the work on "Primitive Man," which we consider, in the main, an excellent treatise. The facts embodied have but an indirect relation to primitive man—therefore the title is a misnomer—but the work contains the most comprehensive presentation yet made in a single volume of the investigations in Belgium, Holland, France, Spain, Italy, Switzerland, Austria, Germany, and Denmark of the bone-caves and other repositories of human and animal remains belonging to the prehistorical period. The facts collected cover the period of barbarism, and extend back some distance into the period of savagery; but not far enough to win a glimpse of primitive man. The Neanderthal skull approaches the nearest to that yet very distant man; but M. Figuier, with the strange fatality which beclouds his genius, failed to recognize its primitive characteristics. His ideal of primitive man is evidently a Greek of the magnificent cranial development of Euripides; or, at the very least, a Greek of the Homeric period. He is plainly irreclaimable.

The Romance of American History. Early Annals. By M. Schele De Vere. (New York: G. P. Putnam & Sons. 1872. 12mo, pp. 254.)—Prof. De Vere has made a very agreeable little book, consisting of seven independent chapters of just the character of magazine articles. Here are collected, under their several heads, most of the romantic incidents of our early history, arranged and told with a good deal of literary skill. There are some evidences, especially in the early chapters, of "reading up" for the purpose of writing; these chapters contain a good deal of fragmentary and ill-digested matter, which a person more at home in the subject would have known better how to dispose of. The later chapters are, from a literary point of view, almost without exception good, easy, and pleasant reading. We will particularly commend the account of Lord Fairfax, of King Carter, and of the colonization of New Sweden. History, however, is not the right field for our author; his mind is too inaccurate, and he has too little notion of what is meant by historical evidence. Or, if he undertakes to write historical narratives, which he certainly does very well, he should enter into partnership with some more accurate student who should be responsible for his facts. Jamestown is called, p. 193, "the second town ever built on this continent"—Santa Fé (1582) being forgotten. Cavendish is spoken of, p. 148, as "the first bold mariner that ever sailed around the globe." Marietta is said, p. 130, to have been named, in 1788, "in honor of poor Marie Antoinette, whose fate just then excited universal sympathy in all feeling hearts"—the French Revolution began the next year. The author of "The Wonder Working Providence" is called, p. 28, "Rev. Mr. Johnson," instead of Capt. Edward Johnson. There is curious confusion, p. 51, between the Lenni-Lenape, the Illinois, and the Miamis, where we read of the Illinois: "The tribe was known as Miamis to the French, and as Delawares to the English; but among themselves they permitted no other designation but *Lenoré-Lenapé*"—in the later chapters the name is spelt correctly.

The fondness of the author for sounding phrases, while it mars his style, is the source of some inaccuracies. Thus, p. 41, Marquette, at the mouth of the Mesconsin (Wisconsin) River found "a chain of lofty mountains"—which we are to suppose have since been swallowed up by an earthquake or washed into the Gulf of Mexico by the turbulent Mississippi. Maple

sugar, the French colonists found, p. 122, could only be made "in mid-winter." Captain John Smith, according to the original account, was surrounded by "more than two hundred" Indians, when about to be executed; on p. 79 of this book he was "well guarded by a thousand watchful eyes." Here are five hundred already, but on the next page the number is doubled, for "a low, subdued cry of amazement escapes from a thousand wrought-up hearts." This is "fine writing," and it well illustrates Mr. De Vere's faults both as a writer and a historian.

The entire chapter entitled "Our First Romance," from which the above is taken, is characterized by this same inflated style, as if the author felt that he had a bad case and were doing his best to dress it up. We are hardly willing, however, to attribute his vamping of the exploded story of Pocahontas to an intentional disregard of truth, but rather to a defective appreciation of the weight of evidence. His tone of mind is essentially romantic in dealing with historical questions. He enjoys such stories as this, and cares more to believe that they are true than to examine their truth in the light of evidence. Probably, too, his mind lacks the power of weighing impartially against each other the negative testimony of 1608 and the positive testimony of 1624, and seeing that the former outweighs the latter. No doubt, as an adopted citizen of Virginia, he would like to prove the story true; but it would unquestionably be the same with the fable of William Tell. Just so, he gives the Indians the credit of the mounds, which were certainly built by an earlier race.

There are many misprints, especially in the first part of the book, where, for instance, *Rivière* is always spelt *Riviere*. On p. 55, *y* should undoubtedly be *r*; p. 155, 1697 should be 1673; p. 136, Tabontes should be Taborites; p. 125, we cannot conceive what should stand instead of 1674.

Fine Arts.

THE "VENUS" OF MELOS.

As the one recognizable and indisputable good the world has derived from the bombardment of Paris, we may reckon the discovery of the distortion practised on the so-called Venus of Melos by the impertinent self-sufficiency of the former curators of the Louvre when this peerless statue was set up under Gallic protection. It is well known that the torso was in two pieces originally, or separated for portability in the hiding of it, and when the Frenchman set it up he could not resist the temptation to better the Greek, and so inserted a thin wedge between the two parts, giving the figure an exaggerated leaning over towards its right and forwards, which perhaps expressed better what he thought it was meant to express. When the statue was removed for hiding from the Prussians, it was separated again, and on reuniting it the wedge was left out, restoring the figure to its original pose. This is slightly more thrown back and more upright in the lateral sense, a modification which gives new force to the hypothesis originally, if I mistake not, advanced by Millingen, that she held a shield (tablet?) on which there might be an inscription.

What has kept the statue in the class of Venuses so long? I can only conceive the reason to be that most students of the antique have always regarded the Venus as the supreme type of beauty to the Greek mind, and that as the Melos statue was the highest example of beauty known, it must be a Venus. But it is opposed not only to the analogies of Greek art but to the temper of the Greek, to whom Venus was beauty without the higher intellectual attributes he gave to Minerva, Juno, and even Diana, which, differing in their qualities, are always consistent in their form. No Juno can ever be mistaken for a Minerva, or Minerva for a Diana, and if we confuse the type of the Venus, it is mainly because we do not perceive that there is another type still which is not Minerva as commonly received, and still less like all the palpable Venuses—types purely of sexual perfection and attractiveness, viz.: the Victory, or properly speaking, the Minerva-Victory, "Athene-Nike," to whom the beautiful little Ionic temple on the Acropolis of Athens was dedicated, and in the centre of which was erected a statue of the wingless Victory—Minerva-Victory being wingless that she might never quit Athens. If any one will take the trouble to compare the Melos statue with the fragments of Victories from this temple (of which I have given the example most like this statue in my Album of the Acropolis), he will see that not only is the general type the same, but the artistic feeling is the same—the epoch of art and the evident use. But these reliefs are all winged, and formed part of a balustrade round the entrance to the temple in the centre of which stood the Wingless.

My impression has always been, since seeing these fragments at Athens, that the Melos statue was a Victory, and, I believe, the identical statue which once stood in this temple. She is engaged in writing the names of those who fell in the struggle with the Persians, a struggle whose incidents are recorded in the frieze of the temple, while the Victories of the balustrade are sacrificing, offering oblations, etc., and one, the world-known draped figure, is taking off her sandals after her flight thither.

It happened in one of my cruises in the Levant that I put into the harbor of Melos for a stormy spell, and waited there several days. I made then the acquaintance of the son of the man who discovered the statue, and he went with me to show me the spot where it was found, not buried in a field and turned up by a plow, but walled in a niche, with arms and all its parts, carefully concealed by some devout lover of it. The finder at once sent word to the French Minister at Constantinople, who after some delay sent a frigate to secure it. Arriving at Melos, the Frenchman found that the commander of a Turkish ship which had come to the island had taken arbitrary possession of it, and it was by an equally arbitrary application of *force majeure* that the Frenchman took it under his protection; but in the struggle the arms, which were detached when found, were left in the hold of the Turk or thrown overboard, and never to be found again.

The niche in which it was found was close to the theatre of Melos, a never-finished work of the Roman Empire. If my conjecture as to the identity of the statue be true, it might have been carried from Athens to Melos while the original sanctuary was in danger from invasion, and hidden, as the magnificent bronze Hercules of the Vatican was, either before the theatre was built or (which seems to me more probable) when the attack of the barbarians which arrested the construction of the temple was impending, it having been carried away from Athens to decorate an imperial seat or public work.

There are no indications of a temple having ever stood near the spot, and a work of so great beauty and of an epoch so far anterior to the theatre could never have been in a place of no local importance or religious interest. Its style, its close sympathy with the Victories, and its having no connection with any tradition or local worship of Melos, are all circumstances which confirm my conjecture. Melos was a favorite "watering-place" under the Empire, and Athens not far away. It must, as it seems to me, have been carried there for safety and buried by the Athenians, or taken by the Romans as an ornament for their theatre, and like the Hercules (also in the vicinity of the theatre) buried some time when invasion was menaced, exactly as, following its imperial destiny, it was buried at its new seat when the Prussians came to menace its possession; for neither Turk nor Roman community could ever have been in the slightest ignorance of the true value and incomparable beauty of the work. Whoever had it must have dreaded its loss, and hid it as the Parisians did.

My Melosian friend was, when I was there, French Consul, as his father had been before him, and I presume he is still there in the same capacity, as all civilized nations except our own regard their representatives as the better for having been in one place long enough to know their business, and I suppose any one may now go to Melos and see the place where the statue was found as I saw it.

W. J. Stillman.

THE PICTURES AT THE ACADEMY OF DESIGN.

There are some singular qualities about the exhibition at the Academy. An enormous rout of pictures, approaching four hundred in number, conquering our respect by sheer force of mass, yet not insignificant in detail or mean in quality, collected on speculation at a time when such commodities have made a sudden and marked leap in value, argues, we suppose, a "feeling of confidence" in the art commerce of this country. The collection is to be sold at vendue, and the admission-fee is only a protection against thronging the gallery, being not more than half of what the pictures, as an exhibition, would easily bear. Mr. Derby, who represents the enterprise, has collected in a spirit very different from that of his last exclusive and very choice importation. There are this year no Venuses by Cabanel, nor any *hors d'œuvre* by Breton, Rousseau, Troyon, or Leys. Instead, there are repeated daintinesses by De Jonghe, and Dillens, and Perrault, and Bakalowics, all aimed with fatal knowingness straight at the parlor of Carlyle's gig-man. It is evident that multitudes of this impressionable type of being are to be brought in, fired with the mutual flame, and sent away with costume studies that they do not understand, and portraits of lorettes that their wives will consider "improper." The titles, whether those produced from the inner consciousness of Mr. Derby, or those painted in fat black London letters on the frames, and attributable to Mr. Everard (part owner of the collection), are meant to sink into the heart of the English or American burgher, and differ from the reserve and good taste of French nomenclature; a gay head by Merle is labelled "Smiling at Me," and the Spanish study by Portaels thrills the marrow of Philistia with the horrid caption, "I will be Revenged." These literary improvements are of slight moment, but it is not agreeable to find that

the makers of boudoir pictures are changing their style, with an obvious eye to the American and English demand, and turning out work that is all-over Birmingham. A costume-picture may be a very good work of art, meeting most of the requirements, and conquering most of the difficulties, of serious painting. But we observe, with a displeased and almost a compassionate regret, that clever men like De Jonghe and Bakalowics are stultifying themselves with work that is simply bad, painting draperies of tin and dismembered lay-figures in sad quantity. A short engagement with some practical, cross, exacting editor of a French *Journal des Modes* would do a world of good to these spoilt and heedless costumers. The paucity or indolence of their invention, too, and their tendency to lean on the shoulders of more thoughtful artists, is a discouraging trait; for instance, since the "Salome" of Regnault, which was a study of yellows with a background of golden drapery, every one seems to be painting yellow backgrounds. At Knoedler's, we notice a lady with a page kissing her hand, the figures in the style of Willems, the distance of the most crude and aggressive ochre; in the present collection, De Jonghe's lady in black velvet, with child and paroquet, is modelled upon flat-yellow damask; and even Bertrand, coming forward with his spiritual and diaphanous Marguerites and Ophelias, relieves the beauteous lunacy of Denmark against a panel of yellow somewhat in the tone of a washerwoman's petticoat. All these crudities and plagiarisms indicate a want of that deep-seated respect for the intellects of their patrons which it is desirable to keep alive in the bosoms of the versatile and volatile painters of France.

The curiosities and salient points of the Derby-Everard collection are soon got over. Perhaps one of the most agreeable surprises to many connoisseurs is the brace of pictures by Richard Burnier, of Düsseldorf, who exhibits cattle, and coast and field scenery, of very high quality, with a secret of light hardly caught by any artist since the death of Troyon. This landscapist, though new to many visitors, is not quite unknown in this country, Mr. Claghorn having long possessed one of his coast scenes of great merit. The figures in M. Burnier's scenes are large and broad, their surfaces sharing in the general motive of light and shade, not too much studied out in detail, and admirably massed; his soft play of light, without trick or forcing, is wonderful. Alma Tadema, more of an antiquarian than an artist, exhibits one small composition which certainly strikes the eye as if a window had been opened into antiquity. It is the fag end of an ancient banquet, with fruits and objects of virtu on the table, and an old man musing on his couch like Socrates at the end of Plato's *Banquet*. A younger guest lies on his cushions in a still more sybaritic manner, and a music-girl plays on her flutes for the edification of the two. The picture is not remarkable artistically, but as a bit of reconstructive scholarship it may be better than several cabinets in the Naples Museum, and it is quite credible how England, having now got her South Kensington collections together, should send for such an antiquary as Tadema to live with her and be her archæological love. The example of Meissonier is very satisfactory and impeccable, exciting that dry admiration quite unmixed with enthusiasm which is the author's proper meed, and indeed not quite approachable by any Fortuny, or Detaille, or Zamacois in its own narrow line; those who have tired of Meissonier and clamor for "feeling" may renew their vows before this work of a man who struck out a new style, and was great in his own manner, before they and their tastes and their new favorites were formed. Willems shows a specimen of really tender painting, in soft, rich drapery, and tender flesh; it is not a new work, and that is its advantage, for he will probably never again paint with the same conscience, and silvery, sculptural sentiment. Tony Robert Fleury, a rare visitor to these shores, shows a bust-picture of a girl not very remarkable, and recalling but little of the energy and national sentiment of his fine scene from the Polish insurrection. Charles Louis Müller, so well known by his great theatrical "Last Roll-call in the Reign of Terror," contributes a couple of life-sized Oriental subjects, and a girl-group in rather Bacchanalian postures, showing creditably his studious and well-preserved and formal excellence. Merle and Bouguereau crowd each other with almost a catalogue of specimens. By Merle there is the first study of his "Maniac," a black, unrelieved, decidedly unpleasant study of misery; Bouguereau's little Italian, receiving a lesson on the pipe from his brother pifferaro, is dainty and careful, and a breath out of his happiest spring-time. Among the conspicuous pictures is an imposing work by Mouchot, "The Sortie of the Grand Council," painted somewhat in the manner of Hamman, and exhibiting a scene of gracious pomp in the courtyard of the Doge's Palace and along the stately descent of the Staircase of the Giants. Gallait, whom a decade ago we used to swear by, is probably less popular than he was, but the baby in his Rubensish domestic group is at least brilliant, flesh-like, *ondoyant*, and pictorial. Of genre pictures there is a scene with a *Coquette Bretonne* that would hardly be taken for an American work, so impressed is it with the most solid lessons of European study; although the artist's hand seems a little heavy for his subject, and demands to be seen, we think, in graver and larger work, yet the picture we speak of is admirable for sheer massive strength. It is by Mr. Robert Wylie, of America and Paris, recipient of a medal at the last salon, and certainly deserving that rare honor. We must not omit to state that the enormous pastels by Maréchal, "Galileo," and "Columbus," are again displayed by Mr. Derby, this time in a small inside room of the Academy, among pictorial atrocities that would argue by their presence some very unconventional views on the business of picture-hanging. These crayons are strange and impressive. The subjects seem to contradict the very genius of pastel, and are—especially that of the Columbus, floating in chains on the ocean he was the first to chain—noble in the extreme. The postures are horizontal, and, with their affectation of what is tortuous and involved, seem to challenge some comparison with Michael Angelo. There is none of the simplicity of severe art, but there is, especially in the "Galileo," an elevation and originality of rare order.

The Nation.

NEW YORK, THURSDAY, DECEMBER 5, 1872.

The Week.

THE Forty-second Congress began its final session on Monday with some half a dozen rather striking incidents, and amid a general expectancy on the part of the public as to the action of the Administration leaders. To believe the more violent of those newspapers which may be called the representatives of the machinery of the Republican political organization, the guillotine is nicely oiled, and the stern-eyed executioner is ready to chop off the heads of Trumbull, Schurz, and Sumner, lay the wire cat on the bare back of Banks, and do very peremptory and terrifying disciplinary work generally. The Senate is said to be particularly determined to purge itself, and so it may be, although the House shows itself inclined to practise the American good-nature rather than be bloody-minded. The Senate is full of ambitious and powerful leaders, each with an eye to his own political future, and less imbued with the spirit of the rank and file, to whom the Representatives are much closer. Banks's resignation, therefore, and the House's refusal to accept it, may or may not indicate what is to become of the Liberal Senators—so far, that is to say, as the Mortons, Edmundses, and Conklings, and their following, can settle the status of the old-time leaders.

Mr. Sumner's usual contribution to the beginning of a session is some two or three or more bills and resolutions, proposed as soon after the chaplain has finished his prayer as is possible; and he was ready on Monday with his Civil Rights Bill, which wasted so much time last session, and also with a resolution which probably took everybody by surprise. In pursuance of the spirit of his justly-renowned "party of hate" letter (which so sagaciously brought out in full force the strong Unionist feeling of the war), Mr. Sumner proposed that all names of battles "fought with fellow-citizens" should be stricken from the regimental colors of the regular army. Who can doubt that such proposals tend to put off the day of real unity of feeling? The South fought—and fought well—for ideas which, it has been decided, must be abandoned as wrong. What are we to say to public men who, for any reason whatever, fan the smouldering embers of strife? Mr. Blaine's call for an investigation was another marked incident, and so was Mr. Dawes's resolution in regard to the death of Mr. Greeley.

The President's Message tells of the result of the Geneva Arbitration and of the San Juan Arbitration, and thanks the British Government for removing its troops from the islands in dispute, and giving them up to the United States, even before the official announcement of the verdict had reached this country; recommends legislation for carrying out the provisions of the Treaty of Washington regarding the Canadian fisheries, and for finally determining the boundary line between the territory of the two powers on this continent, and rejoices in the fact that at last there remains "not the shadow of a cloud upon their relations"; recommends an appropriation and the loan of two ships in aid of a proper exhibition of American products at the Vienna Exposition; mourns over the outrages and disturbances on the Mexican frontier, and recommends the appointment of a commission to investigate them; laments the continuance of the rebellion in Cuba, ascribes it largely to the existence of slavery, and recommends legislation to prohibit American citizens from holding slave property in that island; rejoices in the restoration of peace between Spain and the Allied Republics of South America, and over the general prevalence of tranquillity on that continent, but gives Venezuela a broad hint that it had better pay what it owes under the award of the Convention of 1866; speaks in a complimentary manner of the Japanese, and recommends the maintenance of "four American youths" in our legation in that country, to learn the ways and language of the people; recommends an appropriation for the relief of distressed American seamen and citizens abroad; sums up the reports of the various departments; urges the passage of the Education Bill of last session; speaks favorably of the centennial celebration; declares that he will continue to apply the new civil-service rules during his term of office, and calls on Congress to make this reform binding on his successors by appropriate legislation. The message is, on the whole, a plain, sensible, and narrative document, which raises no exciting issues.

The Secretary of the Treasury estimates the revenue for the fiscal year ending June, 1874, at $320,300,000, and the expenses during the same period at $286,600,000, leaving a surplus of $33,700,000. The reduction in taxation since the close of the war he sets down at $300,250,171. The next topic which occupies his attention is the condition of the American carrying-trade, which he declares is very bad, and he pronounces the action of Congress last session, in allowing a drawback on materials used in shipbuilding, to be entirely inadequate to its revival. He thinks there is little chance now of our recovering the Atlantic trade, but alleges that there is an immense field in the Pacific which can be worked with Government aid, which ought to be afforded without delay. If American steamers were run even at a loss on that ocean, he thinks it would give "a wonderful impetus to the agricultural and manufacturing interests of the country." He regrets the condition of our foreign trade. He finds that last year, as for many a year past, the imports have exceeded the exports, and the difference he calls an "adverse balance," but says it has been met "probably by freight on merchandise carried in American vessels, profits on exports made on account of American merchants and shippers, the sale of bonds abroad, and investments in the United States by the inhabitants of other countries." We think this conjecture probably correct, and would suggest to Mr. Boutwell the strong probability that these American merchants, shippers, sellers of bonds, and foreign investors, understood their business as well as anybody in Washington, and would not have done what they did unless money was to be made by it, and that all weeping over the "adverse balance" is therefore time wasted. The late Mr. Greeley wailed over "this adverse balance" annually for twenty years, and prophesied ruin as the result of it, but somehow the country kept prospering all the same.

With regard to the future, Mr. Boutwell recommends persistence in the policy of protection for native industry, on the ground that "for the purposes of government, political economy must be national, not cosmopolitan," whatever that may mean. He recommends that the circulation of the national banks should be fixed and limited, and that power to change the volume of the circulation within limits fixed by law should be left with the Treasury, both for its own protection, now that its currency receipts are becoming low, and for the supply of facilities for "moving the crops" every fall—all issues made for this latter purpose, however, to be withdrawn as soon as the object is attained. Mr. Boutwell opposes firmly all permanent increase of the paper currency, but he also opposes all contraction of it, and relies on the increase in its value, or on the demand for it caused by the increase in trade and population, especially at the South and on the Pacific coast, to bring it up to the level of coin, and make a return to specie payments possible—a view which, we think, finds more acceptance with the public than any other.

The Commissioner of Internal Revenue reports a gradual decrease of revenue, from $185,000,000 in 1870 to $131,000,000 in

1872. This decrease is owing to the remission of taxes by Congress. The general receipts for the last fiscal year exceeded the estimates by $6,770,946 78. "It is impossible to state with certainty, at this early day, how much the receipts for the current fiscal year will be affected by the modified provisions of the law. From the best information now attainable, it is estimated that they will not fall far short, under the present law, of $110,000,000."

The Postmaster-General finds that the expenses of his Department do not decrease. The excess of expenditures over receipts for the past fiscal year were between four and five millions. The estimated deficiency for next year is over six millions. Owing to ten snow blockades last year, the number of days on which no New York mails were received at San Francisco was in December 19, in January 24, in February 25, in March 10, the case being very much the same the other way. Excepting the period of the snow blockades, however, there was little variation from "the degree of regularity noted in previous reports." The total number of letters exchanged with foreign countries during the year was over 24,000,000, an increase of 4,000,000 over the number reported for 1871. Of this number about half were sent to and half from the United States. $48,000,000 passed through the money-order offices during the year. The franking privilege the Postmaster now, as always, thinks ought to be abolished; he thinks it safe to say that the quantity of free matter during the late Presidential canvass so largely increased that, if there had been no franking privileges, the entire deficiency of the year would have been covered. The most interesting portion of the report is that relating to the telegraph system, which the Postmaster desires to see in the hands of the Government. He thinks the cost of the construction of an entirely new system of wires would be about $12,000,000, and that they could be worked to the pecuniary advantage of the Government. Among the objections to the present régime he mentions the undoubted fact that the Press Association and the telegraph companies by their private agreements create a monopoly of news, to the great injury of the public, and also that the "free pass" system—very much like the franking privilege—increases the general expense. "About seven per cent. of the entire telegraphing of the country is done without apparent remuneration."

The Secretary of the Interior reports that Indian affairs have on the whole a favorable look. The President's policy has worked well. Many if not most of the causes which have given rise to Indian hostilities in the past have ceased to exist, the Indians are becoming convinced of the entire good faith of the Government, and with the disappearance of game are becoming also convinced of the necessity of civilization. Twenty tribes in the Southern Superintendency during the past four years increased their valuation from $751,183 in 1868 to $1,870,285 in 1872. The Secretary reports an excess of receipts over expenditures in the Patent Office; thinks the Office ought to be separated from the Interior Department; advises an authorized edition of a statistical atlas of the United States, based on the results of the ninth census, for general distribution among libraries, societies, colleges, and academies, for the promotion of "that higher kind of political education which has heretofore been so greatly neglected in this country, but towards which the attention of the general public, as well as of instructors and students, is now being turned with the most lively interest, etc.," and suggests the value of a quintennial census. The reports of the Pension Bureau and of the Bureau of Statistics are not important. The regular annual outlay for pensions is estimated at $30,000,000 for some time to come. Mr. Young, the chief of the Statistical Bureau, has "visited Europe," but he does not seem to have acquired much information of value while abroad.

The report of the Secretary of the Navy is mainly a statement of the defects of that branch of the service. The "notorious unreadiness to meet any sudden hostile emergency," the necessity of building ships, the need of a careful study of the torpedo system of harbor defence, are some of the topics on which the report dwells. The Army Report is even more empty. Discipline and study at West Point are said to be in a satisfactory condition, but a large percentage of the candidates for admission to the Academy fail in their preliminary examination. The explanation of this is, that they are recommended for examination by members of Congress. The Department accounts show a reduction of about half a million in expenses. We refer elsewhere to the Signal Office Report.

Preparations seem to be making in Congress, as well as elsewhere, for an "era of good feeling." The tendency in this direction showed itself at the opening of the House by the refusal to excuse Mr. Banks from serving as chairman of the Committee on Foreign Relations—a position for which he urged his unfitness, owing to his want of political sympathy with the Administration. He is to remain, however, and the country will, therefore, have the benefit, until March 4, of his profound knowledge of foreign countries, his intimate acquaintance with international law, his lofty superiority to demagogical wiles and ways. After that he will pass into a private station. In the Senate, the majority is said to be by no means so magnanimous, and there is, according to the organ of the Administration, to be punishment in that body for "political apostasy." Mr. Trumbull, by far the ablest lawyer in the Senate, is to be displaced from the chairmanship of the Judiciary Committee, and Mr. Edmunds, who is also able, is to take his place. Speaker Blaine has demanded an investigation into the "Crédit Mobilier slander," which is right. But no legislation of any moment is talked of, and in this Congress there will probably be none. A desperate effort will, however, doubtless be made to turn public attention away from the sins and abuses of Congress itself, such as the corruption of the civil service, and the franking privilege, and its private-bill legislation, which are the crying evils of the day, and from which the people should by no means suffer their eyes to be diverted by buncombe.

If the prophet Ezekiel were now alive he would have had no difficulty in prophesying weeks ahead exactly such a paragraph as we found on Monday morning in the Washington correspondence of one of the morning papers. We could have prophesied it ourselves, in fact. "Some Western members who have arrived," says the letter-writer, "express dissatisfaction with the civil-service outlook. They insist that it is impossible to maintain party organization if such a system is to be inaugurated. They go so far as to say that the late campaign in their part of the country, and especially in Illinois, was to a large extent on the basis of opposition to the civil-service reform technicalities, which were alone supported by the Liberals, and they claim that the verdict of the ballot is against the system. Some are so radical in their opposition as to declare that they will use their best endeavors to prevent the operation of these rules in future appointments which require the confirmation of the Senate. It is not unlikely that legislation more specifically defining and limiting the civil-service regulations will be attempted early." There is precious little doubt that the general belief of the wheel-horse is accurately expressed in this delightful paragraph; and there need be little that the prediction with which it closes will be fulfilled. We cannot be made to believe that the Republican party managers, when they constructed their platform with a reform "plank" in it, cared two straws for real reform, or meant more than a juggle; nor can we be made to believe, by all the speeches made in the campaign or at any other time, that the average Congressman means to do anything more than cheat the public when he pretends an interest in getting Mr. Chester A. Arthur, for instance, out of our Custom-house, in favor of Mr. Clinch. Mr. Arthur "worked" as far as his brains and means extended, and the majority of the New York delegation wishes to keep him there, or else it wishes to scalp him, decapitate him, and put some other gentleman, who also "worked," in his place. Of Mr. Clinch there is no heed, we may

be perfectly sure. But a good deal has been gained nevertheless. The managers *were* compelled to begin juggling; the party press *is* committed; the public is reasonably well awake to the need of the measure and is becoming more so; and the politicians, after they have derided its impracticability for a few years more, will as usual prostrate themselves and proceed to obedience.

The most striking event of the week has been the death of Mr. Horace Greeley, who, both as editor of the *Tribune* and more recently as a candidate for the Presidency, has occupied for many years so large a share of the public attention. The close of his career has been so pathetic in many of its incidents as to excite deep and general sympathy, and to incline the hearts even of his opponents to peace and forgiveness, and it will therefore probably contribute powerfully to the production of a year of political calm. The leading events of his life are well known to all our readers, and our own judgment on his place in American politics and journalism has been too frequently expressed of late to make any recurrence to the subject necessary. In reading the glowing eulogies passed on his life and works, however, by some of our contemporaries, one can hardly help asking why these encomiums which are now poured out so freely should have been reserved for "the dull, cold ear of death"—why some of this ardent appreciation of Mr. Greeley's talents, and character, and services, if not proffered to him directly in his lifetime, should not have been allowed at least to make denunciation of him decent and restrained? The mysteries of "journalism" are numerous and deep, but we think the most puzzling is that which makes journalists wail or chant praises, like "keeners" at an Irish funeral, over the coffin of a dead brother, whom, in the days of his strength and activity, they never wearied of describing as a knave, a liar, and a cheat. Self-respect, at least, seems to require either that journalistic controversies, *inter vivos*, should be conducted with greater decency and toleration, or journalistic lamentations after death be made more sober.

We beg now to suggest, with great meekness, to the "cads," "liars," "slanderers," "thieves," "lunatics," "rowdies," "idiots," and "crétins," who, according to their own account, conduct the metropolitan press, whether, its three founders being dead, it would not be well for the new generation to take this occasion of putting off the old Adam, and to try hereafter to refrain from mutual abuse, to confine themselves to the discussion of public questions and the supply of news, and to exclude rigidly from their columns such barbarous outbreaks of commercial rivalry and hatred as that in which the New York *Times* pointed out with ill-concealed glee, the day after Mr. Greeley's death, the damaging effect his loss would have on the *Tribune* property. The Christian public which reads such things as this, and as the *Tribune's* warnings to Gen. Dix that he was too old to work and that the grave was yawning for him, begins to look on editors as savages, whom civilized men have to endure, but who are as treacherous and unscrupulous and unsavory as Roman Nose or Hole-in-the-Day.

We observe some indications that there may be a revival of the Santo Domingo business this winter, although the President's message says nothing about it, and although, as we believe, he has in good faith abandoned it. The Baltimore *American*, a highly Administrationist journal, has recently been defending the annexation scheme at considerable length, if not with much of strength. It says that perhaps the reason why the Boston papers oppose the annexation is because Boston merchants sell goods to the islanders at extravagant prices. One "solid man," it says, who has or had a store in a San Domingo town, it once knew to buy a lot of molasses from a Dominican, who had carried it many miles, and who got for it the absurdly small sum of four or five cents a gallon. The transaction did not end here, for when the San Dominican wanted his money, he was politely informed that he must take his pay in soap; that it was a transaction in the nature of barter. He declined, but the Boston man or his agent, whichever it was, was firm, and the San Domingo man had to pick up the soap and trudge home again with a heavy heart over the many miles of his "happy morning track," as Mr. Birdofredum Sawin says. This man and his relatives and friends and countrymen are all orderly citizens, the *American* says, pious, clean, courteous, and, we believe, industrious, good-natured, free, and independent. The molasses-and-soap affair, however, shows, we fear, that a people which carries kegs of molasses for twenty miles, and trades it off for an inadequate supply of undesired or detested soap, is not fit for admission into this American Union; it has not roads enough, industries enough, education enough, or intelligence and enterprise enough. One argument there is why we should annex this mass of ignorance to our Republic, of which intelligence in the voter is the sole hope of salvation and continuance, and that is, that military men, figuring out the problem of a foreign war, see in San Domingo a most desirable place of strength and coaling station. It is their business to consider the problem. But the country looks at the island from another point of view, feels itself strong, and certainly wants neither provinces to be ruled by proconsuls, nor States inhabited by illiterate semi-barbarians. There is "money in it," however, beyond a doubt, and we shall probably hear more of the plan.

The new commercial treaty between France and England has at last been concluded and published, but all the trouble does not as yet seem to be over. The preamble acknowledges that the instrument has been rendered necessary by the financial difficulties of France, which all acknowledge to be a fair ground for readjustment of duties. The free-traders of the Manchester school are, however, disgusted by the increase of duties on English goods, which the English negotiators maintain is only from 2 to 5 per cent., but some of the manufacturers hold that the Treaty may be so interpreted as to make the increase as high as 100 per cent. in some cases. England gets the differential duty taken off her shipping, obtains the right of putting an export duty on coal, and of putting the light wines of France on the same footing with the heavy wines of Spain, Portugal, and Italy. But she submits to the duty on raw materials, and the compensatory duty on foreign manufactures, although it is all but certain that Germany, Switzerland, Holland, and Italy, with which France has also commercial treaties, will not submit to it, and England will thus be placed under a differential burden until 1876, the date at which these treaties expire.

The text of M. Thiers's Message to the Assembly has reached this country, but, unlike President Grant's, it was a speech delivered by M. Thiers himself, and, instead of being listened to in respectful silence, it was interrupted by the wildest plaudits, objections, and protestations. He began by describing the financial situation, gave some account of the commercial treaty with England, and then took up the political situation, and produced tremendous uproar. He declared himself unequivocally in favor of a republic. "The Republic," he said, "exists; it is the legal government of the country. To wish for anything else would be to wish for a great revolution, the most formidable one of all." But it ought to be a Conservative Republic, or it cannot exist. "France cannot live in continuous alarms." The Republic, too, "inspired not only France but the whole world with confidence; and if France is peaceful under a Republic, she will alienate no one; while, if she is agitated under a tottering monarchy, she will see a void created around her." The Radicals were highly gratified with the message, but the Conservatives received the general conclusions at the close of it in gloomy silence, and appointed a committee to prepare a reply to it. They are very much opposed to M. Thiers's desire for immediate action, hoping that as long as the *ad interim* government lasts something may turn up that will lead to the establishment of a monarchy. Hence the recent and partially successful attempts to reduce M. Thiers to subjection, or rather to get rid of his domination over the Assembly.

THE CRISIS IN FRANCE.

THE new "crisis" through which France is passing is one which has for some time back been regarded as inevitable by most competent observers. Why it was inevitable may be readily understood by anybody who will give himself the trouble to read the series of letters published by M. Laboulaye during the last half-year in the *Journal des Débats*, and now reissued by him in a collected form.* M. Laboulaye is a gentleman whose judgment some persons may not consider sound, and with whose opinions as to the kind of government France requires many persons may not agree, but it is quite certain he thoroughly understands the condition of the French mind, and knows exactly what stage the French people have reached in their political education. The object which M. Laboulaye has in view is very much the same as that which the authors of the *Federalist* had in view in writing their series of papers. France has just passed through a political revolution and a bloody war, and is living under an *ad interim* government, and has before her the task of framing a permanent one. This task, too, in her case, as in that of the United States under the Confederation, is rendered the more difficult by great diversity of sentiment not only as to the form of the government to be framed, but as to the nature of the dangers to be guarded against. If we keep all this in remembrance, and keep the *Federalist* open beside us, we shall find M. Laboulaye's letters in the highest degree interesting and instructive, and yet full of discouragement as to the future of France. The authors of the *Federalist*, great as were the obstacles which they found in their path, were addressing a people who had for six hundred years seen a fundamental written law in actual working, as a positive restraint on the powers of government; who had had long practice in the transaction of business through the action of deliberative assemblies; who were as familiar with the doctrine of governmental responsibility to the people, and with the limitations on the functions of legislative bodies, as with their A B C; to whom the *habeas corpus* was as commonplace a right as the right of locomotion; and to whom the presence of large standing armies in time of peace would have been nearly as strange, outlandish, and offensive as combats of gladiators in the arena; and who could hardly conceive of a public officer exempt from responsibility before the courts in a *bonâ-fide* suit brought by a private citizen. They, therefore, in all their recommendations and objections, constantly made deductions from certain great principles which they did not need to explain or defend, and, in fact, had simply to occupy themselves throughout with proving that certain administrative machinery of their own contrivance would produce certain great results, about the importance and necessity of which all were agreed.

Turning to M. Laboulaye, we find he can take nothing for granted, and nothing for understood. His pamphlet is a rudimentary exposition, which one would hardly use in an American high-school. He has to show that a written constitution is a good thing; that it is not, however, a machine for making men wise and virtuous, as the men of 1793 thought, but a machine by which a free people impose limits on the powers of their rulers, and regulate their responsibility and the relations of the different branches of the administration to each other; that before making your constitution, you must determine the form of your government; that a political party in a free state is "a group of citizens, friendly to the laws, who contend for influence and power within the limits of the constitution"; and not, as in France, a "band of ruined, restless, discontented men," seeking the destruction of "everything that exists in order to establish the government of their choice on the ruins of the one they have overthrown"; that the will of the people is the source of all law, and that only those who have been chosen by the people for that purpose have a right to make or amend constitutions; that a legislative assembly is not and ought not to act as a constitutional convention, and that a constitutional convention has no right to put a constitution in force without submitting it to a popular vote, and so on. In short, if one should take one of the intelligent Japanese now in this country, and ascertain and put down what one would have to tell him, in order to explain to him the nature and working of the American Government, he would find that he had composed a little treatise closely resembling that by which the French publicist seeks to prepare the French public for the work of providing a permanent political organization—and this after ten revolutions within a single century, and actual experience within the memory of men now living of three republics, two empires, and one limited monarchy.

Bearing all this in mind, let us look at the crisis now pending at Versailles. To understand it, one has to go back a little. The close of the war found the Government of France in the sole possession of a young lawyer, possessing not a particle of political experience of any kind, and only known to the people as a person who had committed a series of absurdities as a self-constituted director of military operations. His theory and that of his adherents was, that a republic was the natural and divinely ordained government of the French people, and that, therefore, anybody who could establish it by any means within his reach, forcible or other, was bound to do so, no matter what the wishes of the people might be; or, in other words, the theory, *mutatis mutandis*, of the Legitimists. As this doctrine did not meet with general acceptance, and the Assembly which was elected at the cessation of hostilities was overwhelmingly conservative, an agreement was entered into with the Radicals, known as the "Pact of Bordeaux," that the settlement of the form of government should be postponed till after the country had been released from the clutches and presence of the invaders. On this understanding the Assembly elected M. Thiers chief executive officer, and gave him the title of President of the French Republic—meaning by Republic simply absence of a king. Of course, while the payment of the indemnity was a source of anxiety, the taxation formed the main subject of interest, and the Assembly devoted itself to this almost exclusively, but under M. Thiers's active superintendence, to whom it yielded on nearly every point on which he made a stand. In the meantime, the Monarchists steadily lost ground. The Comte de Chambord issued several preposterous manifestoes, which disgusted the country and disheartened the Legitimists; the Orleans Princes refused to push their fortunes by any active exertions, and played the rôle of modest, unpretending, and patriotic country gentlemen; and Gambetta and the Radicals became studiously silent and moderate, and gave M. Thiers a pretty steady support. This reassured the peasantry, and gradually reconciled them to the Republic. They saw order restored in its name, the greater part of the indemnity paid off, and the army reorganized. This was as much as could be expected from any government; and when M. Thiers declared himself for a republic, as that form "which divided France the least," the battle seemed half won.

When things had reached this pass, the Radicals thought the time for action had come; that they were now sure of their game; that there was no use in delaying any longer the formal establishment of the Republic; and that for this purpose the Assembly, which was in the main hostile to them, should be dissolved, and a Constituent Assembly chosen, to frame a Republican constitution, or else that the Republic should be proclaimed without more ado by M. Thiers, and the army used to chastise anybody who objected, including the Assembly, whom Gambetta has pronounced "a herd of wild beasts." To prepare for this, M. Gambetta took the stump in the provinces, and delivered several violently incendiary harangues, which threw the Conservatives into a fever of alarm, which turned into irritation when it was found that M. Thiers listened to the denunciations with great calm, and into positive hostility to him when it came out soon after that he was in favor of the definitive establishment of the Republic at once, with himself as President for a term of four years. Curiously enough, too, the Radicals about the same time suddenly came to the conclusion that they had followed

* "Lettres Politiques: Esquisse d'une Constitution républicaine; suivie d'un Projet de Constitution. Par Edouard Laboulaye." F. W. Christern, New York.

M. Thiers too far, and that they were being led into a trap, and that any republic he might set up would be too conservative. So they raised the cry that nothing definitive should be accepted from the present Chamber, that there must be an appeal to the country. He had thus the combined opposition of the two sides of the Chamber to contend with, though each opposed him for a different reason, and the uncertainty of both as to what his real policy will be has finally led to the adverse vote of last week and the resignation of the ministers. In the meantime, M. Thiers has refrained from using his old threat of resignation and has induced the ministers to withdraw theirs, and has plunged into the game of intrigue now being played at Versailles, and of which no man knows or pretends to know the issue. The most salient fact of the situation is the increasing boldness of the Monarchists and Conservatives, under the influence, it is said, of the certainty that the Germans will not permit the establishment of any form of government that is too democratic. This, as we state it, may be a trifling matter, and yet a moment's reflection shows it to be one of the signs of the demoralization for which no speedy cure has yet been found. When parties grow courageous in reliance on the bayonets of a foreign invader, the country is very sick—sick nigh unto death.

"PRIVATE-BILL LEGISLATION."

A PHILADELPHIAN correspondent requests that we will bring to the attention of constitution-makers in Pennsylvania, and of reformers in and around Congress, what is known as the English system of Private-Bill Legislation. Here is a reform, as our correspondent urges, which does not need a Constitutional amendment, though it may be made a requirement by the Constitution, but can be put in operation by Congress as completely as by Parliament. "Considering," says our correspondent, "that Parliament is so largely controlled by an aristocracy of landed proprietors, and that Congress is endowed with no inconsiderable number of 'watch-dogs,' how comes it that England has a system contrived to do, and which in effect does, most exact justice in matters requiring special legislation, while the overtaxed American people find their public property given away for railway depots, and their money disbursed in liquidation of Chorpenning claims, with no better excuse offered than that their legislators and 'watch-dogs' did not in fact know what they were about?"

There is, however, in the system to which our correspondent alludes something beyond a mere system; and instead of its being a clever invention to curb an assemblage of unprincipled men, it is the outcropping of a principle which exacts integrity and justice in matters of legislation, and subordinates the legislature to the general welfare of society. As we have before pointed out, the legislative system in other countries has been improving during the last thirty years, while our own has been growing weaker and worse. And not only this, but during the same period, while Congress has been exceeding steadily its constitutional limits, interfering with the judiciary, controlling the executive, usurping the distribution of public offices, there has been going on a remarkable self-renunciation of powers and privileges on the part of members of Parliament, and this without constitutional conventions to insist upon it, nor any better reason given than that the welfare of the country they legislate for seemed to demand it.

In the first place, the members of Parliament voluntarily gave up as a sacrifice toward cheap postage for the masses the franking privilege, which our members of Congress have, against the reiterated wish of the public, and to the manifest injury of the postal service, retained as one of their personal perquisites. The reform was less needed there than here, for the frauds and opportunities to defraud were not nearly so many as with us. The surrender, too, was a much greater sacrifice for British legislators to make. They receive no pay and have no *Congressional Globe* to publish all their remarks at the public expense, and furnish to them printed copies of speeches they have never made, for distribution among their constituents; neither have they executive patronage at their disposal; nor can they take post-offices and custom-houses to buy votes with; nor levy contributions on poor clerks towards paying election expenses.

In the next place, the members gave up the privilege of bribing and being bribed by places in the public service. The evil was never so great in England as in America, for rotation in office had not been invented, and there was not the same hungry horde of expectants waiting to be fed. Turning a maimed soldier out of a post-office to make way for a member's political retainer, as Mr. Dawes did at Westfield, would probably have been deemed so cruel and mean a piece of interference as to ruin a member with any ordinarily decent constituency. But Parliament gave up whatever power or influence it had over places and established the competitive system, not a perfect system nor perhaps the best in the world, but incomparably better than a system which enables the President to buy the member and the member to buy the constituent. The transfer of this power has been so complete that Mr. Mundella was able to tell his American auditors at Cooper Institute that he, a member of Parliament, agreeing with the administration, had not power enough to procure the appointment of a tide-waiter, and his attempt to do so would be thought an unwarrantable interference.

The last illustration of this principle of voluntary relinquishment of power by Parliament is probably the most remarkable that can be found in legislative history. It is the surrender by the House of Commons of the privilege of being the judge of the election of its own members; the transfer of that power to the judiciary, and the voluntary determination of the House to become in that particular the mere ministerial officer of the court which might be invested with jurisdiction of a contested case. This act of Parliament did not receive the attention it deserved until the extraordinary decision of Mr. Justice Keogh last June. The decision (we believe the first under the act) was fiercely attacked by some of the Irish members, who demanded an opportunity to review and if possible reverse the judgment. Speaking for the Government, Mr. Gladstone replied: "It appears to us, in examining this section of the act, that it is our duty neither to deny nor to delay justice. My right honorable friend behind me has pointed out that *we have parted with our powers* as an independent portion of the legislature in this matter. We are called upon to perform ministerial duties, *and must perform them* with the same exactitude, and I may say *with the same submission and obedience* to the law, as the humblest agent of the law." This bringing down the power of Parliament as regards one of its highest privileges to submission to the decree of a single judge, and of an exceedingly eccentric and, in language, intemperate judge besides, and likening the House of Commons to the humblest ministerial agent of the law, is certainly going a great way, and in some places might be set down as so much political claptrap. But Mr. Disraeli immediately rose and added, that the proposition of the Irish member "was in fact a proposition that there shall be an appeal to this House from the decision of the court"; in reply to which Mr. Disraeli begged "to remind the House that the question whether there should be an appeal or not was brought before the notice of Parliament, and that it was definitely settled that appeals should not be made." The act being thus construed by the two opposing chiefs, it may be taken as settled that Parliament has parted with the right to judge of the election of members of the House of Commons, and transferred that part of its authority to the department of Government best fitted to conduct litigation and dispense justice. Contested cases in Congress are becoming a serious item of public expense, involving always the payment of both contestants, of their counsel and witnesses, and resulting generally in a decision based on party predilection. Yet inasmuch as the Constitution makes each House the judge of the election of its own members, the power is undoubtedly one that cannot be transferred to the courts without a change in the Constitution.

It is not possible in this article to review the entire system of modern English legislation, nor even to advert to the various

methods that have been devised to legislate wisely and justly, with regard to matters of detail, and with regard to general and comprehensive systems. The ordinary reader of a newspaper must know that Parliament does all the legislative work for England, Scotland, and Ireland, which in this country is distributed between Congress and forty-seven State and Territorial Legislatures; that it is less in arrears with its work than Congress; and that its enquiries constantly relate to matters of the smallest detail. Yet its general statutes are drawn with considerable particularity and care, and its private acts are so preceded by a thorough examination of the facts that they are accepted by the public at large as the well-considered award of an impartial, if not infallible, umpire. This last branch, known as "private-bill legislation," we will sketch briefly as an illustration of what has been done elsewhere, and may be accomplished here.

The first step to be taken toward procuring the passage of a private act by Parliament is for the party to draft his own bill. It must be preceded by a preamble which shall fully and correctly sketch its object and extent. The preamble must be published in certain newspapers, and the bill must be filed a specified time before the beginning of the session. The only provision we have to contrast with this is that clause in some State constitutions which requires private and local acts to be confined to one object, to be stated in the title. But as such a bill may be introduced at any stage of a session, and passed in a few days, our constitutional safeguard amounts to very poor notice for persons adversely interested.

The next noticeable thing is the "court of *locus standi*." Instead of giving one large committee a monopoly of all railroad jobs, and allowing it to be made up of members particularly interested in them, there may be fifty railway committees sitting at the same time (at the last session there were more than thirty), and the most scrupulous care is taken that each shall be absolutely impartial. To that end the "court of *locus standi*"—a sworn committee, we believe, of each House—takes all the railway bills that have been filed and groups them, placing ordinarily four or five bills in a group. It next makes up committees, ordinarily of five members, and assigns a group of bills to each. But no member who is interested favorably or unfavorably in any bill, *or whose constituents are interested*, is competent to serve on the committee. Should he conceal his interest, it would be deemed dishonorable conduct; besides which, any person interested may challenge his right to sit either for his own interest or his constituents, and his impartiality will be determined as we pass upon that of a juror. When at last the committee is made up, it virtually gives to the parties a trial. All its proceedings, down to the absence of members, and their votes upon every question, with all the evidence it receives, is immediately printed and reported to Parliament. If the committee comes to a favorable conclusion, it reports a bill which cannot exceed in its scope the petitioners' preamble. A certain interval must then elapse before the bill can be acted upon, and it will be taken up only in its regular order. In ninety-nine out of a hundred cases the unanimous report of a committee will be accepted as final by all the parties interested. It is such bills which are passed by the Speaker and one or two members in advance of the ordinary business of the House, at the rate of sixty a minute, to the great astonishment of travellers, who are often shocked at such reckless legislation. But if a bill be opposed, a member demanding a vote, the Speaker assigns a day, and the bill is put down upon the "paper" of that day as a part of the regular business of the House. The "paper" is a printed memorandum of all the business which will or can come before the House on that day. It is sent to members at their residence in the morning, on the one hand informing them of what may require their attendance, and on the other cutting away the old excuse of surprise. Thus it will be seen that it is absolutely impossible for a powerful lobby to "rush" a bill through Parliament; and as powerful lobbies cannot live on impossibilities, they do not in fact exist.

Objections to the system find their way into the English newspapers, and there is an occasional call for reform. But the objections go to the cost of the proceedings—the production of evidence, the employment of counsel, and the means which make the system safe and certain; and the grumblers have never counted the cost of employing an Albany lobby-agent, or suffered the wrong of presenting a just claim which Congress will not examine, or examining will not act upon.

THE DEATH OF MR. HORACE GREELEY.

THERE has been something almost tragic about the close of Mr. Greeley's career. After a life of on the whole remarkable success and prosperity, he has fallen under the weight of accumulated misfortunes. Nobody who heard him last April, at the meeting in the Cooper Institute, declare that "he accepted the Cincinnati Convention and its consequences," but must be struck by the illustration of what is called "the irony of fate" which nearly everything that has since occurred affords. His nomination, from whatever point of view we look at it, was undoubtedly a high honor. The manner in which it was received down to the Baltimore Convention was very flattering. Whether it was a proper thing to "beat Grant" or not, that so large and so shrewd a body of his countrymen should have thought Mr. Greeley the man to do it was a great compliment. It found him, too, in possession of all the influence which the successful pursuit of his own calling could give a man—the most powerful editor in the Union, surrounded by friends and admirers, feared or courted by nearly everybody in public life, and in the full enjoyment of widespread popular confidence in his integrity. In six short months he was well-nigh undone. He had endured a humiliating defeat, which seemed to him to indicate the loss of what was his dearest possession, the affection of the American people; he had lost the weight in public affairs which he had built up by thirty years of labor; he saw his property and, as he thought, that of his friends diminished by the attempt to give him a prize which he had in his own estimation fairly earned, and, though last not least, he found his home invaded by death, and one of the strongest of the ties which bind a man to this earth broken. It would not be wonderful if, under these circumstances, the coldest and toughest of men should lie down and die. But Mr. Greeley was neither cold nor tough. He was keenly sensitive both to praise and blame. The applause of even paltry men gladdened him, and their censure stung him. Moreover, he had that intense longing for reputation as a man of action by which men of the closet are so often torn. In spite of all that his writing brought him in reputation, he writhed under the popular belief that he could do nothing but write, and he spent the flower of his years trying to convince the public that it was mistaken about him. It was to this we owed whatever was ostentatious in his devotion to farming and in his interest in the manufacturing industry of the country. It was to this, too, that we owed his keen and lifelong desire for office, and, in part at least, his activity in getting offices for other people. Office-seekers have become in the United States so ridiculous and so contemptible a class, that a man can hardly seek a place in the public service without incurring a certain amount of odium; and perhaps nothing did more damage to Mr. Greeley's reputation than his anxiety to be put in places of trust or dignity. And yet it is doubtful if many men seek office with more respectable motives than his. For pecuniary emolument he cared nothing; but he did pine all his life long for some conspicuous recognition of his capacity for the conduct of affairs, and he never got it. The men who have nominations to bestow either never had confidence enough in his judgment or ability to offer him anything which he would have thought worthy of his expectations when there was the least chance of their choice receiving a popular ratification, or they disliked him, as politicians are apt to dislike an editor in the political arena, as a man who, in having a newspaper at his back, is sure not to play their game fairly. The consequence was that he was constantly irritated by finding how purely professional his influence was, or, in other words, what a mortifying disproportion existed between his editorial and his personal power. The first revelation the public had of the bitterness of his disappointment on this score was caused by the publication of the famous Seward letter, and the surprise it caused was perhaps the highest compliment Mr. Greeley ever received. It showed with what success he had prevented his private griefs from affecting his public action, and people are always ready to forgive ambition as an "infirmity of noble minds," even when they do not feel disposed to reward it.

Unfortunately for Mr. Greeley, however, he never could persuade himself that the public was of the same mind as the politicians regarding his personal capacity. He persisted to the last in believing himself the victim of their envy, hatred, and malice, and in looking with unabated hope to some opportunity of obtaining a verdict on his merits as a man of action in which

his widespread popularity and his long and laborious teachings would fairly tell. The result of the Cincinnati Convention which his friends and emissaries from this city went out to prepare, but which perhaps neither he nor they in the beginning ventured to hope for, seemed to promise him at last the crown and consummation of a life's longings, and he received it with almost childlike joy. The election was therefore a crushing blow. It was not, perhaps, the failure to get the Presidency that was hardest to bear—for this might have been accompanied by such a declaration of his fitness for the Presidency as would have sweetened the remainder of his years—it was the contemptuous greatness of his opponent's majority which was killing. It dissipated the illusion of half a lifetime on the one point on which illusions are dearest—a man's exact place in the estimation of his countrymen. Very few—even of those whose fame rests on the most solid foundation of achievement—ever ask to have this ascertained by a positive test without dread or misgiving, or face the test without a strain which the nerves of old men are often ill fitted to bear. That Mr. Greeley's nerves were unequal to the shock of failure we now know. But it needed no intimate acquaintance with him to see that the card in which he announced, two days after the election, that he would thereafter be a simple editor, would seek office no more, and would confine himself to the production of a candid and judicial-minded paper, must have been written in bitterness of spirit for which this world had no balm.

In addition to the deceptions caused by his editorial influence, Mr. Greeley had others to contend with, more subtle, but not less potent. The position of the editor of a leading daily paper is one which in our time it is hardly possible for the calmest and most candid man to fill without having his judgment of himself perverted by flattery. Our age is intensely commercial; it is not the dry-goods man or the grain merchant only who has goods for sale, but the poet, the orator, the scholar, the philosopher, and the politician. We are all, in a measure, seeking a market for our wares. What we desire, therefore, above all things, is a good advertising medium, or, in other words, a good means of making known to all the world where our store is and what we have to sell. This means the editor of a daily paper can furnish to anybody he pleases. He is consequently the object of unceasing adulation from a crowd of those who shrink from fighting the slow and doubtful battle of life in the open field, and crave the kindly shelter of editorial plaudits, "puffs," and "mentions"; and he finds this adulation offered freely, and by all classes and conditions, without the least reference to his character or talents or antecedents. What wonder if it turns the heads of unworthy men, and begets in them some of the vices of despots—their unscrupulousness, their cruelty, and their impudence; what wonder, too, if it should have thrown off his balance a man like Mr. Greeley, whose head was not strong, whose education was imperfect, and whose self-confidence had been fortified by a brave and successful struggle with adversity.

Of his many private virtues, of his kind-heartedness, his generosity, his sympathy with all forms of suffering and anxiety, we do not need to speak. He has left behind a host of friends who will do full justice to this portion of the subject. His career, too, has little in it to point any moral that is not already trite and familiar. The only lesson we can gather from it with any clearness is the uncertainty of this world, and all that it contains, and the folly of seeking the Presidency. Nobody can hope to follow in his footsteps. He began life as a kind of editor of which he was one of the last specimens, and which will shortly be totally extinct—the editor who fought as the man-at-arms of the party. This kind of work Mr. Greeley did with extraordinary earnestness and vehemence and success—so much success that a modern newspaper finally grew up around him, in spite of him, almost to his surprise, and often to his embarrassment. The changed conditions of journalism, the substitution of the critical for the party view of things, he never wholly accepted, and his frequent personal appearance in his columns, under the signature of "H. G.," hurling defiances at his enemies or exposing their baseness, showed how stifling he found the changed atmosphere. He was fast falling behind his age when he died. New men, and new issues, and new processes, which he either did not understand at all or only understood imperfectly, crowded upon him; and if the dazzling prize of the Presidency had not been held before his eyes, we should probably have witnessed his gradual but certain retirement into well-won repose. Those who opposed him most earnestly must now regret sincerely that in his last hours he should have known the bitterness of believing, what was really not true, that the labors of his life, which were largely devoted to good causes, had not met with the appreciation they merited at the hands of his countrymen. It is for his own sake, as well as that of the public, greatly to be regretted that he should not have lived until the smoke of the late conflict had cleared away.

ENGLAND.—PUBLIC-SCHOOL DISCIPLINE.

London, Nov. 15, 1872.

A CONTROVERSY is now raging in the newspapers which might be found amusing and instructive by any students of our educational system. It was opened by a letter complaining of a case of cruelty at Winchester. There is, it appears, a pleasant practice known in the peculiar dialect of the schools as "tunding." The "præfects," who correspond to what are elsewhere called præpostors, have, it appears, the right to inflict upon younger boys such an amount of thrashing as seems good in their eyes with an instrument known as a "groundash." The slang which grows up at each public school is cherished with warm affection by all who have had the happiness to receive an education within its walls, but it sometimes makes the dispute rather unintelligible to outsiders. Not having had the chance of benefiting by William of Wykeham's foundation, I confess that I do not attach such precise ideas to "tunding" and "groundashes" as might be desirable. I presume, however, that in a free translation one might say that the big boys at Winchester are allowed to beat the little boys with thick sticks. It was stated by the gentleman who opened the dispute that the victim in this case had been so severely punished as to be seriously hurt; and he inferred not unnaturally that the discipline of the school sanctioned what would elsewhere be called tyranny. Little does any one know of the spirit generated at an English public school who fancies that such a charge could be made with impunity. Indignation—not against the tyranny, but against the complainant—thrilled the bosoms of every Winchester boy from one end of the kingdom to the other. Their indignation took the form of a voluminous correspondence in the newspapers. Old men who remember Winchester at the end of the last century, lads who have just become freshmen at the universities, clergymen far away in retired parishes, busy lawyers immersed in business—all found time to protest indignantly against the theory that anything like human infirmity was to be found in one of our oldest, best, and most efficient of schools. Even the pupils of other analogous institutions raised a cry of horror at statements which may seem by remote implication to blame the system of Eton, Harrow, or Rugby. An "Old Public School Disciplinarian," for example, writes to this morning's *Times* in laudation of the great moral effects of the system. A "tunding," he declares, was "severe, but not cruel"; it was administered "with a due sense of responsibility"; it punished some crimes which would otherwise have escaped, and afforded a mild chastisement for others which would have been too severely punished by the higher officials; like mercy, it blessed both the giver and the receiver; it "created good feeling" between juniors and seniors; the older boys regarded themselves as the protectors of the younger; the younger "looked up to the older with feelings of respect and veneration"; the senior who used his authority strictly was more popular than the soft-hearted one who spared the rod; the writer has himself received fifteen cuts from a stick, which, physically, caused him to prefer standing to sitting for two days, but morally "did him all the good in the world." Leave the boys to administer justice amongst themselves, he exclaims in a glowing peroration, "and, instead of becoming weak milksops, they will be fitting themselves to be Englishmen like their ancestors, confident in themselves and others."

Great are the virtues of a "groundash"! Probably readers unfamiliar with our public schools will regard this as a nonsensical exaggeration of the doctrines of muscular Christianity. And, certainly, I can say from my own recollections that "respect and veneration" are not precisely the feelings which were inspired in all bosoms by the awful authority of the big boys at a public school. Apart from such damaging defences, the common-sense of the matter seems to be simple, and several of the defenders of the system express themselves in more reasonable language. I need not prove to you that English public schools formerly gave license to gross brutality. Your readers know what Cowper had to say on the subject, and a very accurate picture of the more modern system is given in the beginning of *Vanity Fair*. Thirty years ago, as I have too good reason to know, a sensitive and delicate boy, even at one of our best schools, had to suffer cruelly from the rough discipline, which was often brutal, though seldom intentionally cruel. Put several hundred lads of from nine to nineteen together, and allow the big ones to thrash the little ones, and let the supervision of the masters be palpably inadequate, and it is easy to guess at the results. Only that dogged loyalty to their schools which is a characteristic product of the system—and proves, by the way, that it has some good points—could lead any one to overlook the facts. No Eton boy, however, dares to say that he disliked Eton; such an admission is felt to be a kind of imputation on his character; and the bitterest political toryism is faint as compared with the dogged conservatism which blinds the man to every fault in the favorite place of his childhood. The victim of the present injustice writes himself to

the *Times* to say that he was not much hurt; that he could play football two days after his punishment; and that the punishment, though excessive, was not inflicted out of wanton brutality, but in consequence of a genuine mistake of the præfect's. If a lad likes to be thrashed, it is hard to oppose his tastes; and yet, as I have said, the brutality of old days was undoubtedly great, and I do not believe that it has yet disappeared as completely as might be wished. Everybody knows Dr. Arnold's solution of the difficulty, as described in the graphic pages of "Tom Brown." The essence of his plan was to allow the boys to exercise their old rule, but to endeavor to impress them with a sense of responsibility in its exercise. I confess that I have found it rather hard to sympathize with the more idolatrous worshippers of Dr. Arnold; perhaps because corrupt human nature is apt to revolt against the most excellent persons when they are too fond of flourishing their high moral tone in your face. Dr. Arnold, however, did something to improve the public-school spirit, and since his day the old brutality has progressively diminished. I believe that even the sacred old custom of fighting has been allowed to fall into desuetude by the rising generation; and our descendants will be in imminent danger of becoming "milksops" if that fate is in store for every one who has not had practical instruction in the noble art of self-defence. So long, however, as English public schools are managed on the present system, or on anything like it, some modification of Dr. Arnold's system must be admitted. So much liberty is allowed to the boys that the only alternative to legalizing the authority of the sixth form is to allow brute force to have its own way. It is inevitable, in short, that the præpostors or præfects should have considerable power; whilst a good school system would take all possible precautions against its possible abuse. It is very questionable, for example, whether the præpostors should be allowed to administer corporal punishment without the authority of a master, or to inflict it in any but moderate doses. A powerful lad with a tough ash stick in his hand does not always calculate to a nicety the power of endurance of a delicate child; and the strong *esprit de corps* of the school makes any appeal to the higher powers unpopular and perhaps impracticable. With proper precautions, any gross tyranny may be suppressed, and I fully believe that it is, in fact, very rare at the great schools; but constant attention is required to see that boys of eighteen and nineteen have a sufficient sense of their responsibility, and the radical extirpation of bullying is by no means an easy task. There are, moreover, other very serious evils which occasionally show themselves at these great schools, with their lax discipline, to which I cannot do more than allude. The preservation of a good moral tone depends very greatly upon the character of the masters, where so much more dependence is placed upon moral influence than upon direct supervision.

With all its faults, I believe the English public-school system to be more healthy than the excessive *espionage* encouraged in France. In truth, its most prominent defect is of a different kind. One is more apt to complain of the happiness than of the misery of the boys. At Eton, for example, there are about 800 lads of different ages, the great majority of whom enjoy themselves exceedingly, and are very fine healthy animals. The masters are altogether too few in number to be able to look after them in detail; and the consequence is that the boys make their own public opinion very much for themselves. It need not be said that the current of public opinion under such circumstances runs very strongly in favor of rowing and cricket as compared with classical study. Some of the masters do their best to encourage a tendency already too strong. In my time, a master scarcely condescended to take any interest in our sports. At the present day, some of the masters rival professional trainers, and make it their highest aim—an aim in which, to do them justice, they have met with great success—to send a good boat to Henley regatta and a good "eleven" to Lord's cricket-ground. The effect of open competition for all kinds of scholarships and public offices has been curious and not precisely what its advocates expected. It has certainly not stimulated the intellectual activity in the school at large. The foundation at Eton supports about seventy boys; there is a severe competition amongst children of thirteen or fourteen to gain admission, and afterwards to gain the prizes which are thrown open to them at the universities. These seventy boys constitute a kind of intellectual *élite*, who have distinguished themselves highly at Cambridge and elsewhere. But they do not set the tone of the school. The "Oppidans," as the other boys are called, consider themselves to have a certain social superiority, though this feeling is weaker than of old, and more decidedly revenge themselves for their intellectual inferiority by prizing mere athletic excellence at an absurd rate. The general tendency of the school is more strongly than ever in favor of every kind of sport; rowing, cricketing, and running are regarded with warmer enthusiasm than the old fetish of Latin-verse writing. Many, perhaps most, of the masters see the evil and struggle against it; others, as I have said, give way to the current; but in one way or other, it can hardly be doubted that muscular Christianity, or Christian muscularity, or, more accurately, muscularity pure and simple, is rampant in our great schools, though I am happy to say that it is comparatively discredited elsewhere. Doubtless there will come a reaction in time, but the great liberty allowed to the boys makes any change difficult. One symptom of this state of things is curious. Boys who wish to enter the public offices, or the army, or the Indian civil service, might be expected by outsiders to seek for a good preparatory training at our best schools. To some extent they do so, but very few of them receive their whole training there. A new profession has sprung up, known by the significant name of cramming. I happen, for example, to know a boy who was in a good position at one of our best public schools who wishes to obtain an Indian appointment. He does not think for a moment of entering for the prize on the strength of his school-teaching, though he is a very promising scholar. He comes up to London and puts himself for a year under a "crammer." In that time, he has a course of moral and mental philosophy, modern languages, mathematics, and other subjects drilled into him, by the most approved methods, as a necessary supplement to what he has learnt at school. The crammers are often good teachers, and possibly my young friend may acquire some useful knowledge in his year of training. But this system of drafting off the most industrious lad to be filled with such knowledge as may pay in an examination, instead of being systematically educated with a view to his intellectual and moral development, is of doubtful benefit to him, except in so far as it will get him a good salary, and is certainly a very unsatisfactory element in our general system. Most lads are strongly tempted to pass their school-life in comparative idleness, and make up for it by being crammed, like a Strassburg goose, during a brief period of training for an examination. The influence on the schools is certainly unhealthy, and gives an additional impulse to the excessive devotion to athletic amusements. We have still much to learn; though it may be hoped that the evils which I have noticed are gradually receiving attention.

Correspondence.

THE WRECK OF THE *METIS* ON RHODE ISLAND SHORE.

To the Editor of the Nation:

Sir: Your aid is asked in reviving a very sad story to remedy what to all who have heard of it sounds like a cruel injustice.

On the 30th August last, the *Metis*, with 180 souls, more or less, on board, was wrecked off Watch Hill. There has been a public enquiry, a public verdict of culpability, and the disaster seems at an end. Do the survivors and the friends of those who perished so lamentably in the rage of waves, as well as the public at large, agree to this conclusion? Be that as it may, you, sir, as a leader of public opinion, public honor, and public intelligence, are solicited to disseminate this plain narrative by a mere bystander. John Harvey, fisherman, of Watch Hill, and Courtland Gavitt, of Westerly, started on that 30th August, after hard labors on the shore in rescuing the drowning people, at about half-past eight in the morning, with five comrades, in a "seine fishing-boat," to pick up the unfortunate strugglers in the sea who were despairing of reaching the land. It was blowing hard; the sea was terrific; no such "sand waves" were ever remembered.

The boat was comparatively a poor frail craft for their labors, but these seven men saved fifteen lives, and brought six bodies out of the fury of the sea. Three were found on a skylight, and "the Judge's son," a boy supposed to be dead, was laid across the thwarts of the boat and rubbed back to life. The boat escaped the peril of being stove in against the revenue cutter *Moccasin*, which received those saved and those drowned.

These men, Harvey and Gavitt, and their mates, returned to Watch Hill after spending eleven hours in their terrible task. Some had not tasted food or refreshment for twenty-four hours; some had stripped themselves to their shirts and pantaloons to clothe the wretched whom they had rescued from death. Has there been any public or private acknowledgment, thanks, recompense, reward, or testimonial? Harvey, as captain of the boat, and Gavitt, as his second, acted entirely of their own free will; no one suggested their daring deed to them.

Congratulation and commendation, loud and long prolonged enough, came to the landlords of the Watch Hill hotels. They had friends on the "Providence newspapers" to sing their praises. Charity of the kind they gave is frequently, and was in this case, an admirable advertisement. But these working fishermen, competing in their miserable crowded boat with the life-boat in its noble labors, who has thought to pay the slightest notice to them?

Not even one of the survivors picked up by the seine-boat has cared to

learn who saved him or her. A large reward was offered for the portmanteau of the jeweller who was drowned on board the *Metis*, but was a dime paid for *his body* by his partners, his relatives, or his friends? Sir, is not this shocking? Is it not inhuman? Is it not a disgrace to the Steamboat Company, to the local authorities, to the general public, as well as the ungrateful, heedless creatures whom Harvey and Gavitt and their companions saved out of an awful shipwreck and sudden death? I am sure you will agree with me that this is not a case where "courage should be its own reward."

Yours respectfully, VIATOR.

Notes.

A SECOND volume of Mr. Horace Howard Furness's New Variorum Shakespeare—Macbeth—will shortly be issued by J. B. Lippincott & Co.——The library of the University of Wisconsin at Madison has just received about four hundred volumes from Norway, the result of a concert given for the purpose last May by Ole Bull. It already had upwards of two hundred Norwegian books, and the collection is now a fine one, probably unique in this country.——A National Prison Reform Congress will be held in Baltimore on the evening of Tuesday, January 21, 1873, with Hon. Horatio Seymour in the chair.——A Musical Festival will be held in Cincinnati in the first week of May, 1873, and societies wishing to take part in it should correspond with Dr. C. C. Miller, the official agent.——Some too little scrupulous publishers, it would appear, have been endeavoring to forestall the market for Mr. Stanley's "How I Found Livingstone" by issuing books descriptive of his expedition, but full of geographical blunders and typographical errors, and not at all resembling the work above-named, of which Scribner, Armstrong & Co. are the sole publishers.——A novel by Dr. Mayo, author of "Kaloolah," will be published immediately by G. P. Putnam & Sons. Its title is "Never Again." It is a tale "of American society," and is said to have been twenty years in preparation.

—The MS. records of the colony of Connecticut, from page 66 to page 514, transcribed and edited, in accordance with a resolution of the General Assembly, by Charles J. Hoadly, librarian of the State Library, have just been published (Hartford: Case, Lockwood & Brainard). They compose the sixth volume of the printed series (pp. 602), and embrace the period between May, 1717, and the close of the October session of the General Assembly in 1725. The volume also contains the record of the acts of the Governor and Council from May, 1717, to April, 1726, as comprised within pages 96 to 259 inclusive of a book containing those records from 1712–13 to 1727–28. Mr. Hoadly is well known as a painstaking, accurate, acute, and learned antiquarian, and, in transcribing and editing the early records of his native State, he is performing a labor appreciated by all whose studies render it necessary for them to examine into the transactions to which these records relate. The work has not been undertaken a day too soon. The records are upon paper, which is slowly crumbling away; the ink is fading, and the chirography is often illegible to any but an expert. The expenditure of time and eyesight required to bring these old manuscripts safely and correctly into plain print is fearful, and nothing but the enthusiasm of an antiquary and the delight of conquering difficulties would give one courage for the undertaking. This volume covers a period of no great general interest, but includes a large portion of the magistracy of that magnificent old aristocrat, the Honorable and Reverend Gurdon Saltonstall, who might almost be said to have been "prophet, priest, and king" in this sturdy little commonwealth, and who certainly "ruled the people prudently with all his power." Connecticut is perhaps the oldest of existing democracies, having elected her own governors and rulers for almost two hundred and fifty years; but many of the traditions and habits of aristocracy passed down along with democratic principles for many generations, and it was not until within the memory of men now living that a respect for dignitaries and their positions reached its present low ebb. Among matters of interest in this volume, we note considerable legislation on the location of Yale College, a prize contended for by several ambitious towns; much reporting of committees, also, of vain attempts to settle the boundary line with New York—a matter, we think, not yet fully completed; grand lists of taxable property in the several towns; legal-tender acts; pirates, copper mines, etc. But mostly it is a record of the ordering of affairs of a thrifty little community during a season of peaceful, healthy growth.

—The rank linguistic growth—the *lingo franco*, it might be called—of Wall and Broad Streets and the London Stock Exchange, has not as yet attracted that attention among philologists which its importance and necessary daily reproduction in the financial columns of the newspapers seem to warrant. In the same way that the traders of the Middle Ages, who met to exchange their wares in the Levantine ports, found it necessary to invent a barbarous dialect of their own, which was neither the language of Christian nor Moslem, neither French, nor Greek, nor Italian, nor Arabic—so the stock operators of our day have invented a lingo of their own which, though not a compound or mixed dialect, and though it is indeed in origin and pronunciation English, is even more purely technical and professional than the *lingua franca*. It is a real stock-gambler's *argot*, or thieves' language, not unlike in its general terse, coarse effect the dialect with which we all became familiar in reading the fascinating descriptions of the adventures of Oliver Twist in London. "Bulls," "bears," "lame ducks," "puts" and "calls," "margin up," to "cover," to "carry" stock; to "be long of" it and "short of" it, and "cornering" it and "breaking the corner"—do not these racy, vigorous, autochthonous terms carry us back to the days in which we were the confidants of Bill Sykes and Fagin, and Mr. Charley Bates, and the Artful Dodger?—when we first learnt what "dowsing" meant when applied to "glim," that a "pal" meant fellow-thief, that among the dangers of life was that of being "lagged for a lifer," that a "kid" meant a child, and that to talk "flash" was to talk in very much the same sort of way that the gentlemen talk who are familiarly known on the Street as the "grizzly bear" and the "American reindeer," "uncle," "count," and so on? So any one who has been in the interior of a stock-exchange, even in quiet times, cannot have failed to be struck with a further resemblance between the behavior of the members, in their moments of excitement or fun, and the behavior of the inmates of Fagin's household when the day's work was over, and the benevolent old gentleman used to walk negligently up and down the den with his handkerchief hanging out of his pocket, followed by his faithful pupils. When we see One-eyed Bill or The Pet coming skylarking into the exchange, and being immediately upset and carried about the room in triumph by his pals, while others practise their voices in anticipation of the formal business of the day in derisive shouts and bids, we cannot but expect to find the whole end with the appearance of some uncle or other among the Boys, giving them a little friendly instruction, it may be in breaking a corner, or managing an arrest, or in performing any other professional feat in which he is an adept. Perhaps the veterans of the Street do in sequestered spots give schooling to the younger bears and reindeer. The general resemblance is borne out in other particulars. Every one recollects the extreme difficulty of access to Fagin's place of business in London; but our readers may not be aware that there are, in the money centres of New York retreats, quite as strange and difficult of approach. The other day a reporter went to visit Mr. H. N. Smith, or, as he calls him in his report of the interview, the Grizzly Bear, and was intelligent enough to give a diagram of the labyrinth into which he was admitted. He enters on Broadway, where there are no less than three doors of exit or entrance; he passes by an interior door into the banking office, through an interior door into another room, and another, and two or three others, until he finds himself in the Grizzly's private room, at the rear of the building, where Mr. Smith is nowhere to be seen. He mentions his name and business, is kept waiting some minutes, when a messenger appears, saying that Mr. Smith will see him. He follows the messenger through a new door, a blind passage, another door, and at last finds himself in the real private retreat of the Grizzly Bear, at the very front of the building, by the side of the entrance where he began his search. Such is the reporter's tale, and it will not sound strange to any one who has read the accounts of the Erie stronghold in the Grand Opera-house, with its private stairways, its secret doors, and its passwords, under the régime of Fisk and Gould.

—Some time ago a book was published called, if we remember right, "Men and Mysteries of Wall Street," the author of which undertook to give, among other things, a glossary of this lingo. Stock-gambling has not been a distinctly recognized career for as long a period as thieving; so, naturally, the terms of art are fewer. Besides this, the words, having come into use recently, are not generally used as yet in remote senses. There are no such bewildering terms as "kinchin lay," "ben cove," or "fly," or "pad the hoof," "stowing the lush," "shoving the queer," and "fogling a wipe." We gave a description of the term "corner" in the last number of the *Nation*, and it is not difficult to perceive that the word conveys merely a highly picturesque and speaking description of the attitude of those who are "short" of stock to those who are "long" of it. Being "short" of stock means obviously having less stock than you ought for some reason to have; so, the sale of a "put" is the sale of the right to "put" (deliver) stock, while a "call" means the opposite—the right to demand the delivery of stock. The explanation of such terms as "bulls" and "bears" is not so simple. Whether to "bear" stock (to speculate for the depression of the price) meant originally to *bear down on* the stock, or something of that sort, or whether it came from a supposed resemblance between the disposi-

tion of the bear who roams Wall Street and the animal of the same name, it would be difficult to find out. Whether a "bull" (a person who speculates for a rise of prices) receives the name on account of a resemblance between his habits and those of the animal, or whether he is so called on a rough principle of classification—for the sake of distinction only—we cannot pretend to say. But the lingo is worth studying, as all dialects and argots are. Like the Chinook or Pennsylvania Dutch, the scientific examination of it may serve to throw some light on other fields of linguistic or philological study.

—Those who were interested in the Tichborne case, and those who are interested in trial by jury generally, will find in a letter of Mr. James C. Carter's to the *Tribune* of Saturday last some information on a subject about which the public at large seem to be extremely ignorant. In the Jumel case —a suit involving property in this city to the extent of several millions— the parties are to have a "special" jury; and to counteract misapprehensions which have arisen from an article in the *Tribune*, Mr. Carter explains what a "special" jury is. According to the New York practice, the court may in its discretion, on application of either party, order the selection by one of its officers of forty-eight men best qualified in his judgment to try the case impartially. From these forty-eight, each party strikes out twelve, and from the remaining twenty-four twelve are chosen by ballot to try the case. In the English practice, a special jury is a matter of strict right; the court cannot refuse to grant it. Special juries, when they are selected by a good court, are always good. Mr. Carter mentions one case in which, after nine trials before an ordinary jury, a special jury was empanelled, and at once agreed upon a verdict. In another suit (an election case) that "terrible arithmetician," Mr. S. J. Tilden, obtained a special jury, and gained a verdict by the mere production of some well-arranged figures. The Jumel case is to be tried in the United States Circuit Court, but the State practice governs.

—Of all the Department reports, that of the Signal Office is the only one which possesses much interest. It differs from most of the others in being the evident result of devoted study and thought. With regard to the verification of "probabilities" there is some valuable information :

"A comparison of the tri-daily forecasts, or 'probabilities' as they have been styled, with the meteoric condition afterward reported and so far as known, has given an average of sixty-nine per cent. as verified up to Nov. 1, 1871. Since that date to the present time (October 1, 1872), the average of verifications has been seventy-six and eight-tenths per cent. If regard be had to those predictions verified within a few hours after the time for which they were made, this percentage is considerably increased. In view of the deficiency of telegraphic facilities during the year, and the great irregularities of the working, it was not anticipated that these predictions, based as they are upon the tri-daily telegraphic reports, would increase in accuracy. Whatever success has been attained must be considered an indication of what success might be with well organized and full telegraphic facilities."

During the year three hundred and fifty-four cautionary signal orders have been issued, and the percentage of cautionary signals verified by the occurrence of storms "is estimated to have been about seventy per cent."

"The practical results of this branch of the service, with all its errors and imperfections, can be summed, it is believed, in the statement, that since the inauguration of its duties no great and continuous storm has traversed the territory of the United States, or raged along the length of its lakes, its gulf or sea-coast shores, as in their course such storms have sometimes done, without fair and general premonition given at the great majority of the points endangered to any who cared to seek or heed them."

For the purpose of being able to increase at will the number of reporting stations, in dangerous seasons of the year, the organization of "a mobilized corps of observers"—a force of picked men, carefully equipped with portable apparatus—has been commenced. With this force it will be possible "to occupy the stations as stations of report" with very great rapidity. "The period of danger for which they may be occupied being passed, they will be abandoned and the force left free to be transferred for the protection of other sections whose seasons of danger will be then approaching." The Chief Signal Officer hopes that the co-operation with Canada may be made more close than it now is, and indeed that the signal-services of all governments may in time work together for the public good. He recommends that the service should be given an independent organization, and not remain a mere branch of the War Department, with officers and men subject to be recalled to regimental duty at any moment.

—The unfortunate result of their last conflict with Germany has led the French people, as every one knows, to look sharply into their systems of training in order to discover wherein these require to be amended. Among the many books produced on the subject, not one, perhaps, is more worthy of attention than that of M. Bréal, "Quelques Mots sur l'Instruction Publique en France," which had reached a second edition early in this year. Bréal is Professor of Comparative Philology in the Collége de France, and one of the best, if not the best, of the younger generation of French scholars. Of unimpeachable patriotism, an ardent lover of France, he yet has that breadth and impartiality of view which comes from birth in the border-land between France and Germany, and from an education in great part German. In this little volume (of four hundred 18mo pages) he shows the same clear and penetrating intellect, sound sense, and judicial calmness of spirit which have distinguished his labors in more limited fields of enquiry. He treats his subject under three heads: the school, the lyceum (or college), and the faculties (or university), describing the methods of each stage of education, pointing out their defects, and suggesting the needed reforms. He thus furnishes, along with his criticisms of it, an excellent view of what the French system really is, and, though the weak points in our own system are not in general those which he finds occasion to reprehend, much of what he says has its bearing also upon points mooted among us, and therefore a practical value for American educators. The tone of the work is irreproachable. There is no flattery of French prejudices; there is no appeal to the love of glory, or to any other foible of the national character; there is no jealous depreciation of the country's foes. The investigation is carried on in the spirit of the true scholar and patriot, who simply seeks to discover and acquire for his own people whatever in the institutions of their neighbors is better than their own. The author tells us, in fact, that he had been long gathering the materials for such a treatise, and that the war has only hastened its appearance.

DE TOCQUEVILLE'S CONVERSATIONS.*

II.

"I HAVE," says De Tocqueville, "seen reason to change some of my views on social facts, as well as some reasons founded on imperfect observations. But the *fond* of my opinions can never undergo a change. Certain irrevocable maxims and propositions must constitute the basis of thinking minds." De Tocqueville, in other words, was above all things a critic, and a critic whose strength lay in applying certain maxims to the subject of his criticism. His critical power sometimes gave him something like a faculty of divination. Was he, however, really a prophet in the sense of thoroughly understanding the movement of the age? It must be admitted that in some respects his want of insight is quite as remarkable as his foresight in other directions. He said, for instance, that Kossuth was the "most mischievous man" in Europe. "Kossuth's influence was purely mischievous; but for him Austria might now (1852) be a constitutional empire with Hungary for its most powerful member." Now, we are no outrageous admirers of the Hungarian Dictator, but it is impossible not to perceive that De Tocqueville utterly failed to see the true position of the Hungarians and their leader. Hungary was struggling for national existence, and De Tocqueville thought her wishes could be fully satisfied by forming part of a constitutional empire. He in fact seems in this and another instance utterly blind to the influence exerted by the so-called "principle of nationality." This is at least a partial explanation of one of the most painful parts of his career as a statesman. As already pointed out, he assented to, though he did not originate, the most disgraceful crime ever perpetrated by French diplomacy—the invasion and destruction of the Roman Republic. On this subject he conversed with great freedom, and no doubt with perfect candor, and his whole conversation shows that he did not in the least recognize the real character of the contest at Rome. He talks of the city as a "municipality which twenty thousand foreign refugees had kept down by the terror of imprisonment, executions, and assassinations." He describes the triumvirs as at the "head of a horde of foreign ruffians driven into Rome by the disgust and indignation of all other countries." A man who could see in Italians defending their capital a horde of foreigners, might not unnaturally consider Garibaldi and his followers as mere ruffians; but such a man can neither have foreseen nor understood the indefinable sentiment of nationality which has moulded the whole recent history of Italy and of Germany. De Tocqueville had, we grant, no wish to do injustice to the Romans, and tried, though in vain, to procure them a constitution; but the curious point is that the greatest historical theorist of the age should have seen in the Italian movement a mere contest for constitutional rights.

No doubt in the matter of Rome De Tocqueville was biassed by his strong Catholic feeling. That the feeling existed and greatly influenced him is apparent even in the conversations with Mr. Senior, who was of all men the last to whom any one would have confided any religious or other exalted sentiment; but it is also clear that De Tocqueville failed to appreciate the religious no less than the patriotic movements of the time. He seems to

* "Correspondence and Conversations of Alexis de Tocqueville with W. Nassau Senior." London : H. S. King & Co.

have known little and understood less of Protestantism. He appears neither to enter into the zeal for religious truth which excites theological controversy, nor into the religious enthusiasm which from time to time rouses the mass of the people. Mr. Senior undoubtedly was not a person to whom any one would willingly talk much of religion. A gentleman who calmly writes with the supercilious superiority of a Whig, a political economist, and a Master in Chancery—"I have long been anxious to get somebody to do what I have not time to do, to look impartially into the evidences of Christianity and report the result"—occupied too exalted an intellectual position to be made the confidant of spiritual emotions; but still, when every allowance is made for the dulness and obtuseness of his auditor, it must be admitted that De Tocqueville's remarks on religion are generally of a superficial character, and even when at their best refer only to the external or political side of religious questions. His personal feelings seem to have been those of an ardent Catholic, and his philosophical theories the views of a statesman who looked upon religion merely as an influence to be made use of in politics. We can hardly, therefore, be surprised that De Tocqueville showed little appreciation of the theological controversies which have marked the last thirty years.

Next, perhaps, to the sentiment of nationality and to religious or anti-religious speculations, nothing has influenced recent history more strongly than what for want of a better term may be called "social movements." Now, here again De Tocqueville's insight to a great extent failed him. He shows, as in the prediction of the Revolution of 1848, a perception of the important fact that popular enthusiasm was turning from political to social questions, but his interest in such questions must, to judge from his conversations, have been very limited when compared with his interest in the niceties of constitutional government. He saw how the world was going, but he himself gave his mind to political and not to social speculations. Indeed, he must have known little of political economy, for he took Mr. Senior for an economical prophet, and exhibits a blind confidence in the good effects to be produced by introducing the poor-law into France. A theorist who understood neither the patriotic, the religious, nor the social movements of the day can, however great his genius—and De Tocqueville's genius is certainly indisputable—hardly be considered as thoroughly understanding his age, or as exhibiting statesmanlike foresight; but when it is admitted that De Tocqueville in some respects showed his singular blindness to the course which the world was likely to pursue, the very curious question arises, What was the cause of this blindness in a man who criticised past events with the utmost acuteness, and on some points showed a wonderful insight into the future?

We incline to think that De Tocqueville's weak as well as his strong points were all connected with the same turn of mind. He was great as a critic, but he was a critic, and nothing more. Thus, give him past events to criticise, and he could unravel their connection by the application of a few simple principles with almost unrivalled sagacity; and, similarly, when present facts were brought under his notice, when, for example, he was called upon to judge of the course of action pursued by the President and the Assembly, he showed exactly the same sagacity in analyzing the situation. But a mere power of analysis, however great, does not supply knowledge of facts or suggest new principles—the object of a critic being mainly to judge of the bearing of certain facts when tested by what De Tocqueville terms "irrevocable maxims." Criticism, in short, though it may contribute to foresight, is of itself something quite different from foresight, and theorists are constantly deluded by the idea that the power of analyzing the past is closely connected with that of foreseeing the future; whereas, such foresight, which is sometimes found in men of limited critical capacity, often depends upon the power of entering into the emotions and feelings of the time. Mazzini, for example, could never have come near De Tocqueville as a critic of history, but Mazzini's fervent belief in the principle of nationality gave him on some points a comprehension of his age which is not possessed by the author of the "Ancien Régime." The truth is that perhaps what in part made De Tocqueville so pre-eminent as a critic, and what also blinded him to some of the movements of the time, was his marked want of sympathy with the tendencies of the age in which he lived. His feelings were those of an aristocrat, whilst his cool judgment and his clear perception of certain principles led him to consider the progress of what he terms democracy inevitable.

He shows again and again in these "Conversations" great personal liking for the Legitimists, though he exhibits no sympathy with their prejudices, and was perfectly aware that they had no policy on which any man of judgment could rely. The liking sprang partly from family associations, but partly also from the idea that the Legitimists kept alive some strength of personal character in the midst of a society from which individuality was gradually passing away. On the same ground he certainly admired the English aristocracy, though an extremely sagacious critic of the weak points in English institutions, which, at any rate in 1854, he suspected to be destined to sudden ruin. The problem of his life was how to conciliate individual freedom and independence with the inevitable progress of democratic notions. The means by which he hoped to achieve the reconciliation was undoubtedly constitutional government—hence his almost pedantic interest in the minutiæ of constitutional theories, and hence too his despair when free government seemed, towards the end of his life, either to have failed or to be on the point of failure throughout Europe. This despair led him to turn with regret to an age in which there was less freedom and much less equality, but in which, he held, there existed more individual greatness than at present.

"I have a friend," he says, "a Benedictine, who is now ninety-seven; he was therefore about thirteen when Louis XVI. began to reign. He is a man of talent and knowledge; has always lived in the world; has attended to all that he has seen and heard; and is still unimpaired in mind. . . . He admits the material superiority of our own age, but he believes that intellectually and morally we are far inferior to our grandfathers, *and I agree with him.* These seventy years of revolution have destroyed our hopefulness, our courage, our self-reliance, our public spirit, and, as respects by far the majority of the higher classes, our passions, except the vulgarest and most selfish ones, vanity and covetousness. Even ambition seems extinct. The men who seek power seek it not for itself, not as the means of doing good to their country, but as a means of getting money and flatterers."

These expressions were used in 1858, when the power of the Empire was at its height, and the rule of the new Cæsar, like that of the old Cæsars, had produced a class of high-minded men who could see and analyze the corruption around them, but had too little hope to see anything in the future but darkness. Of such men De Tocqueville was in France the most illustrious example. Both his talent and his position made him a successful though desponding critic, but this hopelessness contributed to make him merely a critic rather than a prophet.

CHILDREN'S HOLIDAY BOOKS.*

IF "Camping Out" is not in the main a true story, it is exceedingly well invented. It tells of the adventures of four youngsters—two of them from Boston, and Harvard "sub-freshmen"—in the Maine wilderness, Mt. Katahdin being their objective point. Here they camp for many days, exploring minutely the sides of the mountain in search of the "lost lode" of lead which tradition asserted an Indian hunter had once discovered, and used for the making of bullets. Their pains are rewarded by finding a deposit of plumbago, and on their return to civilization they sell their claim for fifteen thousand dollars. This enables them to carry out their pet scheme of buying a yacht, the medium of fresh adventures, to be related in succeeding volumes of this "Our Young Yachters' Series." There is nothing overdrawn in the narrative, at least on the side of the comforts of camping out. Fire and wild beasts interrupt most of the nights of the party, and their meagre fare runs so low as to inspire fears of starvation, happily not prolonged. All dangers are safely passed, and the only tragedy is the death of a hairless Chinese dog, Ding-bat, in an encounter with a wolf. The narrator is evidently unpractised in writing, as his use of italics shows, and a certain fondness for slang; but he has the art in him, and has made one of the best boys' books we have read in a long time. The conversations are very natural, and adult readers will also enjoy the store of Down-East Americanisms which give piquancy to the style. Its topographical fidelity and consistent regard for the points of the compass and for actual distances will be still further merits in the eyes of parents, not to speak of the book-learning, scientific and otherwise, that appears in the camp-fire talks. The following extract is a fair specimen of the author's skill, though the reader will perceive that "Kit" is not apt in transcribing the particular Scotch dialect he has fallen in with. In a deserted cabin the boys had killed a wild-cat overnight, and their meeting with the owner the next day called out an apology for having made free with his provisions:

"Oh! sich things is all weel anough," began the unknown in a strange, creaky, husky voice (as if his whole vocal machinery was rusty from long disuse, and needed oiling).—"sich things is all weel anough, an' to be expected in a coontry like this. An' I wouldn't a' cared, an' ye mout ha' took

everything 'ere, an' welcome, ef — only — ye — hadn't a — keelled — Beelly," with a gesture so solemn that we were appalled.

"Killed Billy!" exclaimed Raed in horror.

"Ef — only — ye — hadn't a — keelled — Beelly," repeated the singular being, pointing reproachfully to the carcass of the wild-cat, hanging from the hook.

"Is that Billy?" inquired Wade, while we all strove hard to keep down a grin at this unexpected upshot of our cat-hunt.

"That 'ar," continued the old man, very sorrowfully too,—"that 'ar *war* —Beelly — wunst!"

"By Jude!" exclaimed Wash, turning round to me to keep his countenance shaded, "if we haven't been and gone and killed the old man's cat!"

Raed, meanwhile, was trying to explain it, assuring him that it was a mistake, — one we all deeply regretted. The old man heard him in grieved silence.

"I thought like anough that mout 'a' ben the way on't," he replied, after Raed had said everything of a pacifying nature he could think of.

"I thought like anough that mout 'a' ben the way on't," he repeated several times. "'Twas nartral anough, him bein' a *bob-cat*, so. But, oh!" (in a deep bass whine like a camel's) "to come 'ome 'ere — arter bein' gone amost a fotnit — an' see Beelly hung up thar" (pointing to the hook) — "dade — dade — dade — da-a-de!"

Every one of these words, *dead*, sounded like a sob.

"Him as I left 'ere a-purrin' in the sun, an' a-rubbin' agin my laigs," the old man went on, "weeth a nice leettle nest up in the loft, an' plenty o' bones to suck teel I gut back — to find him — dade!"

The old man was tenderly lifting the carcass from the hook. We could do nothing, save look on in chagrin and wondering pity. The animal's legs had already stiffened, and the eyes were glazed and hideous; but he gathered it up as if it had been a sick child, and, sitting down in the door-way, rested the big cat-head on his rough sleeve.

"It's three year ago, goin' on," he continued, stroking back the stiff, wiry whiskers beneath the creature's nostrils, "sence I fust picked him up out in the woods. Nothin' but a keetten then; 'adn't gut his eyes open; gut lost away from the old 'un, I s'pose. I picked 'im up, and fetched 'im in 'ere. Dreffal hungry the leettle feller was. I fed 'im on bits o' meat; an' then he toddled along,—you've minded 'ow leettle keettens'll walk,—he toddled along, and poked his leettle wet nose inter my 'and, jess as 'ow he wanted to nuss. I s'pose he did.

"That kinder made me take to 'im. An' he's lived 'ere weeth me ever sence;" still stroking the rumpled fur.

"I make no doubt he spit an' snarled at *you*, bein' strangers so; an' I make no doubt he took at yer dog: an' that's about the quarest-looking dog I ever set my eye on; looks as 'ow he'd ben skulped all over. But ef it 'ad been me as come iustead of you, then you'd oughter seen 'im tare round an' purred an' rubbed agin' my laigs, an' 'opped up onter my shoulders, an' sharpened his nails in my trousis-knees. He'd 'a' been so teekled, he'd 'a' fairly screeched for j'y at the sight o' me,—lookin' as I do."

To get any idea of the miserable pathos of the scene, the reader would need to have seen the unkempt old man sitting there, sprawlingly as he did, stroking that carcass, with tears standing in his hard old eyes, and now and then trickling down his leathery and not over-clean face.

"For the last two seasons," said the old man, "he's allus ben weeth me when I'd go ter look ter my traps; followed me closer'n a dog 'ud 'a' done. Hardly ever strayed off inter the woods. Soon's ever he'd happen to luse sight on me fer a minit, he'd begin ter *mawl*,—'Per-mowh, per-mowh!' An' all I'd hev ter do was ter say 'Pure Ruin,' like this,—'P-ew-er R-ew-in,' an' in a jiffy I'd hear 'im a-comin', his soft feet goin' *pat, pat, pat*, on the dead leaves.

"He'd ketch fatties too (hares), an' squirrels; an' wunst he fetched in a 'saple.' A *saple*, mind ye, 's no slimpsy critter ter ketch. An' nights he'd stretch 'imself out jess like a man on the hay, side o' me; an' I do s'pose that his purrin', when he was goin' ter sleep, was about the sweetest mewsic I'll ever hear. Meny an' meny's the night he's purred me ter sleep. An' now — poor leettle Beelly (fondling the body), you naver'll purr no more,— you naver'll — purr — no — m-o-r-e!"

What a post-chaplain or anybody else sees and hears on the Plains is not all of a nature to repeat to boys, and we have serious doubts of the Rev. Mr. Tuttle's capacity to write anything which we could advise boys to read, or their elders to let them read. The hotch-potch which he has labelled "The Boy's Book about Indians" is in no sense a boy's book; it treats of murderers and horse-thieves as well as of Indians, is full of scenes of violence and slaughter, is wretchedly written and disorderly in the last degree, and, while it undoubtedly contains a great many true descriptions, it is calculated only to convince youthful readers that the Indians have thoroughly deserved their fate, whereas the author professes to aim at exciting sympathy on their behalf. To paint the Indians as they are, in Mr. Tuttle's manner, is as delusive as it would be to let a child form his ideas exclusively from Mr. Catlin's histories, which at least have the merit of being most attractively written, and of doing justice to the original Indian nature. Mr. Catlin, by the way, in his nice sympathy for childhood, would hardly have placed in the hands of boys his "O-kee-pa"; but Mr. Tuttle describes graphically enough the horrors of the Sioux sun-dance, which is in all respects analogous to the Mandan o-kee-pa. His first tale "of the Plains" is about despoiling the grave of an old Onondaga chief in Central New-York. Some passages from it will show the tone which pervades this disagreeable scrap-book:

"My father had a cousin who was also a doctor and surgeon, a man of stalwart frame, raised in Vermont, named Cogswell. He was proud of his skill in surgery, and devoted to the science. He had learned of the death of the Onondaga chief, and conceived the idea of getting the body out of the grave for the purpose of dissecting the old fellow—that is, of cutting him up and preserving his bones to hang up on the walls of his office; of course there was only one way of doing it, and that was by stealing the body under cover of night. . . . It was soon noised about town what they had done, and there lived a man there who threatened to go and inform the tribe of the despoiling of the chief's grave, unless he was paid thirty dollars to keep silence. The doctor, being a bold, courageous man, refused to comply with a request he had no right to make, because it was an attempt to 'levy blackmail,' as it is called."

The man accordingly informs the tribe, who plot the destruction of Auburn, but are diverted by the surgeon, who places the dead body of a negro convict in the empty grave, with what Mr. Tuttle calls "the shrewd cunning of the fox," also simple "shrewdness," "outwitting," and "humbugging," he not having "been bred among the hills of old Vermont for nothing," any more than the unscrupulous Mr. James Fisk, jr., and both of them being excellent models for boys to pattern after.

Mr. Tuttle's learning and rhetoric at once are illustrated in the second sentence of his book, on the origin of the Indians:

"The most plausible theory seems to be that they are one of the lost tribes of Israel; that they crossed a narrow frith from the confines of Asia; and that their traditions, it is said, go far to prove it."

Beside this we will place what seems to us the best description. It is at the end of a passage which, with characteristic derangement, is placed under the head of "Indians making signals":

"If an Indian is benighted on the Plains, he can make himself quite comfortable where a white man would perish in winter with cold. He will gather some buffalo-chips, and strike a fire with a flint, sitting close to it, and throwing his blanket around him in shape of a tent, and let the smoke go out of a hole at the top. *He thus looks at night like a stump on fire.*"

Whoever has read Mrs. Oliphant's pretty little novel of "Katie Stewart" will be likely to open "Agnes Hopetoun" with pleasant anticipations. As far as the entertainment afforded by her story goes, the simplicity in telling it, the agreeable Scotch flavor of it, and the good and honest spirit pervading it, it will be found a fair successor for a "juvenile" to "Katie Stewart." The "experiences" of Agnes and her sister Lucy are such as might fall to the lot of any two very Episcopalian little girls, brought up in a remote country town by a widowed mother in slender circumstances. The hopes excited by the turning up of a rich but unstable uncle are very nicely managed so as to teach a good lesson, and yet not to disappoint too much in the end. The most interesting experience in the book to our mind is the spending of the five pounds given to Agnes by Uncle James, under his express orders "to buy nothing useful." Besides sympathizing with what took place on that white day, the little reader—especially if she be chronically short of pocket-money—will have the enjoyment of the suggestiveness of such a piece of luck, and the consequent delightful necessity of preparing a programme at once to meet the possible contingency of such a thing happening to herself. The religious side of the story will add very much to its acceptability in certain quarters—its sound morality should commend it anywhere —but there are many people who cannot but find passages in it offensive both to their taste and judgment:

"'Oh! that heaven which one can never see! where Jesus is, just as he is in the Bible—as he used to be in Jerusalem. Do you think you could have the heart to be wicked and disobedient and angry if you could but look through that sky and see how he lives, and walks, and speaks, and blesses little children every day?'

"When Agnes heard what Lucy said, her little heart was touched," etc.

The children's happiest time of the week was on Sunday evening, after having been to both morning and afternoon services. They had a kind of Bible-lesson, and read "verses about one of the parables—a different one every week till they had got through them all, when they just began again, but never were tired." "Then mamma was always so gentle on Sunday, and passed over things *which she used to be angry about* on other days." What a text for the anti-Sabbatarian! Also, "if mamma had been displeased with any of them through the week, she was always sure to think of it, and say something, and make an end of it on that Sunday." Most mortal children we have met with would hardly have found this last practice conducive to their perfect enjoyment of a social family gathering. The book is summed up in this final paragraph:

"As for Agnes, there is no fear now that she will think her languages are the one thing that she can be good for. Often she does translate into Italian and German for some good ladies in London, who try to improve the poor little Italian image-boys and German organ-grinders. . . . But Agnes is not in any doubt now about the one thing needful, and understands (as I hope you girls who read her story will all understand) how this one thing is not

to do anything but to make sure of Jesus, and know him as Mary did; and so, as mamma told her, to get a heart into her life."

We should be sorry to be supposed to be finding fault with the spirit of this conclusion.

No variety of story for children seems to retain its popularity more—if one may judge of popularity by the continued appearance of fresh books of the kind—than that in which animals are the characters, and are made to act and speak like human beings. There is something plausible in the notion that animals have feelings and ideas in common with us, and that they have some kind of a language in which to communicate them to each other. The sense of realism is pleased with that view, while the desire for mystery and extravagant fancy which all children possess more or less, is gratified by carrying this notion to the farthest extent. An animal story may be almost as fascinating as a fairy story, with the advantage of not seeming so far off and impossible. The consequence is, that a tale of this kind would have to be of the poorest imaginable quality not to meet with favor among its little readers. "Conrad the Squirrel" is not of this category certainly, for it contains enough ingenious situations and exciting incidents; and besides, all the fights are described with the usual English delight in bloody and violent details. But we must beg to point out, as we have often had to do before, the extraordinary imitation of the full-blown sentimental novel which children's books of many kinds seem more and more striving to become, and to ask what kind of theories the writers of them pretend to hold as to the educational influence of fictitious literature on juvenile minds? In "Conrad" there is a double love-story, an account of a devoted sister, and nearly all the incidents of the narrative have already furnished forth many a fifth-rate English novel. Olaf, a Norwegian squirrel, gets away from his master, and is taken into the family of Conrad's father. Olaf is a "widower," and gives a most "hifalutin" description of his adventures to his hosts. At the conclusion: "Olaf paused, and then, turning to Judy, he added gently, 'Why should I have told my story since it makes thee sad?' Judy started from her attitude of intense listening, looked down, and murmured presently 'that she was not sad, only she was sorry——' Then she played with her tail, and did not finish her sentence." Conrad goes off on his own travels, and Ermine, his favorite sister, takes his absence greatly to heart. She grows very interesting and delicate and pines away; and her vivacious manners give place to a meek and lovely patience; she weeps in secret, but troubles no one, and becomes angelic after a fashion. Conrad returns, and Ermine dies with the shock of meeting him. The sentimental closing scene is too long to be inserted here; it is enough to say that Ermine is the counterpart of a character most common in novels, which dies young and does the "harrowing up," and leaves emotional and religious young girls in a state of exaltation of feeling in which they think they would like to have a grief and die young too. Finally Conrad meets the orphan Cora. "When she saw him, Cora said: 'Oh, Conrad!' and Conrad said, 'Oh, Cora!' and both of them were very glad. . . . Cora looked up into his face—'Oh, Conrad, I am so sorry for you; I wish I could comfort you.' 'You can comfort me, Cora'; and as he came a step nearer," etc., etc. The author doesn't say that he stooped and kissed her, but of course after all the rest such a catastrophe was unavoidable.

California: for Health, Pleasure, and Residence. A Book for Travellers and Settlers. By Charles Nordhoff. (New York: Harper & Bros. 1872.)—The basis of this entertaining book is a series of letters written to sundry journals of this city, with the epistolary dates now removed; to some extent, also, revised, but not so much so as to prevent repetitions for which, after all, the reader will confess himself thankful. Mr. Nordhoff is an excellent *raconteur*, with a simple and vigorous style, and something of the positiveness of a man who half expects his audience to put their tongues in their cheeks at what he is telling them. We believe, however, that the Easterner has now pretty much made up his mind to doubt no report, be it never so marvellous, of the prodigies of the Pacific Coast. Indeed, it is rather a welcome change from the stereotyped brag of the Westerner, who has so long accustomed us to look upon ourselves with compassion, to be told, as we are on p. 18, that food is cheaper and cooking better in California than in New York, the roads better, the people you meet more civil; and that "when you have spent half a dozen weeks in the State, you will perhaps return with a notion that New York is the true frontier land, and that you have nowhere in the United States seen so complete a civilization—in all material points, at least—as you found in California." When we have read further on, we learn that Mr. Nordhoff had in mind such facts as these (p. 146):

"San Bernardino has a Methodist, Presbyterian, and a Mormon, as well as a Catholic church. It has also, what you would hardly find in a town of its size and character outside of California, a large, well-built, and well-kept school-house. The school-houses in this State are a constant surprise to an Eastern traveller. You find them everywhere; and if you are interested in education, you will easily discover that the people take great interest and pride in their public schools. The school building at San Bernardino would be creditable to an Eastern town of 10,000 inhabitants."

Mr. Nordhoff's hearty note of admiration for California appears all the more genuine from the fact that he is what might be called an old *Achtundvierziger*—that is to say, he was in California in 1847, perhaps in '48 also, and is naturally amazed at the contrast which twenty-five years have produced in the face of the country. Ten of those years—the last—show a progress marked as well as anything by these statements concerning the building of the Central Pacific Railroad:

"Not a foot of iron was laid on the road on all the eight hundred miles to Ogden, not a spile was driven, not a dirt-car moved, nor a powder-blast set off, that was not first brought round Cape Horn" (p. 48).

To-day the company "manufactures within the State every article and material used in building or running its roads" (p. 58).

We cannot touch upon a tithe of the topics which justify the title of Mr. Nordhoff's book. If he had any purpose more than another in writing it, we should say it was to recommend the climate to invalids, and next to preach the superiority of agriculture to mining as a means of comfortable living and even of affluence; and incidentally to praise the foot-hills for certain supposed advantages, and to stimulate the planting of nut, orange, and olive orchards, and the manufacture of raisins. Here, of course, the marvellous element comes in again:

"The eucalyptus, a fine Australian evergreen shade-tree, has made twenty feet in a year, and I have seen one, eight years from a small cutting, which was seventy-five feet high and two feet in diameter at the base; the apricot becomes almost a forest-tree in size; and in the southern parts of the State it is the custom to make fences of sticks of willow, sycamore, or cottonwood, cut to the length of eight feet, and stuck into the ground in December. These strike root at once, and grow so rapidly that in the second year the farmer cuts his firewood from these living fences."

He writes "under the shade of an acacia-tree which is six inches in diameter at the base, and comes from a seed planted three years ago, and never watered"; and he sees half an acre of mangel-wurzels "as big round as a nail-keg, and mostly two feet and a half long," not to speak of "oat straw which, hung up and dry, measured eight and a half feet, was as big round at the base as my middle finger, and which yielded, on one piece of fourteen acres, the enormous crop of one hundred and two and a half bushels per acre."

It is hard to say whether the colonist or the invalid will be most served by Mr. Nordhoff's descriptions of this Pacific paradise. The tourist is not neglected, either; and in those portions which most smack of the guide-book, containing routes and estimates of expenses, we have such practical directions as:

"At some part of the journey you will have to rise very early; but this is only on one morning; and as it is impossible for most people to eat breakfast at four or half-past four, though it is served, take a cup of coffee, and have a hearty lunch put up for you, which will be welcome to you about nine o'clock" (p. 71).

"About Murphy's, near the Big Trees, children will offer you tarantulas' nests as curiosities. You should not pay more than half a dollar for one of these singular bits of clay" (p. 72).

Mr. Nordhoff advises the traveller to provide himself with Hutchings's "Guide to the Yo-Semite Valley," of which the revised edition of 1872 is before us (New York and San Francisco: A. Roman & Co.) It is profusely illustrated (as is Mr. Nordhoff's "California"), and we have found amusingly agreeable the compiler's familiar talk with the reader, after the manner of the conductor of the panorama in days now past:

"As you will perceive, the summit of the mountain [Monte Diablo] is reached without the necessity of dismounting; and as there are wild oats all around, and the stores of sundries provided have not been lost or left behind, suppose we rest and refresh ourselves, and allow our animals to do the same."

First Principles of Geology: Presenting the Science in its Physical and Moral Aspect, and exhibiting its application to the Arts of Mining, Agriculture, Architecture, and Engineering. With a geological map of the United States. By Wm. J. Barbee, A.M., M.D. Second edition, enlarged and revised. 12mo, pp. 523. (Louisville: John P. Morton & Co.)—It is something to say of a book, yet we say it advisedly of this, that it is about the worst bearing a geological title that has ever passed an American press. What, it impels us to ask, is the motive that incites so many half-educated men to undertake the making of text-books concerning these most difficult of natural sciences? Requiring as it does skill in half a dozen diverse branches of science, failure is assured to any but those of the most extended and ac-

curate knowledge. The most lamentable part of the business is that most of these rehashed text-books have for their purpose a reconcilement of religion and science. It is a matter of first importance to the world that some common ground should be found for the teachers of science and of moral faith, but this is made more and more difficult by every such worthless work. There is danger that the breach may be made impassable if its repair be left to those ignorant at once of science and of religion. We can heartily recommend all school committees and teachers to keep geology out of their schools rather than admit it in this form. It would be a profitless task to try to enumerate the blunders of detail and the faults of method of this book. Something can be said for the mechanical part of it—we mean the printer's; the press-work is good for its class, and the paper well suited for its use; and, looking once again at it, we feel that it may be commended to those who seek choice specimens of bathos, and anti-climax, and delightful bits of conceit. It abounds in anecdotes, tending in the main to show the extraordinary acumen and geological skill of the author; some of these are amusing enough in their way, but the book is not worth the words it would require to produce them.

The World of Anecdote: An accumulation of facts, incidents, and illustrations, historical and biographical, from books and times recent and remote. By Edwin Paxton Hood. (Philadelphia: J. B. Lippincott & Co. 1872. 8vo.)—The title-page of this book gives such a thorough description of its contents that it is hardly necessary to add anything by way of explanation. There is a long introduction, in which Mr. Hood shows that anecdotes are a very valuable source of knowledge, and that De Quincey was wrong in saying that all anecdotes were lies, and declares that in his opinion it would be much more nearly right to say that all anecdotes are true. He may be right, but he does not strike us as a particularly fit compiler of a book of this sort, which is nothing at all if the selections are not made with great judgment. For example, of what value to any one, either as an anecdote, fact, incident, or illustration, is the "beautiful saying of a dying man" (quoted on page 14) who, according to the New York *Observer*, told his wife not to visit his grave in the shade of the evening, or in the dark night, because these are no times to visit the grave of a Christian, but to go in the morning in the bright sunshine, and when the birds are singing? It was very good advice, but that it should be selected for its typical death-bed beauty does not seem to show the exercise of any great judgment on the part of Mr. Hood. We may say the same thing of the anecdote of Isaac T. Hopper on the 16th page and the "practical power of faith" (p. 34). The manner of narration, too, is rather inflated throughout, when Mr. Hood appears as narrator; and, on the whole, we may say that the compilation is chiefly remarkable for the haste with which it appears to have been got together.

REDUCTION IN THE COST OF LIFE INSURANCE.

THE MUTUAL LIFE INSURANCE CO. OF NEW YORK,
144 and 146 Broadway,
NEW YORK, November 30, 1872.

TO THE EDITOR OF THE NATION:

SIR: From the facts set forth by the Actuary in the following letter, which have been carefully considered by the Trustees in committee and by the Board collectively, they have decided that the rates of premium for assurance in this Company shall be reduced in conformity with the recommendations of this letter as soon as the necessary preparations are made for the purpose.

As many of the readers of your paper are interested in the subject of life assurance, the letter will, if published, not only apprise them of the fact of reduction, but also explain the reasons which have led to the adoption of this important measure. Respectfully yours,

F. S. WINSTON, President.

THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK, Nov. 12, 1872.

F. S. WINSTON, ESQ., President, etc., etc.:

DEAR SIR: The Mutual Life Insurance Company has now been in operation well-nigh the period allotted to a human generation, and the exhibit of its affairs just published demonstrates, in my opinion, its ability, and urges upon itthe duty, to revise its rates and widen the range of its usefulness by diminishing the price of its assurance.

The true mission of life assurance is to give to persons of slender means, and especially the laboring classes, the opportunity to provide a support for those whom sudden death may reduce to helpless dependence. The special objects of its care are indigent widows and orphans. The prices for their protection are often paid from hardly-earned and scanty means, and should be the lowest consistent with entire safety. I would respectfully ask your early and serious attention to the subject; and that you may have the matter fully before you, I submit herewith a new scale of reduced rates, and certain suggestions with regard to the future practice of the company should they meet your approval and become the basis of our future business.

The old net prices, based on 4 per cent. for money and the mortuary rates of the American table, are retained; and the alterations arise from a change in the percentage addition for ordinary expenses, which is reduced from 40 to 10.

The yearly dividends under the new system will, of course, be greatly reduced, and I earnestly recommend—

1. That the reversionary credits for these dividends be given, as heretofore, but that no use be made of them till in every instance their present cash value, on the policy anniversary, shall amount to more than one annual premium, when the excess above one premium may be available to pay, at the expressed wish of the owner, the premium then due.

2. That those credits be held to be assessible to meet any deficit that may arise from any circumstances whatever.

3. That in case of death, the whole of the reversionary credit be paid to the heirs, as at present.

4. That existing policy-holders may have the option either to leave their policies undisturbed and pay their old rates, receiving, of course, their proportional dividends and reversionary credits, or to take out new policies, with their existing credits added, and pay the new rates corresponding to their then present age, provided they subject themselves to a new medical examination and are pronounced assurable.

The company will, by this most desirable plan, have within its control a large fund to which it may resort in time of trouble, should trouble come to it, while it will avoid the objectionable measure of keeping on hand a large undivided surplus, in which those who die cannot fail to have an interest, whose precise value it would be difficult to ascertain.

I would merely add that the company has pioneered its way to a condition of unrivalled prosperity and success. It has had large experience, and the community may properly expect it to use this experience to advance the interests of life assurance, so as to bring within the range of its business the poorer classes. To compel these to advance money beyond the true price of assurance, only to be returned at the end of twelve months, is a hardship to which, I think, they ought not to be subjected.

Respectfully submitted,

WM. H. C. BARTLETT, Actuary.

JUST READY.

A NEW NOVEL BY TURGENIEFF.

LIZA: A Novel. By Ivan S. Turgénieff. Leisure-Hour Series. 16mo, $1 25.

"In our opinion he is equal to any living novelist.'—Nation.

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—London Spectator.

RECENTLY PUBLISHED.

JOSEPH NOIREL'S REVENGE: A Novel. By Victor Cherbuliez. Translated by William F. West. Leisure-Hour Series. 16mo, $1 25.

A CONDENSED EDITION OF TAINE'S ENGLISH LITERATURE FOR GENERAL READERS AND FOR SCHOOLS. Prepared by John Fiske, Assistant Librarian and late Lecturer on Philosophy in Harvard University. Post 8vo, $2 50.

THOUGHTS FOR THE TIMES. Sermons by the Rev. H. R. Haweis, Author of "Music and Morals." 12mo, $1 50.

OUTLINES OF HISTORY. By Edward A. Freeman, D.C.L. 16mo, $1 25.

HOLT & WILLIAMS,

25 Bond Street, New York.

The Duke of Argyll, Matthew Arnold, Max Müller, Erckmann-Chatrian, Miss Thackeray, C. Kingsley, Arthur Helps, George Macdonald, Charles Reade, Karl Blind, Miss Muloch, Sir Robert Lytton, Fritz Reuter, Prof. Huxley, Prof. Tyndall, Prime-Minister Gladstone, Julia Kavanagh, James Anthony Froude, Frances Power Cobbe, Jean Ingelow, Alfred Tennyson, Robert Browning, are some of the distinguished authors lately represented in the pages of

LITTELL'S LIVING AGE.

A weekly magazine of sixty-four pages, THE LIVING AGE gives more than

THREE AND A QUARTER THOUSAND

double-column octavo pages of reading matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a satisfactory completeness attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

TRANSLATIONS.—In addition to the productions of the leading British authors, and in pursuance of its plan of including the best translations, THE LIVING AGE will publish serially, beginning about Jan. 1, 1873, one of the finest productions, translated expressly for it, of that charming Platt-Deutsch novelist and humorist, FRITZ REUTER, "the most popular German author of the last half-century." His writings, says Bayard Taylor in the N. Y. Tribune, "are the wonder and delight of Germany." This serial will be preceded by a charming Christmas Story by the same author.

THE LIVING AGE is invaluable to every American reader as the only thorough as well as fresh compilation of a generally inaccessible but indispensable current literature—indispensable because it embraces the productions of the ablest living writers in all departments of Literature, Science, Art, and Politics.

It is pronounced by the Rev. Henry Ward Beecher, the Nation, the N. Y. Evening Post, and the leading men and journals of the country generally, to be "the best of all our eclectic publications," and is indispensable to every one who desires a thorough compendium of all that is noteworthy and admirable in the literary world.

Published weekly, at $8 a year, free of postage. The volume begins Jan. 1. New subscribers beginning then will receive Reuter's Christmas Story without charge.

Address LITTELL & GAY, Boston.

NOW READY.

FOUR EXCELLENT BOOKS,

PUBLISHED BY

HURD & HOUGHTON, NEW YORK;

THE RIVERSIDE PRESS, CAMBRIDGE.

I.

SONGS FROM THE OLD DRAMATISTS.

Collected and Edited by Abby Sage Richardson, with designs by J. La Farge, and vignettes by S. L. Smith. In one volume, small 4to, cloth, extra gilt, $3.

"It is rare to find a collection of verses so dainty and so exquisite. . . . The paper and printing are unexceptionable, and the whole style of the work is dainty. What shall I say of the drawings with which La Farge has illustrated it? They are strong and suggestive and singular. . . . La Farge draws, as he paints, the soul of things."—Louise Chandler Moulton, in New York Tribune.

"The few illustrations, with head and tail pieces, are quaintly original and full of a happy suggestiveness."—New York Evening Post.

"The whole volume is alive with vital poetry. . . . It is a beautiful volume, full of beautiful matter, . . . a book which will do credit even to the Riverside Press."—E. P. Whipple, in Boston Globe.

II.

THE MINNESINGER OF GERMANY.

By A. E. Kroeger. In one volume, 16mo, cloth, gilt top, $2 25.

"To the general reader it will give the freshest picture possible of what in all human history preëminently deserves to be called 'the age of romance.'"—St. Louis Times.

III.

"MORE THAN CONQUEROR."

Memorials of J. Howard Kitching, Sixth New York Artillery, Army of the Potomac. By the Author of "The Conquest of Florida." With Portrait. In one volume, crown 8vo, cloth, gilt or red edges, $1 50.

The striking memorials of a Christian soldier.

FOR THE AMERICAN TRACT SOCIETY.

IV.

HOMES AND HOSPITALS.

Or, Two Phases of Woman's Work, as exhibited in the Labors of Amy Dutton and Agnes E. Jones. In one volume, crown 8vo, cloth, $1 50.

"Here is a book that will be read with unflagging interest by all. It is a simple story of how two women worked among the poor and forlorn, and it exhibits two ways in which they made themselves useful. One, Miss Dutton, went day by day from her own home to minister to the distressed in their wretched homes. She still kept her place in the circle of friends to which she belonged. The other, Miss Jones, gave up home and all the attractions of the society of those she loved. She put herself under a systematic course of training at the celebrated institution at Kaiserswerth, and then went into hospitals and workhouses in Liverpool and London. Her life is one of the most remarkable of its kind. Her devotion was intense, and her accomplished results wonderful. The remarks of Miss Nightingale, in the introduction, are only a just tribute of one hard worker to the memory of another."

JUST PUBLISHED.

THE STANDARD LIFE OF DICKENS.

The second volume of the Life of

CHARLES DICKENS.

BY JOHN FORSTER,

Author of "Life of Landor," "Life of Goldsmith," etc.

Covering the period of 1842–1852. With two portraits from steel, and illustrations and facsimiles. 12mo, bound in extra cloth, $2.

Fifth Edition of Volume I. now Ready. Price uniform with that of Volume II.

"Of all men living, Mr. Forster is the best qualified to be Charles Dickens's biographer."—Phila. Press.

"All the thousand touches that can only be inspired by close intimacy and the hearty sympathy of friend with friend are here, by one of the subtlest and most powerful literary artists of the time, given to a marvellously vigorous picture of a man whose real portrait all the world will be glad to see, and will be better for seeing."—London Examiner.

"Should the remainder of the work equal the first volume in excellence, no more satisfactory record of Dickens's career can be looked for in our generation."—London Standard.

"The publication of Mr. Forster's 'first volume' will almost prove as great a surprise to the world as the first appearance of the first story which won fame for the subject of the biography. . . . Now for the first time we seem to have learned the secret of the individuality belonging to all of Dickens's really great novels."—London Daily News

For sale by all Booksellers, or will be sent by mail, postage paid, on receipt of price, by

J. B. LIPPINCOTT & CO., Publishers,

715 and 717 Market Street, Philadelphia.

MARY, QUEEN OF SCOTS,

AND HER

LATEST ENGLISH HISTORIAN.

BY JAMES F. MELINE.

One volume crown 8vo, cloth, $1 75.

PUBLISHED BY THE

AMERICAN NEWS COMPANY, NEW YORK.

Sent by mail, post-paid, on receipt of price.

"Unless Mr. Meline can be answered, he has convicted Mr. Froude not only of inaccuracy, not only of carelessness, not only of prejudice, but of tampering with documents, perverting evidence, practising disingenuous artifices, and habitually disregarding truth."—Goldwin Smith (late Regius Professor of History at University of Oxford), in Canadian Monthly.

"Its positions are so damaging that, if they are not turned, implicit confidence in Mr. Froude as a historian is gone entirely."—Chs. Dudley Warner, in the Hartford Courant.

"The case made against him by Mr. Meline's work should not be left to stand if Mr. Froude places even a moderate value upon his good name."—New York Evening Post.

THE LAWS OF GAS AND WATER SUPPLY: Comprising the Rights and Duties, as well of Local Authorities as of Private Companies in regard thereto; and including the Legislation of the last Session of Parliament. By W. H. Michael and J. Shiress Will. 12mo, cloth, $9.

MINING INDUSTRY. By J. D. Hague. With Geological Contributions by Clarence King. Submitted to the Chief of Engineers, and published by order of the Secretary of War, under the authority of Congress. Illustrated by 37 Plates and accompanying Atlas. 4to, cloth, $50.

D. VAN NOSTRAND, Publisher and Importer,

23 Murray St. and 27 Warren St.

The Nation.

NEW YORK, THURSDAY, DECEMBER 12, 1872.

The Week.

THE Greeley and Brown electoral colleges cast their votes for a rather surprising variety of candidates, the opportunity for conference having been denied them, as Mr. Greeley died just a week before their meeting, and was carried to his grave in Greenwood on the very day they met. Mr. Hendricks, Mr. Gratz Brown, Mr. David Davis, Mr. Charles Jenkins of Georgia, were among the persons who received votes (or a vote, as was Mr. Davis's case) for the Presidency; and Mr. Gratz Brown, Mr. A. H. Colquitt, Mr. N. P. Banks, Mr. Geo. W. Julian, Mr. W. O. Groesbeck, and General J. M. Palmer, got votes, or a vote, for the Vice-Presidency. There were but sixty-six votes, all told, cast in these colleges, the Greeley and Brown ticket having carried but six States. Governor Brown's own State gave him eight votes out of fifteen for the Presidency, and six out of fifteen for the Vice-Presidency, the six who voted for keeping him in his own secondary place on the ticket probably being the six who gave their votes to Mr. Hendricks. This gentleman is the evident favorite of the party just at present. The curious upshot of the election has, of course, set everybody to pondering on the constitution and uses and possible dangers of the electoral colleges, and there is a universal feeling that they must be done away with. They form the one portion of our system of checks and balances which has made the most conspicuous and utter failure. The electors have been made into a purely ministerial body; and while, if they all met together in one college, they would still never dare to be independent, as it was originally meant that they should be, meeting in thirty-seven separate colleges there is great danger of corruption. Suppose the Cameron and Morton party had wanted four votes of an election, and Mr. Greeley had, nevertheless, died of excitement, where should we have been then? It is highly probable that a certain number of electors might have been corrupted, especially considering that the nominating conventions at Cincinnati and Baltimore were as careless as usual concerning the character of the Vice-Presidential candidate, who could not well have held his electors together. Luckily, we live under a constitution a chief merit of which is that it contains a provision for its own amendment.

The most important political news outside of Washington comes from the South, but it comes in such a shape that exactly what to make of it all is not very clear. In Louisiana, the case appears to be about as follows: The Republicans have there had in force as to registration and the other machinery of the ballot a very stringent law, designed to secure their own political ascendancy, and this had to be worked by the executive officers of the State. Such inventions proverbially return to plague the inventors, and when the Republicans split, Warmoth, who took one side, while the Federal officials took the other, was very nearly able with color of law to put himself in control of the Legislature, by cheating of an audacious character, and get himself sent to Washington as senator. Packard, the Marshal, and Casey, the Collector, were determined that he should not; and no sooner had he issued his proclamation declaring the Greeley electors elected and Kellogg defeated for the governorship, than the power of the United States District Court and of the "Enforcement Act" was invoked. As we understand it, the court ruled that it had jurisdiction over the returning board as regards the State election as well as regards that for the Presidential electors. Concerning the latter there is, we believe, no doubt; but there has been fear that the popular doubt concerning the jurisdiction in the former case might lead to a riot, which it is alleged Warmoth did everything in his power to incite, but without success. At this writing he appears to be overthrown and in the clutch of his enemies, for the Lieutenant-Governor, having informed the Kellogg Legislature that Warmoth on Sunday night last came to him at midnight and offered him fifty thousand dollars and unlimited appointments in return for his assistance, the Legislature at once impeached Warmoth, the Senate has been convened for his trial, and flight or conviction seems likely to close his wonderful career. The Democracy, who may be pardoned for not knowing exactly what to do, are playing into the hands of the Radical Republicans by supporting Warmoth, because he represents "State Rights." They ask for a Military Governor rather than Kellogg. The whole affair is frightful, or would be if the future of republican institutions lay wholly in Louisiana.

In Alabama things are worse rather than better. There the Republican candidate for governor, Mr. Lewis, was undoubtedly elected, and has taken his seat. It is probable, though it is not certain, that a Republican majority was elected to the General Assembly; but it is certain that a Democratic majority held the regular certificates of election, though it is alleged that in the case of the members from two counties these certificates represented not votes, but frauds perpetrated by Democratic election officers, who threw out negro votes. To complicate matters still further, the Democrats got possession of the State House, which is, of course, the usual place of convening the Assembly, and according to the forms of law they were organized into a Senate and House by the officers who held over from the preceding Assembly, and who were Democrats. Being so organized, the Democratic outgoing governor recognized them as the Assembly. Certainly it would seem at this distance as if the incoming governor exceeded his power when, going behind the certificates and the forms of law, he made enquiry into the alleged frauds, and asserted men not to be members whose cases were surely subjects for the courts to examine. He did so, however, and it is probable that Mr. Spencer will get his senatorship, which is probably at the bottom of all this wrangle. It is probable, too, we are bound to say, that the Democrats did do some cheating in the election. Arkansas also is in difficulties as well as Alabama; but her case is not so well developed. The "Liberals," so far as we make out, asserted, on the strength of votes polled at other than the legally designated polling-places, that they had carried the State for Greeley and Brown; but the regular Republican electors formed the college and cast the vote for Grant and Wilson; and beyond peradventure, it is this vote which will be counted by the President of the Senate next March.

In South Carolina the Legislature, to call it a Legislature, has been voting for a senator to take the place of Senator Sawyer. Elliott, a colored man, and a representative elect, was a candidate; so was Scott, and so was a man called Patterson. Patterson bought the necessary number of votes, though whether Scott or Elliot sold out the most of them, or was the most sold out, is not stated. Patterson has been arrested for bribery, rescued, rearrested and put in jail, got out on a writ of *habeas corpus*, and at this writing is ready for Washington. He would be a good man for chairman of one of the committees, and we recommend him to Messrs. Edmunds, Conkling, and Morton. Cameron already knows him.

The affidavits taken in Gould's case have thrown some additional light on the great Erie "Reform Movement" of a year ago, though for the public at large the obscurity is still so dense that a good many more rays could be endured. The true history of the movement was this. The English stockholders (owning the larger part of the stock—between forty and fifty millions), having become

alarmed at the robberies of Fisk and Gould, appointed a committee in London to protect their interest, and to regain, if possible, possession of the road. This committee, afterwards uniting with American shareholders owning about twenty millions of the stock, secured the repeal of the "Classification Act," through which Fisk and Gould kept themselves in power, and the passage of a new act making a fair election of a new board of directors possible. Meantime, however, a new interest had arisen which complicated all the proceedings. One of the members of the London Committee, a man named Bischoffsheim (Bischoffsheim & Goldschmidt), owned some of the stock of the Atlantic and Great Western Railroad, a line connecting with Erie, and running into the "heart of the Great West." The road was and is a worthless concern, with a debt which has run up from forty to over a hundred millions, and an income of perhaps two. Bischoffsheim and his friends saw that the Erie was still a valuable property, and that their own was not. They therefore formed a plan to get control of both roads, and then fasten the Atlantic and Great Western on Erie, and let it eat up the profits of that unfortunate line. Controlling, as they soon did, the Atlantic and Great Western, the next step to be taken was to get hold of Erie. As soon as their design became manifest, Bischoffsheim was forced to resign—or at any rate did resign—from the English Committee, and he and his friends began to act for themselves. Sickles was now called in, and sent to this country as the agent of the Bischoffsheim and Great Western party.

When Sickles arrived, Gould was still in possession, and it was obvious that if the Sickles-Bischoffsheim party waited till the legislature repealed the Classification Act, and permitted a fair election, they would only have such opportunity to get hold of the direction as their Erie stock entitled them to. They therefore determined to steal the road; and for this purpose the great "Reform Movement" was organized; a melodramatic attack and a melodramatic defence of the road were got up. Sickles, appearing as the leader of the bold band of public-spirited men, determined to drive the thieves out; an enormous amount of journalistic sympathy was excited; and while the public were clapping their hands with delight, Sickles and Gould retired into a private room, to come to terms. Gould knew that he had only a short-lived lease of power, and that he owed the road some ten millions of dollars, stolen by himself and Fisk; but he still had the means of letting into the direction of the road any one he pleased, by resignations, under a legislative power. The terms, therefore, agreed upon were, that Gould should receive a release from Erie of all claims from the beginning of the world, and should, as an equivalent, let in nine directors (a majority) in the interest of Atlantic and Great Western. Accordingly, Gould and his friends resigned one by one, the Atlantic and Great Western men coming in to fill the vacancies. The fraud would now have been consummated, but it was too monstrous. The stock of the Atlantic and Great Western was refused recognition by the Stock Exchange; the "reformers" were obliged to wait for quieter times. Under the new law, an election was soon held, and the present board came in, with Mr. Watson at the head, and S. L. M. Barlow, who is one of the Atlantic and Great Western men, as counsel. Whether Erie will again be stolen depends on circumstances. At the time of the Sickles movement, by the way, facts showing the real character of the reformers' plans were sent to one of the chief daily papers of this city, but they were suppressed.

There is a great uproar raging in what the reporters call "insurance circles" over the proposal of the Mutual Life Insurance Company, the oldest and richest in the country, with over 77,000 policyholders, to reduce the cost of insurance by about twenty per cent. It says, through its officers and actuary, that it has found after thirty years' experience that its charges are needlessly high, and its surplus needlessly large. As a reduction of this amount on its part would drive the smaller and weaker companies out of existence, and as the question touches the dearest interests of 800,000 persons or thereabouts, it has given rise to a controversy of extraordinary fierceness, in which the actuaries marshal the opposing battalions and belabor each other with mathematical formulæ. Professor Bartlett maintains the fight for the Mutual, while Messrs. Elizur Wright, Sheppard Homans, and D. P. Fackler assail the proposed change on behalf of the other companies, while the blackmailers and free-lances by whom the realms of insurance are harried, publish attacks on the personal character of the officers of the Mutual.

The case of the company is, that, basing its business on the American table of mortality and four per cent. interest for money, it charges the assured an average or general rate, no matter what the age, of $18 84, adding to this forty per cent. for expenses—$7 54, or, in all, $26 38. It has now found, after thirty years' experience, that these premiums are unnecessarily large, and it proposes to cut them down over twenty per cent., and maintains that it can do so with perfect safety to existing as well as future policy-holders. The actuary indulges in some rhetoric about the philanthropy of the proposed change and the desirableness of bringing life insurance within the reach of the laboring classes which he had better have avoided. There is no more place for philanthropy in insurance calculations than in bank ledgers. The opposition maintain, on the other hand, that if the precautions the company has been taking hitherto are not necessary to its safety, the calculations on which it has been inviting confidence have been a sham, and it ought not, therefore, to expect people to rely on those it now puts forward; that the proposed reduction will not amount on the average to more than ten per cent.; that in reality it will, in the actual working, increase rather than diminish the surplus which the company now says is too large; that the plan cannot be carried out without injustice to existing stockholders, and a decrease in their security; that the reserves of the old policies will be used as capital in getting new business, while the old policy-holders cannot be reimbursed from the profits of the new business, as the new members, being "mutual," will be entitled to any surplus that may accrue from their own premiums.

The failure of Messrs. Bowles, the American bankers in Paris and London, would be sufficiently discreditable and annoying even if it had not been accompanied by gross frauds. One of the brothers, the only one on whom the police has been able to lay hands—though he appears to be the least culpable—is now under examination before the London magistrates for making away with the bonds and other securities committed to the firm for safe keeping by unfortunate travellers. The way the business of the firm was conducted—the care and forwarding of baggage and the furnishing of assistance in finding lodgings and making purchases being the principal feature of it—made it very attractive to the poorer or more helpless class of travellers, and there are, therefore, we fear, a considerable number of unprotected women, country ministers, and simple-minded people of both sexes among the victims of the failure. This leads us to say that the publishers of European guide-books for popular use incur a serious responsibility in recommending bankers to travellers. This is often done, and has been done in two or three instances by prominent houses in the case of Bowles Brothers, apparently for no better reason than that the firm advertised in the guide-book, and certainly we are bound to believe without enquiry as to their standing; the firm has been set down as "shaky" by the mercantile agencies for some time back—their capital, until Mr. Appleton went in, not having exceeded $50,000. No publisher has any business to recommend any banker, unless of the oldest and highest standing; and we warn all travellers, and

especially women, that it is probably dangerous, and may expose them to great inconvenience, to go to Europe with a letter of credit from any but the best houses. No banker is a bit too good for the poorest traveller, because a political revolution, or fire, or war, or sickness, or shipwreck, or who knows what, may land him moneyless in some out-of-the-way place where it will make all the difference in the world to him in the matter of raising money whether he can draw on the Browns, or the Barings, or the Rothschilds, or on only Jones or Smith. The United States Government, we know, set a bad and deluding example on this point lately by substituting as its foreign banker a gentleman of the name of Clews for the Barings; but there was "politics" in that, and private citizens must not be taken in by it. As a general rule, too, we may say that all bankers who, besides keeping your money, offer to run errands for you, and black your boots, and carry your parcels, and take you to the milliner's, and the hair-dresser's, and the trousseaux shop, and find peanuts, squash pie, buckwheat cakes, and baked beans for you in Paris, are so far dangerous.

The contest between President Thiers and the French Assembly, which has been raging for the last fortnight, arose first, as we pointed out last week, out of his open declaration of his readiness to take the Republic as the definitive form of government, and his advocacy of its immediate proclamation. This the Right, or Conservative party, looked on as a virtual breach of the Pact of Bordeaux, and they began forthwith to suspect him of secret complicity with the Radicals, or, at all events, of courting Gambetta's alliance, and marking out the latter, whom they nicknamed "The Dauphin," as his successor in the Presidential chair. Thiers has been, in the meantime, working hard and hopefully to secure a majority in the Chamber, by flattery and concessions to each side, and showed himself very indifferent as to the materials of which this majority was made up, being apparently quite ready to include the Left in it, and studiously avoiding offence to Gambetta in his speeches. This increased the exasperation of the Right, which determined finally to force him to declare himself with regard to Gambetta; and this job was undertaken by old General Changarnier, in a determined attack made under the form of an "interpellation" with regard to the ex-Dictator's recent inflammatory address at Grenoble. M. Thiers met him in his now usual manner, treating all questioning of a man of his age and antecedents touching his attachment to "the principles of social order" as personally offensive, while Gambetta remained studiously silent, and, as it seemed to the Right, by preconcerted arrangement. M. Thiers has expressed his willingness to appeal to the country, or, in other words, to have the Assembly dissolved, but the Assembly refuses to be dissolved as long as the powers of the Executive are unsettled, well knowing, say the champions of the Right, that the popular vote in France is apt to be what the Executive likes to make it, if the "chief of the state" enjoys full powers of interference.

The Left replies, on the other hand, that the Assembly is not a constituent body; that it was elected to make peace, and this only; that it has no right to exercise the powers of government one minute after this object has been accomplished; and that it is the country, and the country alone, which is competent to decide between it and the President. The Right rejoins that, in using the phrase "appeal to the country" in the sense in which it is used in England and America, the Left is guilty of an attempt at deception; that a dissolution of the Assembly now would be looked on by the people as a revolutionary measure and as leaving France without a government; and that French electors would then be terribly frightened about "order," and do what they have always done under similar circumstances—support the man in actual possession of power—so as to make sure of tranquillity anyhow; but M. Thiers, who is now in possession of power, is no longer neutral; he has committed himself freely to the Republican cause, and, for aught they know, is in alliance with the Radicals; and that, therefore, before the appeal is taken, his powers must be limited and defined, and the supremacy of the Assembly formally asserted. It objects, in particular, to his uniting in his own person the functions of a responsible minister and of a constitutional monarch. It says, if he comes down to the Assembly and takes part in the debates, he must submit himself to the majority in all things; while if he is to be a permanent President, his means of objecting to legislation must be confined to a veto, under the usual conditions. The result of the fight thus far has been the election, on the motion of the Minister of the Interior, of a commission composed of thirty members, who are to define the powers and regulate the responsibility of the various branches of the government. There are on it, as elected, 19 members of the Right, and 11 from the other shades of opinion, viz., the Left and Left Centre—the latter being composed of moderate liberals, who are ready either for constitutional monarchy or a republic, whichever offers the best chance of repose and liberty. The kind of compromise with M. Thiers which seems probable or possible is the acceptance by the Right of the Republic *de facto*, the responsibility of the ministry, and the renewal of the Chamber by thirds. In the meantime, there has been a change of ministry, the new one being composed of very good men, but it is evidently only "transitional."

The Counties Reform Bill has at last been passed in the Prussian Herrenhaus, by a majority of 116 to 91. The contest between the Crown and the Lords has been long and bitter, but the result is decisive of the future course of Prussian politics. The Junker party is ruined beyond redemption, and the Government fairly committed to the policy of constitutional reform. The Prussian monarchy has been built up, like the French monarchy, by the consolidation of provinces, but the work of consolidation has been carried on from the throne downwards; that is, the king took from time to time all the authority he could from the feudal nobility, but the organization below them he left untouched. Consequently, there was not until now any homogeneous basis for the monarchy. The kingdom was made up of provinces and departments, counties and communes, but there was among them all no political unit, like the New England town or the English county. Between nearly every commune and county there was a difference of origin and organization. Some communes were democratic, others thoroughly feudal, and the feudal aristocracy of Eastern Prussia especially has really done so much for the monarchy that it has preserved down to our day an arrogance long extinct everywhere else, and which it would well repay a political observer to make a journey to witness. However, the times are changed; thrones can no longer rest on the allegiance of old houses and the fidelity of vassals. It now takes a whole people to make a state, and Bismarck has found it out, and the poor Junkers go to the wall. The county now becomes the unit of the Prussian system; its limits are defined; its government reorganized; and its power over the communes extended; the peasantry are admitted to an equal share of representation in the county assemblies; the privileges of the aristocracy of birth are curtailed, and a property qualification substituted for some of them; and the county assemblies have the right to select candidates for the Landrath, or provincial assembly, whom the king may, and probably always will, appoint, instead of selecting them himself, as heretofore. In short, the whole process is one which thoughtful Frenchmen can hardly witness without thinking sadly of "what might have been," for it is the very one through which France in 1789 ought to have set out in quest of the Promised Land. A curious illustration of the state of mind of the Junkers is afforded by a letter from a member of the Herrenhaus to the *London Times*, in which he alleges that the king is making a terrible mistake, in support of which position he cites "Machiavelli, *Discorsi, lib.* 3, *cap.* 5."

MR. BOUTWELL'S POLITICAL ECONOMY.

WHENEVER we hear anybody denying the existence of a "science of political economy," and bragging of his ignorance of it, we always feel sure that what he really means is not that he denies the value or existence of the political economy of other people, but that he has somewhere a science of political economy of his own in which he has the profoundest faith. For instance, those gentlemen in Pennsylvania who look on the political economy of Adam Smith, and Turgot, and Say, and Mill, and Ricardo with utter contempt, have a political economy of their own, invented by Mr. Henry C. Carey of Philadelphia, for the generalizations of which they have reverence which we think nobody has ever accorded to those of the other writers we have named. They will tell you in one breath that there are no such things as "economical laws," and in the next that Carey's economical laws are among the most beautiful discoveries in the whole field of human knowledge, and that a nation which bases its legislation on them cannot go wrong. In like manner, Mr. Boutwell, great as is his scorn for "the dismal science," is far from dispensing with a knowledge of the laws which regulate production, distribution, and consumption; on the contrary, he has a system of them at his fingers' ends and in constant use, but, instead of being compiled by Adam Smith, they are the work of George S. Boutwell. He denies, we believe, also, the existence of a science of finance, and boasts that he has never read a book on finance; but by that he simply means that he does not think the experience of the human race during the last three thousand years in the matter of raising and spending revenue of any value; he does not mean that his own views, based on his own experience, are of no value, or do not furnish a sure guide in dealing with the various fiscal problems of the day. Indeed, it is almost a waste of time for us to offer this explanation on his behalf. The man who says that he is acting in any important business of life without a theory, or, in other words, is *simply* "a practical man," confesses himself either a fool or a knave. When we offer goods for sale at a certain price, we act on a theory as to the intensity of certain public wants, based on our own or our neighbors' experience of the habits and tastes of the society in which we live. When we go to borrow money of a banker, we base our application on a theory of his mode of doing business, and of his probable aim in lending money, based partly on our knowledge of human nature and partly on our knowledge of the customs of the class to which he belongs. If a man says he is going to open a store or borrow money without any regard to the conditions of trade or the requirements of money-lenders, we look on him as a lunatic, or any man who says so is apt to be a lunatic. Accordingly, when Mr. Boutwell denies that the theories of finance found in books are of any value, what he means to say is, that they are of small value compared to his own.

For instance, it is the opinion of all the great economists of the world, excepting Mr. Henry C. Carey, that man, being by nature a producing and trading animal, the freer play you give his faculties —that is, the less you trammel him by burdens, rules, and regulations—the more rapidly will he create wealth; and the less any two or three men attempt to substitute their judgment in the work of production for the active intelligence of the whole mass, the more prosperous will the country be. Therefore, it is the opinion of most economists that, when a nation is heavily burdened with debt, the wisest way of meeting the liability is to put the payment off as long as possible, so as to give people time to multiply, labor, and accumulate, and so lessen the weight of the burden. Mr. Boutwell does not say that no opinion on this subject is of any value. He says that his own opinion is the best, and he therefore devotes himself soul and body to the payment of the public debt in the shortest possible period, without regard to the condition of industry or of the currency. In this, we think, however, he is right, as long as his duties are so largely ministerial as they are now. He has been directed by law to apply certain moneys to the reduction of the debt, and if he failed to do so he would be guilty of malversation. The only fault we can find with him is, that he supports the system which he is engaged in carrying out with all the influence at his command.

In his last report, however, he uses this influence in support of three theories of his own political economy which are totally opposed to the conclusions of political economy commonly so called. He recommends the Government to induce people to run steamers on the Pacific Ocean between California and Japan and China, by promising to compensate them for the loss which they would be sure to sustain in the undertaking. The subsidization of lines of steamers by Government has not been uncommon in other countries. The excuses offered for the practice have been either (1) that quick and regular communication has thus been secured with places with which there would otherwise be no communication at all, or no communication that was not slow and irregular; or (2) that steamers were thus kept ready for sea, which would be useful in case of the sudden outbreak of war; or (3) that a supply of sailors was thus kept up for the military navy. Mr. Boutwell does not defend his plan on any of *these* grounds. He acknowledges that quick, cheap, and regular transit between the United States and China and Japan will probably be supplied by foreigners at once, at less cost than Americans could supply it; and of the value of the enterprise for warlike purposes he evidently and properly cares nothing. What he says is, that an increase in our commercial marine "would give a wonderful impetus to the agricultural and manufacturing interests of the country." By an "increase in our commercial marine" he does not mean an increase simply in the number of ships owned by Americans and used in the carrying trade. This could be brought about at once by allowing Americans to buy ships in the same yards in which the English buy them, and pay for them with their own products. To this Mr. Boutwell is inflexibly opposed. To him, no number of ships carrying the American flag would do the country any good, unless they were constructed by American builders—there being some mysterious influence, apparently, in the place of a ship's birth on her capacity for making money. The only "increase in our commercial marine" which would produce the wonderful results which the laws of his political economy enable him to predict so confidently, is an increase caused by an agreement on the part of the Government to pay people for engaging in a losing business. The phrase "wonderful impetus to the agricultural and manufacturing interests of the country," though used by politicians somewhat loosely and vaguely, means, when we analyze it, that those now engaged in agriculture and manufactures will be induced to produce more largely, and large numbers of other persons be induced to devote their capital and their labor to similar pursuits. According to the old political economy, the work of production in any given place, or at any given time, is mainly stimulated by the opening of new markets, or, in other words, by the increase of demand. That cheap and regular communication with China and Japan would open up new markets there is no denying; but this Mr. Boutwell does not propose to furnish. In fact, his position is that the English and French and Germans are making rapid preparations to carry our goods to these countries more cheaply and expeditiously than we can do it ourselves, and that they will certainly do it unless our Government intervenes and furnishes transportation, to be paid for partly by the consumer of the goods, and partly by contributions levied in form of taxation on all the citizens of the United States.

It is, therefore, not cheap and ready access to the markets which Mr. Boutwell thinks will stimulate production, but transportation in ships owned and built by particular persons. According to the old political economy, the ownership of the ship which is to carry his goods to market is a circumstance of no consequence whatever to the manufacturer or farmer. Under the economical laws of Adam Smith, when a capitalist is deciding whether he will invest or produce, he examines first the cost of production in the place of production, and then the rates of freight to the place of sale. Where the man was born, or

to what sovereign he owes allegiance, who owns the wagon or the ship which is to do the work of transportation, he never thinks of enquiring. According to Mr. Boutwell, however, the owner's domicile or place of nativity is the principal fact. The capitalist, under his system, who would fold his arms if an Englishman or Frenchman offered to carry his goods to Canton at $5 a ton, will immediately begin to erect machinery or clear land on hearing that an American will do it at the same price. These views may be correct, but down among the shippers in South Street they would excite much hilarity, those gentlemen being still under the influence of the ancient delusion that the use of ships is to carry things, and that the maintenance of ships as a matter of personal or national pride is yachting, and not business.

It is a well-established doctrine of the old political economy, that the trouble which men used to give themselves about "the balance of trade" was a chimæra of their own imagination; that each individual, in either buying from or selling to foreigners, does what is best for his own interest, which he understands better than anybody else; and that what is best for his interest is best for that of the country; that what is true of one person is true of ten thousand; and that when ten thousand persons engaged in foreign trade square their accounts at the close of the year, and their books show that they have received more from foreigners than they gave, it is as absurd for any man, no matter what he calls himself—vizier, manamouchi, secretary of the treasury, or chairman of committee—to begin wailing over their folly, and predicting their ruin, as it would be for him to go into the counting-house of a single merchant and tell him he acted madly in selling American bonds in London, or in sending specie over to pay for his silks. On the other hand, under Mr. Boutwell's system, any person whom General Grant may select for a seat in his Cabinet, or any half-dozen men whom Simon Cameron's caucus may choose to put on the Senate Committee on Finance, is presumed capable of directing all the great merchants of the country in the conduct of their foreign trade; and we have in Mr. Boutwell's last report an expression of sorrow over the unsatisfactory way in which they have been carrying on their business, though he himself has never had any experience of any foreign trade or even of any wholesale domestic trade.

According to the old political economy, which on this point, more than on any other, bases its conclusions on the experience of many nations and many ages, nothing can be more dangerous than to lodge in the hands of any one man, or body of men, the power of increasing or diminishing the volume of the currency—or, in other words, the power of raising and lowering the price of commodities and changing the real amount to be paid under contracts. It has never, or almost never, been committed to anybody without its being abused. The old kings abused it by adulterating the coinage; modern governments have abused it by issuing vast quantities of paper promises to pay. It is now, therefore, a well-settled canon of the economists that such issues are only permissible, if permissible at all, as a supreme military necessity, like the burning of a bridge or the destruction of a railroad; that in times of peace, at all events, paper money should only be issued in compliance with the demands of trade, as indicated by its redeemability in coin; that is, that nobody should issue it except under the check imposed by liability to pay it in coin on demand. Under Mr. Boutwell's system, however, it is considered proper to commit this power to an irresponsible minister who may hold office for four years in defiance of the popular will, who is not obliged to make any public statements for the reasons of his conduct, and who, this year, may be a very honest man, but next year a Butler, or a Drew, or a Jay Gould; and this not "in case of an invasion or insurrection," but in aid of the ordinary annual operation of "moving" the crops. Under the old system, the farmer who raises corn is supposed to be the proper person to find the money to carry it to market, either out of his own savings or by loans from his friends or his banker. Under the Boutwell system, even the American farmer is not supposed to be able to carry it to market without the help of the Government, which is expected to afford this help by an act of arbitrary power such as no sovereign in Europe would now venture on—not even Abdul Aziz, the Commander of the Faithful.

SOME APPARENTLY UNFORESEEN RESULTS OF THE DECISION AT GENEVA.

THE most obvious and direct results of the decision at Geneva are the increase of neutral obligations which were before somewhat vague and elastic, like the common law, but have been made certain, arbitrary, and rigid like the statutory law; and the effect, whether favorable or not, which will be produced upon the practice of settling international disputes by arbitration. The *Nation* has already discussed this subject with some fulness, and we shall not recur to it except by this mere mention in passing. Undoubtedly, by means of the "three rules" which were proposed to the High Commission by its representatives, and of the theory upon which its "Case" before the Tribunal was based, and of the arguments of its counsel, the United States has created and assumed heavy and perhaps unnecessary neutral burdens. But there is no doubt as to the competency of the General Government to meet and perform these onerous duties; there is no question as to the authority of Congress to pass appropriate laws and to establish an adequate police. The difficulty will be entirely a physical and not a legal one, and may be overcome by a sufficient expenditure of money and a sufficient employment of detective and repressive officials to prevent the use of American territory for belligerent purposes either by citizens or by foreigners.

But there will be other necessary results of the Arbitration which have not as yet been noticed—results peculiar to the United States; results which will reach far beyond the subject of its neutral rights and obligations, and will affect its internal and constitutional law wherever that law touches upon or has any connection with its foreign relations. These consequences of the decision at Geneva it is our purpose to describe and discuss.

To appreciate and understand them we must refer to one element of the controversy which appeared in its very earliest stages, but which became most prominent at its close. It will be remembered that to the representations and demands made by Mr. Seward and Mr. Adams, the British Government constantly opposed their existing statute as the limit of their administrative powers and the measure of their international obligation. To this defence the American secretary and minister replied, first, that even assuming the statute to be for the time the sole practical criterion of obligation towards belligerents, the means provided for by it were not properly and faithfully used; and, secondly, that if the statute was insufficient, Parliament had ample and conceded power by amendment to make it adequate to the exigencies of the case, and that if the Government were in earnest in their professions of impartiality, they would at once procure the additional legislation to be passed. These positions of Mr. Seward and Mr. Adams were unanswerable, and furnished broad and solid ground upon which to rest the liability of Great Britain. In the "Case," however, presented to the Tribunal, and especially in the argument of the counsel, the United States went far beyond this original theory of liability, and asserted with great earnestness, and even vehemence, the doctrines which, as we shall see, must of necessity retroact upon our own constitutional law. The fundamental thesis maintained by the representatives of the United States, the broad dogma which upheld the whole superstructure of practical argument, was that the International Law knows absolutely nothing of forms of government, of constitutional checks and safeguards, of limited powers, of regular and legal as opposed to arbitrary and illegal procedure. All these matters belong exclusively to the internal and domestic arrangements of states, and have nothing to do with their external and foreign relations. Before the majesty of the International Law all sovereign states are equal and alike in subjection. Its mandates

are addressed with the same compelling force to absolute monarchies, to constitutional kingdoms, and to democratic republics; they speak to and bind alike all departments of a government, the executive, the legislative, and the judicial. No independent state can escape its international obligations on the plea of defective legislation or of defective administrative machinery, because the very nature and essence of these obligations require that it should have provided itself with appropriate legislation and sufficient executive and judicial means to enforce within its jurisdiction the duties which the Law of Nations creates and imposes. In a word, no independent state, whatever be its form of government, whatever be its notions of internal order, or its methods of administering justice and executing its laws, can avoid or free itself from its duties to other nations by reason of any constitutional checks or limitations which it may have chosen to adopt. This doctrine, formulated by the authors of the "Case," and elaborated with great strength and with a wealth of illustration by Mr. Evarts and Mr. Cushing, was made the very foundation of the American contention at Geneva in defining the duties of neutrals during a war. It was vigorously opposed by Sir Roundell Palmer. It was practically accepted and approved by the Tribunal. It has become a part of the International Law so far as the United States is concerned. Our Government, having in the most solemn manner known to diplomacy maintained this doctrine as a part of the universal code binding upon civilized peoples, is estopped from ever denying the correctness of its present position.

The consequence of this theory of international obligation and of the efficacy of international law must be important and may be exceedingly embarrassing. The application has now been made to neutral duties, to the relations of neutral states to belligerents; but it is evident that the theory itself cannot be restricted to these relations. The argument on the part of the United States at Geneva endeavored to discover a general principle defining the nature of international obligation in the abstract, which principle should be decisive of the particular obligation in controversy. That principle was adopted by the Tribunal as the *ratio decidendi*, but was plainly not exhausted by the single application then made; it must be hereafter extended to all varieties of international duties, to all classes of foreign relations, and will be most fruitful in its effects upon our constitutional law.

It is conceded by every school of constitutional interpreters, by the ultra-national as well as by the advocates of State sovereignty, that numerous subjects of legislative and administrative action are completely entrusted to the separate States to the exclusion of the General Government. Some of these subjects have, or at least may have, an external as well as an internal connection; the exercise by a State of its proper and exclusive functions may give rise to foreign relations and complications with which, in most countries, the supreme general government alone can deal, but with which, under our organic law, the State governments cannot deal. Whenever such cases have heretofore arisen, and they have not been infrequent, the State Department, in its diplomatic correspondence, has invariably set up the want of constitutional power in the United States as excuse for the non-fulfilment of international obligations; or, to speak more accurately, it has maintained that this lack of constitutional power frees the General Government from a duty which might perhaps have rested upon a nation differently organized. Thus far in the history of our foreign relations, this plea has been accepted as valid, but will probably be so accepted no longer. A single well-known example will illustrate the difficulty and the former attitude of the United States.

During the so-called Canadian rebellion, while the insurgents occupied Navy Island in the Niagara River, a small party of British troops came over in the night to the New York side, seized the American steamer *Caroline*, which had been employed in carrying supplies to the rebels, and which was moored there, set her on fire, and sent her over the falls. One person at least was killed in the affray. Some time after one McLeod, an officer in the British service, was apprehended while in New York by the State authorities, was held on the charge of being engaged in the *Caroline* affair, was indicted for murder, and was imprisoned awaiting his trial on the indictment. The British Government at once assumed all responsibility for the acts of McLeod, declared that what he did was done by their authority, insisted that the matter was one for settlement between the two nations, and demanded the release of the prisoner. Daniel Webster, who was then Secretary of State, admitted the general correctness of the position assumed by Great Britain, and the abstract justice of the demand, but insisted and of course demonstrated that, under the constitution and laws of the United States, it was impossible for the President or any of his subordinates to obtain the custody of McLeod, to remove him from the control of the State authorities, or to surrender him in compliance with the demand. This answer of Mr. Webster was for the time acquiesced in, but the question of international obligation was not, after all, brought to a practical test, for on his trial before the New York Court McLeod was acquitted. If he had been condemned and executed, our Government would have been compelled to meet the question, and a severe strain might have been given to our institutions, for the people were not then so familiar with the free exercise of national functions by the President and Congress as they have since become. Congress, at its next session, passed a statute which will prevent *such* an emergency from arising again, by providing that, when any person shall be in custody on account of an act done by him under color of authority from a foreign government, the United States courts and judges shall have jurisdiction to enquire into the cause of the detention, and to release him, if proper, upon a writ of habeas corpus. This legislation, it will be observed, is very special, is applicable only to cases exactly similar to that of McLeod, and confers no general power or authority to act in other instances of international complications. Should an analogous case again arise—a case depending upon the same principles, but not exactly covered by the statute—the Geneva arbitration has furnished the complaining nation with a ready and complete answer to the position which Mr. Webster assumed.

Such cases must frequently occur, and we will specify, for purposes of illustration, some of those which are most probable. A resident of Canada commits some ordinary crime in New York, and escapes to his own home. The offence is not included in the extradition treaty, so that he cannot be demanded and delivered up. He is kidnapped by American citizens, brought within the territory of New York, and is there held under an indictment for his crime. The British Government interferes on his behalf, lays the facts before the President, and demands his release. We are informed that such a case is now or has recently been pending in the State Department. What can be done? Plainly the United States can do nothing legally. If Congress has the authority to pass an appropriate statute, none is now in existence. Neither the Secretary of State nor the President has more legal power than any private citizen to take this man from the custody of the sheriff; the constitutional limitations are positive and plain. But by our own showing at Geneva, this want of power, these checks and restraints of the organic law, do not in the least lessen the international obligation which rests upon the Government, do not furnish the slightest excuse for failing to fulfil that obligation. Again: complete and exclusive control over the general subject of acquiring, owning, and transmitting property in lands is confessedly given to the States. The United States, as it plainly may, enters into a treaty, wherein it is stipulated that the subjects of the other high contracting party shall have all the rights and privileges within the United States which are given to American citizens within the jurisdiction of the foreign power. The laws of that country permit all persons of foreign citizenship as well as natives to exercise full rights of ownership in land within its territory. Some of the American States retain the barbarous rule of the old common law, which forbids aliens to inherit land or to hold it by a perfect title. Has the treaty overridden the State legislation so far as the subjects of this parti-

cular foreign power are concerned? There can certainly be no higher international obligations than those created by solemn treaties, and the United States is plainly committed to the doctrine that the State law must yield to the treaty stipulation.

Another and very peculiar case which has recently occurred shows in a striking manner the effect which the conception of international obligation that we are discussing has upon the internal and even constitutional law. The treaty with Japan, as is the case with all treaties with Asiatic nations, provides that when an American citizen commits an offence within the territory of Japan, he shall be tried and punished, not by the local courts, but by the United States consul or minister resident. An American has been arrested and delivered over to the consul, charged with having in some manner desecrated a temple or an idol, an offence according to the native law punishable with death. The consul, naturally thinking that, as a United States officer, he is to administer United States laws, and not finding in his copy of the Statutes at Large any act making it an offence to desecrate a heathen temple or an idol, writes home for instructions. The matter is as puzzling to the Secretary of State as it was to the consul. Of course there is nothing in the common law nor in the statutes which applies to such a case. Treaties with heathen powers, and even with the Mohammedan powers, all contain similar stipulations. The consuls and ministers who execute these provisions ought certainly to act under some appearance of law, and not entirely according to their own discretion. How shall this appearance of legality be procured? Shall the Secretary of State draft a code to be used by his subordinates? Can Congress enact a system of proper laws to be administered exclusively in foreign countries with whom we may have entered into such compacts? The whole subject is full of difficulties. We remark, in passing, that the doctrine we are discussing throws much light upon the vexed question to how great an extent Congress, and especially the House of Representatives, is bound by treaties which call for acts to be done which the Constitution provides for doing only by statutes, such as the appropriation and payment of money, or the fixing the rates of duties upon imports.

Additional examples are unnecessary. These sufficiently illustrate the nature of some results which must inevitably flow from the decision at Geneva—results which were probably unforeseen, but which are the direct consequences of positions assumed by the Government, and to which it is now committed. These consequences are not confined to the international law and to the defining of international duties; they have a necessary and intimate connection with the constitutional law; they open, in fact, a new and wide field for the legislative and administrative functions of the General Government. As the fulfilment of international duties cannot be left to the mere arbitrary and irregular exercise of governmental power, the principle must be accepted that, by virtue of their control over foreign relations, the President has implied authority to do all executive acts, and Congress has implied authority to pass all laws necessary to the fulfilment of international duties, even though such acts and laws may interfere in the most direct manner with subjects which are generally within the exclusive control of the States. To how great an extent this principle might be carried, what a vast accession of power it would bring to the General Government, every student of constitutional law will at once perceive.

THE DIAMOND BUBBLE AND ITS BURSTING.

THE great diamond swindle which was exposed in San Francisco on the 28th of November, astounded that city of surprises and speculations like an earthquake of which there had been some premonitory rumbles, but for the catastrophe of which there were few persons ready. Doubtless the fraud was one of the most ingenious and masterly ever perpetrated among men of intelligence and wealth; it involved some of the most eminent and respectable business men of California; it rested upon the report of a mining engineer whose character for integrity and knowledge are still unquestioned; its success was partly due to the confidence reposed in two well-known New Yorkers; it had attracted the attention of wealthy men in the leading capitals of Europe; in short, it is a moderate assertion to say that its timely exposure has alone prevented the people of California, and doubtless of the entire country, from a diamond fever, compared with which the petroleum furor of a few years ago would have been trifling, and which can only be likened to the Mississippi Scheme and the South Sea Bubble.

The daily newspapers have given such full reports of the development of this swindle and of the mode in which "it came to grief," that we may refer to it chiefly as an illustration of the importance to the public of Governmental surveys, and of trained scientific observers knowing enough to cope with plausible rascals, and bold enough to go in the face of fallacies which are well endorsed and generally accepted.

The chief points thus far revealed in the history of the fraud are these: Ever since midsummer the Pacific breezes have blown furiously with diamond rumors; the newspapers far and near have published articles and items telling of this and that discovery of diamonds and rubies and of other precious stones, which were soon to add as much as gold and quicksilver to the wealth of "the slope." Amid many stories which were false, one thing was certain, that several of the shrewdest and richest men in San Francisco, with General McClellan and Mr. S. L. M. Barlow of New York, were associated in a company, having the nominal capital of $10,000,000, under the name of the "San Francisco and New York Mining and Commercial Company." Their specific object was "to develop" a diamond locality of extraordinary promise, the site of which was not revealed to any but the most select. The public were left to guess its whereabouts: now it was here, now there; but the impression was cherished by the newspapers that Indian-ridden Arizona was the new Golconda. Congress before its adjournment passed in hot haste, and under suspicious circumstances, the "Placer Mining Act," so framed as to cover diamond lands. Great expectations were held out of what would be revealed when the company should be ready to admit the public to a share in the facts and the profits. At length, matters were so far advanced that the report of Mr. Henry Janin, the mining engineer to whom reference has been made, was given to the newspapers. It was a guarded paper, based on a very brief reconnoissance of the region, the site of which was still kept secret; and it concluded with these words, which embody both the caution and the emphasis of his whole report:

"I would say that I consider this *a wonderfully rich discovery;* and one that will prove extremely profitable; that while *I did not have time enough* to make the investigations which would have answered very important questions, I do not doubt that further prospecting will result in finding diamonds over a greater area than is as yet proved to be diamondiferous; and finally, that I consider any investment at $40 per share, or at the rate of $4,000,000 for the whole property, a safe and attractive one."

As these facts became public, many shrewd people were still sceptical and distrustful, but the common belief was sure that great discoveries had been made, and that the knowing ones would soon "realize" a fortune. Other diamond companies were formed, and arrangements were making for the disposal of their shares, and for sending off next spring abundant parties of "prospecters." No one can foretell how wide would have been the excitement, or how determined, when the possibilities thus vaguely suggested should have been proclaimed as facts throughout the land, sustained by some of the most respected capitalists of San Francisco and the report of an able expert.

All at once the whole affair collapsed by the sudden appearance upon California Street of the United States Geological Survey of the Fortieth Parallel, commonly known as Mr. Clarence King's geological party. Certain trifling indications led the members of this expedition to surmise that the reported Golconda might be found within the belt which they have been exploring during the last few years. "Feeling," says Mr. King, "that so marvellous a deposit as the diamond fields must not exist within the official limits of the geological survey of the fortieth parallel unknown and unstudied, I availed myself of the intimate knowledge possessed by the gentlemen of my corps, not only of Colorado and Wyoming, but of the trail of every party travelling there, and I was enabled to find the spot without difficulty, reaching there November 2."

We have learned from private sources that when the diamond rumors began to be definite, and the report of the mining engineer made the prospect of hidden gems appear most certain, Mr. King and one of his chief aids, Mr. J. T. Gardiner, were far apart from one another, but both of them were curious, of course, to know whether the diamond locality could be within their beat. Mr. Gardiner, whose knowledge of the physical structure of the region of the interior in the latitude indicated is that of one who has been over and mapped down the streams, the roads, and the hills, took up his map and asked where the diamond placer could be. Two or three facts in respect to the time and the direction of the prospecting party had leaked out; he knew, for example, that they were only gone twelve days from a

certain point. His knowledge of the streams and of the snow-covered ridges enabled him to say with a strong degree of assurance that the region must be south of the Union Pacific Road, east of the Green River, and probably on one of the two peaks marked as Bishop Mountain on the map of the War Department. This was his surmise.

Mr. King, in his turn, was at a distance questioning what geological region on his beat would be most likely to bear diamonds if any were found, or to be selected as "diamondiferous" if a fraud were intended. By reasoning quite independent of Mr. Gardiner's, he was sure that the locality above-mentioned was the most likely. The comrades met, and each on his own knowledge put his finger on the mysterious and coveted spot.

Quietly and without consultation, Mr. King set out for the locality, with the co-operation of Messrs. Emmons and Wilson, two other members of the Fortieth Parallel Expedition. He found the trail, he saw the indications of recent visitors, he looked for precious stones, and behold there were diamonds and rubies—real diamonds and rubies, without the possibility of mistake. This was a great achievement to have discovered the region and to have found the priceless treasure. His well-trained mind and his habits of scientific study, however, suggested caution and further research. It occurred to him that if these gems were here deposited by nature, they would sink to the same place in the earth as other stones of like specific gravity, and not lie sprinkled on the surface. But, in fact, the treasures were superficial. He also noticed that one diamond was found associated with twelve or fifteen rubies with a very suspicious or shopkeeper's regularity, not at all like the methods of distribution which nature employs. Both these suspicious circumstances were confirmed by a careful examination of the region, and the conviction became irresistible that, instead of a treasure, a fraud of the most extraordinary character had been discovered. Hastening to San Francisco, Mr. King at once made known, on November 10, to the managers of the company his discovery; but, at their request, he kept it a secret from the public until a re-examination of the locality could be made. Accordingly, the company's superintendent, Gen. Colton, the engineer, Mr. Janin, and Mr. King, went up again to the still hidden locality. His associates were satisfied of the correctness of Mr. King's examination, and the parties all hastened back to San Francisco, and reported to the company. The trustees at once gave all the chief facts to the public, and the diamond bubble burst.

Doubtless, when the facts respecting the origin of this fraud are all brought to light, it will appear that some very knowing adventurers had bought up in London and elsewhere a quantity of uncut stones, and "salted" with them a region which in some of its aspects was suggestive of other diamond fields—those, for example, in South Africa, if not kindred to them. Certainly they prepared the scheme with a degree of cunning which might deceive the very elect.

We have already alluded to the immense service which has been rendered to the country by this exposure of Mr. King's. To appreciate it fully, it should be understood that the reports of the number and character of the precious stones already gathered by the company indicated a fabulous amount of treasure, sufficient even to raise among diamond dealers the enquiry whether the value of diamonds in the world-markets would not be seriously impaired. The shares of the company to the amount of ten millions were about to be offered to the public. In the wake of this great company eighteen other companies, it is said, were about to come before the public, each with a capital of a million in shares of ten dollars each, adapted to the smallest investors. Innumerable other localities in the wilderness were reported as diamondiferous, and there were clear indications that from East and West there would be next spring an exodus to the hypothetical Golcondas akin to the great transmigrations which were occasioned by the gold discoveries of California and Australia. Such results would be serious enough in the loss of money to those who could ill afford it, and in the loss of homes to those who ventured to the mountains, but still more serious injury would have come to California by the loss of her credit at home and abroad, and by the widespread belief, which no amount of explanation would have removed, that her best and most credited financiers could be parties to a cruel and stupendous cheat. These perils have been fortunately averted by the timely action of Mr. King.

His ability to expose the fraud is a good lesson in respect to the value of Governmental surveys. People have not yet forgotten that last winter in Congress doubt was thrown upon the value of this survey of the fortieth parallel, and some of our legislators wondered whether it would pay. This single exposure, the work of a few days in appearance, the result of several years in reality, has more than paid for the cost of the survey. The Government party has surveyed the entire belt of a hundred miles in width between the eastern slope of the Sierras and the eastern slopes of the Rocky Mountains. Full particulars have been gathered respecting its topography, its geology, its mineral deposits, its mining industry, and its vegetation. It was this knowledge which made it impossible long to conceal any "salted" diamond field within the boundaries of the survey. Moreover, the trained habits of observation which the leader and his assistants in this party had acquired, their scientific thoroughness and precision, and their sense of responsibility for their work to the Government of the United States, fitted them to investigate and discover the truth, however skilfully the fraud was put uppermost. Were it not for this Government survey, it would be hard to surmise where detection could have come from till the lack of dividends alarmed the stockholders.

The superiority of independent Governmental surveys and scientific researches to the examination of experts, however honest, is also well illustrated by this transaction. Nobody doubts the uprightness or the engineering skill of the expert employed by the company, but he went to "the field" with representatives both of buyers and sellers; they were readily persuaded that the findings were testimony enough; and they hurried him away, as his first report says, before he had time to make a thorough investigation. It was this necessity of conforming to the requirements of his employers which was unfavorable for the expert, and likewise it was the absolute independence of the United States geologist which favored his discovery of the truth.

One of the most respectable journals of San Francisco, the *Evening Bulletin*, brings the lesson home in the following excellent advice:

"These facts sharply emphasize the practical value, in the ordinary business of society, of scientific education and research. Had the rich men of this city had any respect for or knowledge of science, they would have employed a competent geologist at first, and have insisted upon his making his own tests, in his own time and way, thereby saving themselves the humiliation and loss they have now to suffer. Mr. King, while acting strictly as a Government officer, and upon the suggestion of his own sense of duty, has done the public a memorable service, the mere statement of which carries with it all the praise a man like him can desire, as it is the only reward he will receive. We recall in this connection the fact that Professor Whitney, of the State Geological Survey, with whom Mr. King once served some years ago, saved California from the disgrace and loss of a wild speculation in petroleum lands, by steadily adhering to the plain geological reasons for his belief that oil-wells could not be found where they were said by schemers to exist. Here are two conspicuous examples of the value of science as a protection against ignorant speculation. These public surveys 'pay' in more senses than one, and even those who care nothing for wider and fuller knowledge for its own sake, must hereafter admit that Government expends no money more wisely and usefully. If our wealthy men would as readily learn to be less speculative in their enterprises and more helpful of legitimate undertakings which build up a community on the solid basis of productive and diversified industry, the lesson of the great diamond swindle would be worth far more than it has cost in gold and damaged prestige."

OPENING OF CONGRESS.

WASHINGTON, December 8, 1872.

THE first week of the session of Congress is over. What it will bring forth in three months of labor it is too early to predict. But one thing is clear already, "the era of good feeling" has not been entered upon yet. Those in command of the Administration party have decided otherwise. The House of Representatives opened propitiously. Whatever we may think of General Banks's personal merits, the refusal of the House to accept his resignation as Chairman of the Committee on Foreign Relations showed at least a disposition on the part of a strong minority of the Republican members to be tolerant in their treatment of the "apostates," and that minority includes some of the leading men in that body. But that is not a new thing. It is well known that several Republicans of prominence in the House sympathized at heart with the "Liberal movement" before the disaster at Cincinnati; that they would have supported such a man as Charles Francis Adams for the Presidency; and that only the nomination of Mr. Greeley drove them back into the regular Republican organization. Such men do not interpret the victory of General Grant as a condemnation of the ideas and purposes which gave the original impulse to the insurrectionary movement; and they do not, therefore, look upon the offenders as fit subjects for summary execution. But this class of Republicans, however influential in the popular branch of Congress, do not control the "party machine." Their orthodoxy is again becoming suspected; their "soundness" is doubtful; and we hear loud cries for a Republican "leader" in the House, for a "Great Commoner," like the late Thad. Stevens, who will crack the party whip with sleepless vigilance over the whole flock, and wield the tomahawk without mercy. But the Great Commoner's mantle does not seem to have descended upon anybody's shoulders yet, although there is no lack of aspirants for that position, such as General Butler, and Mr. Maynard of Tennessee, and some lesser lights ambitious of power. A struggle for the mastership in the House is not unlikely to come between intolerant partisanship and a more liberal

tendency; but, as that body is now constituted, the chances will be in favor of the latter, whatever way the Administration may throw its influence. The preponderance of talent and integrity is so great on that side that the result cannot be very doubtful.

But in the Senate that struggle is already decided. In the Republican caucus, called for the purpose of reorganizing the committees, a few feeble voices, such as Mr. Wilson's, made themselves heard in favor of reconciliation and good feeling. That, of course, was useless, for the party magnates of the Senate insist that party discipline shall not be trifled with. They strictly adhere, as a supreme rule of action, to the time-honored principle that "deserters must be shot." The manner in which they tried to execute the sentence was quite curious. First, the circular calling the Republican caucus was so framed as to invite only those senators who had supported the platform and candidates of the Philadelphia Convention. This circular was also sent to the Liberal Republicans who had supported Greeley, thus pointedly inviting them to stay away. Had the circular not been sent to them at all, it would have answered all practical purposes as well. But it was probably considered a sharper thing to let them know in due form that their company was not desired. Then the caucus appointed the committees, dropping the names of all the Liberals from the positions formerly held by them. Then a note was addressed to the Democrats, informing them of the vacancies left on the committees for the Opposition, and inviting them, in filling those vacancies, to provide for themselves and also for Messrs. Sumner, Trumbull, Tipton, Schurz, Hamilton of Texas, Rice, and Fenton. On the most important committees only one place was left vacant, so that either the representative of the Democrats or the Liberals would be excluded. The design was evidently not only to deprive the seven gentlemen above-named of their former places on the committees, and thus to impair their influence in the Senate, but to hand them ostentatiously over to the Democratic party. Thus was not only every possibility of a friendly understanding with the Liberals destroyed, but the recognition of a third, independent element was studiously avoided, and the Liberals were to be *driven* into the Democratic organization.

This design, however, was not entirely successful. Mr. Casserly, in a very handsome manner, gave up his place on the Committee on Foreign Affairs to Mr. Schurz, and the latter addressed a letter to Mr. Thurman, in which he declared his unwillingness to serve on any committee as a representative of the Democratic party, and his determination to maintain an entirely independent position. It is understood that his views are shared by all the "Liberal" members of the Senate, except perhaps Mr. Rice, who is said to have shown some inclination to identify himself with the Democrats. The letter of Mr. Schurz seems to be well received by the sensible men of both parties, but the Republican managers in the Senate give out that they will treat him and his associates as Democrats whatever course they may take. That is what Mr. Conkling calls "purifying the Republican party."

Thus it may be said that in spite of the conciliatory disposition shown by a number of Republicans in the House of Representatives, the "era of good feeling" has for the present been postponed, especially as, according to current report, the refusal of the House to accept Mr. Banks's resignation has met with little favor at the White House. We must expect to see Morton, Conkling, Chandler, and Cameron continue to carry things in the Senate with as high a hand as they did before, for even Cameron does not seem to have suffered from the apparent snubbing he received in the Philadelphia postmaster case. In fact, I have it on very good authority that the statement contained in a letter which appeared in the *Nation* of November 28 is true: Mr. Fairman, the newly-appointed Postmaster, was really Mr. Cameron's candidate, while the latter ostensibly advocated the appointment of Mr. Truman in order to please a certain set of Pennsylvania politicians. Mr. Cameron is known here to have resorted to such tricks before, and he can now afford a chuckle about the snubbing story when he has his postmaster at Philadelphia, and his influence at the White House as well as in the Senate unimpaired. It is, therefore, doubtful whether Mr. Cameron will join in the threatened attack on the President's civil-service regulations. But Senators Logan and Carpenter are in earnest in their opposition to all the proposed modes of civil-service reform, and they will avail themselves of the first opportunity to open the assault, while General Butler will do the same in the House. This assault, however, will probably not be successful, provided the President himself does not permit himself to appear in an uncertain light. There are, indeed, but few Republicans in Congress who will defend any civil-service reform measure with sincerity and zeal, but the average Administration man will not be inclined to thwart the President's wishes in this matter, and the Liberals may be counted upon to fill the gaps.

The Democrats in Congress are in a disturbed state of mind. There are but few who do not secretly recognize the fact that the last Presidential election has virtually broken up the Democratic party, and that an organization so completely shattered cannot become a great power again. Some of them, especially the younger men, in the House of Representatives openly express the wish to see it disappear, so as to give its members full freedom to choose new associations. The question is, how to bring about its speedy dissolution, and that question seems to be a distressing puzzle, even to the most progressive Democratic mind. Nobody seems inclined to take the initiative, and a vague hope is entertained that the decisive thing will be done by the people, so as to relieve the leaders of the responsibility of burying the Democratic party. What even the most enlightened leaders seems to lack is the courage to begin what they see must eventually be done. The older chiefs are particularly anxious not to commit themselves. They are still dreaming of the possibility of preserving for their own benefit the political capital they have invested in the old organization. They are unwilling to give up their commanding positions, even if they command nothing but a shadow; they fear to be robbed of a prestige which gives them no real power. There are several worthy and honorable men among them who might still do the country some service, and it would be a pity if they should passively permit the coming flood to pass over them, instead of saving themselves by attempting to direct it. But the idea that the very existence of the old Democratic organization as such serves to give strength to the worst influences governing the party in power is steadily gaining ground, and the Liberals can do much to promote the disintegrating tendency by discouraging the hope, still here and there cherished in Democratic quarters, that they may permit themselves to be driven as reinforcements into the Democratic ranks. As to the development of new formations, we shall probably have to wait for the next Congress.

THE DEFEAT OF THIERS.

PARIS, November 22, 1872.

I HAD not been to Versailles since the return of the Chamber. Last Sunday morning a Deputy told me, "You had better come to-day; we shall have a stormy day." So I went. The rain was falling in torrents in the city of magnificent avenues. I saw old General Changarnier running for a cab at the station, as there are perhaps only fifty cabs for 750 deputies. He opened the fire in the Chamber; he made what is called here an interpellation on Gambetta's speech at Grenoble. Gambetta had attacked the Right and the authority of the National Assembly, which, after the late events, is the only legal power remaining in France; he had pronounced on his own authority the dissolution of the Chamber; he was therefore guilty of high treason; he was a rebel. The General, who is eighty years old, is still erect, and his voice though weak is full of energy; his style is pure, and he prides himself upon his scholarship. Speaking of the Gambetta men, he called them *coquins*, and the President interrupted him and remarked that the word was not parliamentary. Changarnier bowed and said that he thought the most correct word was the word which best represented the thought, and he preferred his own old-fashioned French to the slang (*patois*) of the Radical school. The Minister of the Interior made a very feeble answer to Changarnier; he had no difficulty in showing that the Government could not be held responsible for the opinions of a Deputy; but he proved it like a third-class lawyer, and the House could hardly be blamed for refusing to give him much attention. After him, the Duc de Broglie, one of the leaders of that faction which is called the Right Centre, and which is chiefly composed of Orleanists, said a few words: The question was not so much political as social. M. Gambetta had announced the domination of a new social stratum, and pronounced the condemnation of the old society. Now, what did a new social stratum mean in a country which enjoyed universal suffrage, equal rights, laws founded on the most absolute equality? Did the obscure gentlemen who signed the decrees of the Commune, and who, even after so many crimes, were still obscure, though they tried to write their names on the pages of history with blood and fire—did these gentlemen represent the new social stratum? The Duke wished to have M. Gambetta's answer to this question. But Gambetta was silent; he was sitting in his usual place, spread like a lion with his long and curly hair, and looking insolently at the Duke with his Cyclopean eye. The Duke then asked M. Thiers to condescend to repeat before the country what he had said of the Grenoble speech before a committee. To this committee he had declared that the political and social doctrines of Gambetta were bad, very bad; but a committee was a very close audience; he begged M. Thiers to make a declaration to the Chamber and to France.

M. Thiers was present, though it would have been much better had he remained at the Presidency; he slowly ascended the tribune, and drank as usual a glass of black coffee; he looked sullen, angry, and impatient. "The

declaration you ask me to make, I will not make. I will not say a single word. I will not allow you or anybody to drag me here like a criminal, and to extort from me declarations and professions of faith. You know my opinions. This question is a mere pretext. You dare not stab me directly, and you try to do it indirectly. Come down, and let us fight at once the political question. Are you ready to take the government from my hands? Can you make a more energetic, a more definite government?" So he continued, and every word fell like a hammer on the Assembly.

I have witnessed the most dramatic scenes at Bordeaux and at Versailles, but I never saw anything like the sitting of the 13th of November. Thiers in his message had crossed the Rubicon, he had been named Chief of the Executive and President according to the Rivet proposition, on the distinct understanding that the form of government should be reserved. The government was called a republic, as there was no king; but the constituent rights of the Chamber were solemnly recognized, which meant that the Chamber was still free to institute a republic or monarchy. In his message, M. Thiers had made a parliamentary *coup d'état*; he had said that the Republic had become the legal government of the country, and that every attempt to build up another government was revolutionary. The majority of the Chamber, which is divided when it comes to the choice of a dynasty, is not divided when the dynasty is out of question. The message of the President was a declaration of war to this majority. It was decided that an address should be made in answer to it. The leaders of the majority had no wish to upset M. Thiers, they only hoped to find the means to keep the *statu quo* and to imprison M. Thiers in the limits of the compact which had been made between him and the Assembly. But M. Thiers no longer considers himself as the delegate of the House. He spoke haughtily of his services. "Who was there to sign the peace when I offered to sign it? Who bombarded Paris and took it by force?" The Chamber became very angry when these imprudent words were pronounced. It remembered that M. Thiers had abandoned Paris on the 18th of March; that he had sent the order to evacuate all the forts, and even Mont Valérien; that for three weeks he negotiated with the Commune. Had the Assembly nothing to do with the peace, with the defeat of the Commune, with the reorganization of the army? Thiers spoke very much in the tone of young Bonaparte. It was really distressing to see, under the present sad circumstances of France, this old man, as pale as a ghost, with his face, as the Latin poet says, "*jam pallida morte futura*," scolding, threatening, tormenting a French Chamber, which was elected in the hour of peril, and which contains the most reputable citizens of France.

The friends as well as the enemies of M. Thiers were almost in despair. The Prussian ambassador, Baron von Arnim, Prince Orloff, the Russian ambassador, next to whom I sat, looked down upon this painful scene with feelings of pity and contempt. In vain did the Duc de Broglie ascend again the tribune and protest that he had no intention of opening a political war, of upsetting the President; personally, he was inclined to accept all the constitutional modifications which would be agreeable to M. Thiers. He only desired him to show publicly that he had nothing to do with the Radicals, and that he did not desire their alliance. General Changarnier followed him; he appeared like the *toreador* who comes alone with a fine steel sword and places himself before the infuriated bull. He was even nearer than M. Thiers to the awful moment when every man must give to the Supreme Judge an account of the use of his liberty and of his faculties; he was not animated by a servile ambition. I watched the President at this moment, and I think I could perceive that this time the sword had entered his breast. Changarnier went on and said that, old as he was, he was always ready to fight the cause of order and of loyalty. At this moment the House looked like a rolling sea; both sides stood in array. "This," said a Russian neighbor to me, "is civil war on the stage." M. Thiers from this moment felt vanquished. He retired before Changarnier's bold attack. He ascended the tribune slowly, and began a rambling speech, a long and diffuse statement; he went so far as to condemn in words the speech of Gambetta, though an hour before he seemed determined to be silent on this point. The Chamber breathed more freely after this condemnation; the majority had triumphed, but did not wish to push its triumph too far. Two hours were spent in the wildest confusion; various formulas were tried which embodied at the same time an expression of confidence in the Government and the condemnation of Gambetta. One was finally carried by a small majority—and it was all over. Thiers returned to the Presidency, complaining of the ingratitude of the Chamber. How could he go on with such a contemptible majority? Nearly three hundred deputies had abstained. Ever since, he has remained in his tent, like young Achilles; he receives the messengers of Agamemnon, but he says he cannot resume his duties till his power is placed on a firmer ground. His friends go wildly about with constitutional schemes in their hand. They say that M. Thiers must be named President for four years; that in this case he will have a responsible Cabinet, he will no longer go to the Chamber and compromise in daily struggles the dignity of the executive; they claim, however, his right to go and defend at the second reading the bills defeated after the first. The monarchists are trying to find the elements of a new provisional government in case Thiers cannot be brought back to the Chamber; some mention Marshal MacMahon, some the Duc d'Aumale, some both. So long as the Comte de Chambord and the Comte de Paris disagree, they dream of a duumvirate, or a triumvirate, of a Consul, of a Protector or Lieutenant-General. Meanwhile, Germany is discontented, and it is rumored that Bismarck will no longer accept any guarantee for the payment of the fifth milliard, and that France will in consequence remain occupied till March, 1874.

The situation, as you see, is as dark, as painful, as it was on the eve of the Commune. The Radical party alone feels elated. Gambetta, who once organized, in the words of a Republican, the dictatorship of incapacity and of defeat, is the only gainer; he never said a word while the two sides of the Assembly were fighting, like gladiators, over his name. He laughed and smiled, and looked calmly on the scene. His party numbers only 120 men in the Chamber; but the divisions of the Conservatives are so profound that he feels that this minority has the game in its hands. He has been a tool in Thiers's hands, but Thiers is now a tool in his hands. In this deplorable confusion, nobody seems to think of France; her will is ignored, her sovereignty is despised. It is impossible to know accurately where she wishes to go. She seemed contented with the government of Thiers as long as he preserved order and seemed an arbiter of parties. But now he has placed himself at the head of a party, and of the party which has the minority in the House.

Some compromise will probably be made for the present, but Thiers has lost something of his prestige as well as the majority. He has not shown the temper of a Washington; he has appeared more like an old Tiberius scolding his frightened Senate. His rule is a personal rule; his republic a personal republic. To many this is a surprise and a disappointment; it will not be for those who have read carefully the historical works of M. Thiers. He has always worshipped force; his criticism of the Terrorists and of Napoleon is only the shell of an instinctive admiration. Old as he is now, he may in a moment of disgust and of discouragement give up the political game; if he was younger, he would, without any hesitation, try to play the part of a Cæsar or a Napoleon.

ELSASS, STRASSBURG, AND THE UNIVERSITY.

STRASSBURG, November 12, 1872.

SINCE the 1st of October the political and social atmosphere of the new *Reichslande* has changed considerably, and certainly not for the worse. There was a certain sultriness in the air which rested upon all minds; now, after all those are gone who have voted *(optirt)* for France, everybody breathes more freely. The Alsatians are as yet very far from being enthusiastic Germans, but they, as well as the unwelcome newcomers, begin to feel as if everything was fast settling down into a normal condition, and this is, of course, the best proof of our actually making headway towards such a condition. The aristocracy—*i.e.*, the rich manufacturers and merchants, the *gens de lettres*, etc.—still keep aloof, and, undoubtedly, many a year will pass by ere there is any social intercourse whatever between them and the Germans in the higher walks of life. But even they already begin to bend under the high pressure of interest. It is a noteworthy fact that the merchants have at last consented to communicate with the railroad administration in regard to the defects under which, from various reasons, the railroad service has been laboring, to the great detriment of all persons receiving and forwarding goods. Their advice and assistance had been long ago solicited, but thus far the only answer was angry declamation. A still better token of the approach of an era of better—if not of good—feeling is the all but general participation in the elections of local governments. In the beginning, the same *parole* had been given out as in Italy by the irreconcilable clergy. Now, however, the very men who so zealously preached a dignified and absolute isolation from the "modern savages in uncouth attire"—as the *Evénement* recently called the Germans—have exerted their influence to the utmost to bring the voters in full numbers to the polls; and honor and thanks to them that they have done it. Not many things will do so much towards reconciling the Alsatians to their fate as the local self-government which they may enjoy under German rule. Even Germany is in this respect far behind America, but it can nevertheless well serve as a model for republican as well as imperial France. The Alsatians will be quick to appreciate that, for they never relished the imperial Providence which, in its over-solicitude for the welfare of the sovereign people, even

brought the parish funds to Paris and prescribed how many poor children were to be admitted to the parish schools free of charge. The danger was that the rich and influential men, whose personal interest in these and similar questions is comparatively small, would be carried away by their hatred of Germany and the Germans, not stopping to weigh conscientiously the interests of their fellow-sufferers who belong to the class of common mortals. The latter are mostly of a good-natured disposition, and, what is at present of still greater value, most excellent reckoners. Their pockets have, upon the whole, not suffered by the change of government, and the consequence is that, with a little politeness and tact, nothing is easier than to be on satisfactory terms with them.

It is true that the subordinate Government officials often lack this politeness and tact, and therefore frequently cause the old heartburnings to break forth anew. This is universally acknowledged by the Germans themselves. On the other hand, the Alsatians freely admit that they are met by the higher officials in a truly liberal spirit; especially the Ober-Präsident von Moeller stands very high in the public estimation. Along with this, however, it is also admitted that it is not ill-will which annoys them in the case of the subordinate officials, who cannot be made to understand that here the task is not only to govern with a firm hand, but also to win hearts. Although the reasoning of the mass of the people is not of a kind to make them always keep in mind this logical conclusion, yet they are so far conscious of it that a private German gentleman or lady has hardly ever to suffer from the ill-humor caused by the blunders of minor officials. Even on Friday, the great marketing day of the week, the ladies are not exposed to any insults, though *les dames des halles* of Strassburg are not renowned for over-politeness, and although the fairer sex is, upon the whole, more ready to give vent to the bitter feelings still lingering in their bosoms. The refusal of a furniture wagon by the wife of a livery-stable keeper, although half a dozen of the desired vehicles were standing in the yard, has been the only exhibition of ill-will which has come under the personal observation of your correspondent. Even the sworn enemies of Germany—for not all of them have shaken the dust from their feet—have grown tired of demonstrations. Here and there one still meets with a *Vive la France! A bas l'Allemagne!* written with charcoal on a fence, but nobody takes the trouble to wipe it off. Some boys still indulge in the pleasure of wearing ribbons of the French colors, but no one stops to look at them. In the show-windows of a certain book-store is still to be seen a picture representing a broken-hearted French family just about to leave "home, sweet home," to suffer hunger in France rather than enjoy plenty in Germany, but it does not attract the attention of the passer-by more than any other picture. If it were not for the universal *bon jour* and *bon soir*, the white-pointed nightcap on some man's head, peeping out of a window, and a few similar things, one could walk for an hour or more through the streets without becoming aware of being in a city which has been under French rule for nearly two centuries. Only in some of the principal stores French is habitually spoken, and everywhere the German customer is treated just as politely as the Alsatian.

The Germans, although not rich, consume much and pay promptly, and that certainly goes very far in accounting for the rapid change of public opinion in this city, at least so far as it manifests itself on the streets. To the Imperial Government the credit is due of having used this powerful lever without regard to the proverbial Prussian stinginess. Not only has it paid promptly and liberally all those whose property had been damaged or destroyed during the siege—except, of course, those who have emigrated to France—but it has also taken care to bring money into the country in an indirect and lasting manner. Foremost in this respect stands the new university, although established for other and more important reasons. At first the citizens were anything but delighted at the prospect of getting beside the army of helmets an army of many-colored caps. Their imagination painted the German student as a kind of semi-barbarian, continually full to overflowing with beer, and fighting a duel about every other day, to which was also added the *grisette* of the French student. The consequence was that it was found extremely difficult to procure lodgings of any kind for the students, although their whole number was in the first semester but 213. Now, it is not to be denied that there are students, and a good many too, of the above description at the old universities, excepting always the *grisettes*, who are an unknown institution even among the students of Berlin. This class, however, had nothing to expect in Strassburg, and so it was not represented at all. About a week ago the new rector—Professor De Bary, one of the very first among living botanists—was solemnly installed. In his inaugural address he mentioned as the most characteristic feature of the last semester that it had been a diligent one, among the students as well as among the professors. This is the truth, and it has had its good effects. There is no longer any trouble about lodgings; the student is a welcome guest wherever there is a furnished room to let. Rats and mice—Strassburg can boast of really appalling numbers of all sorts of common house vermin—have been obliged to give up their old haunts because the garrets had to be fixed up for the young men who want to lay in their stock of learning where a Goethe found ample nourishment for his vast mind. This reputation of diligence has proved a powerful magnet. Nearly 50 students left at the end of the last semester, so that 170 were the stock to begin the new one with, and no little anxiety was felt about the fate of the university. Now, however, already 214 new students have been inscribed, one more than the whole number of the last semester. It is to be imagined that the professors, now numbering 67, and the list is not yet quite complete, are in high glee. The students also are full of enthusiasm, and the beginning bids fair even to excel the first semester in zealous and earnest work.

Many difficulties are, of course, still to be conquered, because almost everything has to be created anew. One great drawback, for instance, is the lack of a university building. The lectures of the philosophical faculty are delivered in the castle, and the professors of law lecture in the academy. There are, however, many lectures which it is equally important for students of both faculties to attend, but they often have to forego the one or the other because it is a quarter of an hour's walk from one building to the other. Another weak point is the library. Whenever this subject is touched, there is not a professor whose face does not at once grow at least an inch longer. Every one insists that his department is more deficient than any other. But there is no question whatever that the poor professor of the history and constitutional law of the United States is worse off than all the rest. The *Americana* do not quite fill three shelves, each about two feet long. It makes one's heart bleed to look at this vast emptiness, dotted only here and there with a dry reed, which even the least-spoiled reading cattle could hardly be made to swallow. There are some books worth having, but they certainly do not number more than a dozen. The names of the gentlemen on the American committee are an ample guarantee that we shall some time get something that will not have to shun comparison with the splendid gifts of England; but we want to commence working at once, and though we strain our own means to the very utmost, yet they are very insufficient. We are not ashamed to beg, for we don't beg for the furtherance of *German* science; we beg in the interest of the whole civilized world, whose ends and aims we want to serve in common with the whole republic of students with whatever ability we may possess.

Correspondence.

"THE WRECK OF THE *METIS*."

To the Editor of the Nation:

Sir: The communication admitted to your columns last week, filled with reproaches for alleged unjust neglect of the gallant men who launched their boat for the relief of the shipwrecked on the *Metis*, is itself so unjust to them and to others as to call for correction. It unjustly neglects to name three out of the five whose courage and humanity it proposes to commemorate. Their names were Eugene S. Nash, William Nash, and Edwin Nash. It even mistakes the number—seven, instead of five, on the boat; it is also mistaken in regard to the case which it specially mentions, in stating that "the boy was rubbed back to life" on board the boat. He was brought back to life by care and warmth on board the *Moccasin*, the presence of which is so slightingly referred to. It gives no credit to the second engineer, who, having assisted the boy when exhausted on the skylight, saved him from being left for dead, as he apparently was, urging the boatmen, when that not unnatural proposition was made, "to give the boy his chance," which indeed they readily did. The name of the engineer was Edward D. Doane, whose deserts have been and are acknowledged by the parties interested, in forms satisfactory at least to him.

This letter also does injustice to the modesty of these gallant men, for their modesty since has been akin to their heroism during those fearful hours. Two of them upon application immediately afterwards refused for a long time to give even their names, and utterly rejected the idea of pecuniary compensation. One has most reluctantly received, in addition to other acknowledgments, a sum of money. Another in writing strongly disclaims a willingness to receive any.

Their services were commemorated in the papers of the day; not adequately, but more fully than by "Viator." Justice has not been done them. What would be justice to them? Has our censor even done them justice? These complaints, untrue certainly in part, probably in much, come not from them. The epithets, "cruel injustice," "shocking," "in-

human," "disgrace," applied so lavishly to the "Steamboat Company, the local authorities, the general public," as well as to "the ungrateful and heedless creatures whom Harvey and Gavitt with their companions saved," to "the Providence newspapers," "the landlords of the Watch Hill hotels," "the partners, relatives, and friends" of the lost jeweller, come not from the men who put out in their frail boat on that stormy sea, but from one who styles himself, with truth probably, "a mere bystander."

This complaint has given occasion, however, to record in this journal, which he truly styles "a leader of public opinion, public honor, and public intelligence" (as they have been in less durable memorials), the names of six men—John D. Harvey, Courtland Gavitt, William Nash, Eugene S. Nash, Edwin Nash, and Edward D. Doane—whose courage, humanity, and modesty are most worthy of commemoration. B.

NATIONAL REFORMS.

To the Editor of the Nation:

Sir: Your article upon private-bill legislation touches a point of the deepest interest for the future of our Government and country. I do not believe that the members of the British Parliament are any more public-spirited than our members of Congress, or any more disposed to sacrifice their private interest for the general advantage, although I quite agree with you that their legislative system has been improving for the last thirty years, while ours has been growing "weaker and worse"; and that they have effected national reforms involving great sacrifices on the part of Parliament, while we are falling more and more under the domination of private interests.

All the reforms you mention, and many others of at least equal importance in England, have been accomplished in one way. First, individuals becoming deeply impressed with some public grievance set themselves to arouse public opinion. As this gathers strength, the ministry, acting for the nation, and who are always seeking such methods of advancing their reputation and power, take up the subject, get together all the information upon it, strip it of all that is impracticable, formulate and reduce it to definite shape, and then bring in a bill to Parliament. The opposition, which again naturally falls under leadership, attacks and criticises it, and aims to defeat the ministry in every possible way. The conflict which thus arises gives new strength to public sentiment, adding the powerful element of personal enthusiasm. Thus the name of Sir Robert Peel is indissolubly associated with the repeal of the corn-laws and the Bank Act of 1844; that of Earl Grey with Catholic Emancipation; that of Mr. Gladstone with the Irish Church and Land Bills and the Geneva Arbitration, and so of innumerable other instances. And thus the hostile interests in Parliament, finding the question reduced to definite shape, which they cannot evade by bringing in a dozen other bills, all pretending to aim at the same object, and being reduced to a simple yes or no, with the whole weight of public opinion on the other side, are forced, *nolens volens*, to yield.

Now turn to our Congress. There is no man in it who represents or is authorized to speak for the nation. Every member represents a district, and they are all on an equal footing. Ten, fifty, or a hundred of them may bring in separate bills on the same subject. As a matter of necessity, things are all referred to the committees, which form the most complete wet blanket upon all national legislation. These committees sit in secret, are composed chiefly of men who have a special interest in the subject with which they deal, and who have absolute power to stifle any movement which does not suit their views. Even if the House orders them to bring in a bill, it is perfectly easy to kill it by quietly introducing some clause which shall rouse the hostility of members.

Calling upon public sentiment with us, therefore, is like stripping an army of its generals and telling the rank and file that they must win a battle by their combined efforts, and that, too, when the enemy, private interest, is thoroughly organized and drilled. Mr. Forster, the English member of Parliament, told his constituents in a recent speech that the mass of the people have far more need of a strong and resolute government than any special classes, and this is still more true here. In England, the constituency is limited, and can watch its interests more closely; and, moreover, as the ministry is practically elected by Parliament, they are much less directly responsible to the people. Universal suffrage makes a people like an army of peasants, utterly helpless if left to their own efforts. If we want national legislation, we must have national representatives in Congress. It is absurd to charge our failures to universal suffrage while we give the latter no chance at all to make itself felt.

G. B.

Boston, December 7, 1872.

THE MORAL OF IT.

To the Editor of the Nation:

Sir: I have read with sad satisfaction an article, entitled "The Fate of an Historic Edifice," published in your journal of last week. You have given worthy voice to the indignation that the desecration of the Old South Church has excited in Boston, and in the adjoining towns which make it their centre. But as the pages of the *Nation* are by no means confined to the presentation of current events in their emotional aspects, I offer a few paragraphs from another point of view. In commenting upon this vandalism, you justify your own apt quotation by eloquently showing "the pity of it." We cannot afford to neglect *the moral of it*.

I was glad to see that you gave the Old South trustees the benefit of their own announcement, that although they have "no veneration for walls, they do revere Christ their Lord." For if this latter reverence were at all discernible in their corporate action, it might be plausibly argued that we had some compensation for their lack of sentiment in the abundant piety that crowded it out. But are we able to find consolation in this reflection? If there is a sin of this present time which the Christian Church should treat with uncompromising severity, it is the headlong hurry to be rich that, keeping within the letter of the law, violates the spirit of equity that was designed to animate it. The difference between *Jus* and *Lex* is undoubtedly one that a pretty large class of our countrymen do not think it worth their while to recognize. But the distinction cannot be ignored with impunity by Christian professors. Lord Bacon gives a sharp opinion upon the deserts of those "who elude and circumvent *the meaning* of a law by captiousness and craft." And where this is done by persons occupying a position of sacred responsibility, it may furnish a worse example than the breaking of a positive edict, for which the courts provide a remedy for all aggrieved. You probably know that a few of us, who have given some study to the labor question, believe that the just complaint of the workingman arises from the burdens laid upon him by our State and national systems of indirect taxation. We believe that Adam Smith's sound maxim, that all subjects should pay according to their abilities, has been set at naught by the ignorance or negligence of American politicians. General laws have permitted corporations to levy taxes at discretion, and this has been done so adroitly that it will be some time before our busy masses can be made to see it, and provide a remedy. But the day approaches when they will see it. The struggle of the people with corporate powers entrenched behind bad legislation will give historical interest to the remainder of the present century. In that contest, it may reasonably be asked that those professing church-membership should lend a passive influence to the weaker side. It is not impertinent to consider upon which side these Old South trustees, who "revere Christ their Lord," have chosen to place themselves.

It is well known that our statutes exempt from all taxation churches and the land they occupy. In other words, our legislators decree that taxes due to the State for protection of ecclesiastical property shall be annually assessed upon the mass of the people. They decree that whatever annoyance may come to the community through this dwarfing of the capabilities of land by factitious distinctions among its holders, must be patiently borne. I here make no comment upon the wisdom of such legislation. I ask attention to the end it was designed to serve. It is obvious that this great privilege was accorded to church members *solely* that they might remain undisturbed in a familiar house of worship which their sentiments were supposed to have hallowed. I defy any one to show that this favor was designed to enable a sect to acquire great wealth by taking it without compensation from the only source of wealth—the labor of the people. It was never designed to compel our busy workers with brain and muscle to pay their hard-earned money to propagate the opinions or gratify the pride of some sect with whose views of religious truth only a small minority might sympathize. It was never supposed that the taxes annually assessed upon the people to spare the sentiment of church members, would be massed into an enormous fund to lavish ecclesiastical luxuries upon a sect or congregation. Now, undoubtedly the trustees of the Old South can appropriate to their private sectarian uses these annual gifts of the people for a specific object. They can do this and yet keep within the letter of the law. "*I cannot find it; 'tis not in the bond*," was the unanswerable reply of one of Shakespeare's characters to the remonstrances of certain sentimental citizens of Venice. But then the personage in question never professed to "revere" the Head of the Christian church.

These trustees may undertake to excuse themselves by alleging a similar sharpness of practice on the part of other churches. But that two wrongs make a right, or that we may follow the multitude to do evil, cannot have been proclaimed as ethical maxims from the Old South pulpit. Other churches, no doubt, have taken the people's money for their own uses after

a manner which no high court of morals could justify. But they did not take quite so much of it. They did not, at the same time, outrage a popular feeling which cannot be estimated in dollars. There is a venerable saying touching the impolicy of adding insult to injury, which is full of significance.

Nevertheless, these shrewd ecclesiastical appropriations are instructive to the thoughtful, even when they shrink from a publicity which commands general attention. It was modestly stated in my *Daily Advertiser* some months ago that a certain well-known church in Boston was "understood to be for sale," as soon as anybody would give an enormous price that was then specified. The church in question is in no blind alley crowded by towering warehouses, but holds a noble frontage upon public grounds. Not only is it hallowed by whatever associations may be supposed to cluster about a house of Christian worship, but it has the added sacredness of a place of sepulture. I should have felt that I offered an insult to its proprietors in suggesting that their consecrated edifice could be for sale, even at the Jew's bargain which their long exemption from taxation might give them hopes of wringing from the community. We all remember how Charles Surface, while selling the portraits of his ancestors, cracks a pleasant joke to the effect that if a man wants money, he should be allowed to make free with his own relations. The jest, which may be good enough to excuse the spendthrift who sells his family pictures, can scarcely cover church members who come to market with their family tombs.

Let us face the conclusion of the whole matter. Incorporated church members have no moral right to value that arises from the good-nature of the community in paying their tax-bills. But suppose it is necessary (as for imperative reasons it sometimes is) to change the location of a church, how shall we make an equitable adjustment of claims? I answer unhesitatingly, in one of two ways. Let the original cost of land and building be deducted from the amount realized by their sale, and paid into the treasury of the society—all surplus going into the State coffers to lessen the fiscal burdens of the people. Or, give the society the option of paying, principal and interest, all taxes that would have been assessed upon its possessions had they been treated like lay property, and then let it take a clear title to the remaining value. In either case, it is to be remembered, the pew-holders would carry their privilege of exemption from taxation to any other church they might erect. Their property would still be protected by a special favor whose expediency is questioned by American divines of undoubted orthodoxy. But church members might honestly accept it, because it would be precisely the privilege that the people intended to give them, and no other.

It cannot be denied that the sad fate of the Old South is felt as a personal calamity by the majority of our best citizens. The lesson is indeed bitter; but it may be one that we needed. It will, in many minds, raise the question whether we need burden our workingmen with additional taxes to gratify the supposed sentiment of church members which those who represent them emphatically repudiate. It will cause others to reflect that the increased value of exempted property—which has proved a bait so tempting to Christian professors—is not the gift of Providence to a sect, but rightly belongs to the community that has given its taxed labor, and risked its taxed savings, in the necessary business of this sinful world. The divine command, to render unto Cæsar the things that are Cæsar's, has never been abrogated. If church members cannot incline their hearts to keep this law, the secular power must give them some assistance. Our legislatures should enact that no sect shall appropriate to its own use the increased value of its exempted property, until the people are indemnified for the expense they have incurred in protecting it. Not only do church builders, as Emerson has it, build better than they know, but church destroyers also may work to higher purpose than they fancy. If the fall of the Old South shall impress upon our voters the truths I have endeavored to indicate, the last sermon preached from that venerated pulpit may be more useful than the best of its predecessors.

J. P. QUINCY.

QUINCY, MASS., December 6, 1872.

[We would suggest to our correspondent, as a point worth consideration, and which certainly he must prepare himself to see urged against his striking argument, that the church societies may be thought to have rendered something of an equivalent for their exemption. Apart from their sectarian, or even their strictly religious value, their general influence, conservative and elevating, will be said to have been worth something to the community, and so it may have been of good policy to encourage them.—ED. NATION.]

Notes.

HURD & HOUGHTON announce as in press "The Grammar of Painting and Engraving," from the French of Charles Blanc, by Mrs. Kate N. Doggett, with original illustrations; "The Butterflies of North America," first series, by W. H. Edwards, consisting of sixty plates, figures life-size, and descriptive letterpress; "More than Conqueror," a memorial of Col. J. Howard Kitching, 6th N. Y. Artillery, Army of the Potomac.——John E. Potter & Co., Philadelphia, will shortly publish a "Complete Bible Cyclopædia," edited by Rev. Wm. Blackwood, D.D., LL.D., pp. 2,000, illustrated by nearly 3,000 engravings.——J. E. Tilton & Co., Boston, will publish "Songs for Our Darlings"—a collection of poems for the youngest children, with an illustration on every leaf.——A weekly periodical to be called "The Table," and which will endeavor to promote the practice of sound gastronomical science in the American household, is announced as soon to appear. Mr. "Barry Gray" is to be the editor, and his efforts may probably be blessed to the improvement of the more wretched of our well-supplied kitchens—where perhaps more good food is worse wasted than anywhere else on earth.

—A movement of some importance has taken place at Albany in the interests of education, being the consolidation of Union College, the Dudley Observatory, and the Albany Law and Medical Schools into the "Union University of New York." There has been a growing desire among the alumni of the college to establish at Schenectady law and medical departments. The present object, however, as stated by Dr. Potter, the president of the college, "is not to create new and struggling institutions, but, in accordance with the spirit of the age, to consolidate and thus to strengthen and perfect institutions already existing." The college will remain in Schenectady and the other institutions in Albany; but as they are only thirty minutes apart, no great inconvenience can result. There will also be in Schenectady "Engineering, Chemical, and Scientific Schools," and a department of "Theological Instruction" under Dr. Tayler Lewis. In the early days of the State, it was seen that a number of struggling institutions must be injurious to higher education, and so carefully was the evil guarded against that the citizens of Albany and Schenectady were twice, we believe, certainly once, refused a charter for Union College, notwithstanding that there was then no college north or west of New York. Of late years this far-sighted policy has been reversed, and any man with more money than he has known what to do with has been allowed to endow a college, and been deemed a public benefactor. The consequence is a number of institutions struggling, like boys beyond their depth, to keep themselves up by dragging the others down. This new movement of consolidation, carried out by commendable concessions as well as co-operation, is one that may yet extend to the consolidation of colleges themselves, and one that must be attended by desirable results.

—We do not know whether the unfinished and discontinued course of lectures which Mr. Henry Stanley has attempted in this city is the only course which he meditates delivering. We suppose it may not be. For although he has but very slender qualifications for delivering instructive lectures on explorations in Central Africa, and would weary an audience in less than ten minutes if he tried to be instructive, he is nevertheless the Mr. Stanley who has travelled to Tanganyika and other more or less unpronounceable places; and throughout the country there are hundreds of towns where hundreds of people would give half a dollar a piece to see with their own eyes the Saviour of Livingstone, and the small black boy who accompanies him, and the African lances, shields, bows, arrows, javelins, and garments which decorate the platform, and the American flag which waved over the *Herald* Expedition. Mr. Stanley's first lecture, which is the only one we have heard, was, we must say, about the most deplorable exhibition of ignorance and self-sufficiency that we have ever been called upon to witness. It was unconsciously offered, or it would have been an atrocious insult to the public; and one could not but think that our British cousins must have been in a little panic about American good-will or they would never have taken up the heavy handful of being civil to our enterprising discoverer. When a gentleman who has but slight deference for Lindley Murray pronounces "prosaic" "prosiac"; and "fertile" with the "i" very long; and "deteriorate" as if it were derived from "deter" and the second "e" in "deter" were a "u"; and "clover" as if the "o" were extremely short—it is with reluctance that one hears him giving his views as to the origin of the negro race or saying that Sir Samuel Baker

and other gentlemen think so and so, but that "Doctor Livingstone and I" think differently. The lecture which we heard may be characterized roughly as being composed of a most tedious enumeration of meaningless African proper nouns, varied by occasional bursts of *Herald* "headline" eloquence, all delivered in an uncultivated voice and with a manner anything but enlivening. A large map hung beside the lecturer, but no use whatever was made of it, and everything showed incompetence. People in the audience were long-suffering, but about one-quarter of those present left the hall before the lecture was half over, and others were emulating the example of the young African on the platform, who ought to have been in his bed two hours before, and who, in his drowsiness, nearly bobbed his young head off. We should advise Mr. Stanley to eschew ethnology and to stop all articulate aspiration for the evangelization of Africa, to make one talkative lecture of what he saw of Dr. Livingstone, and to deliver it before as many country lyceum audiences as Mr. Redpath can secure for him. The whole thing has been frightfully overdone, the "intellectual department" of the *Herald* not being extravagantly strong, but the natural desire to look upon a notoriety may be counted on in this case as in others, and Ujiji will still do to conjure with in the rural districts. But offering intelligent audiences such matter as Mr. Stanley spread before us at Steinway Hall argues a pretty low view of American intelligence, and we would not have the English public believe that it is good enough for us. There have been of late some surprising mistakes made on this point by Englishmen.

—As all of our readers know, many and very grave charges have been for a long time brought against Mr. Froude's historical works. He has been accused of wilfully perverting documentary evidence in a way that amounts to gross falsehood, and his milder judges charge him with a haste of generalization, a warmth of prejudice, and an inability to look fairly at facts, which altogether make his writings thoroughly untrustworthy, and make their reception as true history nothing less than a public misfortune. And these accusations have been brought and urged not merely by Roman Catholic orators speaking glibly before audiences of patriotic Irishmen, but by scholarly men, students of history, with qualifications which, at the least, may be regarded as equal to those of Mr. Froude; and not by Roman Catholics alone, but by men of a confirmed Protestantism quite as strong as that of the person accused. In reply, Mr. Froude has at different times said a great deal, but it is not too much to say that his replies have convinced most persons that at all events those accusations against him which are morally least blamable are probably well founded. This, of course, leaves his writings discredited as untrustworthy; "fraudulent historian" he may not be, but his "History of England" is placed in a very unfortunate position. It is a position which his latest defence in no way betters. He proposes that his enemies shall select a certain number of pages in any part of his works, and that the assertions there made shall be compared with the original authorities in the State Paper Office in England, the persons comparing to be experts supervised by the Keeper of the State Papers, and the expense of the investigation to be borne by Mr. Froude. To this several answers might be given: as that historical works are to hold their own against all comers and in all their parts; that competent experts to spend months in ineffectual researches are hard to find; that, as Colonel James F. Meline remarks, "a very large number of Mr. Froude's historical assertions are totally without support of reference, and what are charged as the gravest offences—his suggestions, concealment, innuendo, attributing of motives, pictorial exaggeration, and pretended psychological introspection—are all matters which utterly elude all such tests as he proposes"; and, finally and most forcibly, that there are several very solid and specific charges already fully brought forward against Mr. Froude's fairness and accuracy, and supported by very strong evidence, and that until Mr. Froude clears himself of these he is a historian with a reputation so seriously damaged that further enquiry into his character is entirely unnecessary.

—Mr. Froude appears to misunderstand his position, and to be ignorant of the exact estimate put upon it by the more enlightened part of his reading public. The secretaries of Young Men's Christian societies will not tell him so, and do not think so; nor will the distinguished literary men who are invited to meet him and who laud his books to his face. But there are numbers of people who think his literary character under a decided cloud, and who think examining committees of experts uncalled for till, for example, this following instance of inaccuracy is explained, and an explanation is given, too, of an explanation which has already been proffered: In Mr. Froude's eighth volume, at the 211th page, he presents, says Colonel Meline, "a word-picture of Mary Stuart, full of passion and revenge, and adds, 'She said she could have no peace till she had Murray's or Chatelherault's head,' supporting the passage with this reference: 'Randolph to Cecil, Oct. 5, Scotch MS., Rolls House.'" Colonel Meline, in a pretty warm little book ("Mary, Queen of Scots, and her Latest English Historian"), which he published two years ago, informed Mr. Froude that his reference was wrong; that no such letter was in existence in or out of the Rolls House; and soon after, a reply which the Colonel thinks was inspired by Mr. Froude, and which we remember as so seeming to us also, was printed in the *Tribune*. This reply said in substance that Mr. Froude or the printer had made an error of the pen or of the press in naming Randolph as the writer of the letter in question: "It was the Earl of Bedford instead of Randolph who wrote the letter, though, owing to the fact that the latter was at that time about the court and in connection with Bedford, the letter could only have been written with authority of Randolph." But Colonel Meline sent for a certified copy of the Bedford letter, and found that there was in it no such passage as that "she said she could have no peace till she had Murray's or Chatelherault's head." Or take the case of Miss Agnes Strickland. The English Records Offices have of late been a perfect quarry of materials for the historian, and Miss Strickland discovered there a letter written by Lady Lennox, Darnley's mother, which makes it plain that her former opinion of Mary's guilt as regards the murder of Darnley she afterwards fully abandoned, and so informed the Queen. At all events, to write of Mary's connection, real or supposed, with that crime, and not mention this respectful letter—"loving and reverential letter," Miss Strickland calls it—is to fail utterly in the historian's duty. "Judge," says Miss Strickland, "of my strong surprise and indignation at Froude's disgraceful book, which appeared shortly after mine was finished," and which caused a controversy between Miss Strickland and Mr. Froude in the *Times*. Miss Strickland insisted on the value of the letter which she had discovered, and which was perfectly accessible to Mr. Froude, as to her. For reply he cited a letter written by the Countess two years earlier, when she was indeed persuaded of the guilt of Mary as afterwards she was of her innocence. This called out a letter from Miss Strickland, explaining the misconception under which Lady Lennox at one time labored, but the letter was suppressed by the *Times*, and, as Miss Strickland avers, by the influence of a relative of Mr. Froude's attached to the staff of that paper. Every reader will see that until such time as Mr. Froude says something perfectly explicit in answer to charges like these, and to some others of which the *World* of November 30 and December 2 contains specimens, he need hardly ask commissions of experts.

—Nicholas Copernicus, it is generally assumed, was born on the 19th of February, 1473, and died May 24, 1543. Our European exchanges lead us to believe that the four hundredth anniversary of his birth will be celebrated with more *éclat*, if possible, than that of Galileo, on the 18th of February, 1864. Among other things to take place in commemoration of the great astronomer is the publication of a centenary edition of his great work, "De Revolutionibus Orbium Cœlestium," under the auspices of the Copernican Scientific Society of Thorn, his native place. Unless the work pays for itself the expense will fall upon the society. The state has contributed 2,000 thalers to the contingent expenses. It is to be edited by Dr. Curtze, with notes and comments; and to be collated with the original manuscript, which still exists, and belongs to the "Majoratobibliothek" of the Rostitz family in Prague. This will be the fifth edition of the great work. The first was published in 1543 at Nürnberg, the second in Basle in 1566, the third in Amsterdam in 1617—the two latter being rather imperfect; the fourth in Moscow in 1854, by John Baranovski, the Director of the Observatory in that city.

THE "NEW BROAD CHURCH" IN ENGLAND.*

THESE "Thoughts for the Times" are contained in fourteen discourses, not sermons, but lectures slightly flavored with the parenetical herb of grace, the subjects of which are: "The Liberal Clergy," "The Idea of God," "The Science of God," "The Character of Christianity," "The Ethics of Christianity," "The Essence of the Bible," "The Doctrine of the Bible," "Trinity, and Original Sin," "Predestination and the Church," "The Lord's Day," "Preaching," "Pleasure," "Sacrifice," "The Law of Progress." To these discourses is appended an address in memory of Frederick Denison Maurice, an affectionate tribute to the teacher, the friend, the man to whom the author owes more, he declares, "than to anybody else in the world." Mr. Maurice was the reputed founder of the English "Broad Church," the "Old Broad Church," as Mr. Haweis calls it, as distinguished from the "New Broad Church" which the disciples of Maurice instituted, and to which he himself belongs. We are rather surprised at Mr. Haweis's statement of the

* "Thoughts for the Times. Sermons by the Rev. H. R. Haweis, M.A." 12mo, New York: Holt & Williams. 1872.

chief difference between these two parties. "Truth," he says, "must be restated again and again. Maurice could not bear a restatement; he thought the old forms too sacred for a paraphrase." Perhaps Mr. Haweis knows better than we; but to us it has always seemed that Maurice was the great master of paraphrase; that his ingenuous ingenuity in putting new interpretations on the Articles was his distinguishing characteristic as a theologian. Taking this volume as a sample of New Broad Church teaching, we should say that its peculiarity consisted not so much in giving restatements of the ancient doctrines as in dropping them altogether. The disciple has improved on his master by setting aside what the master tried to explain; for the discussions here of Trinity and Original Sin rather push those great Articles out of view than interpret them.

Mr. Haweis is quite unlike the brethren of the Broad Church whose names are familiar to us. He is less vague, mystical, and redundant than Maurice, less terse, didactic, and incisive than Robertson, less poetical and sentimental than Stopford Brooke. Maurice was a theologian, as Mr. Haweis, judging by these chapters, is not. Robertson, if not a philosopher, was a philosophical critic, which Mr. Haweis cannot claim to be to anything like the same extent. He presents himself rather as a bright-minded, cultured, frank, independent man, intellectually and heartily earnest, well furnished with thoughts of an interesting character, and gifted with a remarkably free utterance. That he is not without consciousness of his importance may be inferred from the "arguments" prefixed to the individual sermons in this volume, though these may have been suggested by the author's evident desire to be well understood. The same ingenuousness may explain his acknowledgments to Froude, Lecky, Spencer, Matthew Arnold, Emanuel Deutsch, Dr. Hussey, and Mr. H. W. Beecher, for thoughts borrowed from their writings.

Mr. Haweis's leaning is towards scientific rationalism. But for his announcement that he had been five years the incumbent of St. James's, Westmoreland Street, Marylebone, London, we should suppose, from the offhand treatment of his themes, that he was a rationalizing Unitarian. His acknowledgment of mental indebtedness to the men we have just named (and he might have added Darwin) is not formal. He has been indebted to these writers for more than he acknowledges; at heart he is in sympathy with them; he has surrendered to them his theological beliefs. "If the church," he says, "cannot utilize some of the best men of the age, the church will go down. Those who, under the garb of a spurious piety, refuse to recognize facts—those who oppose themselves to the voice of scientific, social, and religious progress, will find themselves, ere long, in a very poor minority." "We do not mind dogmas, but we don't want inflexible dogmas. We don't mind theology, but we must not allow our theology to rough-ride conscience and exterminate religion." He declares that "the time has gone by for ever when it is possible for an educated person to declare that Christianity is true and every other religion false. Christianity must take its place in the history of the world among other religions, and must be regarded as a point, and a turning-point, in the harmonious religious development of the race. He quotes with evident approval Professor Jowett's assertion, made in his own pulpit, that we might cull from past religions all the principal ethical doctrines of Christianity. "The sacrificial portion of Christianity," he admits, "is certainly neither new nor original. You might go further, perhaps, and single out every petition of the Lord's Prayer, for instance, in the literature that already existed at the coming of Christ." "If we want to discover the origin of dogmas about the Trinity, the Incarnation, and the Procession of the Holy Ghost, we must go to the Greek schools of Alexandrian philosophy—not the Gospel. The Greek mind has done our theological thinking for us." "The very words Predestination and Verbal Inspiration are in my ears as the explosion and bursting-up of old smooth-bore cannon." Again: "I implore you to take reasonable views of the Bible. It is futile to believe in its infallibility; such a belief, logically carried out, must lead you into both immorality and error." "To preach that the Bible is infallible is most dangerous to morals, and especially derogatory to the character of the Supreme Being, as we have now learned to believe in Him." The author's sympathy with the essential doctrines of Mr. Darwin may be inferred from a passage like this: "Speaking accurately and scientifically, the stream of tendency is God. God is the stream of tendency by which all things fulfil the law of their being. God may be, and doubtless is, more—but he is that."

After these quotations, Mr. Haweis's opinions about Pleasure, Sacrifice, the Lord's Day, need not be enumerated. They are such as are entertained by very few Churchmen, by scarcely any "Evangelicals," by no single Puritan, but by very many if not by most men of the world. He does not condemn balls or theatres, but rather approves of occasional attendance on them, as helping to keep up their tone. He does advise people to keep away from the race-course "if they have no hope of being able to do anything towards the purification of the system of betting, cheating, dishonesty, lying, and debauchery that goes on during the races." "But that which gives horse-races their civilized *locus standi* may be a good thing." His doctrine of sacrifice is many degrees removed from asceticism. The lecture on the "Law of Progress" will be satisfactory to believers in evolution. "The Law of Progress" he declares, almost in the phrase of Herbert Spencer, "is a procession from the simple to the complex, from what is homogeneous to what is heterogeneous." "Adam, as a man, was very much the kind of being which Mr. Darwin and Mr. Herbert Spencer have described."

These opinions are familiar to people of ordinary intelligence, and are met with in popular literature. The remarkable circumstance here is that they are given out in the pulpit of a minister of the Church of England. To be sure, we are prepared for a good deal from a church which allows Professor Jowett to continue in its communion and makes of Mr. Stanley a dean. But Mr. Haweis goes much further than either of these gentlemen have ventured in their public utterance. He himself is aware of the necessity of justifying his position. To those who say to him, "If you don't like the Church, leave the Church; you are simply an officer of the state, and as long as the state maintains certain formulas, you ought to maintain them," he makes substantially the reply that a young American rector made to a blunt friend who urged on him a similar objection—"I stay in the Church in order to maintain the indifference of dogma. By leaving it I should confess the saving importance of opinions, the very thing I most strenuously deny." I am under the control of the state, says Mr. Haweis. The state puts forward a series of articles and formularies which it requires its ministers, and, in fact, all its members, to subscribe as members of the National Church. Now, when the state did that, it no doubt tried to get as near the truth as possible. But do you tell me that the state meant to fix these formulas as expressions of truth beyond which there was no expression of truth possible? Do you suppose that when the state denied to the Church of Rome the power to fix dogmatic truth or ceremonies, she arrogated to herself the privilege of doing so? I don't believe it for a moment; and for this reason—because the very action of the state, in remodelling the forms of faith, was a protest against the fixedness of such forms.

Very ingeniously and adroitly argued is this, somewhat too adroitly, the question being by no means fairly put. England threw off the Romish Church as a political despotism, but did not so absolutely repudiate the Church's title to fix points of faith. But let that pass. Grant that the forms of sound doctrine may be varied, even to the degree that Maurice and Robertson varied them, is it permissible to alter the very substance of them as Mr. Haweis does? At the heart of the Church doctrine lies the theory of mediation by the sacrifice of a redeemer. The terms in which this act of mediation is described may be altered to suit the intelligence of different epochs and nations of men; but the theory itself is vital to the existence of the National Church; it cannot be discarded without shaking the entire fabric of dogma and rite in pieces, thus abolishing the institution. Now, unless we have read these discourses carelessly, their author not only substitutes a new phraseology for the old one, but substitutes a new theory for the old one, rejects the whole idea of mediation, and constructs his religious system from another set of opinions—so radically reconstructing the scheme of salvation that scarcely a hint of it is left. The very mention of it is rather tolerated as an indulgence than insisted on as an important matter. The consciousness of an English Churchman is something we have not the presumption to try to fathom; we only feel that if conscience had free play in it, such reasoning as this of Mr. Haweis's would be set down as sophistry, and the conduct based on it would be in great danger of being pronounced dishonest.

It is quite true, we make haste to acknowledge, that Mr. Haweis says a good many things in the course of these lectures that are intended to break the force of such strong expressions as we have quoted above—things about the "minor personality of God," whatever that may be, and the divine character of Jesus, and the regenerating influences of Christianity, and the peculiar and original type of the Gospel ethics, and the miracles, and the moral inspiration of the Bible, and the Trinity, and the Incarnation, and about many things besides, speculative and practical. Some of these sayings are just and noble, some of them are finely, all of them are elegantly and earnestly said; but some of them are vague, sentimental, rhapsodical; some of them are evasive; and some of them, we regret to say, do not give evidence of the writer's study of the best authorities; they will not, in a word, bear critical examination; and taken as he puts them they do not meet the objection that he tampers with the substance and not merely with the formularies of faith. They do not wholly set him right with the Church, nor fully justify him in standing where Maurice and Robertson stood with dignity.

CHILDREN'S HOLIDAY BOOKS.*

A YOUNG man at a bar, somewhere in California, remarked that the whiskey was bad; whereupon an old compotator turned and said, "Young man, never say that again. All whiskey is good. Some whiskey is better than other whiskey, but all whiskey is good." All Mr. Trowbridge's Yankee stories are good, but some of them are better than others, and among the better ones we do not place this year's "Jack Hazard." The idea of the story is excellent—the finding of an old trunk of counterfeit half-dollars in a log by the boy, his excitement over his treasure, which he believes to be genuine, and the bad effect on him of the gain of sudden wealth. The secondary idea is also good—the claiming of the "treasure" by old miserly Squire Peternot, on whose land it was found, and the confusion to which he and his greedy nephew are brought in the end by the discovery of its "bogus" nature. But in the filling out of this plan, the farcical turn of Mr. Trowbridge's invention, if it may be so called, gets so entirely the better of his judgment, that he permits Jack and the money to go through a series of adventures which, though possible, are almost on a par in probability with the extraordinary coincidences in the play of *Box and Cox*. As we have said before in reviewing Mr. Trowbridge, he always seems to write with the stage in his eye, and is too often not able to resist the beguilings of trapdoors and actors with nothing to do but enter in the nick of time. This habit does not necessarily prevent his characters from being natural, but it certainly makes the motive and moral of the story theatrical and void of effect. A writer of this kind does well not to burden himself with too weighty a moral object; the one hit upon in "Coupon Bonds" was exactly suited to carry the material and style of the work. But in "Jack Hazard" the attempt to write a book which would not only amuse but really improve a boy, was only imperfectly successful in the volume of last year, while in the one of this year it is made so entirely subordinate to the fun and excitement of the adventures, that one feels a little bit sentimental in mentioning such a thing as a moral at all. In the line of ingenuity, let alone as a lesson of youth, the conclusion of the story is a most singular failure. Jack resigns the money nobly, sees the advantages of modest gain over sudden riches, and gives himself up to the law, *only* after he has discovered the treasure to be a fraud! Perhaps Mr. Trowbridge thought it would be too great a strain on the credulity of his audience to ask them to believe any more of the powers of a boy's virtue, but we think it would have been a much easier task than to believe that a boy ever skewered an old man into a log with sticks, or locked up a whole village in a court-room. Besides, it is a good thing for boys to be asked to give ear to the stories of unusual and even impossible virtue, for a struggle to resemble his heroes is common to every boy's breast; while it is far from being so good a thing to hold up to their wonder a series of exploits in outwitting country-folk which no young reader could have an excuse for enjoying, except the love of brag.

We have Mr. Knatchbull-Hugessen with us again this Christmas, in another volume of his ingenious and lively fairy stories. With the other reading in the book, there may be found at the back extracts from notices made of his previous publications for children by various English papers. These are all very strong sentences of praise, one even professing the author's imagination to be as fanciful as Grimm's, and "some of his stories superior to anything Hans Christian Andersen has written." Mr. Knatchbull-Hugessen is a great admirer of Andersen's, and one of his books is either dedicated to him—if we remember aright—or speaks of him in a dedicatory passage as one whom the writer holds in veneration and humbly strives to resemble. For our own part, we are willing to concede any amount of fancifulness of imagination to Mr. Hugessen, but a resemblance between him and Andersen in any essential particular, or even a trace, outside of the declaration referred to, that the former considers the latter as worthy of emulation, seems one of the most impossible discoveries to be made. Their names both end in *sen*, they are both writers about children and for children *con amore*, and they both deal in a mixture of homely and familiar and supernatural materials that is extremely effective. After these likenesses, the only comparison between them is suggested by the strong contrast. The one is poetical, delicate, gentle as a woman, with spiritual meanings hidden under his fantasies, and with a humor of the most refined sort. The other is extraordinarily ingenious, but never by any accident poetical; he is undeniably coarse; his talent and his fun are for the rough and boyish, and the boots and trowsers are always to be detected peeping beneath the girls' frocks. Above all, his tales make no spiritual suggestions of any sort, although such are frequently inserted or appended, so that the reader shall by no chance overlook them. "Tales at Tea-time" are an improvement on their predecessors, inasmuch as they do not count among them one ogre story, one robber or murder story, nor, to keep balance with the horribleness, one of the preposterous religious conclusions which we pointed out last year in "Crackers for Christmas" and "Moonshine." This is so very pleasant a change that we make the charge of coarseness with regret, and desire to modify it as much as possible by saying that it is not a kind of coarseness to be seriously objected to, but only one which denotes an imagination far removed in kind from that of Hans Christian Andersen. An illustration of what we mean will be found in "The Boy with a Tail," and how surgeons are sent for to cut it off, but refusing to do so are kicked out of the house; how the tail is tied up in a bag, and the boy's life made miserable by having it; how he catches fish with it—holding it in the water for them to bite at, and then landing them dexterously on the bank. Also, in the "Pea-green Nose," where the beautiful princess who is disfigured by this peculiarity has the color licked off by an enchanted dog and cat, who take turns at it while she is asleep. Unless we have entirely misread the author of the "Gingerbread Man and the Gingerbread Maiden"—that most pathetic and refined of funny innocent stories—he would shudder even in his grave at conceptions like these. To show what we mean by the girls being boys in disguise, take the "War in Dolldom"—a particularly good story it is, too—or see in "The River King" where "Amelia Jane" in a fury "turned the lobsters head over heels, right and left, on each side of the throne, and kicked the king's velvet cap into the air, at the same time giving the monarch a push which sent him rolling down the steps of the throne," etc.

There is one curious oversight or accident in the book; it might be called a different name in another writer, but Mr. Hugessen has far too abundant a supply of material of his own to be accused of poaching on anybody else's manor except through inadvertence; and that is a page or two of bald imitation of the "Alice" books. Mary is in the River King's dominions. She said as civilly as she could:

"I'm sure I didn't mean any harm; I am very sorry if I have been rude or unkind to anybody. . . . But, you know, it seems so odd to see one's best doll turned into a queen all of a sudden, and seeming just as if she didn't know one and had never seen one."

"Don't say 'one' so often," interrupted a lobster sharply; "you've said it three times in that last sentence, so you ought to say 'three' now, by all the rules of grammar and arithmetic." Mary stopped whilst the lobster was speaking, but as soon as he had done she went on, everybody keeping strict silence and listening with the deepest attention. "And then, you know——"

"Don't say 'you no' again," said the other lobster; "you might as well say 'you yes' now and then, if only for a change!"

Mr. Hugessen is at his best in the "Story of a Horse," and in the main all the stories are up to his average in entertainment and vivacity. To the abundance of these qualities the children all testify.

"Roundabout Rambles," by Frank R. Stockton, is, without exception, the very best book for children we have had the pleasure of reading in a long time. There is a collection of illustrations, from all sorts of works, made by author or publisher, and a short story, varying from a page and a half to several pages in length, fitted to each one. All the stories are told so apparently *con amore* that it seems as if the author must have had a hand in choosing his subjects; and yet some of the pictures are so feebly suggestive of narrative, that it looks as though they were put in for their own sake by the person who controlled the plates. If this latter case be true, it is difficult to find a place where the writer's ingenuity and fertility have not been more than a match for the illustrator. Mr. Stockton has an unusual combination of qualifications for telling stories to the young. He not only narrates with spirit, but with an excellent perception of what is interesting from a *child's* point of view. We remember to have seen a small boy on the knee and under the spell of just such a magnetic historian, who described a tremendous fox-hunt, with a countenance of intense seriousness, taking his cue as to where to bear on and where to abridge from the boy's face—so expressive of every shade of feeling; and who, by the mere skill of perfect sympathy, excited the small hearer to a pitch of intense enthusiasm, and a resolution to get ready immediately for foxes. Many stories illustrate this trait, but none better than "Building Ships," suggested by a small cut of the "Great Eastern." No natural boy with the least turn for a boat or for tools could read that simple description of how to construct a toy vessel, without a glow and a desire to get to work. Another qualification is the author's sense of responsibility—a trait which in lively story-tellers is so frequently and sadly lacking. Perhaps it is simply instinctive good judgment and refined moral feeling, and not a distinct intention of quietly encouraging what is good, and as quietly suppressing or turning aside what is rough or coarse or sentimental in the thought of the juvenile audience; but it sounds very thoughtful and paternal. And here there is a temptation to draw a com-

* "A Chance for Himself; or, Jack Hazard and his Treasure. By J. T. Trowbridge, author of 'Jack Hazard and his Fortunes,' 'Lawrence's Adventures,' 'Coupon Bonds,'" etc. Boston: J. R. Osgood & Co.

"Tales at Tea-time. Fairy Stories by E. H. Knatchbull-Hugessen, M.P., author of 'Moonshine,' 'Crackers for Christmas,' 'Stories for my Children,' etc." Illustrated by William Brunton. London and New York: Macmillan & Co.

"Roundabout Rambles in Lands of Fact and Fancy. By Francis R. Stockton." New York: Scribner, Armstrong & Co.

parison which is suggested not by any means for the first time. American juveniles are certainly superior to English ones in all that relates to the humanities. It is to be feared that a British publisher, accustomed to cater for pugnacious little British boys—boys more or less familiar with the fagging system, and brought up from the very nursery on fighting traditions and the necessity of proving manliness by occasionally getting and giving black eyes—would consider the "Big Game" stories of "Round-about Rambles" as very "slow." The terrific points are toned down, not adorned; the slaughters are not dwelt on with elaboration, as in English books, but softened or made short work of; and all this without mitigating the truth, or being in the least namby-pamby. The roughest boy could enjoy the vigor of the writing without having his propensities encouraged.

Mr. Stockton amuses himself humorously over his small audience without forgetting that his business is to entertain the young folks, and not only the old. One story alone, "Going after the Cows," will perhaps be relished rather more by the elders than the little boys whom it describes; but it is really a gem of its kind, and we would on no account spare it from the book. The author seems to betray a Pennsylvania origin or training, not more by his Quaker-like gentleness of spirit than by his persistent use of will in place of shall, and by several other peculiarities, more or less failings of the Keystone State. "Little Bridget's Bait" ought to be mentioned as an exceedingly nice specimen of innocent fairy story.

Das Wichtigste aus der Phraseologie bei Nepos und Cäsar . . . nach Materien geordnet, von Dr. Georg Wichert. (Berlin. 1872. Pp. 164.)—If the study of Greek and Latin ever tends again to a more wholesome and rational method; if less attention is paid to etymological speculations, and a great deal more attention is paid to the thought and diction of the masters and to the literature; in short, if the classics are studied as classics, for themselves, such books as this will command attention. In one sense it may be called a kind of dictionary to Nepos and Cæsar. But the arrangement is not that of a dictionary. It is not a collection of words in alphabetical order, but of expressions and phraseological combinations grouped under certain leading ideas or categories. To give a hint of the arrangement, we quote the titles of a few divisions: I. Physical Matters: under this head are given fire, heat and cold, space and place, hills, woods, rivers, the sea, islands, etc. II. Time, Duration of Time, Passage of Time, Special Divisions of Time. III. The Animal World. IV. The Human Body and its Parts. V. Life, Sickness, Death, Burial. VI. Hunger, Thirst, Meals, Food and Drink. VII. Good Fortune, Misfortune, etc., etc. There are twenty-eight such headings, military matters in a writer like Cæsar naturally covering the most ground. At the end of the book is an alphabetical list of words. A series of collections like this for the principal authors would be a valuable auxiliary to the Latin lexicon. Not the least merit of the book is its suggestions for the young scholar. Niebuhr, in discoursing somewhere on the value of indexes, recommends index-making itself as a most instructive occupation for the student of language and history; and perhaps there is more truth than satire in Pope's well-known lines:

> "Index-learning turns no student pale,
> Yet holds the eel of science by the tail."

To make collections somewhat on the system sketched by Dr. Wichert, would be more instructive than the mere alphabetical indexes Niebuhr had in mind.

The Ten Laws of Health; or, How Disease is Produced and can be Prevented. By J. R. Black, M.D. (Philadelphia: J. B. Lippincott & Co. 1872.)—This is perhaps on the whole the best popular book on hygiene which has appeared in our country. Most of our hygeio-maniacs have had some hobby or other which they have ridden to its death or to that of the unfortunate disciple who ventured to mount behind them. But with the exception of his undiscriminating veto of all stimulants, Dr. Black's precepts are marked by a fair amount of temperateness and judgment. His style partakes somewhat of the roughness and heat with which one is familiar in this class of books, in which menace of the wrath that is to come, persuasion, and exhortation usually take as large a place as detailed practical advice. But if this were made a reproach to him, Dr. Black would justly reply that he writes to awaken those who now are well, and to keep them from presuming on their capital of vitality as if it were inexhaustible. We may by vicious ways of living sow the seed of misery before we begin even to suspect the bitter taste of the fruit; and when we do, it is almost always too late for reparation. The exceedingly long cycles in which physiological causation works, the latent accumulation of deleterious influences—masked perhaps the while by an appearance of benefit—and their sudden blossoming into permanent effect, form not only one of the most interesting theoretic problems for the physician, but one of the chief practical obstacles to the physical improvement of the race. For of the public total of infirmity that prudence might prevent, less is caused by ignorance of sanitary rules than by indifference to them—the confidence of us stout fellows who now feel so well while disregarding them, that we may go on to the consummation of centuries and be none the worse. With regard to insanity, for instance, Dr. Ray says at least two generations are usually required to accomplish the various stages in the development of the disease. Dr. Black's hortatory tone needs therefore no excuse; and the omission from his book of minute rules for the delicate may be explained by its being addressed exclusively to those as yet well. Nevertheless we think it errs through too great generality. Why not say a word, for instance, of the great use to certain constitutions of a nap in the afternoon, and of doing no brain-work at night? of the advisability to business men of eating their heaviest meal after their hard day's work is over, and so forth? Nothing, either, is said of *vacations*, which our infamous business customs deny to so many of us, but which may be called indispensable to the proper performance of each and all of us in the long run. A strong man may do without one for one, two, or three years, and hardly know it; but after ten years he will be a different being from what he would have proved if, for a solid month each year, he had been able to forget his cares, and let the galled spots of the mind heal entirely over. We hope Dr. Black's book may have the circulation it deserves, especially among the less instructed; and we close with an extract whose lesson may be new to some of our readers:

"During the winter season at least two pairs of drawers and two undershirts should always be worn. . . . The advantage of two or three layers of flannel next the skin is not in the weight, nor in the bulk, but in the fact that each layer is a wall within a wall, holding warm air between them. Two pounds of wool put into the body of a single garment does not shield the body half as well as that quantity made into two and then worn double. Let those who doubt this try the experiment."

Fine Arts.

SOME MODERN SCULPTURE.

I.

WE have already remarked upon the fact, which, until we come to think about it, is a curious one, that foreign sculptors are generally unknown here, even by name, while foreign painters of merit are familiar to as large a public on our side the Atlantic as on their own. There is no cause but a very slavish one, the natural depravity of inanimate matter, or, in other words, the refusal of stone to be readily moved and made popular. The other day, the *Atlantic Monthly* set us to thinking, by stating its opinion that an interesting statue by one of our home sculptors reduced the other sculpture of the day to a condition of inferiority. American sculpture seems to us to be in a promising and healthful state. We have Palmer, and Powers, and Miss Hosmer for works of sentiment; Ward, Launt Thompson, and others for subjects of heroism; and several competent portrait-sculptors, while the graphic character-sketches of Mr. Rogers are thoroughly pleasant in their way. This is no mean exhibit; and there are other sculptors of eminence among us whose names will occur to our readers. The selection, however, of an American work of genius to place at the head of the whole result and production of European genius is, in our eyes, not judicious; and we had really forgotten the prevalence of the boast that sprung up some years ago, when Crawford and Powers were in the ascendant, and Palmer was beginning to come forward, about America's whipping the world in sculpture. This opinion, doubtless still alive in all its vigor, has got into a class of the public which we no longer come across, and we had overlooked its vigor and its existence, until we were reminded by the *Atlantic's* venturing to give it expression that it is an opinion still proudly glowing in some bed or other of the social formation, and provided with an occasional crater through

which to utter itself. Foreign sculpture is a vast and complicated outgrowth, excelling in countless lines of energy. There are now living one hundred and ninety-three sculptors whom the French Ministry of Fine Arts has judged worthy of special reward. They and their fellow-craftsmen have been raised into distinction by the same critics and the same enlightenment of public taste that have conferred fame upon painters like Couture, Gallait, Pilotty, Baudry, Merle, Meissonier, and the rest. They have as many merits, foibles, and differences of bent as the painters. Yet in America we hear nothing of them, and a dilettante who would be ashamed to know nothing of Couture would be not at all ashamed to know nothing of Carpeaux and Paul Dubois.

It is better, in a mere bird's-eye view such as this must be, to confine ourselves to one national school. The French is the best for our purpose. In France, the study of antique art is very deep and systematic, but there is an equally strong predilection for the art of the Revival; from this has arisen the fact that French artists are willing to add a grace, if they can, to the antique. They consider, for example, that the Greeks are improvable in one important matter, the expression of flesh texture. Only a few antiques, of the very highest class, push the imitation of the skin as far as it may be pushed; the Greek desire to give the essence of human form, to make a marble bust, probably forbade the very effort. French art, ever since Rubens decorated the Luxembourg with the history of Marie de Medicis, and there showed his matchless understanding of what Taine calls "the fluidity of life," has taken great care of this department. Puget profited by the study of Rubens to give the flesh of his statues a sense of life, blood-circulation, and pliability which the ancients hardly got. It is a mere discovery in realism, but a glance at the wrinkling, crisping, sweating skins of Puget's heroes, true Rubens heroes in stone, is very impressive. This realism is the present tradition in which a large proportion of French sculpture is conceived. There are not wanting, however, sculptors who occasionally essay the large, generalized, abstracted manner of the Greeks. We think of a recent cast, the name of whose author we have forgotten, but certainly an artist of repute: it was a sketch left at this artist's death, found worthy of preserving, and cast in bronze with the marks of the sculptor's thumbs plainly seen on many parts of it. It had so perfectly the Greek look that we might have declared it an imperfect antique, an experiment from the hands of him who carved the "Discobolus Watching"; there were the small athlete's head, the round-polled crown, the limbs linked together with those soft interfluent lines of muscle wherein the ancients so wonderfully excelled. It sat in a pose as simple and original as the "Boy and Thorn," one leg bent under the body, and the innocent face raised in a perfect directness and simplicity. To a sculptor, it had the same self-possessed, satisfying imitation of the Greek accent that certain writings of Thackeray have of the accent of Queen Anne's age. There is another statue that may be pointed to as also entering the lists with antique art. Those who recollect Perraud's "Infancy of Bacchus," in the centre of a room in the Luxembourg, will recollect how nearly a modern artist has succeeded in throwing off the cumber of this complicated age and adopting the simplicity of the Greek outlook. The Bacchus is a baby, dancing on the shoulder of a faun, whom it holds by one leaf-shaped ear. The suggestion is similar to that of the antique "Bacchus and Silenus," but there is no resemblance in the treatment. To entangle the eye for ten minutes among the pectoral and serrated muscles of the faun's torso is to get an unconquerable impression that the chest is breathing. The arm which bears the strain of the infant contains a daring experiment, one of the "mistakes" of sciolistic criticism; it shows, along the length of the forearm, two or three depressions, or tucks, or hitches, in the inside line, where muscles cross or bind each other; it is an effect previously unknown in art; and we were somewhat sceptical, we confess, until we once caught a model, in strong action, showing just the same result. The type of this sitting faun is illusively like the antique; it is a lithe, supple man of the woods, not quite so much padded as the generality of Greek models, but singularly like them too; as with them, each muscle dislikes to announce its precise edges, but does its best to slip undiscovered into some other muscle; and as with them, every square inch of every muscle is supremely happy, blessed with free air and balanced development.

Either of the two *tours de force* just spoken of deserves a long lecture. Perhaps the difficulty of a modern's rendering of the Iliad into a perfectly satisfactory imitation of Homer's manner is a small task in comparison with what is achieved in both cases. We must leave them immediately. The next direction of the modern spirit we would speak of is the study of adolescence. This bent we would not refer to admiration of the antique, because it is expressed in a very sharp realism, while the great Greek adolescent subjects are idealized as much as they can possibly bear, and become quite hermaphroditic in their pursuit of elegance. We would refer the taste rather to a strong love for Michael Angelo's "David." This stripling giant, with his divine "gawkiness" (there is no other word), with his great joints and extremities, and with his inexplicable captivating quality, turns his back upon the Old Palace, the lasting exemplar and poem of an angelic hobbledehoy. A surprising number of modern sculptors have taken up the "David's" period—the term of adolescence. To a ripe scholar, surfeited with infinite cramming of the antique, the coltish imperfection of healthy boyhood has something of a tang, a flavor, unknown to the study of mellow and perfectly ripened man. Theseus and Hercules are willingly left for the company of lusty youth: for all this, no budding Bacchuses and Cupids are represented, nor anything erotic. We could easily reckon up a dozen salient, remarkable statues of such subjects as we mean. There are Moulin's figure of a boy who has found an antique dancing bronze at Pompeii, and falls to imitating its attitude; Falguière's "Winner at the Cockfight," running along at the top of his speed, and snapping his fingers to the bird perched on his arm; Blanchard's "Young Equilibrist," in which the pose has a daring allowable in bronze perhaps, but suggestive of *chic;* Delaplanche's "Child Mounted on a Tortoise"; Fesquet's "Young Faun Playing with a Goat"; Sanson's "Saltarella Dancer"; and many more artists and subjects. At nearly the head of this kind of realism we might place the "Young Florentine Singer of the Fifteenth Century," by Paul Dubois; the simplicity of this masterpiece, like that of a perfectly bred lady, does not at first strike you with so much surprise as with a sense of ineffable comfort; the imagination must needs be softly titillated with anything so rare, so reserved, so reposeful; after being seen, it goes on caressing the memory like perfume. This singing boy is merely a lad, in hose and doublet that perfectly define his slender form, singing like a native of Atlantis; it eludes description as the stem of a water-lily eludes the fingers. These studies of adolescence of course touch by some of their sides upon other motives of art. There is one exquisite creation in this spirit, by Jouffroy, in which the half-formed developments are those of a girl; it is the image of a little maid, smooth as any eel, reaching up on tiptoe to breathe her secret into the ear of a stony-looking terminal statue of Venus. Some touch upon religious art: by Dubois, author of the "Florentine Singer" just named, there is a "Youthful Saint John," naked, open-mouthed, positive, angry, and dictatorial, going out to convert the wilderness with a boy's confidence and a boy's contempt of consequences and delays; and by Falguière, author of the "Cockfighter,' there is a pathetic figure of Tarcinus, a martyr who died carrying the eucharist and defending the body of God from the blows of the heathen. Some border upon the style of heroism and artistic declamation or eloquence: the busts of the "Young Gracchi," by Guillaume, are superb orations, as it were, in favor of aristocracy, divine right, caste, and natural distinction; the serious hauteur of these unfledged lads, rising up in a phantom-like manner through the top of their pedestal, embracing each other and reserved to all the world besides, is a more pointed essay on Roman character than could be found in Gibbon. These works of art with didactic motive are, however, something radically different from the simple studies of youthful lustihood we selected as marks of the type. We shall add to the instances we have chosen, though, a work by Frémiet, the animal sculptor, whose "Wounded Dog" in bronze is one of the decorations of the Luxembourg; the work of Frémiet's which shows the spirit of boyhood is a "Young Faun," teasing some bear-cubs by punching their noses, as they try to reach a comb of honey; it is in marble, life-size; but the small bronze reproduction can be seen at any importer's; the malicious faun, flat on his stomach, with his goat's haunches spread upon the ground like a design for a lyre, is delightfully original, quaint, and unsophisticated. Nothing would better cure our nineteenth-century cares, perhaps, than to live in a gallery of these lank, more or less clumsy, eager, and non-morbid boy figures.

Other artists attack the antique, but not in the imitative spirit so much as in the cultured, literary, studying spirit, as do the paintings of Gérôme: an example is the fine "Aristophanes" of the late F. C. Moreau. Others can interpret the spirit of the French *salon* with a tact, a discernment, a sense of balance, that are inexpressible; high in this line we would place the statue of the Empress Josephine by Dubray. She is a colossal woman, perhaps eight or nine feet high, framed in a standing collar of marble lace, and beclouded with a volume of long drapery, which she may have just arranged with her foot. She is enormous, yet she is all sensitiveness and fragility; she has creole features, and the pride of Satan; she is evidently *parvenue,* yet as evidently a social monarch; the artist has known how to make her the fictitious empress of a throne-room, and the born queen of a *salon.* There are artists whose portraits have incredible vigor; they seem, as the French say, ready to blow their noses; such are the busts of Carpeaux, whose dancing figures for the opera, precisely resembling casts from life, shocked the delicate sense of convenance which so skilfully covers French license. Another fine portrait sculptor is Guillaume, author of the "Gracchi" already mentioned, who executed for Prince Napoleon the "Seven Ages" of Napoleon Bonaparte. We cannot go on with these enumerations; we but

meant to give hints here and there of the exuberance of modern talent in a walk we seldom see. The sole examples of Continental sculpture which we habitually meet are chimney and other bronzes. The liberties and audacities of bronze are comprehended by French sculptors, with keen insight. Bronze has always occupied a place about halfway between marble statuary and pictures; the Pompeii bronzes take full advantage of the facility of undercutting and challenge the Pompeii frescoes in dash and originality. A momentary attitude, that would be offensive in marble, is agreeable in a bronze, much as it would be in a painting. Great liberties of equilibrium are accordingly allowed, while some of the antique heads have wire hair fastened on. This sentiment explains the tossing attitude and sketchy draperies of many of the small bronzes that come over to us. A perfect example of the spirit, developed in large, is the "Rembrandt," by Oliva, in the Luxembourg. It is tempestuous, fluttering, romantic, with draperies so real that you think you could undress it. Bronze is the vehicle chosen by Barye for his lions and panthers—wonderful existences, restless carnivorous passions, taken out of their furry skins, and revealed to us by moral dissection; boldly discarding the imitation of hide which conceals anatomy, and is not worth trying to render. Barye pursues what *is* worth trying for, the muscular action of the creature, and gives a denuded, unveiled study which must be a good deal like the animal's personal conception of itself, as it lies in its den and thinks how it would feel to spring upon an eligible victim.

THE EIGHTH YEAR—VOL. XVI.

The Nation enters on its Sixteenth Volume with the issue of January 2, 1873, under the same management and with the same aims as from the beginning.

Its circulation is now 9,000 copies weekly, in all parts of the United States.

JUST PUBLISHED.

THE STANDARD LIFE OF DICKENS.

The second volume of the Life of

CHARLES DICKENS.

BY JOHN FORSTER,

Author of "Life of Landor," "Life of Goldsmith," etc.

Covering the period of 1842–1852. With two portraits from steel, and illustrations and facsimiles. 12mo, bound in extra cloth, $2.

Fifth Edition of Volume I. now Ready. Price uniform with that of Volume II.

"Of all men living, Mr. Forster is the best qualified to be Charles Dickens's biographer."—Phila. Press.

"All the thousand touches that can only be inspired by close intimacy and the hearty sympathy of friend with friend are here, by one of the subtlest and most powerful literary artists of the time, given to a marvellously vigorous picture of a man whose real portrait all the world will be glad to see, and will be better for seeing."—London Examiner.

"Should the remainder of the work equal the first volume in excellence, no more satisfactory record of Dickens's career can be looked for in our generation."—London Standard.

"The publication of Mr. Forster's 'first volume' will almost prove as great a surprise to the world as the first appearance of the first story which won fame for the subject of the biography. . . . Now for the first time we seem to have learned the secret of the individuality belonging to all of Dickens's really great novels."—London Daily News

HOLIDAY LIST

OF

ELEGANTLY ILLUSTRATED WORKS,

FOR THE SEASON 1872-73,

ISSUED BY

SCRIBNER, WELFORD & ARMSTRONG,

654 BROADWAY, NEW YORK.

I.

REYNARD THE FOX. The Prose Translation by the late Thomas Roscoe. With about 100 exquisite Illustrations on Wood, after Designs by A. J. Elwes. Imperial 16mo, cloth, extra, $3. Beautifully printed on toned paper, and elegantly bound in cloth, extra gilt, and gilt edges.

II.

MERIDIANA: Adventures of Three Russians and Three Englishmen in South Africa. By Jules Verne. Translated from the French. With numerous Illustrations. Royal 16mo, cloth, extra, gilt edges, $3.

III.

SEAGULL ROCK. Translated from the French of M. Jules Bandeau, of the French Academy, by Robert Black, M.A. With Seventy-nine very beautiful Woodcuts. Royal 16mo, cloth, elegantly gilt, gilt edges, $3.

IV.

HISTORICAL ILLUSTRATIONS. By Paul Delaroche. Twelve exquisite Autotypes, including "Napoleon at Fontainebleau," "The Girondins," "Marie Antoinette," "Christian Martyrs," etc., etc. With a brief Memoir of the Artist, and Historical Descriptions from Holinshe, Carlyle, Froude, D'Aubigné, and other writers. Small 4to, cloth, extra gilt, $3.

V.

THE PICTURE GALLERY OF SACRED ART. Containing Twenty very fine examples in Permanent Photography after the Old Masters. With Descriptive Letterpress. Demy 4to, cloth, extra, gilt edges, $5.

VI.

THE PICTURE GALLERY OF MODERN ENGLISH ART. Twenty beautiful and Permanent Photographs after the most celebrated English Painters. With Descriptive Letterpress. One volume, demy 4to, cloth, extra, gilt edges, $6.

VII.

THE LANDSEER GALLERY. A Series of Twenty Permanent Autotypé Reproductions of Engravings after the celebrated early Paintings of Sir Edwin Landseer, R.A. With Memoir and Descriptions. Imperial quarto, choicely bound, cloth, extra gilt. Price $18.

VIII.

THE RAFFAELLE GALLERY. A Series of Permanent Reproductions, in Autotype, of Engravings of the most celebrated Works of Raffaelle Sanzio d'Urbino. With Descriptions, etc. Imperial quarto, choicely bound, cloth, extra gilt. Price $18.

IX.

ITALIAN PICTURES DRAWN WITH PEN AND PENCIL. By the Author of "Swiss Pictures," etc. Profusely Illustrated. Imperial 8vo, cloth, gilt edges, $4.

X.

THE FORCES OF NATURE: a Popular Introduction to the Study of Physical Phenomena. By Amédée Guillemin. Translated by Mrs. Norman Lockyer, and Edited, with Additions and Notes, by J. Norman Lockyer, F.R.S. Illustrated by Eleven Colored Plates and 450 Woodcuts. Royal octavo, cloth elegant, gilt top, $12 50.

Any or all of the above Works sent free of charge upon receipt of price by the Publishers.

CHEGARAY INSTITUTE, Established in New York in 1814. English and French, for Young Ladies and Misses, Boarding and Day Pupils, 1527 and 1529 Spruce Street, Philadelphia, Pa. French is the Language of the Family, and is constantly spoken in the Institute.

MADAME D'HERVILLY, Principal.

JUST READY.

A NEW NOVEL BY TURGENIEFF.

LIZA: A Novel. By Ivan S. Turgénieff. Leisure-Hour Series. 16mo, $1 25.

"In our opinion he is equal to any living novelist."—Nation.

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—London Spectator.

RECENTLY PUBLISHED.

JOSEPH NOIREL'S REVENGE: A Novel. By Victor Cherbuliez. Translated by William F. Wells. Leisure-Hour Series. 16mo, $1 25.

A CONDENSED EDITION OF TAINE'S ENGLISH LITERATURE FOR GENERAL READERS AND FOR SCHOOLS. Prepared by John Fiske, Assistant Librarian and late Lecturer on Philosophy in Harvard University. Post 8vo, $2 50.

THOUGHTS FOR THE TIMES. Sermons by the Rev. H. R. Haweis, Author of "Music and Morals." 12mo, $1 50.

OUTLINES OF HISTORY. By Edward A. Freeman, D.C.L. 16mo, $1 25.

HOLT & WILLIAMS,

25 Bond Street, New York.

LIBRARY OF CHOICE FICTION.

The Initial Volume Just Published.

AT HIS GATES.

A Novel. By Mrs. Oliphant, author of "Chronicles of Carlingford," "Ombra," etc., etc. One vol. 8vo, with 31 Illustrations. Cloth, $1 50; paper, $1.

Mrs. Oliphant ranks among the first of living novelists, and this is one of the best of her very popular productions. The characters are strongly individualized and thoroughly human—men and women who have impulses and sympathies in common with those of the thousands who are sure to read the story—and the plot, which shows the genius of the true artist in its construction, has its issue so carefully concealed that the interest is sustained to the last page.

Sent free of charge, upon receipt of the price, by the Publishers,

SCRIBNER, ARMSTRONG & CO.,

No. 654 Broadway, New York.

DESCHANEL'S NATURAL PHILOSOPHY.

Translated by Prof. Everett. Part IV. Sound and Light. 8vo, flexible cloth, $1 80.

WILSON'S INORGANIC CHEMISTRY.

Revised and enlarged by H. G. Madden. Crown 8vo, cloth, $2.

EXPERIMENTAL CHEMISTRY.

Founded on the work of Dr. Stockhardt. By C. W. Heaton. 12mo, cloth, $2 50.

Mailed free, on receipt of price, by

JAMES MILLER, Publisher,

647 Broadway, New York.

CHRISTOPHER CROOKED.

A CHRISTMAS STORY.

BY W. E. HATHAWAY.

The author of the "Hoosier Schoolmaster" and "The End of the World" speaks of "Christopher Crooked" as follows: "The theme is one on which tales can hardly be written as works of art; and yet your style is fluent—almost metrical, your story unique, curious, and interesting. It is all you claim for it when you say it is a thing of itself. Your sincere friend, Edward Eggleston."

"Mr. Hathaway's story, 'Christopher Crooked,' is one of the stories that, having a moral, are yet readable. It is a temperance rather than a total abstinence tract, and describes the ill results that came of the holiday festivities in a certain household where the wine flowed too freely. We do not agree with the writer as respects the physiological basis of his tale, but he has made an unusually interesting story upon it, and one which we can heartily recommend to all who are interested in the cause of temperance."—*N. Y. Independent.*

The Editor of *The Ladies' Repository* says: "Little Chris is the malformed victim of a father's intemperance, bearing even in his gait and leer the marks of intoxication. The story is no myth. The style of the writer is poetic, his pictures are well drawn and truthful to nature and fact."

The *Hearth and Home* says: "The strong point in this little book is its warning to intemperate fathers. It is both touching and terrible."

Price, elegantly bound in cloth, $1. Sent by mail, on receipt of price, postage paid, to any address. Liberal discount to the trade.

G. P. PUTNAM & SONS, NEW YORK.

DR. RAY PALMER'S NEW POEM.

HOME; or, THE UNLOST PARADISE.

One vol. small 4to, beautifully printed, and bound in cloth, gilt, $2.

"The author has well earned the right to be listened to as a poet of exquisite taste, as well as Christian purity of thought. In this volume he has taken Home for his theme, and he graphically pictures the varied experience of the ideal Christian home of New England, with its hopes and joys, its duties and responsibilities."—Evangelist.

"For a wedding gift or a holiday present, there is no more appropriate book."

SONGS FOR OUR DARLINGS.

BY "UNCLE WILLIS."

Illustrated with over one hundred Engravings, and elegantly printed on fine tinted paper. Price $2.

This little volume is a selection of Poems for reading to children who have not yet learned to read. Nearly every poem has one or more illustrations, so that after reading any of the verses a few times the child will be able to repeat the same when he sees the picture belonging to it.

The selection embraces the best of the old verses, as well as a large number of new ones. It also contains many pieces which will do for children "to speak."

HENRY K. VAN SICLEN,

BIBLIOPOLE,

183 NASSAU STREET.

American or Foreign Publications sent by mail, post paid, at Catalogue prices.

The Duke of Argyll, Matthew Arnold, Max Müller, Erckmann-Chatrian, Miss Thackeray, C. Kingsley, Arthur Helps, George Macdonald, Charles Reade, Karl Blind, Miss Mulock, Sir Robert Lytton, Fritz Reuter, Prof. Huxley, Prof. Tyndall, Prime Minister Gladstone, Julia Kavanagh, James Anthony Froude, Frances Power Cobbe, Jean Ingelow, Alfred Tennyson, Robert Browning, are some of the distinguished authors lately represented in the pages of

LITTELL'S LIVING AGE.

A weekly magazine of sixty-four pages, THE LIVING AGE gives more than

THREE AND A QUARTER THOUSAND

double-column octavo pages of reading matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a satisfactory completeness attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

TRANSLATIONS.—In addition to the productions of the leading British authors, and in pursuance of its plan of including the best translations, THE LIVING AGE will publish serially, beginning about Jan. 1, 1873, one of the finest productions, translated expressly for it, of that charming Platt-Deutsch novelist and humorist, FRITZ REUTER, "the most popular German author of the last half-century." His writings, says Bayard Taylor in the N. Y. Tribune "are the wonder and delight of Germany." This serial will be preceded by a charming Christmas Story by the same author.

THE LIVING AGE is invaluable to every American reader as the only thorough as well as fresh compilation of a generally inaccessible but indispensable current literature—indispensable because it embraces the productions of the ablest living writers in all departments of Literature, Science, Art, and Politics.

It is pronounced by the Rev. Henry Ward Beecher, the Nation, the N. Y. Evening Post, and the leading men and journals of the country generally, to be "the best of all our eclectic publications," and is indispensable to every one who desires a thorough compendium of all that is noteworthy and admirable in the literary world.

Published weekly, at $8 a year, free of postage. The volume begins Jan. 1. New subscribers beginning then will receive Reuter's Christmas Story without charge.

Address LITTELL & GAY, Boston.

The Best Home and Foreign Literature at Club Prices.

["Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find himself in command of the whole situation."—Phila. Evening Bulletin.

For ten dollars, THE LIVING AGE and either one of the American four-dollar monthly Magazines (or Harper's Weekly or Bazar, or Appleton' Journal, weekly) will be sent for a year; or, for $8 50, THE LIVING AGE and Our Young Folks. Address as above.

STANDARD WORKS FOR HOLIDAY GIFTS,

PUBLISHED BY

J. B. LIPPINCOTT & CO., PHILADELPHIA.

"A LIBRARY IN ITSELF."

Chambers's Encyclopædia,

A DICTIONARY OF

UNIVERSAL KNOWLEDGE FOR THE PEOPLE.

REVISED EDITION OF 1872.

Illustrated with numerous Wood Engravings and Maps. In Ten Volumes, Royal Octavo, bound in various Styles.

The publishers have the pleasure of announcing that they have recently concluded the revision of CHAMBERS'S ENCYCLOPÆDIA, and that the work is now complete in TEN ROYAL OCTAVO VOLUMES, of over 800 pages each, illustrated with about 4,000 engravings, and accompanied by Forty Maps; the whole, it is believed, forming the most complete work of reference extant.

The design of this work, as explained in the Notice prefixed to the first volume, is that of a Dictionary of Universal Knowledge for the People—not a mere collection of elaborate treatises in alphabetical order, but a work to be readily consulted as a Dictionary on every subject on which people generally require some distinct information. The editors confidently point to the ten volumes of which it is composed as forming the most Comprehensive—as it certainly is the Cheapest—Encyclopædia ever issued in the English language.

A CRITICAL DICTIONARY

OF

ENGLISH LITERATURE

AND

British and American Authors,

LIVING AND DECEASED,

From the Earliest Accounts to the Latter Half of the Nineteenth Century. Containing over Forty-six Thousand Articles (Authors), with Forty Indexes of Subjects.

Traffic Guarantee

AND

REDEMPTION BONDS

OF THE

SPRINGFIELD AND ILLINOIS SOUTH-EASTERN RAILWAY.

Road 228 miles long, entirely completed and equipped. First Mortgage 7 Per Cent. Gold Bonds. Only $15,000 per mile. Interest payable semi-annually at the Farmers' Loan and Trust Company in New York.

PRICE 90 AND ACCRUED INTEREST.

This Road has a Traffic Guarantee from the well-known "Cleveland, Columbus, Cincinnati and Indianapolis Railway," by which it is estimated that from One Hundred to Two Hundred Thousand of these Bonds will be redeemed by lot, at par and accrued interest, each year, giving the fortunate holder 10 per cent. profit, besides 9 per cent. interest upon the investment.

We invite the attention of Capitalists and Investors to this security as a particularly desirable and safe one, and should be glad to furnish Pamphlets and Maps and full particulars upon written or personal application.

We have also for sale a small balance of the quarterly Coupon 8 PER CENT. GOLD BONDS of the "LOGANSPORT, CRAWFORDSVILLE, and SOUTHWESTERN RAILWAY" of INDIANA, a completed Road running for twelve miles through the CELEBRATED BLOCK COAL FIELD.

Government Bonds and all marketable securities taken in exchange at the market rates.

JONES & SCHUYLER,

12 PINE STREET, NEW YORK.

TO INVESTORS.—We are selling at par and interest, and recommend to careful investors, the First Mortgage Seven-Thirty Gold Bonds of the Northern Pacific Railroad Company. Special attention is called to the ample Land security on which these bonds rest, in addition to the usual guarantee of a first-mortgage on the Road, its equipments, and earnings. The lands of the Company thus far sold have realized $5 97 per acre. The grant averages about 23,000 acres per mile of road.

JAY COOKE & CO.

NOTICE.—The Kidder National Gold Bank, located at Boston, in the State of Massachusetts, is closing up its affairs. All note-holders and other creditors of said Association are therefore hereby notified to present the notes and other claims against the Association for payment.

O. W. PEABODY, Cashier.

Dated, Boston, November 20, 1872.

Invention of Capt. F. P. WARREN, Royal Navy.

(See Correspondence in *Nation* of Nov. 14.)

PERFECT COOKING.

ABSOLUTE ECONOMY.

THE meat is cooked without the access of air, water, or steam, at 210 degrees. The juices and flavors are all preserved. Everything cooked in it is more easily digestible than when cooked in the ordinary way. Burning, scorching, overcooking, and smoking impossible. The dinner may be kept hot two hours without spoiling. All cooks like it. It saves the time, labor, and discomfort attending the ordinary process. It saves three ounces to the pound of meats. It saves fuel, requiring only a heat sufficient to boil water. Can be used perfectly on any gas stove, kitchen stove, or range. Every housekeeper can be independent of the "autocrats of the kitchen." The most delicate sense of smell cannot detect in the house the slightest suggestion of cookery. The price of the utensils will be saved in one month's use.

Send for pamphlet, embracing testimonials from Bishop CLARK, of Rhode Island; Major-General M. C. MEIGS, Quartermaster-General United States Army, Washington, D. C., and others, with full description, recipes for cooking, price, etc.

NOTICES OF THE

AMERICAN AND ENGLISH PRESS

ON

DORE'S WORKS.

"Magnificence of engravings can alone be comprehended by those who have seen them." "Beauty is indeed most wonderful." "Show the wonderful genius of the artist." "Art circles are delighted with Doré. His conception of men and things is exquisite, and his productions are beyond all praise." "Not one design which does not carry upon it the impress of the artist's genius, a pervading evidence of his patient, loving determination to put forth all his power, and to guide it with all his care." "In the whole history of ancient or modern art it seems impossible to find a parallel for his extraordinary industry and fertility of invention." "Marvellous delineations." "The most astonishing masterly pictures that ever emanated from the mind of man, and surpass everything in artistic illustration that has ever appeared."

ENGLISH READERS.

A SERIES OF BI-MONTHLY VOLUMES.

Small 12mo, fine cloth, $1 each.

EDITED BY

REV. W. LUCAS COLLINS.

JUST PUBLISHED.

ARISTOPHANES.

BY THE REV. W. LUCAS COLLINS, M.A.,

Author of "Etonians," "The Public Schools," etc.

Recently Published.

1. HOMER'S ILIAD.
2. HOMER'S ODYSSEY.
3. HERODOTUS.
4. CÆSAR.
5. VIRGIL.
6. HORACE.
7. ÆSCHYLUS.
8. XENOPHON.
9. CICERO.
10. SOPHOCLES.
11. PLINY.
12. EURIPIDES.
13. JUVENAL.

Other volumes in preparation.

The aim of the present series will be to explain, sufficiently for general readers, who these great writers were, and what they wrote; to give, wherever possible, some connected outline of the story which they tell, or the facts which they record, checked by the results of modern investigations; to present some of their most striking passages in approved English translations, and to illustrate them generally from modern writers; to serve, in short, as a popular retrospect of the chief literature of Greece and Rome.

"Each successive issue only adds to our appreciation of the learning and skill with which this admirable enterprise of bringing the best classics within easy reach of English readers is conducted."—New York Independent.

"One of the most ingenious and successful literary enterprises of the day."—Every Saturday.

For sale by all Booksellers, or will be sent by mail, postage prepaid, on receipt of the price, by

715 and 717 Market Street, Philadelphia, and 25 Bond Street, New York City.

NOW READY.

LECTURES TO YOUNG MEN.

By Henry Ward Beecher. A new edition, with additional Lectures. 12mo, extra cloth, $1 50; half calf, gilt, or antique, $3.

This was Mr. Beecher's first book, and is known all over the world. The sale of more than 60,000 copies of previous editions is the best evidence of its merits. The present edition is enriched with three additional lectures, and a new preface by the author, giving reminiscences of the origin of the book and of his early life in the West.

Also Ready,

YALE LECTURES ON PREACHING.

By Henry Ward Beecher. 12mo, extra cloth, $1 25; half calf, gilt, or antique, $2 50.

"What a charming, what a 'fruity' volume is this last venture of Henry Ward Beecher! The 'Yale Lectures on Preaching' can be read by everybody, laymen or clergymen, with delight. We can point to few recent novels which are more entertaining than this book."—Boston Globe.

This is uniform with "Lectures to Young Men," and these will be followed by all of Mr. Beecher's works in series, a uniform copyright edition.

J. B. FORD & CO., Publishers,

27 Park Place, New York.

For sale by all Booksellers, or will be mailed, post-paid, on receipt of price.

JUST PUBLISHED.

INDEX CANONUM:

Containing the Canons called Apostolical, the Canons of the undisputed General Councils, and the Canons of the Provincial Councils of Ancyra, Neo-Cæsarea, Gangra, Antioch, and Laodicea.

POTT, YOUNG & CO.

Cooper Union, New York.

PUBLISHED THIS DAY,
BY
S. C. GRIGGS & CO.,
335 WABASH AVENUE, CHICAGO,

GETTING ON IN THE WORLD;

Or, HINTS ON SUCCESS IN LIFE. By William Mathews, LL.D., Professor of Rhetoric and English Literature, University of Chicago. Printed on elegant paper, with new and beautiful Scotch type, and bound in the best cloth, with bevelled edges and lettered side. Price $2 25.

Says one of New England's ablest critics, who has read the proof sheets:

"No work of the kind has been issued for a long time that can at all compare with it in attractiveness and value. Every page is rich in thought, while almost every sentence seems heading beneath the weight of its wealth of information."

Says the "Boston Journal" of Nov. 1:

"The sheets have been read by several competent critics, who pronounce the book the best manual for youth yet prepared by anybody, not even excepting those by Smiles, Beecher, and Horace Mann. Professor Mathews was once the editor of a Boston paper, and he is still remembered as one of the 'best read' men in New England."

To be had of all good booksellers everywhere, or will be sent, post-paid, on receipt of price by the publishers.

Sold by MASON, BAKER & PRATT, New York; LEE & SHEPARD, Boston; CLAXTON, REMSEN & HAFFELFINGER, Philadelphia.

For the Holidays,
1872-73.

THE LITTLE PEOPLE OF THE SNOW.

By William Cullen Bryant. Richly and copiously illustrated by Alfred Fredericks. Printed with a tint. Small 4to, extra gilt, price $3; morocco extra, $9.

"The Little People of the Snow" is one of the most imaginative and delightful of Mr. Bryant's poems. In this volume it appears elaborately and exquisitely illustrated—the illustrations exhibiting a fancy and invention no less striking than the poem itself. A more beautifully illustrated book has never appeared from the American press.

ROME.

By Frances Wey. Containing three hundred and forty-five engravings on wood, designed by the most eminent Artists, and a Plan of Rome. With an Introduction by W. W. Story. 4to, 550 pages, price, in morocco, $30.

One of the noblest volumes of recent issue is Frances Wey's splendidly illustrated quarto, descriptive of the imperial city of Rome. This superb volume is crowded with illustrations, beautifully executed, and accurately delineating all the places of Rome; its palaces and its ruins, its churches and its works of art. It is a splendid memorial of the ancient city, and exhibits its treasures of art and architecture, both antique and modern, with a fulness that conveys to the imagination of those who have never visited it a just appreciation of this historical and ecclesiastical wonder.

THE "LEATHER-STOCKING" TALES.

By James Fenimore Cooper. 1 vol. 8vo. With forty illustrations by F. O. C. Darley. Cloth, gilt, price $4.

The so-called "Leather-Stocking Tales," by J. Fenimore Cooper, comprising "The Deerslayer," "The Last of the Mohicans," "The Pathfinder," "The Pioneers," and "The Prairie," each story fully and beautifully illustrated by F. O. C. Darley, are here gathered in one volume, handsomely bound, and making a superb holiday gift-book.

D. APPLETON & CO., Publishers,
549 and 551 Broadway, New York.

Books for the Holidays.

NELSON & PHILLIPS,
805 BROADWAY, NEW YORK.

We have a complete assortment of Hymns, Bibles, and Miscellaneous Books suitable for the Holiday Trade. We have also issued a new edition of

THREESCORE YEARS AND BEYOND;

Or, Experiences of the Aged. A Book for Old People, Describing the Labors, Habits, Home life, and Closing Experiences of a large number of Aged Representative Men and Women of the Earlier and Later Times. By Rev. W. H. De Puy, D.D. One volume royal octavo, pp. 512. Illustrated Edition, having six superb Steel Engravings. Tinted paper. Price $3 50; morocco antique, $7.

THE LAND OF THE VEDA.

Being Personal Reminiscences of India; its People, Castes, Thugs, and Fakirs; its Religion, Mythology, Principal Monuments, Palaces, and Mausoleums; together with the Incidents of the Great Sepoy Rebellion, and its Results to Christianity and Civilization. With a Map of India and 42 Illustrations. Also, Statistical Tables of Christian Missions, and a Glossary of Indian Terms used in this work and in Missionary Correspondence. By Rev. Wm. Butler, D.D. Cloth, bevelled, $4; half half, $6; morocco antique, $8.

This work is the production of one who speaks from personal knowledge of the events he describes. His residence of many years amid the localities which he mentions gave him full opportunity to verify his impressions.

TWO CHRISTMAS STORIES ABOUT SANTA CLAUS.

Square 18mo. Tinted Paper. Illuminated Cover. Price 25 cents. I. "ANNIE AND WILLIE'S PRAYER." II. "IS SANTA CLAUS DEAD?"
Too much praise cannot be given of these beautiful and touching stories in verse.

George Routledge & Sons'
NEW BOOKS
FOR THE HOLIDAY SEASON.

The Nation.

NEW YORK, THURSDAY, DECEMBER 19, 1872.

The Week.

THERE is in politics almost a complete lull. Nothing new seems likely to come up in either House, and the "managers" are simply occupied in discovering modes of gratifying their own grudges. The attempted exclusion from the Senate Committee on Foreign Affairs of the only men on the Republican side who know anything about foreign affairs, was a curious illustration of the height to which "cussedness" has risen in that body. There are numerous signs at present that many of the chiefs are at last studying the new civil-service rules, to see what is the best way of "getting round" them. The opposition to the rules among all classes of politicians is deep and deadly, and the public need not hope for their submission to them except by continual pressure. Some conceal their rage better than others, but all are furious. The probabilities are that it is the "monarchical tendencies" of "the so-called reform" which will during the winter excite most of their attention, and the President will certainly have a hard fight if he stands firm. The ease with which Mr. Conkling got Mr. Ward Hunt appointed to the Supreme Court, makes many of them flatter themselves that "things are not going to be so bad after all"; but we must remind these gentlemen that though Mr. Hunt was "Conkling's man," he is a good lawyer, and in all other respects fit for the place.

Alabama appears to have quieted down under the power of the Washington authorities, who suggested by the mouth of the Attorney-General a settlement, which by implication condemned the Republican governor, on the one hand, for his disregard of law, and, on the other, the Democrats for fraudulent counting, and which both parties have accepted. It will, as we suppose, result in a Republican victory when the vote shall have been recounted in the districts where the Republicans alleged frauds. In view of this fact, we do hope Democratic papers will for a moment stop parading the wrongs of the Constitution. And we say this because we are to some extent in sympathy with their fears. But to cry "Constitution" when the next unpartisan man you meet in the street knows perfectly that the stupid Alabama Democracy have been trying to convert a Republican victory into a Democratic victory, and trampled on all law in the attempt—to ask him to listen to arguments never so sound on principles never so important to liberty, is to ask a vain thing and to injure your own cause. It was the late editor of the *Tribune*, we believe, who used to say that he had found that when nobody could bring any other argument against a good measure, the argument that it was "unconstitutional" was sure to be brought forward. And we all know what a feeling as regards the Constitution this view, be the same true or false, generated in minds of a certain kind.

In Louisiana there is confusion of all sorts, and there has been some apparent danger of a fight between the militia acting for Warmoth and the police acting for Pinchback, but no blood has been shed, and none, we suppose, will be. So far Pinchback, Packard, Kellogg, and Casey are uppermost, for the President, why we do not know, has recognized that faction as being the government of Louisiana. We certainly cannot tell how to straighten this tangled skein. One party seems to have just as much equity, to an ounce, as the other; and as for who has most law, each has an enormous quantity, though we suspect that Warmoth has the most on his side. But there has been so much lawlessness all along, that really it would seem to matter little which had most law just at present. The whole business lay in germ in the carpet-bag legislation, violative of all decency, which was passed years ago to secure Republican ascendency. Or one may say longer ago than that, and recall the oppressions of slavery, and the methods of reconstruction that Southern folly and violence seemed to necessitate—perhaps did really necessitate to their fullest extent. It is perhaps idle to attempt settling just now how much cheating Warmoth did in the election; or just how much unblushing lying there is in the Lynch-Longstreet return of votes (made "pursuant to an act entitled, An act to regulate the conduct and secure the purity of elections," passed March 16, 1870), which was made with few or no returns before the board; nor whether Kellogg is eligible to the gubernatorial chair at all; nor whether Pinchback can be at once Lieutenant-Governor, Congressman-at-large, and President of the Senate; nor, in short, anything else certainly about the muddle; except perhaps this, that there is a general feeling—which would be stronger than it is were these New Orleans wranglers not such a coil of vipers—that it is an uncomfortable sight to see a State election count for so little in the choice of a governor, and the United States court and garrison for so much.

The investigation into the Crédit Mobilier scandal is going on at Washington, the committee sitting with closed doors. In view of the report which the committee will by-and-by make, it may be as well to state what the real *gravamen* of the charges in this case is—what the knowing ones say really took place. In the first place, the Pacific Railroad was really built by the United States, and not, as is commonly supposed, by a few patriotic gentlemen who thought a highway between the Atlantic and Pacific necessary for their country's good. The United States advanced all the money after the first "section" of the road was built, and then it passed through the hands of the Crédit Mobilier, a company composed of Messrs. A., B. & C., into the hands of the Pacific Railroad Company, composed of Messrs. C., B. & A. In other words, the Crédit Mobilier was a ring formed for the purpose of "sweating" the money. The books of the company have, we believe, never seen the light. It is generally supposed, too, by those who are "inside politics," that Mr. Oakes Ames went to Washington for the purpose of helping the scheme along, and that what he really did to influence Congressmen was to sell them stock—on which, it was well understood, an enormous dividend was about to be declared—for a price which would have been fair enough if there had been no dividend coming, but, with the dividend, made the whole transaction a gift instead of a sale. As to the truth of this we express no opinion; but these are the charges, which ought to be disproved; and to suppose that a close committee report is going to do it, is very childish.

Secretary Boutwell is working before the Committee of Ways and Means for permission to put another loan on the market through a syndicate with a commission of one and a half per cent., which is what the last loan apparently cost, though the law did not allow it. This time Mr. Boutwell is apparently desirous of having the law on his side, which shows that he has learnt something since last year, though some papers treat his application as a sign of stiff-neckedness. But it makes all the difference in the world whether Congress fixes the amount of the commission or Mr. Boutwell fixes it. As to the amount, Mr. Boutwell is probably as good a judge as anybody. The loan could probably be sold in open market for as much below par as the commission and other allowances to the syndicate will amount to (they amounted in all to over $9,000,000, or about 5 per cent. on the last loan); but the ears of a great many people seem to be tickled by calling the sale of bonds a sale "at par," and calling the discount a "commission," or "interest," or something that will

disguise the *fact* that the sale was *not* "at par"; just as during the war Mr. Chase could not bear to sell bonds at sixty in gold, so he issued greenbacks enough to disguise the transaction, or, as he called it, "float the loan," and make it go at par in greenbacks. It seems to the ordinary mind as if the wisest plan under all circumstances would be to give Mr. Boutwell legal authority to sell bonds for what they will bring, and call the sum offered for them "the market price." If this market price does make the interest really greater than Mr. Boutwell thinks it ought to be, it will be a misfortune; but it will be *a fact* which the American people are entitled to know in all its nakedness. Indeed, all devices for keeping from a free community a knowledge of the exact state of its own credit in the markets of the world are highly reprehensible, if they do not smell of fraud.

Mr. Boutwell has, in reply to a resolution of the House, furnished at last an explanation of the reissue of the $5,000,000 greenbacks in October, and it is a very curious explanation. It appears that the person who thus took upon himself to increase the volume of the currency was not even the Secretary of the Treasury, but the Assistant-Secretary, Judge Richardson, and the object of the reissue was "the relief of the business of the country, then suffering from the large demand for currency employed in moving the crops from the South and West"; that is, in short, that a gentleman named Richardson, whom most people have hardly ever heard of, settled in his own mind that the American nation needed more currency to move its products from its farms to its ports, and he thereupon, on his own motion, added whatever he thought proper to its circulating medium. Mr. Boutwell now tells the House that this was done under the theory, laid down in two judgments of the Supreme Court, that the acts authorizing the issue of greenbacks "contemplated a permanent circulation of $400,000,000 until the resumption of specie payments," and actually treats as of no account the subsequent acts of April, 1866, and February, 1868—the first of which authorized Secretary McCulloch to "retire" greenbacks, notoriously with the view of contracting the currency; and the second of which, in withdrawing the authority conferred by the first, explains in terms that the "retiring or cancelling" authorized by the first was for the "reduction of the currency." So that Mr. Boutwell's defence is substantially that a judgment of the Supreme Court on the intent of an act passed in 1862 deprives acts passed in 1866 and 1868 of all force, though they are neither contradictory nor unconstitutional, and leaves him and all his subordinates at liberty to exercise a power never yet conferred on a single man in any free country.

There is an opinion, loudly urged in some quarters, that Mayor Hall is leagued with certain Republicans of this city to tie the hands of Mr. Havemeyer, the game being said to be this: Havemeyer's election is said to have displeased as much as it surprised certain gentlemen, who at once began scheming for a way of making him innocuous. As without good legislation at Albany this winter he will be almost helpless, the politicians in question decided on "fixing things at Albany." To this end, some of the Democratic municipal officials, who were in such a position that Mayor Hall could apply the screws to them, are asserted to have presented involuntary resignations, their places being filled by Republicans of influence at Albany—that is to say, capable of controlling votes there by giving small places here to "workers." The affidavit stage of this accusation has not yet been reached, and we fancy it will not be; but it is certain that the silver-tongued O'Gorman has resigned the place of Corporation Counsel, and that Mr. E. Delafield Smith, an old hand at the political bellows, has been appointed, and has been publicly informed by the Committee of Seventy, and also by the Union League Club, that he will be regarded as a renegade in league with Hall unless he resigns as soon as Mr. Havemeyer takes Hall's place.

We cannot say precisely how much truth there may be in this rumor—over which, by the bye, we hope none of our brethren of the press will go quite crazy. Our own opinion about it is that Hall has been for some time engaged in spasmodic efforts to make some salvage at last of his reputation. Whenever he has felt himself strong he has intermitted his efforts, and whenever his heart sunk a little he once more betook himself to them. If he could secure the favor of some influential Republicans by a plot of the kind now charged against him, and they happened to approach him in one of his craven moments, why, trust him for joining in—and for joining in, too, with no thought for anything outside his own comfortable skin. As for the attempt of certain Republicans to run the Legislature next winter in the interest of a local Ring, how composed we do not know, of course we some time since were far enough advanced from infancy to know that it will inevitably be made. Some of Hall's recent appointments indicate that there may be a compact such as is charged. Others, again, have confirmed us in the notion that he is looking out for himself alone. There is a fair chance, too, that with a large host of incapable persons he will succeed. We have heard from one gentleman of our acquaintance—a man of mature years, a United States official, a free and accepted mason who has passed his thirty-second degree, the head of a family, liable to jury duty, a legal voter—the sagacious and creditable remark, that he thought it one of the noblest acts of Mayor Hall's life "that he went down Broadway, on Thursday, at the head of Mr. Greeley's funeral procession—he, a political enemy." We submit that the acts of an American gentleman who, if justice were done, would be in jail with his head shaved; or, at least, in hiding like his friend Connolly; or, at the very least, in Havana with his friend Tom Fields, should not be of vast consequence.

The trouble among the insurance companies has ended in the retreat of the Mutual from its position. It publishes a remonstrance from various other companies, and a report of the proceedings thereon of its own Board, in which a resolution is passed abandoning the proposed change, at least for the present, in deference to these companies. The reason of the surrender, we think, strikes the public as odd, inasmuch as the remonstrance of the other companies, which ought to have had little if any weight in view of the Actuary's report, was preceded by a very vigorous remonstrance from the Mutual's own policy-holders, which ought, under all circumstances, to have had a good deal of weight. That existing policy-holders, or at least a majority of them, or even a large minority, think their policies would be endangered by any change in the conduct of the business, ought to be in the eyes of any company an almost overwhelming reason for not making it, because, when a man insures his life, he does not simply contract for the payment of a certain sum to his representatives at his death, but for peace of mind on a certain designated matter during the remainder of his life, and he is as much entitled to the one as the other.

Since the publication of our recent article on the city of Washington, the annual report of the Board of Public Works to the President has been published, by which it appears that the debts and liabilities incurred by the Board amount to about $7,000,000, instead of $10,000,000 as had been supposed. But Mr. Roosevelt, of New York, has moved an enquiry into the actual debt of the District, and in the course of his remarks asserted that the report contained fraudulent items. Mr. Roosevelt stated that after having attended regularly the investigation into the affairs of the District, he was of opinion that the work undertaken by the board would cost not less than $20,000,000. He also stated one very interesting and important fact, which is, that the board "had gone far in excess" of the appropriations made by the Territorial Legislature. In one case, $90,000 had been appropriated, but the board had expended $270,000. Mr. Roosevelt then made the very suggestive point, that inasmuch as the Board of Public Works is not the agent of the

people of the District, being appointed by the President and Senate, the District will not be responsible for debts which it incurs in excess of legislative appropriations, but that the General Government will be.

The case of the city, therefore, is even more anomalous than was supposed. Here are the property-holders of a community having on the one hand an enormous debt suddenly forced upon them by the votes of contractors and laborers who expect to pocket the money, and on the other hand the debt doubled or trebled by an administrative board which the community did not appoint and cannot remove. This seems like travelling back to certain aristocratic and arbitrary times, when one class of persons in want of money would get it by the simple process of imposing a tax on those who had been at the pains of accumulating property. Such a state of things at the seat of the government must shock the souls and consciences of all "advanced thinkers" and "watch-dogs of the Treasury." Yet we notice that Mr. Starkweather thought there was very little in it, and that Mr. Dawes, with characteristic regard for economy, opposed the enquiry as likely to cost too much, and proposed to reduce it so that it would cost little and amount to nothing. The report of the board contains some interesting statements; among others, a table showing the "ratio of street areas to areas of certain cities." Of European cities, it appears that Paris has the least proportion of its area in streets, viz., 25 per cent., and Vienna the largest, viz. 35 per cent. Of American cities, Boston has the least proportion, 26 per cent., and Washington the largest, 54 per cent. Thus it appears that the poorest city on the list has the most extravagant thoroughfares; to be added to which burden is the fact that four-tenths of the property in the District is held by an owner which never pays taxes, which receives the benefit of all improvements, and which has contributed since 1802 but one-tenth of the cost to the other owners' nine-tenths This owner is the General Government.

We are glad, for the credit of the American name, to be able to say that highly favorable reports have been received from the Emma mine. Thirteen monthly dividends have been paid since the sale to the Englishmen, while the delivery has been during the summer and is now about seventy-five tons of ore daily. This will do much to neutralize the effect in foreign markets of the Bowles failure, the great diamond bubble, and the petroleum bubble; and is peculiarly gratifying, owing to the position of General Schenck towards the enterprise. But the General must not trust to his luck again, and ought to retire while the dividends are coming in.

In a somewhat bemuddled passage in the "Week" of our last issue we spoke of the "Landrath" as if it were the Provincial Assembly. We left our meaning as to the action of the County Assemblies somewhat obscure. What we ought to have said was that the County Assemblies will now have the right of presenting candidates to the king for the office of "Landrath," or president of the executive council of the county, and that the king will probably in practice make the appointment from the list thus nominated, though not legally bound to do so.

The Prussian Parliament has taken two additional steps in its war against the Papacy, and they are important, as showing that there is to be no quarter given. The Bishop of Ermeland has excommunicated Professor Wollmann, a theological instructor in the Braunberg Gymnasium—a state institution—for refusing to accept the dogma of infallibility, but the Government took no notice of it. Whereupon a member of the Catholic party in the Lower House moved that religious instruction in Government schools should not be imparted by persons under sentence of excommunication; to which the Government replied, that if bishops could turn state officials out of their places by excommunication, it would prove that the civil power was subordinate to the ecclesiastical, which was by no means the case; that, in the eyes of the state, Catholics were Catholics, whether they accepted the dogma of infallibility or not; and that Professor Wollmann must stay where he was, and the House "passed to the order of the day" by 264 to 81 votes. On the following day, the champions of the Church tried their luck once more, and again suffered an overwhelming defeat. A motion condemning the exclusion of monks and nuns from teaching in public schools was defeated by 242 against 83 votes, the Minister, Dr. Falk, declaring, amidst great cheering, that the Government, if supported by the people, would see that the laws were obeyed, no matter who kicked against them.

The last phase of the dispute between the Right and Left in the French Assembly was a debate on Saturday last on the petitions for a dissolution, which began to pour in in considerable numbers. The debate was as usual very fierce, the champions of the Right being unusually violent, and foremost among them their best orator the Duc d'Audriffet-Pasquier. Gambetta also spoke defiantly, but without other results than an increase of bitterness; and when the vote was taken, the Assembly "passed to the order of the day"—the equivalent of laying the petitions on the table—by a majority of 409 to 201. What will happen next nobody ventures to predict. But there is one new feature showing itself in the situation, and this is one of considerable interest: the dynastic divisions in the ranks of the Right and Right Centre are apparently dying out, and the whole of the monarchists are being rapidly moulded into a solid body, capable of acting together with great decision, as in the present case. Moreover, this body is becoming rather Conservative than Monarchist; that is, it is concerning itself less about the form of the government, and more about keeping the Radicals out of power. It does not care so much as it did whether there shall be a republic or a monarchy, and it cares more whether Gambetta and his friends get into the administration. His accession would mean, in their eyes, danger to the property and social order, and they are now fighting him rather as a social innovator than as a politician. This accounts for the fury of Audriffet-Pasquier's attack, for he is ordinarily a calm and moderate man. We have given elsewhere some reasons for thinking that the country would consider the dissolution of the Assembly without making a constitution the equivalent of a revolution, and that the public mind in its panic would then occupy itself, not with the provision of "checks and balances," but with strengthening the "one-man power," and providing a successor for M. Thiers.

The one certain result of the imbroglio thus far is that the majority in the Assembly has broken with M. Thiers, and that there is little or no chance of their working together harmoniously again. The Kerdel Committee, as it is called, have reported in favor of ministerial responsibility, and objected to M. Thiers's participation in the debates of the Assembly. When the report was read in the Assembly, a motion for postponement, made in M. Thiers's interest, was carried by a majority of only 24, large numbers abstaining from voting. On the other hand, the retirement of M. Thiers would be regarded by the country as a public calamity. The Bank of France declares it would injure the late loans, and there are stories that Germany would look on it as an excuse for asking fresh guarantees. The committee appointed to report on the bill regulating the suffrage, which contained a majority of members of the Right, has added fresh fuel to the flames by recommending twenty-one years as the age at which citizens should be allowed to vote, and the disqualification of all persons while serving in the army. This last restriction, coupled with compulsory military service, would amount in practice, for the bulk of the male population, to fixing twenty-five as the voting age.

"THE PEOPLE" AND THE MUNICIPAL GOVERNMENT.

A NUMBER of propositions are now before the public, each intended to supply some particular defect in our city charter or to meet some political evil existing in our city community. If there were only a single defect or evil to provide for, so that a single remedy would be sufficient; or if the defects and evils which confessedly exist were severable, so that we could treat one without making the others worse, the task of amending the charter would be comparatively light. The case, however, is that of a patient suffering from a complication of disorders, in which we cannot call in three or four physicians who make particular diseases specialties, and bid each of them proceed to deal with that disorder which he best understands; it is one which requires a comprehensive mind, able to perceive the relations which all bear to each other and to the patient.

It must be borne in mind that there are certain fundamental evils, as they may be termed, underlying our city government, and that no scheme for a charter can succeed, however ingenious or complete in its details, which does not take them in as conditions to the problem. In the first place, it is an incontrovertible fact that not only a large portion, but even a large majority, of our population consists of foreigners, ignorant, unused to the exercise of the elective franchise, unendowed with the self-restraint and instinctive discrimination of men bred to the responsibilities of citizenship and self-government, and trained from the day of their landing to follow the political leadership of the men whom we are virtually trying to depose and keep deposed. In a European city community this mass would simply have to be provided for, and that would be regarded as a sufficiently difficult task; but with us they have been elevated to the rank of providers. Having nothing of the sense of responsibility, they nevertheless have the power of voting; and as this power without responsibility is for the present inevitable, many persons are disposed to ignore it altogether, and plan a charter on the pure assumption that the responsible part of the community constitutes the majority. In the second place, the respectable part of the community, as it is termed, consists of men struggling with the highest taxes and highest rents to be found in any city in the world—a majority of whom have no early associations with the city, having come here in the pursuit of wealth, most of whom are more engrossed in business, and all of whom are more indifferent to the duties of citizenship, than any other American community. It has been for at least thirty years a saying that "the men of New York are too busy to vote," and voting is but a small part of the sacrifice necessary for effective action. In the third place, our machinery of government, through the frequency of elections and the number of offices to be filled by election, is so complicated as to have called into existence certain bands of trained plunderers known as professional politicians; and the system is such that it not only secures to these men constant occupation, but it also furnishes them with the means for carrying on their predatory warfare, by providing for their followers an immense number of offices always vacant, or, what is the same thing, about to become vacant. Therefore, we see, as the results of our system and the conditions of our society, first, a set of adventurers, who in the nineteenth century are professional politicians, but who in the fourteenth would have been free-riders and outlaws; second, a respectable community peculiarly ill-fitted to contend with them; third, a large ignorant populace furnishing them with the armed following they especially require; and fourth, the means provided for rewarding their followers, and keeping them constantly equipped and in the field. More unfavorable conditions for the existence of free government, and more adroit artifices for the maintenance of all that is bad in our present system, could hardly have been framed and forced upon a community. Our present civilization does not admit of the armed bands that existed in the Middle Ages, going about the country as land-pirates levying contributions on cities, but we are subjected to the same plunderings, effected in the guise of "politics" instead of in the guise of warfare.

It is, therefore, idle to talk of any one change as certain to effect a reformation. Some persons are strenuous in asserting that all necessary to be done is to restore to "the people" of New York full and complete power to manage their own municipal affairs. But there has never been a time when a majority of the people could not have restrained the city government in its expenditures, and compelled an honest administration of its affairs, if there had been a majority really determined to do it. The trouble has not been with the power, but with "the people"—a people in part absorbed in other matters, and in part fully satisfied with their city affairs and the men who manage them. The persons who favor this general restoration of power to the people must do so in the recollection of earlier times, and in forgetfulness of the fact that the first merchants and lawyers of New York then controlled political meetings and deemed it an honor to hold the office of alderman. The departure of local powers was not a cause but a sequence; after the decline in our municipal affairs had become apparent, the increased interference of the State with the city government was invoked as a remedy.

Mr. Dorman B. Eaton, an acute and experienced lawyer, who has lately had his attention turned to the city administrations of other countries, has also sketched the outline of certain changes. A leading feature in Mr. Eaton's plan, as we gather from the outline of it, which has been published, is the doing away with our Assembly districts. These Assembly districts, as Mr. Eaton says, are little nests for little politicians. They are indeed; but breaking-up the "nests" will not exterminate the occupants. So long as their food remains, it will not trouble politicians of this kind long to find shelter. The practical working of the old county system of electing members of the legislature by a general ticket was not without its advantages, yet it must be remembered that the men who nominated, as well as those who were nominated, belonged to a different order from those who now figure in conventions. Looking back to the "tickets" of that day, we see that each party "headed" its ticket with the names of two or three prominent and respected citizens. Then came some names with the intent apparently of attracting certain classes of voters—a well-known shipbuilder, a popular iron-worker, and the like. As for the remainder of the "ticket," we infer that such gentlemen as Mr. Luther Bradish and Gulian C. Verplanck would not have consented to go on a ticket with Mr. John Morrissey or even with Senators O'Brien and Tweed. Hence there was a certain restraint upon the members of a convention, and while mere politicians did force their way upon the "tickets," still they were politicians of good character, whom an honest man need not have been ashamed to shake hands with. But behind this machinery of convention and election there was a controlling power operating upon politicians in the almost equal numbers of the two political parties. When the Whig and Democratic parties were so evenly balanced in the city that causes which would now be unappreciable turned the scale, it was incumbent upon good party managers to make up a ticket which would bring out the full strength of their party.

The supposed evil of the county ticket, or rather the cause of the discontent which it produced, was the fact that almost invariably it was wholly Whig or wholly Democratic. Whig politicians in strong Whig wards or country towns thought that it would be much better to be always sure of one representative whom they could elect, than to share the chances of the general ticket. There were also ambitious Democrats, in strong Whig counties, who believed that they might go up to the legislature from a district, but who knew they had not a chance of ever representing the county. Thus a petty selfishness overthrew a valuable system which had tended to uphold the integrity and character of the legislature; and perhaps the best evidence that it may prove a valuable system for us at this day, may be found in the fact that every politician of each political party foresees in the system some trouble for himself, and ridicules it as a scheme as chimerical as even the reform of the civil service.

Whatever our reforms may be, to be effective they must relieve

the busier portion of our citizens from making an annual sacrifice of time and money; they must do away with the political prizes which are now to be found attracting the worst part of the community, in the form of offices always within the reach of the most undeserving; and they must secure to the tax-paying portion of our inhabitants, not the control of their own city, for that seems now an impossibility, but the means for always securing in the Common Council a powerful obstructive minority. At this moment there are not many men in this city who think less about "reform," and have less time to think about it, than the officers elected through the "reform movement." They are an improvement on the old ones in honesty, and are therefore of course better administrators as well as better legislators; but improvements in the city and State government can hardly be expected at their hands, for the simple reason that their time and thoughts are all but wholly occupied in finding places or work for the men who helped to elect them. The various problems of government by which the mind of the public is so greatly disturbed are to an average city official or legislator questions of "lunar politics"—that is, good things to talk about, but things which do not particularly concern him. His business is to see that his "workers" are in some way quartered on the city, or State, or national treasury, and that "the party" profits by "the tidal wave;" but he leaves reform to "the doctrinaires."

"DIVINE RIGHT" IN FRANCE.

THE contest in France becomes more interesting and exciting as time wears on, and, as there is little chance that a dissolution of the Assembly, even if this should now occur, will bring it to an end, it is worth while to make another effort to throw light on it, particularly as there appears some danger that the public judgment on it on this side of the water may be perverted by the dexterous use of "phrases." In the first place, nothing is more likely to breed delusion about the whole matter than the practice of calling Gambetta a "republican," in the sense in which Americans use that term. The plain truth is, that to those who believe in constitutional government—that is, a government of laws, and not of men; and also to those who believe in government by the people, or the majority, Gambetta and his following in the Assembly—which numbers about 130 all told—are nearly if not quite as objectionable as the Legitimists. This may seem a startling assertion to those who judge things by their names, because the Legitimists call themselves monarchists, while Gambetta says he is a democrat; but a few minutes' reflection will show its soundness. At the bottom of all constitutional government and all republican government, properly so called, in our day, there must, and there does in reality lie, whether expressed or only implied, an admission that government has its origin in convention—that is, that it is an instrument of human contrivance, for the satisfaction of human needs, and ought to be changed or renewed with strict reference to these needs, both in form and substance; or, in other words, that it is a human institution, established for certain mundane purposes. A government which claims a divine origin, or claims a "natural right" to exist, whether people like it or not, and which professes to have for its object other things than the promotion of human happiness on this earth, may be a good government, but it is not a "republican" or "popular" government in the sense in which we now use these terms. It is not a government which can be carried on by discussion and voting, and in which legislation can be based on statistics or be shaped by public opinion. The advocates or conductors of such a government always believe themselves, and sometimes declare themselves to be either inspired by the Creator of the universe, and under his special guidance, or else to be in possession of an intuitional or transcendental knowledge of what ought to be done, received by some process in the nature of an "afflatus," which exempts their conduct from debate or any of the ordinary human tests of expediency. With neither of these classes is there much use in going into a legislative or other deliberative assembly in which conclusions are reached by argument; and with neither of them, therefore, could an average American carry on a republican government. There is, for instance, no use in attempting to discuss the usury laws with a gentleman who is firmly convinced that God has fixed the rate of interest at seven per cent., or going into constitutional convention with a gentleman who feels within him a certainty, of which he declines to give the source, that monarchy or a republic is the only government adapted to human needs, and who intimates plainly that if you think otherwise you are a bad man and deserve punishment. Of the first of these kinds of politicians the Emperor of Russia and the Pope are among the few surviving specimens; but in the last we may include the whole body of German Junkers and French Legitimists, and the great majority of French Radicals, with Gambetta at their head. Therefore, to flatter one's self that Gambetta defends any political principle that Americans have greatly at heart and which the Right attacks, as some of our Sentimentalist friends seem disposed to do, is to fall into a deplorable delusion, which, as American opinion and American practice count for a good deal in France at such crises as the present, is likely to work a good deal of mischief. The government which the United States ought to encourage in all lands is the government of reason, of persuasion and self-restraint, of facts and experience. This we know, as well as we know anything, to be good for all men; just as we know that it is good to be temperate in your meat and drink, to live within your means, and give yourself plenty of fresh air; but what form of government, or what particular machinery of administration, is good for any particular country, we cannot tell any more than we can tell whether a particular man ought to practise law or go into the dry-goods business. This he must find out for himself. Mrs. Micawber thought that the success of Barclay & Perkins as brewers was a cheering sign for Mr. Micawber, which was a natural enough reflection for her to make, but would have been silly in the mouth of a cool bystander.

That Gambetta is as firmly persuaded of the supernatural or extra-natural origin of "the Republic" as the Legitimists of the divine right of Henry V., there is unhappily little doubt. He himself got into power in September, 1870, by the rising of a mob in the streets of Paris, or, in other words, through a riot with which the French people had nothing to do. He was accepted as Minister of War simply because, owing to circumstances, he was part of the only government which it was possible at that moment to set up—a foreign invader, 400,000 strong, being at the same time on French soil. Were he a Republican in our sense of the word, however, he would, as soon as his escape from Paris had made him practically dictator in the open country, have sought as rapidly as possible to have secured popular ratification for his authority, and have provided machinery by which his administration would have had the support and control of public opinion. Instead of this, he proceeded to adopt at once all the most arbitrary processes of the Imperial régime, and to suppress all criticism by precisely the same means; and no period in French history has ever surpassed in violence and in contempt for law his short reign in the provinces. The quality of his brain, too, was well exemplified in the fact that, although his experience of life had been that of a briefless Paris lawyer of Bohemian habits, he had no hesitation in installing himself at Tours not only as the organizer but as the commander of the armies in the field. It has appeared by the reports since published that he compelled General d'Aurelles des Paladines to advance from his lines at Orleans against his own better judgment, we know with what disastrous results. More than this: General Chanzy took General d'Aurelles's place, and arranged a defensive campaign—the only one possible with raw, half-officered levies, and took up a strong position on the Loire, where he was assailed on the morning of the 7th of December by the whole German force, under Prince Frederic Charles. During the whole of that and the following day he bore and repulsed assault after assault, he and old Admiral Jaregnibery almost sweating blood in their anxiety, and knowing

well that the last hope of their unhappy country lay in their faithful swords. On the 8th, Chanzy saw the night fall with relief, for he still held his ground, or thought he held it. But he was soon bitterly undeceived. He found that General Camôs's division, which covered his right, and had been ordered to hold a strong position to the last man, had actually been recalled to Tours by Gambetta's direct order, and that the enemy had thus rushed in and turned his flank, so that the game was up. We need not remind our readers, too, that it was Gambetta who organized and despatched against Chanzy's protest the sapient expedition under Bourbaki.

When France was almost at the enemy's feet, and there was nothing left for the Prussians to do but lay waste the soil, the sober-minded men of the country once more raised their voices for the election of a legislature to end this mad confusion. Gambetta opposed it with all his might; in other words, he was just as unwilling to appeal to the people as the Legitimists in the Assembly are now, and for similar though worse reasons; for the Legitimists in the Assembly owe their seats to lawful election, while he owed his to the yells of a Paris mob. When he could no longer prevent the election of an Assembly, he attempted to limit the people's choice of representatives, by publishing a long list of persons whose election he actually forbade by decree. In other words, he has really just as little respect for the people as Henri V., and is satisfied, like Henri V., that the only good government for France is the one he chooses. In fact, his whole course drew down upon him, amid general approbation, M. Thiers's charitable epithet of "fou furieux," or raging madman, and this was only two short years ago. What we are asked to do now is to lavish on him, because he clamors for a republic, and calls himself "Radical," and makes speeches demanding another social upturning, the sympathy and good wishes which are undoubtedly due to those, by whatever name they call themselves, who seek to bring about in France the final union of liberty and law, but to those only.

Nor must we condemn the Right without understanding their position. Their unwillingness to dissolve and submit a great fundamental question to the electors of the nation wears, in our eyes, a very bad look, because to us the submission of a question to the people means an appeal to a body of men trained in self-government, used to discussion, thoroughly enlightened through the press and the platform on the nature of every question that comes before them, and quite familiar with the process of organizing a government through peaceful deliberation. To the thoughtful Frenchman, however, an appeal to the people as to the form of the government means, he well knows, asking a vast body of timid and ignorant peasants, led by the priest and bullied by the prefect and the gendarmes, whether they are ready for another revolution, which will place their property in peril and perhaps hand Paris over to the Communists. When that question is asked them, they invariably vote whichever way the Executive seems to wish, and what they mean by voting is this or something like it: "We do not care one straw whether you gentlemen in Paris call yourselves a republic or a monarchy. Call yourselves what you please; but for God's sake give us a quiet life and security for our property and good prices for our products. Keep up the army and the gendarmes; pay the rentes; and keep down the Reds in the towns. Don't ask us whether we seek a change; of course we don't. Whoever is chief of the state now, let him remain so by all means. If he styles himself a President, well and good; if he would rather be an Emperor, Emperor let him be; but in the name of all that is sacred, no more revolutions." Now the Right says that if they submit the whole question of government to such a public, the result is sure to be whatever M. Thiers pleases. The habits and traditions of the French people and the peculiar character of the administrative machine will make this result certain, and M. Thiers has openly declared himself in favor of a republic, so that the Pact of Bordeaux has been virtually broken by him, and the Conservative party thus runs the risk of being totally deprived of its legitimate influence in affairs. "Let M. Thiers," they say, "declare himself for a monarchy, and we will go to the country at once, right well assured that a monarchy we shall have."

Our own belief is that the events of the last two years have rendered monarchy impracticable in France, and have given the Republic a fairer chance of success than it has ever had, and that the part for patriotic Frenchmen to play now is to do their best to make it succeed and make it permanent. But the Right contains a large number of the best Frenchmen; they have their errors and their illusions, but they have also ability, experience, high aims, and a fair share of what little "political sense" there is in the Assembly. This may not be saying much; but it at all events furnishes us with a sufficient reason for not aiding in the attempt in which so many are engaged at present all over the civilized world, to enthrone declamation as the great if not the only instrument of human regeneration, and prostrate all knowledge, and experience, and gifts, and graces, and achievements at its feet.

WOULD A POSTAL TELEGRAPH BE CHEAP?

THE most interesting and important part of the report of the Postmaster-General is his argument in behalf of a National Telegraph system controlled by the Federal Government. Mr. Creswell is a new convert to the doctrine, and evinces the zeal that might be expected. He recommends everything that the English Post-Office has ever done, and of course cannot overlook its appropriation of the telegraph. Whether moved thereto by considerations of public policy, by admiration of the English postal system, or by the natural love of power inherent in a Government official, he has certainly given labor to the subject, and presented a fair summary of the common arguments in its favor. The President, in guarded language, and with a respect to the private interests involved which does credit to his sense of justice, calls attention to the project. He appears to have always believed in it. His education and military training naturally incline him that way.

It is a subject upon which the public is ill-informed, though not from lack of teachers. Plans for an association of the Government with the telegraph have been brought forward at different sessions of Congress for the last six years. They have provoked enquiry before committees and discussion by the press. But the arguments on both sides have been those of partisans, with measures to carry or measures to defeat. As a rule, those who knew about the business were opposed to its transfer to the Government, and those in favor of the transfer knew little about the business. The advocates of the change have gathered such statistics as they could from this country and Europe, but they had not free access to the one, and were not qualified to apply the other. To attempt to draw conclusions for the United States from the experience of a little place like Belgium, for example, without correction for latitude and longitude, for the cost of labor, density of population, habits of the people, the nature of their institutions and intercourse, is like trying to sail the Atlantic with a chart of the Mediterranean. Neither have the discussions in the newspapers afforded much trustworthy guidance or information. The newspapers are, almost without exception, interested advocates. The powerful and influential journals are, by long and pleasant business intercourse, by exceptional facilities and satisfactory service, and by their interest in associations for gathering news, closely bound to the chief telegraph company of the country. From the Government they could get nothing more, and might get much less, while their advantages over competitors would be necessarily fewer than under existing circumstances. Journals which are both weak and poor, and necessarily shut out from the present news associations, are naturally in favor of any system that will overthrow the present one. Human editors in such case might be expected to urge that, on high public grounds, it is the function of government to minister telegraph news according to their needs, and, practically, without money or price. It may be questioned whether our Government will be sufficiently paternal to do this, but their belief that private citizens will not, has undoubtedly the sanction of experience.

The principal argument in favor of a Government telegraph is the low rates which it can establish for messages of the public as well as for reports of newspapers. Here the Postal Telegraph people have solid ground under their feet, although most of them do not appreciate wherein the strength of their position lies. It is repeated over and over again that if all tariffs in the United States were reduced to very low figures, business would increase so enormously that the profits would be as large as now, if not altogether larger. It is alleged that the present companies are short-sighted; that their policy is grasping and penny-wise; that they overreach themselves by high

charges. Perhaps a majority of intelligent business men are disposed to take this view. Nearly all who study the subject begin with similar opinions. Now, it is true that cheaper rates encourage business, and that at a very low tariff the increase is enormous. No man questions this. But what is not so well known, and never fully appreciated without patient study, is that in any large system of lines an increase in the number of messages is always followed by an increase of expense, which, though not fully proportional to the increase in work, still approximates it closely. If written letters were paid for by the word, increase of correspondence would not materially reduce their cost. In other words, the advantages of doing a wholesale business are less in telegraphy than in any other industry. Let us examine the statistics on this point.

In 1862, the total number of messages transmitted by the Electric and International Co. in England was 1,534,590. In 1866, the total number was more than double, being 3,150,149. Within this period the number of messages per mile of wire had increased from 44 to 66, showing that in 1862 the wires were not worked within 33 per cent. of their capacity, yet the cost per message was, in 1862, *1s.* 11*d.*, and in 1866, *1s.* 3¼*d.*

In 1861, the total number of messages transmitted in Belgium was 97,945. The total working expenses were 188,050 francs; the cost per telegram, 1.92 francs; the number of messages per mile of wire, 40. In 1863, the number of messages was about double, 188,825; the total expenses, 283,240 francs; the cost per telegram, 1.50 francs; the number of messages per mile of wire, 56. In 1865, the number of messages had almost doubled a second time, being 332,721; the expenses were 422,560 francs; the cost per telegram, 1.27 francs; the number of messages per mile of wire, 71.

In the United States, the total number of messages transmitted by the Western Union Co. in 1867 was 5,879,000; in 1871, 10,646,000, or nearly double. The whole number of messages per mile of wire was, in 1867, 68—in 1871, 87. In other words, the wires in 1867 were not worked on an average within 20 per cent. of their present capacity. Yet the expense per message in 1867 was 67 cents, and in 1871, 49 cents.

If we assume that the employees and wires in 1867 could have done 10 per cent. more business without material increase of expense, if both had been worked up to present standards, the cost per message in 1867 would have been but 59 cents, as against 49 cents in 1871. That is to say, the expense per message would be reduced only 16 per cent. notwithstanding the enormous increase in the volume of business.

If the same correction is applied to the Belgian statistics, the result is similar. 71 messages per mile of wire were transmitted in 1865, as against 40 per mile in 1861. Improved working enlarged the average per mile by 40 per cent. as compared with the later standard. If we assume that 20 per cent. more business could have been done in 1861 without materially swelling expenses, the cost per message on the total volume of business would have been 1.57 francs. The saving per message, therefore, arising strictly from the increase of more than 300 per cent. in business between 1861 and 1865, is only 30 centimes, or 19 per cent.

The same computation applied to the English statistics is equally striking. It will be observed that we have supposed an increase in business of only one-half what the capacity of the wires would justify when measured by more recent and higher standards of working. This is done because the full capacity of the wires could not have been reached without some increase of force, thus materially enlarging expenses. Exactly how much additional work could have been accomplished at the periods named by the staff then employed, cannot of course be stated with certainty. But we believe the above estimates to be moderate, and warranted by the constant improvements in practical telegraphy. Economies arising from this source should properly be excluded from an enquiry into the advantages of a postal telegraph, since they inure equally under high tariffs and low tariffs, and are beneficial alike to governments and private companies.

It may be interesting to enquire why so little expense comparatively is saved by swelling the volume of messages transmitted. The principal element of cost in telegraphiug is labor. After a certain volume of business is reached, a material increase in messages is attended with an increase of labor almost exactly equivalent. Each message must be booked and accounted for, must receive a fixed amount of attention from clerks and messengers, must occupy a definite interval in transmission. For the time being it must monopolize a wire and the labor of the operators who work it.

If a well-managed office does a business of a thousand messages a day, doubling its business will require double labor. No time or care can be saved because two messages must be handled instead of one. Each must receive the same attention as before. This principle applies as well to improved as to ordinary systems of transmission. The "duplex" instrument reduces, not the amount of labor, but the number of wires required.

This, we believe, is the secret of the maxim, announced by Sir James Anderson as the result of his investigations into the statistics of telegraphy, that "a reduction of tariff leads to a diminution of the net profit, even under the most favorable conditions known." For an impartial discussion of this point we refer to his recent memoir to the Statistical Society ("Statistics of Telegraphy," London, 1872), which is an excellent example of careful and patient statistical analysis.

Two things are worthy of note here. First, that Sir James reaches his conclusions with regret. "Like every one else," he says, "I entertained the belief at one time that a reduced tariff was the key to success in private telegraph enterprise." Second, that in Belgium, the home of low tariffs, the Minister of Public Works, M. A. Jamar, by "a study of telegraph statistics more systematic and complete than has been possible with any other country," has reached the same result, and has demonstrated in a recent report (Vol. 28, "Annals of Public Works of Belgium"), that "in Belgium all reduction of tariff has resulted in a diminution of the net product." Upon a diligent examination and comparison of the statistics of all other countries as well as those of private companies, Sir James Anderson "cannot find any data to refute any of the deductions or principles given in that exhaustive report."

If these conclusions be admitted, it is evident that the promise of direct profit to the nation from the adoption of greatly reduced rates can never be fulfilled. It is a delusion. The burden is simply shifted from one pocket to another. The cost of transmitting messages must be paid. The interest on capital invested in poles, wire, and plant must be obtained from some source. It may be levied directly upon those who use the telegraph, as under the system of private management, or their messages may be transmitted at a loss, as in Belgium and elsewhere, and the deficit made good by the public treasury; in other words, by taxation upon the people at large. The solitary advantage of the Government in this respect, is that it can obtain money at a lower rate of interest than private citizens will accept. But this difference is more than made up by the lack of direct personal interest in expenditure of funds from which governments always suffer, and by the large percentage of expense required in collecting taxation from the people.

Now, if Government cannot secure greater profits by reversing the high-tariff policy of private companies, nor hope to make the absolute cost of telegraphing less than under private management, the question arises whether tariffs ought to be reduced for the benefit of those who telegraph at the expense of those who do not. This is a serious question, about which we may have something to say by-and-by.

ENGLAND.

LONDON, Nov. 29, 1872.

A TRAVELLER who was visiting Hyde Park on Sunday last might have been edified by a scene curiously illustrative of our present political situation. If disposed to take a gloomy view of matters, he might have held it to be ominous of revolution, though a more cheerful and, as I fancy, a wiser frame of mind would have regarded it chiefly as illustrative of the slovenly way in which Government has been for some time discharging its duties. There he would have seen Mr. Odger mounted on a low platform, and discoursing volubly to a tolerably attentive audience. At no great distance, rival or subsidiary orators of a lower class were reciting mock litanies, gross pieces of satire enough, tending to the denunciation of the higher classes and of sacred things in general. The crowd included a nucleus of people to all appearance sincerely interested in the proceedings; but the overwhelming majority were obviously attracted by mere curiosity, and very frequently by curiosity of the contemptuous kind. There are always many thousand loungers in Hyde Park on a tolerably fine Sunday afternoon, and any pretext will serve equally well for an agglomeration. There was, therefore, nothing remarkable in the mere fact that a great many cockneys were looking on with rather cynical amusement at a questionable performance. Nothing less revolutionary than the general aspect of the crowd could well be imagined.

The fact, however, that this and other meetings have been held, and held in more or less direct defiance of the Government, is not satisfactory. Ministers have been guilty of some stupid blundering in the matter. A bill for the regulation of the parks was passed last session after a good deal of rather wearisome eloquence from the Radical members. The final result was that the minister who presides over the Board of Works was to be entrusted with drawing up a series of rules, which were to be valid unless disallowed by the House of Commons. The minister in this instance was unfortunately Mr. Ayrton, a gentleman whose talents for making himself disagreeable

are probably unrivalled, and who seems to have an almost equal talent for blundering. Mr. Ayrton drew up and promulgated a series of rules which seem to be rather silly in themselves. Meetings might be held within forty yards of a certain post on due notice being sent to the Home Office. The question, however, remained whether these rules could be in force before the meeting of Parliament. It is disputed whether the act means that Parliament must give them its sanction before they come into force, or that they are to be in force unless expressly disallowed. As Mr. Ayrton has brought them out during the vacation, his opponents have the impression that they have been unfairly treated, and that he was trying to take a questionable advantage of the brief period during which he could enjoy unchecked authority. The holders of the meetings have used this opportunity of challenging the rules and insulting the Government; some of them have been fined by a police magistrate; an appeal will be made to the higher courts; a great deal of parliamentary and other eloquence will be discharged on the matter; and Government will be exhibited in the unfavorable light of men who have made a bungling attempt to restrain a right which they had not the courage openly to admit or openly to suppress. Mr. Gladstone, if he were wise in such matters, would certainly throw Mr. Ayrton overboard, as a Jonah whose loss would be regretted by no one.

The subject discussed at the last meeting shows another piece of gross mismanagement. Our policemen, like everybody else, lately wanted their wages raised. They formed a committee, and petitioned the authorities for an improvement. The authorities did just what they ought not to have done. They first treated the demand as a breach of discipline, and punished the ringleaders; they then gave way to the demand, and thereby tacitly acknowledged its justice. The result was that a body of policemen refused one evening to go upon duty. They were therefore dismissed from their employment; some of them proceeded to hold meetings, and the last gathering in Hyde Park was summoned by Mr. Odger, supported by one of the ex-policemen, to denounce the grievance. Complaints have recently been made of the conduct of the police, which, as I fancy, have been considerably exaggerated. I cannot discover at least that any serious charges have been established. A demand for higher wages is very natural at a time when all classes of workmen have been making such demands successfully, and when provisions of all kinds, and the cost of living generally, have been rapidly increasing. The mode of making the demand was certainly unfortunate; but it is still more unfortunate that it should have been received in such a way as at once to provoke further insubordination and to prove that the demand was substantially right. Most of the dismissed policemen have now humbly apologized, and, on a petition from a large number of householders in the district, have been replaced, though in a lower grade than before. It is to be hoped, therefore, that faults on both sides will be mutually forgiven and forgotten; but such blunders leave a disagreeable impression, and tend to accumulate more unpopularity upon the heads of Government. Parliament will probably meet in a rather sulky humor.

Meanwhile, reports are beginning to circulate as to the probable action of ministers during the approaching session. It is the fifth, and will very likely be the last, of the present Parliament, and we are in more than usual uncertainty as to the questions by which it is likely to be occupied. A rumor, which professed to come from high authority, was published lately in one of the provincial newspapers. The general purport was that Mr. Gladstone intended to throw himself into the arms of the Radical wing of his party. Some decisive measures were to be brought forward in regard to land laws and local taxation, whilst the question of Irish education was to be left to the verdict of the constituencies on a dissolution at the end of the session. For many reasons, this rumor deserves no credit. One or two hints, however, have caused some discussion. There is a suspicion, sufficiently strong to have called forth a long letter from Mr. Fawcett in this morning's *Times*, that Government intends to bring forward a measure enforcing the sale of all landed property belonging to corporations. The commission which has been investigating the revenues of our universities is about to report, and the suggestion is that they will be found to be so rich as to make it very tempting to place their property in a more accessible shape. Some part of it might perhaps then be utilized for educational purposes outside Oxford and Cambridge. In spite of Mr. Fawcett's opinion—though he is generally a very good judge of such matters—I should very much doubt the probability of Mr. Gladstone's introducing a measure which would shock the prejudices of so many of his supporters, and I should still more doubt his carrying it. The topic which I fancy is most likely to excite public opinion next session is that of Irish education. Whether any and what concessions will be made to the demands of the Catholic priesthood is a very delicate question, and Mr. Gladstone will have to steer very carefully if he would not rouse the strong national abhorrence of priests and Popery generally. He has hitherto postponed the discussion, but it must now come up in some form or other, and it will excite very bitter animosities.

I turn, however, from politics to one or two other matters of immediate interest. A trial which is now taking place should have some attraction for Americans. The notorious Mr. Hepworth Dixon is bringing an action against the proprietor of the *Pall Mall Gazette* for libel. The *Pall Mall Gazette* had accused Mr. Dixon of trading upon "obscenity" and publishing "vamped-up" travels. The first charge is of course the interesting one. The *Pall Mall Gazette* showed less than its usual skill when it put the charge in such a way as to be libellous. Mr. Smith, however, the proprietor of the paper, is a man of courage, and has no disposition to back out of his responsibilities. Accordingly, he justified, or, in other words, asserted the charge to be true. The court has, therefore, been occupied for three days in discussing the question whether the "New America" and the "Spiritual Wives" are or are not obscene publications. Mr. Dixon is in a very critical position; for, if he does not obtain heavy damages, his character will be terribly damaged, if not entirely blasted. It is an awkward thing to have a jury of your fellow-countrymen solemnly declare that you trade upon obscenities. As the verdict has not yet been pronounced, I must not speculate too much on the result. From what I have seen and heard, however, I am strongly inclined to think that Mr. Dixon will not come out of the case with much credit. The exposure of the indecencies contained in his books has been enough to disgust every modest reader, though it may be that "obscene" will prove to be a word not legally applicable. The charge of "vamping" travels rests chiefly on the book about Russia. The ingenious work on the "Switzers" was not published previous to the alleged libel; and the work on America, though you may perhaps think it libellous on the country described, has been quoted for its indecencies rather than for its inaccuracies. Whether Mr. Dixon may fairly be called obscene or not is a question for lawyers; but from a purely literary point of view, his writings are so striking an embodiment of the worst faults in taste and style of our modern English school, that, as a critic, I should view his condemnation with considerable equanimity.

Mr. Dixon reminds me, though I need not say that it is not on account of his improprieties (I must use a gentle word at present), of another book which is just now exciting considerable interest. The second volume of Mr. Forster's "Life of Dickens" has just appeared, and will doubtless have a large circulation on both sides of the Atlantic. Mr. Forster, if not a man of genius, is at least a gentleman who has rendered great services to literature, and to whom I should apologize for the arbitrary association which has connected him in my mind with an author of a very different class. The present volume of his biography is less interesting than the first, inasmuch as it contains fewer personal revelations of any novelty. You, however, can judge of its merits as well as I can do, and I will offer you but one remark upon the subject. It is odd that Mr. Forster has confined himself to publishing the letters which he received from Mr. Dickens, and has not, I think, given a single specimen of any other part of a voluminous correspondence. The effect is, in my opinion, very materially to diminish the value of the book. Mr. Dickens had no doubt a very high esteem for Mr. Forster, and indeed appears to have consulted him about everything, from the subjects of his books down to the mode of arranging his dinner-parties. Still, one might suppose that additional light could have been thrown upon Dickens's character from other sources. I know, as a matter of fact, that Mr. Forster might, if he had chosen, have published letters to and from other old friends of Dickens, and that he has simply refused to make use of them. He must of course have had some kind of reason for the course which he has adopted; but the result is that we shall not know Dickens thoroughly until we have better means of seeing him from different points of view. Other letters will doubtless come to light in time, but meanwhile the official biography is singularly narrow in its scope.

Whilst I am upon literary topics, I may remark that we are just expecting the last instalment of "Middlemarch." Few novels, I think, have been read with more general interest, though opinions as to its merits differ widely. The enthusiastic admirers of George Eliot—and they are a numerous and intelligent class—speak of it with something like abject adoration; others hold that whilst she has never shown greater proofs of ability, the book generally produces a rather chilling impression, and is inferior as a work of art, though full of delicate observation and speculative power. From a publisher's point of view, it has been rather a curious experiment. People had complained of the present system by which the ordinary three-volume novel is sold for the extravagant price of a guinea and a half. "Middlemarch" has come out in five-shilling numbers, and, consequently, will cost two pounds when completed in eight parts. If this is to be the new system, our last state will be worse than our first. The result of this method of publication, and perhaps of some defects in the opening of the story, was to make the

sale very moderate at first. Since that time, however, it has rapidly increased, and, if I am not misinformed, the circulation has recently been very great indeed. The commercial test is defective, but it is certainly some testimony to George Eliot's powers of impressing her readers that she should be able to command the market even at so considerable a price.

THE CHURCH IN ITALY.

FLORENCE, November 15.

THE November number of the *Nuova Antologia* contains two articles of considerable importance, as well on account of the subjects they treat of as of the talent and learning with which they are handled, but still more of the names and position of their authors. The one, on the future Conclave and the right of interference granted to the Catholic powers, is due to the pen of Ruggiero Bonghi, the reporter, and in fact the real author, of the famous "Law on Papal Guarantees"—a man who is at the same time professor, deputy, railway director, and, more than all this, by far the most fertile, the sharpest, the most elegant, and the most learned of all the Italian periodical writers. Signor Bonghi is not only a monthly contributor to the *Nuova Antologia*, but also editor of the *Perseveranza* in Milan and the *Unità Nazionale* in Naples. However, in spite of the eminent part he plays in Italian politics, in spite of his talents and his learning, he has so much of the lawyer and the sophist in his mind, he has given so many proofs of his facility of discussing the *pro* and *con*, that the authority of his writings has lately begun considerably to diminish, both with respect to their intrinsic value and to their significance as the expression of the political party to which Signor Bonghi belongs.

Not so with Signor Pantaleoni, whose many years' silence has not passed unobserved. In 1860 and 1861, Dr. Diomede Pantaleoni was the negotiator between the Roman Curia and Cavour, who placed implicit confidence in him, and whose secret wishes and ideas were known to nobody better than to this confidant. The then pending negotiations were cut short by the great statesman's death, and Signor Pantaleoni has since hardly opened his mouth. If, therefore, we find him coming out to-day with his opinions and advice in a periodical like the *Antologia* (which is now for Italy, politically and literarily, what the *Edinburgh Review* and the *Revues des Deux Mondes* were for England and France at their most flourishing period), it is but natural that he should be attentively listened to, and that papers and conversations should be filled with hot discussions upon the subject and the value of this celebrated jurisconsult's ideas and proposals. It may be as well to add that, if Signor Pantaleoni's article was not telegraphically announced *urbi et orbi*, like that of Signor Bonghi's, it was at least known long beforehand that it would appear, and it had been even discussed in anticipation of its appearance, so that we may well risk the supposition that it is a sort of programme of an important fraction of the Liberal party.

After showing that the kingdom of Italy stands in the best possible relations with all other European powers, Signor Pantaleoni proceeds to state that its only real enemy is the Roman Curia, which, not content with calling down upon it the wrath of God, endeavors to induce France —the eldest daughter of the Church—to cross the Alps and undo the work of the last thirteen years in general and that of 1870 in especial. Many Italians are inclined to fear that the French will not be able to withstand this great temptation thus held out to them, and will be only too glad to seize this opportunity of furbishing anew their military glory at the expense of a weak neighbor, the more so as the religious fanaticism of the Conservative party has every interest to uphold Papacy and the temporal power. Signor Pantaleoni, however, seems to consider their apprehensions as chimerical, and confides to the public that, but a year ago, M. Thiers assured him that France, even France with the Count de Chambord as king, would repudiate the idea of French intervention in behalf of the Pope as an "absurd idea." Whatever we may think of the guarantee offered by this personal opinion of M. Thiers for the security of Italy, every friend of that count v will, I am sure, counsel her not to reckon too strongly upon it, nor to neglect keeping her "powder dry."

The really important question treated by Signor Pantaleoni is that of the actual relations between church and state in Italy; and although in more than one point I am not of his way of thinking, his ideas certainly have every right to serious consideration. Passing over the generalities and philosophical or rhetorical commonplaces of which even a man like Pantaleoni cannot divest himself in Italy, we come at once to the point. The negotiations between Cavour and the Holy See aimed at a *bilateral* or reciprocal treaty; the law of guarantees, voted in 1870-1871, is, on the contrary, an *unilateral*, one-sided disposition. By this law the state renounced all intervention and co-operation in the appointment of priests, but did not, in principle, take away the disposal of the *temporalities* (salary and ecclesiastical revenue in general) from its real owner, "the clergy and people," whilst, under the pretext of freeing the Church, it really enslaved it under the yoke of the Roman Curia, thanks to the complete reform, or rather revolution, operated in the constitution of the Church during the reign of Pio Nono—a reform and revolution utterly and wilfully ignored by the Italian legislators when they voted the law of guarantees. It is easy to see how the Italian doctrinairism of the *free-church-in-a-free-state* school is here mixed up with a very sound appreciation of facts and a well-founded criticism of the application of the above-mentioned principle itself—a principle which in the mouth of Cavour's followers has become a mere watchword, devoid of all serious meaning. *Clero e popolo*, the clergy and the people, are considered to be the real owners of the Church property, and consequently sole possessors of the right of disposing of it, because it was so a thousand or fifteen hundred years ago. This, however, is unfortunately no longer so, and in fact, it is the Pope who has extorted from "clergy and people" the right of appointment; it is the state which has cast away the disposal of the temporalities. Now, Signor Pantaleoni's whole project is based on these, in my opinion, very questionable premises. He proposes, in fact, that the Government should entirely renounce all rights over Church property (*asse ecclesiastico*), giving it up to "clergy and people," *i.e.*, to the committees formed of priests and laymen belonging to the parish or the bishopric. The Government has, in fact, taken up the idea of the party which was in office from 1861 to 1862, and which is known under the denomination of *Consorteria*, although it ought more accurately to be called the liberal theorists' party. Now, as the present ministry, contrary to its policy of last year, proposes forming such committees, which are to administer the benefices during the vacation (taking this administration out of the hands of the *economato*, which at present has it), the authority Signor Pantaleoni wishes to see organized will, in fact, be very soon established, and I refer on this head to my correspondence of October 14, where I believe I described the organization of these future committees.

If, on the contrary, Government were to keep the temporalities in its own hands, this would be, in Signor Pantaleoni's eyes, a serious infringement of the principle of a *free church in a free state*. Should it deliver them up to the Roman Curia, as has been the case with the right of appointment, utter servitude of the clergy would ensue. The only way, therefore, of entirely freeing the Government from all entanglements in ecclesiastical difficulties would be, according to Signor Pantaleoni, that proposed by him, *i.e.*, to entrust the disposal of the temporalities to the above-mentioned mixed committees, representing clergy and people, because in case—somewhat problematical to those who know Italian religious requirements—a parish or a diocese were to separate from Rome and follow, let us say, the example of the German Old Catholics, clergy and people of this parish or diocese would simply keep the disposal of their temporalities, whilst if Rome or the state were to possess it, all sorts of complications might result. Besides, and this is the main point, though at the same time the most chimerical part of the illustrious author's argumentation, the disposition of the temporalities in the hands of "clergy and people" would infallibly lead back, sooner or later, to the appointment of curate and bishop by that same "clergy and people." In that way would be restored the sound logical and moral condition of the primitive Church. As for the property belonging to convents and other religious corporations, Signor Pantaleoni advises, in common with most practical Italian statesmen—but in opposition to the ruling ideas of his party—its simple and absolute abolition.

The learned jurisconsult seems to me less practical when he comes to speak of the moral means the Italian Government possess for acting upon the clergy. He speaks very highly of Germany, giving her unlimited praise for having given her universities the confiscated convent property and having succeeded in forming an intelligent, moral, learned, and independent clergy. In this Signor Pantaleoni is mistaken. A very small portion only of convent property in Germany was given to the universities, the greater part having been added to the Princes' domain. The German universities only began to play a prominent part two hundred years later, *i.e.*, in the beginning and middle of the last century; and finally, he evidently confounds the Catholic with the Protestant clergy in Germany. There existed something like a Catholic theology in a rather flourishing state about forty years ago in Germany; but since then—let us put the beginning of the reaction about 1837—the theological teaching has been withdrawn from the universities and confided to the seminaries in Germany, just as in Italy and France. As in these two countries, ignorance and fanaticism have taken the place of learning and tolerance, and absolute submission to the yoke of the Roman Curia has replaced the former national, episcopal, or personal independence.

It is consequently unjust to reproach the Italian Government with the abolition of the still remaining faculties of theology in the Italian universities last year. These faculties had no longer any pupils; the old professors had nearly all died out; it became difficult, in consequence of the strong competition of the seminaries, to find new men, and impossible to discover new men of anti-Roman convictions. There is not a priest in the whole of Italy who did not recognize the decisions of the Council of 1870.

Another reproach Signor Pantaleoni brings against Signor Lanza, the Prime Minister and Minister of the Interior, seems to me as well founded as the first is ill founded. In my correspondence of July 14, I told you how impolitic Signor Lanza's intervention in the municipal elections of last summer and autumn seemed to me, when, instead of rejoicing and exulting in the thought that the clergy and the clericals had finally, after thirteen years, consented to take the legal field of battle, and thereby tacitly recognized the Italian kingdom, he inveighed against them violently, treating them as enemies of the country and of all liberty. A clever statesman would have had no other aim but to get the clericals to take part in these elections, even if they had the best of it, which they had not and which it was easy to foresee they would not have. And this same Signor Lanza, as Signor Pantaleoni sharply observes, has not the courage to protect a priest who musters up independence enough to obey the king rather than the Pope, and therefore has been deprived of his place and its temporalities, nor to guarantee him the enjoyment of his salary, an event which took place just two months ago! It remains to be seen what Signor Pantaleoni's party would do in the same case. What they have done, when they were in office deprived of the leadership of Cavour, and clinging to his words because they did not understand his thoughts, does not justify very great expectations.

Correspondence.

THE CENTRE OF GRAVITY OF THE POPULATION.

To the Editor of the Nation:

Sir: I notice an article in the *Nation* of November 21, entitled "A Sectional Review of the Late Canvass," in which this sentence occurs: "The centre of gravity of the population has not, we believe, crossed the great Appalachian chain."

I think you are in error. I had occasion to consider that question a year since, and at my request Professor Hilgard, of the Coast Survey, made a series of calculations to ascertain the centre of gravity of the population, as shown by each of the last four censuses. He supposes a plane of the exact shape and size of the United States, exclusive of Alaska, loaded with the actual population, and ascertains the point on which it would balance.

By this process he found that, in 1840, the centre of gravity of the population was at a point in Virginia near the eastern foot of the Appalachian chain and near the parallel of 39° north latitude.

In 1850, this centre had moved westward 57 miles across the mountains, to a point nearly south of Parkersburg, Va.

In 1860, it had moved westward 82 miles to a point nearly south of Chillicothe, Ohio.

In 1870, it had reached a point near Wilmington, Clinton Co., Ohio, about 45 miles northeast of Cincinnati.

In no case had it widely departed from the 39th parallel.

If the same rate be maintained during the next three decades, which I doubt, it will fall in the neighborhood of Bloomington, Ind., by 1900.

Prof. Hilgard also found that a line drawn from Lake Erie, at the northeastern corner of Ohio, to Pensacola, in Florida, would divide the population of the United States, as it stood in 1870, into two equal parts. This line is nearly parallel to the line of the Atlantic coast.

From these calculations it will appear that both the "centre of gravity" and the line that divides the population in half, are more than 150 miles west of the Appalachian chain.

Very truly yours, J. A. Garfield.

Washington, D. C., December 7, 1872.

TWO "BUBBLES"—HOW THEY DIFFERED.

To the Editor of the Nation:

Sir: Your article in this week's *Nation* on "The Diamond Bubble and its Bursting," and the pointed moral drawn, prompts me to add something. You call attention to the superiority of the testimony of independent Government surveys, conducted by men of tried integrity and trained in the methods of scientific investigation, over the "reports" of "experts," however honest they may be in intention, but who are paid by interested parties. In that connection you allude to another carbonaceous "bubble"—that of California petroleum. In many respects, the resemblances between these two are very interesting, but the differences are also instructive, and not without their moral.

Each of these "bubbles" was blown by men with sufficient capital to make it a large one, and with sufficient brains to make it a success in this, that they received a rich pecuniary reward for their enterprise; and each was planned to draw money from investors living distant from the scene of the reputed "discoveries."

In each case, there was a meagre foundation of fact to work upon. Genuine diamonds have been occasionally found at various places in the Pacific States and Territories, and bituminous material had long been known to occur in California.

In each case, the newspaper press was adroitly used to produce the right atmosphere in the public mind, the locality was peculiarly well chosen, and so was the time. The African diamond excitement aided the one, the Eastern oil fever helped the other.

In each case, the gas used to float the "bubble" on the confidence of that part of the public which had money to invest was the "report" of a scientific "expert" of eminent reputation. Each of these "experts" was employed by the parties interested, large fees (compared with the rewards for other kinds of scientific labor) were paid for the "examination" and "report." The "experts" were piloted to the ground and carefully shown the treasures they were expected to see, and each received and accepted from the interested parties very extravagant estimates of the value of the article supposed to be found. In each case, the "experts" brought East material obtained on the ground, one worthless soil from Colorado "salted" with precious stones, the other worthless bituminous matter from California salted with kerosene.

In each case, $10,000,000 was the capital stock of the larger companies, and forty cents on the dollar considered the fair price for the buyers to pay for this stock. The most extravagant estimates were made of the prospective riches. In one case, it was feared that the abundance of the precious stones would glut the market and reduce their value; in the other, pipes and even canals were recommended to convey the abundant oil to the sea, steamers were to use it for fuel, and other new uses were to follow the fabulous supply. And in each case, the public seemed ready to believe these wonderful stories.

Many other points of resemblance suggest themselves, but I will only add, that in each case the bubble burst because of the exposures made by officials in charge of Government surveys. Now, let us notice some of the differences between these two "bubbles."

In the diamond affair, only a few companies were actually organized, but many were in embryo. No stock was actually on the market when the collapse came, and the chief losers were wealthy capitalists, mostly in the West. In the other case, $16,000,000 of stock was on the Eastern market, extensively advertised; was recommended as a peculiarly attractive investment for persons of small means; was selling rapidly; and when the collapse came the losses often fell with sad severity upon those ill able to bear them. This $16,000,000 of stock represented only three companies, but more were about organized, with I know not how much capital; one of which, with $7,000,000 capital, was about ready to launch its stock on the market. Californian newspapers have stated that over seventy companies were incorporated on that coast, the aggregate capital of which I have no means of knowing.

With the bursting of the diamond "bubble" those who organized the principal company (mostly Californians, I think, and who are the reputed heaviest losers), so soon as they were convinced of the fraud, made the matter public, and thus checked further losses. Some of the sellers implicated have already made restitution to those who bought of them, and it is stated that others will follow. The deluded "expert" came out with a new report, confessing his error, explaining the manner in which he was deceived, thus making it easier to bring the culpable parties to justice. He has, moreover, it is said, made such pecuniary restitution as was in his power. The newspapers have expressed unqualified indignation over the "gigantic swindle" and "unparalleled fraud." They have justly showered praises on the honest official who so nobly did his duty in guarding the public against further profitless expenditure. Government surveys are commended and their value recognized.

In marked contrast is the bursting of the oil "bubble." No companies came forward and told the buyers that their stock was worthless, nor have I heard that any of the parties who received money for the stock made restitution to the victims. None of the guilty parties were ever brought to justice. The "salting" was only proved by long chemical investigation, the eminent "expert" has never explained his connection with the affair,

nor has the public any knowledge as to who did the "salting." Interested parties bullied the official who had pricked the bubble, and piled odium on his devoted head. Many newspapers joined in the outcry against him, his ability was questioned, and his honor was assailed. Newspapers of wide circulation had nothing to say about the "unparalleled fraud" or "gigantic swindle," but much to say about his "treachery" to the State which employed him. The geological survey was extensively spoken of as of questionable utility, in that by exposing the fraud it "kept capital out of the State." The Legislature of California at its next session failed to pass any appropriation to carry it on, and for two years its work was suspended, except as carried on by the private means of its official head. Then a tardy recognition of its value followed, and the work was resumed by the State. All this was less than eight years ago. The world evidently moves. Each reader can draw his own moral. OBSERVER.

December 14, 1872.

THE "UNFORESEEN RESULTS" OF THE GENEVA DECISION.

TO THE EDITOR OF THE NATION:

SIR: Perhaps all the results to which you refer in your excellent article of December 12 had not been entirely "unforeseen." I find in one American treatise on international law the following passage: "In a state which is formed by a union of states, there is no doubt that the central government is responsible for the acts of bodies which have no existence in the view of international law. There is a weak point in our Constitution in this respect, for the responsibility must be borne by the Central Government, but the evil cannot always be abated."

There is no doubt that in such cases the Central Government—as in the instance where South Carolina shut up British colored seamen, while their vessel was in Charleston harbor—could be called upon to make reparation, and that, in the event of refusal, retorsion could be used on Americans within the territory of the other party.

But you make a supposition in regard to what might happen under existing treaties with Japan and other states not exactly within the pale of Christian international law. An American has desecrated a temple, is brought before his proper judge, the Consul, and his judge finds no penalty for such an offence in American law. Allow me to ask how this can disturb international relations? "Americans committing offences against Japanese shall be tried," says the Treaty of 1858, Art. VI., "in American consular courts, and, when guilty, shall be punished according to American law. Japanese committing offences against Americans shall be tried by the Japanese authorities, and punished according to Japanese law." The plain sense of these words limits the Consul's jurisdiction to offences of which a private Japanese person is the object, but public crimes against the state do not fall within his jurisdiction. Otherwise, he has no other way of proceeding than to deal with the offence according to the strict construction of the treaty. So then, if an American should plot against the government or commit any other public crime against the peace or the religion of Japan, the public authorities would have a right to seize him, if within Japanese territory, and treat him according to the law of the empire. W.

Notes.

APPLETON & CO. will reprint for the American market Darwin's new work, "The Expression of Emotions in Man and the Lower Animals"; also Field's "Stones of the Temple."——Macmillan & Co. will publish "A Treatise on the Building and Ornamental Stones of Great Britain and Foreign Countries," by Edward Hull. ——D. Lothrop & Co., Boston, announce "Mystery of the Lodge," by Mary Dwinell Chellis.

—Stimulating still further the popular thirst for the easily intelligible results of scientific investigation, Professor Tyndall has met with great success as a lecturer in this country, and may expect to be still more successful here than he has been in Boston and in Washington. It would surprise most persons, we suppose, to know how many plain people follow with very real eagerness and with a fair degree of intelligence and a fair amount of profit such researches as those of Darwin, Faraday, Tyndall, and their compeers, and in this city such people are numerous, as Cooper Institute every day indicates, and as it will no doubt very clearly show during Mr. Tyndall's lecturing. The first of his lectures took place on the evening of Tuesday last; the second is set down for to-night, Thursday; the third for Saturday next; the fourth for the day after Christmas, Thursday; the fifth for the Saturday following; and the sixth and last for Tuesday, December 31. The doors are opened at seven and are closed at eight. We notice that in Washington Mr. Tyndall closed his course by an appeal, not unneeded there, in behalf of the interests of original scientific investigation as distinguished from that use of science which is favored by the average Congressman, who would laugh (say) at a chemist while he was investigating the nature of stearic acid, and call him a non-producer and an ass until the chemist had discovered the way to make stearine candles for all the world and a colossal fortune for himself, as a non-producer of a European chemist once did.

—The investigation into the Fifth Avenue Hotel fire, in which eleven persons were burned or suffocated to death last week, has brought to light several facts of interest. In the first place, the cause of the fire was, as usual, bad building. The report of the fire-marshal shows that flames and smoke were carried, before there was any possibility of alarm, through a huge elevator-passage running from basement to attic, from floor to floor into the roof, so that the fire broke out almost simultaneously on each of the upper stories. In one of these were the sleeping-rooms of the women-servants who were killed. It was this same sort of elevator-passage which furnished a draft the other day for the fire in the building on the corner of Kingston and Summer Streets in Boston. There are hundreds of them in the warehouses, hotels, and stores in this and every large city in the United States, and they are so badly built that in most cases, as in the Fifth Avenue Hotel, they serve merely as fire-communicators. To make the ground as dangerous as possible, the Fifth Avenue elevator ran by the corner of one of the servants' rooms, through a part of the house occupied by the least intelligent of its inmates. The proprietors have buried their victims free of expense.

—Another interesting fact connected with this fire is that it should have been put out by the fire department of the hotel. The municipal engines did, to be sure, arrive on the ground in the course of time, and we believe no fault can be found with them or their officers, but the fire had acquired tremendous headway before they came, and if it had not been for the well-organized and efficient hotel force, it is certainly doubtful whether the whole hotel would not have burnt down. This domestic department, consisting of hotel servants, was regularly drilled, and with their hose, and engines, and organization were quite prepared for an emergency. Of course, it is obvious that immense establishments like the Fifth Avenue ought to have fire departments, but they ought also to have a great many other things which they do not possess. How many other hotels have them we do not know, but we believe a good many; and the curious in such matters may find some food for reflection in the fact. If, after all, the general distrust of the protection afforded by municipal authority is itself beginning to operate as a safeguard in such cities as New York, it may turn out that we are better protected from fire than we had supposed. If the owners of some of the largest buildings in the city, from sheer want of confidence in the fire department, organize fire departments of their own, they undoubtedly lessen the danger of fire throughout, because it has been proved, both by the Chicago fire and more recently in Boston, that isolated buildings kept safe will act in case of a general conflagration as a dam to the tide of fire.

—Edwin Forrest, a man great in his way, who may be said to have nearly outlived all of his once enormous professional reputation, and long ago to have outlived his personal good name, died last week, at the age of sixty-six. It has been the fashion of late years to decry him, for "culture" has been having its day, and the stage heroes whom young ladies find romantic in appearance and the clever realists have been the public favorites. More than this, there undoubtedly was in the acting of Mr. Forrest much which good taste was compelled to condemn—faults of commission, crudities and barbarisms, brute violence and animal force in excess, and a lack of the clear expressiveness and clean finish which a well-trained intellect would have given. But there was a pervasive strength, due to a powerful personality, which every now and then electrified the spectator, and which made Mr. Forrest in some of his parts a very great actor—one of the greatest. His *Othello*, for example, was a part which gave full scope to all his best powers. We doubt if there ever was a better embodiment of Shakespeare's ideal than when this play—perhaps the one play of Shakespeare's which can in its entirety be most thoroughly and completely brought in upon the theatrical stage; the one play in the case of which no great portion eludes the manager and the actor and reserves itself for the closet and the reader of poetry—we doubt if it was ever more completely and satisfactorily rendered than when Mr. Forrest was the Moor. His very fine presence; his masculine beauty; his dignity, as of a tried commander who has set many

> "a squadron in the field,
> And the divisions of a battle knows";

his melodious voice, which served him as well in the sustained eloquence

of the most potent, grave, and reverend senate-chamber as when he wooed the gentle lady,

"And often did beguile her of her tears,"

or as when he raved in the tumultuous storm of rage, jealousy, and pity for Desdemona, and pity for his own betrayal,

"There, where he had garner'd up his heart";

the suppressed tremendous energy, and savagery, as of a barbaric spirit, in which "chaos was indeed come again," if the true passions were aroused; the haughtiness, pride and ferocity, the depth of melancholy—all these Forrest represented in a way that we do not believe any one who ever saw it will ever forget. And this, perhaps, because he was of a character and temperament which were in many points not unlike Othello's own. It was impossible to see him much, and listen to him, and not feel that his was a towering untamed and untamable spirit; the mind might be inferior to that of multitudes of the men whom he despised and hated; the character in many respects contemptible for its smallness, cruelty, contempt, profligacy, and lack of elevation; but that he was a man of tremendous spiritual force was evident. We make no pretensions to an intimate knowledge of his character, nor indeed to an extensive acquaintance with his acting, though among early recollections is Forrest as *Metamora*, as *Spartacus*, as *Damon*, as *Othello*, as *Richard*, and as *Hamlet;* and among late recollections will always remain as worth whole evenings of many finished actors his

"Silence that dreadful bell!"

in the second act, and his

"Put out the light; and then put out the light,"

in the last hour of Desdemona's life. But the point which we wish to bring out is that there was in him the indefinable quality—a spark of what we call genius—and that in virtue of this he was, with all his faults, and they were many, a great actor, however much of the Bowery-boy his critics found in him. There are many chapters in his life which his friends may well wish forgotten, as his long contention with his much-injured wife; his desolate and misanthropic old age; his shameful treatment of Macready, when his great natural vanity and overbearing temper were intoxicated to delirium by our craze over him as "the great American tragedian."

—We cannot say that we share the judgment pronounced by our Italian correspondent this week upon Signor Bonghi, to whose extraordinary versatility and industry he does not fail to do homage. Indeed, the most recent example our own country has afforded of an indefatigable literary-political journalist pales before the simple enumeration of Prof. Bonghi's achievements as given by our correspondent. A late number of one of the journals with which he is editorially connected, the *Perseveranza* of Milan, admits a letter discussing the new Roman University, in which the writer bluntly expresses his opinion that "a professor who is at the same time a Deputy (in Parliament) is a real calamity to the instruction" of the University. Now, Signor Bonghi is precisely one of the new Roman professors, by Government appointment, and in a foot-note the *Perseveranza* calls the attention of its correspondent to a recent letter from Rome to the *Corriere* of Milan, which stated that Professor Bonghi, although a Deputy, had delivered all the lectures assigned to his course, and even more. On the whole, we can safely hold this statesman up to our average Congressman as an example worthy of his best efforts at imitation.

—"You rogue, here's lime in this sack too; there is nothing but roguery to be found in villainous man."—*K. Henry IV.*, pt. 1, a. 3, sc. 2.

Nares thought lime "was probably used for fining." Halliwell, remarking that "the notes of commentators are meagre on this subject," offers "some minute evidence that does not appear to have hitherto attracted attention." This is chiefly taken from Walter Charlton's "Two Discourses" (3d edition, London, 1692). He might have found in "The Jewel House of Art and Nature," by Sir Hugh Plat (London, 1653)—not a very rare book—a reason why limed sack was sold by English vintners, and the fact that the "roguery" began in Spain. It seems hardly possible that this passage has escaped the notice of every annotator of Shakespeare, yet we do not find it in any edition now within our reach:

"We are grown so nice in tast, that almost no wines unless they be more pleasant than they can be of the grape, will content us, nay no color unless it be perfect fine and bright wil satisfie our wanton eyes, whereupon as I have been credibly informed by some that have seen the practise in Spain, they are forced even there to interlace now and then a lay of Lime with the Sack grape in the expression, thereby to bring their Sacks to be of a more white colour into England than is natural unto them, or than the Spaniards themselves will brook or indure, who will drink no other Sacks than such as be of an Amber colour" (p. 62).

CHILDREN'S HOLIDAY BOOKS.*

THE author of "Derwent" has carefully concealed his real name and the name of the Connecticut village (on the Connecticut River) in which he was born and brought up, though the latter will doubtless be recognized by others more familiar than ourselves with the topography of the Nutmeg State. This allowable artifice detracts nothing from the interest of his reminiscences, which extend back a little way into the last century, and treat of the rudeness and natural pleasures of country living in the days when coals and lucifer matches were as yet unknown, the whipping-post still in use, the Puritan Sabbath reckoned from sundown of Saturday to sundown of Sunday, tithing-men employed to repress disorder in meeting, children taught at school to end their alphabet with "and-by-itself-and," and, we suppose, with "abisselfa" to begin the spelling of such a word as *acorn*. This picture, with the reflections and observations which accompany it, of New England ways in the "good old times," especially commends itself to grown-up readers, who will find its descriptions faithfully drawn and the sentiment noticeably pure and true, lapsing neither into affectation nor into commonplace. The author's style will also gratify the same class, showing as it does the marks of cultivation and of self-restraint, and being withal so simple as to make it possible for large extracts to be read aloud with but little alteration to the youngest audience. A child of three not less than a child of ten or fifteen can listen eagerly to the story of fetching fire, going to mill, fetching cows, of jack-o'-lanterns, cattle, sheep, dogs, and birds—of the dog Gyp, who "was mysteriously missing for several days, coming home once or twice in the time, and asking for food, and then immediately disappearing again," and who, "being followed, was found in a distant field keeping guard over a coat which his master had left there"; or of the dog Splash, whose "great amusement was to swim across and reswim the river; which he would do several times a day when work was going on in the meadows—for he liked observers. He would aim to land at a particular point, a rock, on the other shore, that his eye fixed on; in order to do which he must take into account the drift or leeway to which he would be subject from the current. A man would throw in a chip or some light thing to test it. As Splash could not do that, his way was to plunge in, no matter where, and swim off a little, and then return and run up or down the shore, as he had found the stream to require, to a point sufficiently high, or low, to justify his setting off." The number of anecdotes of this sort quite justifies us in placing "Derwent" among the children's books of the season, though, as we have said, it can hardly fail to please readers of every age.

We do not remember to have met with the first part of Miss Yonge's series, "A Storehouse of Stories," but we can say for the present volume that its contents could ill have been suffered to pass away and be forgotten. Every one of its four hundred solidly printed pages is a legitimate possession of the English-speaking nursery. "Evenings at my Grandmother's" and "Elements of Morality" occupy by far the greater portion of the book. With the first-named the three or four Persian stories called "Blossoms of Morality" fit very well, and "A Puzzle for a Curious Girl" naturally pairs off with Salzmann's prosaic modern and realistic "Moralisches Elementarbuch." This last is given in the translation of Mary Wollstonecraft, with the spelling of whose name, by the way, the printer or Miss Yonge has taken great liberties. A single extract will give the key to this quaint production of the days of our grandfathers. Little Charles Jones has lost his way in a wood, from which he is rescued by a curate and taken to his home to be kept over night. When playtime has arrived, before the children go to bed,

Charles asks leave to retire, and not returning, is sought for, and at last discovered behind the kitchen door, weeping bitterly:

"*Curate.* What is the matter with my little guest?
"*Charles.* Nothing at all.
"*Curate.* Something must ail you, or you would not cry.
"*Charles.* Ah! if I were with my dear father and mother!
"*Curate.* You now feel, my dear child, languor, or a violent and uneasy desire to see some absent person whom you love. I do not blame you for it; no one ought to be so dear to a good child as his parents, and he should feel a little uneasy when he is parted from them. But, my dear child, if you would live contented, you must learn to moderate this as well as fear and joy, or you will miss many pleasures. Do you think you can bring them here by your longing and crying? Certainly not; you know it is impossible. Of what use is, then, this violent desire which makes you so very uncomfortable? etc., etc."

"Family Stories" are downright fairy tales of the most approved description, and are hinged on to the various actions—conduct and misconduct—of an interesting family of eight grandchildren, just one year apart in age.

Mrs. Laing's "Seven Kings of the Seven Hills" is a very attractive and well-told rendering of the fables of early Roman history. Everybody needs to know these stories, and this book will serve a good end in introducing them to children. Only, while everybody ought to know them, they ought at the same time to know that they are fables, and for this reason we do not like the preface of the book. It lays claim to a merit it does not possess, and, we will add, is none the worse for not possessing—that is, accurate scholarship. Fortunately, children will not read the preface; but it is absurd to refer to "the best writers upon ancient history—Pliny, Plutarch, Dionysius, Livy, Niebuhr"! and worse than absurd for the author to assure her readers that "no fiction has been called in to assist their interest," and that "their record is borne out by history." Her statement that she has "carefully compared and revised the dates which both ancient and modern writers have affixed to the founding of Rome and the reigns of her seven kings" is simply puerile. After such a preface, one is not surprised to read of *Cureata Comitium* and *Via Sceleratus*, and to meet such misspelling as Autemnates, Laurentium, Ariccia, Ferantina, and Lucermo.

Prof. De Mille's "Dodge Club in Italy" some of our readers will remember, as it has not only appeared in book-form, but also serially in *Harper's Magazine*. They will recollect it as an extravaganza almost on the intellectual level of "Major Jones's Courtship," and marked by great liveliness of movement in the incidents. High animal spirits were another of its characteristics, and the Yankee reader will recollect that it showed that curious conception of the Yankee which makes him wear on his waistcoat the stars of our national banner, the stripes of the same emblem being made up into pantaloons for him. Withal, there was evident in his accoutrements and his moral and intellectual outfit sufficient proof of his creator's clear perception that it was the Yankees who were to buy the books in which this gentleman figured, and he is accordingly made as inventive, cool, courageous, just, merciful, independent, and good-natured as he is impudent, ill-bred, and untutored. He is the Yankee as conceived by the British provincial gentleman who wishes to be civil; he is "Sam Slick" essentially, but a good deal elevated and no longer selling wooden clocks. And as was the elder "Dodge Club," so is this "Young Dodge Club" which Mr. De Mille offers to Young America. We have read it with more satisfaction than we have got from the author's previous attempts to write books for boys. There is the same fondness for headlong mischief and practical joking, but there is also a great deal of guide-book information about Rome, which is well enough told to make it in itself beguiling to the boys, and the concomitant horse-play will make it quite irresistible to most boys. We wish we could praise it more highly. Indeed, for the matter of that, we can. There is a description of the ascent to the roof of St. Peter's and of the scene there presented to the eye, which is admirable for its spirit and vividness. Our author has not forgotten that to his audience much that is stale to tourists is absolutely new. But what we mean is that one can never praise Professor De Mille as a writer for boys without being compelled to add that the vulgarity and roughness which his books must do something to encourage may perhaps more than counterbalance the good which he may do. The guide-book information of which we have spoken is in great part rhymed, we regret to say, and taken out of Byron. We must not forget to notice that Mr. De Mille, with a pardonable wish to be civil, we presume (and perhaps after having in vain exercised his Canadian mind to account for our toleration of the Fenians), represents his Young Dodges as being extravagantly fond of the Irishman. His brogue is sweet music to them. When they are in scrapes and are longing for some one who understands Italian, they would have welcomed any such person who could speak English, but the Irish voice, which is what does meet their ears, fills them with genuine and national delight. We wonder how long it will be before there is a general understanding that our authorities have tolerated our Fenian friends partly because it is some amusement to see the Dominion and the English in a panic proportionate to their bounce at other times; partly because, while we despise the Fenian chiefs as robbers of servant-girls and traitors to each other, we believe that England's course towards Ireland till within the last twenty years has been a frightfully bad one; and mainly for the reason that politicians are the most timid of all carnivorous animals and stand in awe of "the Irish vote."

"The Blue Mantle Series" consists of ten little volumes, all of which we have read faithfully; and when we began it we thought we should be able to commend it highly, some of it being very good for boys and girls. And, as the case stands, we don't know that we may not commend it. Many parents will like it very well, and most children ought to like most that is in it. If we make it out rightly, it is a series of volumes issued by a Methodist publishing firm, who have in their employ a Prohibitionist editor, and who have caused to be gathered together for him numerous little tales, some of them French originally and some of them English, but all of which have already been before the English public, and all of which have been imperfectly transferred into what the Hon. Henry Clay used to call "the American language," and supplemented by an occasional editorial note. Thus "pence" are made into "cents," and "shillings" into "quarters," but a good many distinctively English expressions are left. As we have said, some of these numerous little stories are pretty; many of them, most of them, show so delightful an appreciation of the needs and peculiarities of children that they must be based upon much experience, as well as informed with much love; and most of them are well adapted not only to please the children, and their older friends as well, but also to do the children much good in the way of moral instruction. But on the other hand many parents will object to the particular sort of religious teaching which is often inculcated here very sedulously, and which we may describe by saying that it would have pleased those parents who, twenty years ago, believed that at four or five years of age a child was old enough to be taught that his heart was irretrievably black with sin; his soul doomed to everlasting fire—"dead in Adam"; his will free, but himself perhaps foreordained a child of wrath; and that if peradventure there were a chance for him it lay in conviction of sin, a change of heart, and washing in the cleansing blood of Christ. Two or three of the ten volumes are thus disfigured; and one there is where the Prohibitionist editor comes out in great force. This one is "The Young Colt," a French work of a moral tendency that would have extorted envious admiration from Moses himself, so strong, obvious, and triumphant is it. "The Young Colt" itself is but one of the brief stories which give a title to the volume of less than fifty pages, and we will narrate it before passing on to "The Christmas Dress," which is the apologue in which the editor shines: One fine evening Mr. Brinkley, as the translator calls him, arrived at his country seat at a late hour, and wholly unexpected by his unfaithful servants, who are drones. In the morning he happened to be looking out of his window, probably longing for Paris and denouncing himself for living in the country, when he saw a fine colt careering in great glee over a field of wheat and doing much damage. He summoned one of the incapable domestics, and demanded of him what the colt did there, and the domestic, wishing to screen himself from the punishment due his negligence, falsely replied that the colt was the miller's. That evening Mr. Brinkley meets the miller, and, severely accosting him, informs him with unchristian haste that the colt shall be shot if again found in the wheat. Tranquillizing himself, the miller smilingly says in substance that Mr. Brinkley had better go home and shoot; that he would if it was his wheat, and so forth. Next morning the colt is shot; Mr. Brinkley loses a valuable animal, for which the servant has to pay out of his wages; and the moral is that both master and man had to pay dearly for a sin which at first each regarded as a small one, whereas no sin is small. That the miller got off scot-free appears not to strike our casuist, who indeed is not very sharp; not so sharp, we fear, as the future millers to whom she may be telling the tale.

The editor's story is of Madame, or Mrs., Thalbert and her daughter Thalia. Madame Thalbert gives to her daughter as a Christmas present a beautiful blue silk dress, fitted at the dressmaker's and elegantly made; the young Thalia tries it on, and is delighted to find that "it is a perfect fit." While counting out the change for the tailor's messenger, Madame Thalbert, who is of a kind heart, says to her daughter: "It is very cold this evening, Thalia, go and get a glass of wine for the gentleman who has brought your dress—you will find it in the little cupboard in the small pantry below. Be sure and take a light with you, for it is already dark there." But the young Thalia, whose head is perhaps filled with her new silk, or who, perhaps, is not an obedient girl, does not mind her mother. When she returns from the closet with the wine, and gives it to the gentleman, he no sooner takes one mouthful than, in fright of poison, he ejects it from his mouth quicker

than it went in, and Thalia at once finds that the front breadth of her new dress is completely ruined. "Thalia had been too dilatory to obey her mother concerning the taking of a light," and, when she reached the cupboard, could not see what she was getting, and got the ink-bottle. She shed many hot tears of sorrow and disappointment, for her mother made her go to church on Christmas morning with her old clothes on, and bought her no new dress till another Christmas, and the moral is, Be not dilatory in obedience. To this the editor makes the following addition: "Note—If Thalia's mother had been a teetotaler she would have had no wine in the house, and poor Thalia would have saved her dress. Wine is a mocker, and to drink it, or to give it to friends on Christmas or New Year's Day, or indeed at any time, is a great wrong. Let the children's cry be, Down with strong drink! Huzzah for cold water!" Yes, and if Thalia's mother had been a well-behaved maiden lady living alone, no Thalia would have ruined any dress. The argument, silly as it looks, when stated by the editor, is really not different from a chief argument of his friends. A disobedient girl receives as a punishment for her disobedience an injury from a particular agent; had there not been this agent in existence, says Chop-Logic in substance, though he thinks he is saying something else, there would have been no spirit of disobedience to punish. A certain appetite or passion of man's nature—for often it is more than an appetite or physical craving—craves outlet and gratification; in the case of many people, the mental and spiritual excitement consequent upon introducing alcohol into the stomach supplies this gratification. Prevent by force the attainment of this gratification by the use of this particular agent, and you cure the vice of nature; the kingdom of heaven is *not* within you, and you *can* cure corruption of the blood by varnishing the consequent pustules, or by forcible amputation. This is not the whole of the case, to be sure, which is not a simple one. But it is a good deal of it.

We have by this time induced in many of our readers a bad opinion of the "Blue Mantle Series"; but this it does not deserve as a whole. "The Young Colt" volume is not a pleasing book; "Eugene, the Little Rag-picker," is rather pietistic, and so is "Sam's Friend" and "The Widow's Cow." But "Little Blue Mantle" we should be very willing to see a child reading; and so of "Our New Baby"; "Pleasant Words for Little Folk"; Mother's Staff," by Marianne Farningham; "The Truant," by the same lady; and "The Young Potato Roasters," by the author of "Dick and his Donkey." All the volumes are for quite young children, and one more than half of the whole ten we have found good. These alone make up a little library to give a child, although no volume exceeds sixty pages in length.

We do not know what to say to the publishers for Americanizing the language in which the English stories are written, and for not indicating the origin of the French ones. It was thought of no consequence, perhaps, in so slight an affair; or it may have been done in the interest of easier comprehension on the part of the seven or eight-year-old children who will be its readers; but it strikes one at first as a little tricky.

The next series on our list is composed of five books, one called "Alice Leigh's Mission," one "The Wood Carvers," one "A Home Tour with Aunt Bessie," one "Little Grig," and one "Real Robinson Crusoes." This last is very decidedly the most interesting, but it is not necessary to praise such a *résumé* of the stories of the crew of the *Bounty*, of Alexander Selkirk, and other shipwrecked mariners. It is too small, and there are too many larger forms of the famous narratives, every word of which boys read with delight. Perhaps not even excepting love, and instruction in religion, has there ever been one more effective means of importing the ideal and romantic into common lives than the ocean, its ships, its foreign and far-off shores, its "gray and melancholy waste," its mysteries, and perils, and romance. And these tales of the sufferings and dangers of them that "go down to the sea in ships" are to some extent correctives of an inflamed imagination, albeit they stimulate adventurousness and courage and fortitude.

The "Tour with Aunt Bessie" is also more than usually good, but we for our part have nothing so good to say of their companions. The former have a partly redeemed street-preaching tone not to our individual taste, and in our individual belief not wholesome nor of good effect on children's lives and characters. In the case of the others this blemish is far greater. Alice Leigh's "Mission" is incidentally to be a suffering little hunchback, going on eleven years old, with a father whose drunkenness causes her many woes, but whom she loves all the while that she pleads with him to turn from his wickedness. Primarily, her mission is to show a rich lady, also, like herself, a cripple, that she must not live for herself alone, but must become converted and teach a Sunday-school in her parlor. One cannot condemn such a book when one thinks of the motive of the author; reflects how good a woman she probably is; how much better the little world about her is for her living in it; how good it would be if she could have her way with it. But what are we to say for it as art? What, indeed, as nature and as good policy and sensible work looking towards the real elevation of men? One would have to say that such books are nonsensical.

"Little Grig" is about a ragged young Londoner who went to the country for the hop-picking season, and is not a bad little tale, though it confusingly pretends to be American, and will puzzle the children somewhat, and perhaps give some of the shrewder ones a little lesson in fraud. The "Wood Carvers" teaches lame boys not to pine, but to remember that they also may do much, and should not be selfish and ungrateful. This also is an English book, and very religious in tone. "A Home Tour with Aunt Bessie" we can recommend as being fair natural history, pleasantly conveyed and well worth giving to children of less than twelve years of age. On the whole, this second series will offend taste and delicate religious feeling but seldom, and may be commended to the consideration of the religious reader. As in speaking of its predecessor, we have dwelt rather more on its defect than on its good qualities; but the defect is there, and to many minds it will seem fatal.

In Mr. Frank B. Goodrich's "Remarkable Voyages; or, Man upon the Sea," we have a book with a promising title, but the contents do not quite keep the word that the title gives. Sad will be the heart of the young gentleman who wishes to set sail for Far Cathay; or to wind through the straits with Magellan; or to see Kidd hanging in chains; or to be shipwrecked with Ulloa upon the coast of we know not what strange land, so many years is it since we read the book; or to read of Anson capturing the tall plate galleons; or to see the Barbary Moors enslaving the captain and crew of the brig *William*—too little satisfaction will Mr. Goodrich give the young reader who, desiring much of such matters as these, shall be invited to take notice of the remarkable fact that the ark built by Noah was of precisely the same proportions as the ocean steamers of our day, and that these proportions nearly agree with those of the human figure, as the atheist and infidel would do well to recollect. Nor will it gratify him overmuch to enquire with the late Mr. Everett, "Was it the winter's storm, or disease or labor and spare meals," that anti-climaxically killed the *Mayflower's* Puritans? A couple of pages of this composition Mr. Goodrich inflicts upon us. However, although his book is not what it might have been, it has much of the fascination of its subject, and perhaps the boys who read this ambitious "History of Man upon the Sea" will not know till later just how badly they have been treated. To older readers we may give a fair idea of it by saying to them that it is a book which—letterpress, engravings, size of page, and everything else—fully belongs to the class of subscription books which are hawked about the country districts, and whose gay covers fade in the sun as they lie in the window-seat of the farm-houses.

Lady Barker seems to us to have been entirely successful in her present attempt at writing for children. Her "Ribbon Stories" we commend with out hesitation to all parents with intelligent boys and girls for whom they wish to get reading which is at once amusing and innocent. For ourselves, we have read it with great pleasure, and but for one or two touches like that in the "Mouse's Wedding," where old Mrs. Brighteyes, who, like all the mouse race, has an invincible aversion to mentioning the word "cat," informs her husband that her daughter's betrothed is "quite an unbeliever in —— ahem!" And her amazed spouse retorts: "You don't mean to say he is such a fool as to say there's no such thing!"—we could be quite willing to accept as perfectly true her very ingenious account of the origin of these stories. They are all so pretty that we hardly know which is best, whether it is Chatty, with his early thirst for adventures unsatisfied, "because, you know, there are not a great many adventures in England," or "Joe Gengles," who found out by experience what turns the axis of the earth. But every one will please both children and their parents.

We cannot say so much for "The Runaway." It is undeniably amusing, and has no evil taint about it, but its absurdities are so many and so great that we should not willingly give it "to the young," albeit the pleasant author of "Mrs. Jerningham's Journal" intended it for them. It narrates the adventures of Olga Leslie, a half Danish, half Scottish maiden of thirteen, who ran away from school because the big girls read naughty books on the sly, and also because the cook would insist on putting "black beetles' babies" in the pudding, which those who ate of it were forced to believe were currants. The cook had also a way of serving up "deformed animals"—at least the meat always had "strange bones" in it, not the least like what one sees at home. So Olga, pressed by both spiritual and animal necessities, ran away, and was protected by another young lady of fifteen, who suffered greatly for the lack of opportunity for noble deeds in these degenerate days when men wear pepper-and-salt trowsers instead of chain armor, and go down to the city instead of riding to battle on snorting war-steeds. The adventures of the two are very laughable, but they throw a curious light on what is sup-

posed to be good reading and good thinking for "the young" by some, at least, of their elders.

Parents who wish to imbue their children with "High Church" views of life cannot do better than get "P's and Q's" for them. It is in Miss Yonge's usual style, and not uninteresting.

"In the Golden Shell" derives its title from the amphitheatre of the Conca d'Oro in which Palermo lies, and gives a pretty description of the city and its enchanting environs, not omitting its catacombs. Like so many other books of its class, however, it is rather a tale *of* children than for them. The conversations are sprightly and natural. The expression "like Vesuvius was doing," on page 10, we had supposed was intentionally put in the mouth of the little heroine who uses it; but on page 50 we find the author herself writing "like Rosalie did," and conclude that the vulgarism is with her an unconscious one.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*

Fine Arts.

SOME MODERN SCULPTURE.

II.

WE have mentioned only Frenchmen, and of these a feeble handful, so far as numbers go. We have but little space for this department of the *Nation*, and cannot now even glance at the art yield of other countries than France; but of one country, Italy, there happens to be a product in our Metropolitan Museum, in Fifth Avenue, which goes to show that some of her artists, at least, are no "'prentice hands." The sculptor of the "Napoleon Dying" is author besides of a statue of "Spring," a girlish figure, half-buried in flowers, preferred by artists to his Napoleonic effort, and of a "Columbus." His skill is closely challenged by another artist, Giovanni Dupré, of Florence, by whom a "Pietà," or group of "Madonna and Dead Christ," is an inspiration from the best periods of religious art in Italy.

The *Atlantic* was evidently aware of the "Napoleon Dying," by Vela, when it made the assertion of our native superiority to any foreign art. We thereupon conceived the notion of referring to the statue as an example of academic education, hedging in our commendation with an almost ludicrous quantity of reserves. The *Atlantic* has since contentedly said that we "had nothing better to set up as a standard." This is erroneous; we were in no poverty of standards; but our aim was to get an example as accessible as possible, the "Napoleon" being visible at a few blocks' distance from Mr. Ward's bronzes in the Park. Similarly, we indicated the photograph as an aid accessible to all our readers in measuring the Shakespeare statue. The accuracy of Rockwood's excellent pictures, taken with the latest improvements in his art, will not permanently suffer in repute, we hope, by the *Atlantic's* slighting reference. In this case the photograph and the statue may be taken as having the same scale, as we shall show in a minute. Meanwhile, our motive, as our expression at the time showed, was the convenience of our readers. Anybody might test us by the photograph, but everybody could not measure the statue. Anybody might see the "Napoleon," but everybody could not see the treasures of European palaces. As for the "Napoleon," its merit is of course a matter of opinion. Every one, except the ideal critic of culture, has his unaccountable liking for one theme, his unaccountable dislike for another. It is a mystery to us how the *Atlantic* can stamp the subject, however, as a bad subject, referring to the selection of it as "puffery," "hero-worship," and a "clap-trap appeal to the popular admiration for the First Napoleon." We wish to raise no quibbles, we would like to understand the thoughts of the *Atlantic* just as the *Atlantic* itself understands them, and to take its language with just the force it means its words to have. But we do feel the difficulty here of exchanging with it any terms that could be mutually comprehended. To us, now, the career of Napoleon seems to be one of the few palpably good subjects afforded by history for art treatment. It seems to us better than the legend of "Macbeth"; it seems to us better than the history of Lorenzo de' Medici, only famous as being father to an infamous queen, yet forming the subject of the "Pensieroso." It seems to us, above all, a career eminently adapted to a strong *melodramatic* treatment. We made some parallels, we believe, in reference to the style of the statue, as suggesting the manner of Delaroche and the manner of Victor Hugo. We repeat, we want from the authority who challenges us nothing but to get at just what he means, all natural shortcomings of human language apart. But running over the epithets it uses about Vela's statue, we cannot for the life of us be convinced that he understands it, or knows where to place it; he uses words we should be very sorry to use, it is true; he speake of a third-rate work, a clap-trap work, a work with hardly a single fine quality. If strictures like these suggest anything comprehensible to our mind, they suggest the opinion of the frank young collegian, coming home full of Catullus and Horace, and flinging epithets at such compositions as Poe's "Raven," or Lincoln's Emancipation Proclamation, or Lowell's "Cathedral"; in such cases, what strikes us is the ingenuous lad's want of *savoir*, his imperfect adjustment to the length and breadth of the situation, though there is in his fresh barbarism something to like too.

But the principal point in which we displease the *Atlantic* is a simple point of scale, which never ought to have been discussed before the public at all, because the data are always there, fixed in bronze, and therefore indisputable. The *Atlantic*, however, supports an untenable theory with a humorous juggle of measurement. Its own words show that it has not had the head of the Shakespeare measured at all. It adopts a reckoning made in its presence by Mr. Brown the sculptor, from whom Ward "learned the rudiments of his profession." Here is the way in which that "most experienced sculptor now living, Henry K. Brown," undertakes to get the size of a head:

"The height of the head was found by taking the distance from the *tip of the chin* to the *bridge of the nose*."

Very well, and what then?

"*And reckoning this as half the head*"!

An imaginative way this to educe the dimensions of a portrait, and the portrait of a man with a particularly lofty skull. The fact is that the distance from the Shakespeare's nose to its chin is *not* half the head; but it goes on: "The curved compass was of course used, and the beard not thus in the measurer's way. The result was 6½ inches, *thus making* the height of the head 13 inches." That is, because Shakespeare is so much from his nose to his chin, *therefore* he is so much to the top of his head. Because it is so far from New York to Boston, *therefore* it is so far from New York to the North Pole. Because it is so long from the age of Queen Victoria back to the age of Queen Elizabeth, *therefore* it is so long from Victoria to Boadicea. We shall not distribute between the magazine and Mr. Ward's preceptor the merit of this invention of measurement without measuring. The former, with exquisite simple gravity, divides its 13½ inches into "noses," remarking that Shakespeare's head is four noses high, "which is the usual rule." The *Atlantic*, its curved compasses done with, closes by observing:

"We in our turn will give a generous hand to the public, and assure it that Mr. Ward's Shakespeare is $7\frac{5}{13}$ of its heads in height."

But the *Atlantic's* assurance is in excess; it has shown that it did not measure the work in question, and it might profitably, to save awkwardness, withdraw or pocket its hand.

The human head may be measured very closely, though not with absolute accuracy, as it cannot be rigidly decided how much of the fulness

beneath the chin to include, or which bump of the skull to take. We will now give the correct measure. Our computation makes the Shakespeare 96 inches high, Mr. Brown's computation. The head measures 14¾ inches high. Dividing therefore 96 by 14.75 we get 6.503—the statue being six and a half of its heads in height, our first statement.

In conclusion, it may not be amiss to point out once more to readers of the article in the *Atlantic* that the writer of it mingles and confounds the *Nation's* criticisms on Mr. Ward's statue with those of another journal, whose writers upon art are most certainly not ours. A good part of the *Atlantic's* article, therefore, at the same time that it misrepresents us, calls for no answer on our part, and enables us to dispense ourselves from answering that part of it, or indeed any of it if we so choose. We shall add, too, that this assurance of our innocence of the other criticisms had already been given the *Atlantic* before its critic selected his mode of attack.

A NEW NOVEL BY THE AUTHOR OF DOROTHY FOX.

HERO CARTHEW.

BY LOUISA PARR,

Is now being printed from the author's advance sheets in THE WEEK. Specimen copies sent free on application.

A NEW AND CHEAPER COMPLETE EDITION OF TAINE'S ENGLISH LITERATURE. 2 vols. $7 50.

OFFICE OF PUBLICATION,
5 BEEKMAN STREET,
New York.

NOW READY.

SUPERBLY ILLUSTRATED CHRISTMAS GIFT-BOOKS.

RED LINE EDITION OF DR. HOLLAND'S COMPLETE POETICAL WORKS,

GARNERED SHEAVES.

1 vol. small 4to, cloth, $4; morocco, $7 50.

This volume comprises "Bitter Sweet," "Kathrina," and "The Marble Prophecy," with the miscellaneous poems lately issued. The thousands to whom these poems are already as household words will give them a cordial welcome in this very attractive form. The volume has sixteen full-page illustrations, and a steel portrait of the author, expressly engraved for this edition by Halpine.

SONGS OF NATURE.

1 vol. small 4to, morocco, $9; cloth, $5.

The Utica Herald says: "This volume completes the reissue of that famous old book, 'Folk Songs,' under the various titles of 'Songs of Life,' 'Songs of Home,' 'Songs of the Heart,' and 'Songs of Nature.' The four volumes together form as elegant and as comprehensive a library of the best poetry in the language as has ever been published. The present, in the matter of rich binding and perfect and profuse illustration, seems to us to surpass all the others. The character of its contents will equally commend it to favor."

ROUNDABOUT RAMBLES.

1 vol. small 4to, 200 Illustrations, cloth, $2 50.

The New York Nation says: "This is THE VERY BEST BOOK for children we have had the pleasure of reading in a long time."

The above volumes sent post-paid, on receipt of price, by

SCRIBNER, ARMSTRONG & CO.,

No. 654 Broadway, New York.

JUST PUBLISHED BY

SCRIBNER, WELFORD & ARMSTRONG,

654 Broadway, New York.

I.

A Grand Work:

THE FORCES OF NATURE.

A Popular Introduction to the Study of Natural Phenomena. By Amédée Guillemin, author of "The Heavens," etc., etc. Translated from the French by Mrs. Norman Lockyer, and edited, with additions and notes, by J. Norman Lockyer, F.R.S. Illustrated by eleven colored plates and four hundred and fifty-five woodcuts. Royal 8vo, cloth, elegantly gilt, and gilt top, $12 50.

Small 4to, cloth, extra gilt, $3.

The above volumes sent free of charge upon receipt of the price by the Publishers.

HISTORICAL WORKS.

BY JAMES ANTHONY FROUDE, LL.D.

FROUDE'S IRELAND.

THE ENGLISH IN IRELAND IN THE EIGHTEENTH CENTURY. Vol. I. By James Anthony Froude, M.A. One volume, crown 8vo, uniform with the Library Edition of the "History of England." Price $2 50.

From the London Standard.

"The reader will be struck by the vast research and great care of the writer, qualities in which he leaves far behind him writers like Macaulay and Goldwin Smith. The equal, if not superior, of these writers in grace of style, he is not wanting in generous appreciation of what traits of greatness or nobility Irish annals present, and his whole work is ennobled by a consciousness of the high purpose with which it is pursued, to throw some real light upon a subject about which there has been so much romancing, so much deliberate lying, that hitherto reasonable men have lacked the courage to undertake its thorough examination."

N.B.—This work will be completed in another volume.

FROUDE'S HISTORY OF ENGLAND.

A new and elegant style.

CHELSEA EDITION.

Complete in twelve volumes, 12mo.

The set in half roan, with gilt tops, in a neat box, $21.

FROUDE'S HISTORY OF ENGLAND.

THE POPULAR EDITION.

In twelve volumes 12mo, the set in cloth $15.

Any or all of the above volumes sent, prepaid, on receipt of the price by the Publishers,

SCRIBNER, ARMSTRONG & CO.,

No. 654 Broadway, New York.

Harper & Bros.' Valuable and Interesting BOOKS FOR HOLIDAY PRESENTS.

☞ HARPER & BROTHERS will send any of the following books by mail, postage prepaid, to any part of the United States on receipt of the price.

☞ For a full list of Standard Works in the various departments of literature, suitable for Presents, see Harper's Catalogue and Harper's Trade List, which will be sent by mail on receipt of Six Cents.

Ready Saturday, December 21.

CUMULATIVE EXERCISE

AS A SYSTEM OF PHYSICAL TRAINING.

A Scientific Application of the Laws of Muscular Contraction to Physical Culture with special Reference to its Influence upon the Circulation of the Blood and the Processes of Nutrition, being the basis of the so-called Health Lift, or Lifting Cure, by FRANK W. KELLY, M.D.

CONTENTS.—Introductory—The Physiology of Exercise—The Hygiene of Exercise—Systems of Exercise—Cumulative Exercise—Rules for Cumulative Exercise—Cumulative Exercise a System, not a machine.

Ready Wednesday, January 1, 1873.

THE STOMACH:

ITS FUNCTION AND HYGIENE.

*** Explains how CUMULATIVE EXERCISE, by restoring tone and vigor to the voluntary muscular system, secures:

I.—The natural erect carriage of the body, by which the organs of digestion are kept in their proper position and relation.

II.—The healthy condition of the involuntary muscular structure, concerned so importantly in digestion.

III.—The proper, adequate supply to the digestive tract of those juices, without which digestion must be either slow, imperfect, or painful.

IV.—The prompt absorption and assimilation of the products of digestion.

And, finally, the equal, thorough circulation of that fluid—the blood—through the medium of which, not only these, but "all the processes of life take place."

BACK-ACHE:

ITS CAUSES AND CURE.

The first of a series of Hand-books on "Diseases, and their Treatment by Cumulative Exercise, is now ready, and will be sent to any address, post-paid, on receipt of 25 cents.

[*Extract from Introduction.*]

The motive of these pages is to show, first: That a very large share of the suffering endured by women in this country, both maids and matrons, and of which suffering back ache is a prominent feature, arises simply from muscular weakness—from want of tone and health in the muscles themselves, both local and general. Second: That certain serious diseases, in which back-ache is only one of many symptoms, are originally caused, very frequently, by the same muscular weakness. Third: That the remedy in both cases is the same, namely: improving the tone of the Muscular System by judicious, systematic Exercise.

THE following additional volumes of this series are now in preparation, and will be issued in rapid succession:

THE BILE: WHAT IT IS AND DOES. Torpid Livers—Biliousness—Jaundice—Gall Stones—Illustrative Cases. 25 cents.

THE BRAIN AND NERVES. Sleeplessness—Headache—Cerebral Congestion—Neuralgia—Paralysis—Nervous Prostration—Illustrative Cases. 25 cents.

THE BREATH OF LIFE. Insufficient Lung Capacity—Consumption—Asthma—Catarrh, etc.—Illustrative Cases. 25 cents.

TO YOUNG MEN. 50 cents.

*** Any five of the 25 cent, or the 50 cent and three of the 25 cent Hand-Books sent to one address, postage free, for One Dollar.

HYGIENE:

AN EXPONENT OF SANITARY SCIENCE, PREVENTIVE MEDICINE, AND PHYSICAL CULTURE

Published Monthly. Subscription, One Dollar per Year. Specimen Copies free to personal applicants at the Publication Office, or mailed to any address on receipt of ten cents.

Address for any of the above
THE HEALTH LIFT COMPANY,
No. 178 Broadway, New York.

LIPPINCOTT'S MAGAZINE.
AN ILLUSTRATED MONTHLY OF
POPULAR LITERATURE AND SCIENCE.
FOR 1873.

The New Volume, commencing with the January issue, will be replete with

THE MOST ATTRACTIVE FEATURES.

It is the intention of the conductors of the Magazine to render it a model of literary and mechanical excellence, and with this view no advantage will be neglected which either talent or capital can command to render each issue an agreeable and instructive compendium of

POPULAR READING.

The contributions now on hand, or specially engaged, embrace an unusually attractive list of Tales, Short Stories, Narratives, Descriptive Sketches, Papers on Science and Art, Poems, Popular Essays, Literary Criticisms, etc., by talented and well-known writers; together with a variety of able and interesting articles on the important questions of the day. In addition to the shorter articles, the following

ATTRACTIVE SERIAL WORKS

will appear in LIPPINCOTT'S MAGAZINE during the year.

I.
A Charming New Novel,

"THE PRINCESS OF THULE,"

A Story of London Life and Society.
BY WILLIAM BLACK,
Author of "A Daughter of Heth," "In Silk Attire," etc.

II.
A Powerful New Story,

"MALCOLM,"

BY GEORGE MACDONALD LL.D.,
Author of "Alec Forbes," "Robert Falconer," etc.

These productions are confidently believed to be masterpieces of their authors, abounding in incident and humor, in striking characters and dramatic situations.

A large amount of space will be devoted to OUR MONTHLY GOSSIP, which will be enriched with short and lively articles on persons of note, incidents of the day, and other novel or amusing topics.

A large proportion of the articles, especially those descriptive of travel, will be

PROFUSELY ILLUSTRATED.

The pictorial embellishments of the Magazine will constitute one of its most attractive features.

LIPPINCOTT'S MAGAZINE

Is for sale by all Periodical Dealers. TERMS: Yearly Subscription, $4; single number, 35 cts. Liberal Clubbing rates. Specimen Number with Premium List, mailed on receipt of 20 cts.

New Volume of Popular Biographies now ready, called

MODERN LEADERS.

Being a series of Biographical Sketches by

JUSTIN McCARTHY.

One volume 8vo, cloth, price $1 75.

These sketches are marked by all that brilliancy of style which has heretofore given Mr. McCarthy so wide a reputation. Besides being instructive, they are most charming reading. The following biographies, among many others, will be included in this volume:

Queen Victoria,	Louis Napoleon,
The Prince of Wales,	Eugenie,
George Eliot,	Thiers,
King of Italy,	Froude.

Sent by mail, post-paid, on receipt of the price.

SHELDON & COMPANY,
477 Broadway, New York.

CHRISTOPHER CROOKED.

A CHRISTMAS STORY.

BY W. E. HATHAWAY.

The author of the "Hoosier Schoolmaster" and "The End of the World" speaks of "Christopher Crooked" as follows: "The theme is one on which tales can hardly be written as works of art; and yet your style is fluent—almost metrical, your story unique, curious, and interesting. It is all you claim for it when you say it is a thing of itself. Your sincere friend, Edward Eggleston."

The Editor of *The Ladies' Repository* says: "Little Chris is the malformed victim of a father's intemperance, bearing even in his gait and leer the marks of intoxication. The story is no myth. The style of the writer is poetic, his pictures are well drawn and truthful to nature and fact."

The *Hearth and Home* says: "The strong point in this little book is its warning to intemperate fathers. It is both touching and terrible."

Price, elegantly bound in cloth, $1. Sent by mail, on receipt of price, postage paid, to any address. Liberal discount to the trade.

In cloth, elegantly bound, $1.

Illustrated Books.

I. Songs from the Old Dramatists.

Collected and edited by ABBY SAGE RICHARDSON, with designs by J. LA FARGE, and vignettes by S. L. SMITH. In one volume small 4to, cloth extra, gilt, $3 00.

"It is rare to find a collection of verses so dainty and so exquisite. . . . The paper and printing are unexceptionable, and the whole style of the work is dainty. What shall I say of the drawings with which La Farge has illustrated it? They are strong and suggestive and singular. . . . La Farge draws, as he paints, the soul of things."—LOUISE CHANDLER MOULTON, *in New York Tribune.*

"The few illustrations with head and tail pieces, are quaintly original and full of a happy suggestiveness."—*New York Evening Post.*

"The whole volume is alive with vital poetry. . . . It is a beautiful volume, full of beautiful matter, . . . a book which will do credit even to the Riverside Press."—E. P. WHIPPLE, *in Boston Globe.*

II. Forest Scenes.

By WILLIAM CULLEN BRYANT, HENRY WADSWORTH LONGFELLOW, FITZ GREENE HALLECK, and ALFRED B. STREET. Illustrated by JOHN A. HOWS. In one volume quarto. Price in cloth, full gilt, $6 00; in Turkey morocco, $10 00.

This is one of the standard illustrated books in the market. In its rich and attractive binding, covering excellent paper and print, the book bids fair to enjoy a long life.

III. Mother Goose's Melodies for Children;

Or, Songs for the Nursery. A complete revised edition, with an account of the Goose or Vergoose Family. Illustrated by eighteen full-page illustrations by Henry L. Stephens, ten pages of music by Charles Moulton, and twelve smaller illustrations by Gaston Fay. Printed on toned paper. In one volume, quarto. Price in extra cloth, $3 75; full gilt, $4 50. Cheap edition, $1 75.

IV. Sketches Abroad with Pen & Pencil.

By F. O. C. DARLEY, with fourteen full-page, and seventy-four smaller illustrations on wood, is one of the best souvenirs of foreign travel. The text and illustrations of this sketch-book are Mr. Darley's own. He travels over ground familiar to many Americans, but he brings back what all wish they could bring—lively sketches of characteristic scenes and faces. The by-play of travel which photographs and stereographs can never reproduce, his pencil has caught and fixed, and the result is a singularly graceful, humorous, and vivid portraiture of foreign life. Price in cloth, $2 50; in half-calf, $5 00; in morocco, $7 00.

V. The Riverside Edition of Charles Dickens's Works.

In twenty-eight volumes crown 8vo. 550 steel plates.

This edition has enjoyed great popularity as a library edition. It contains all the steel plates that appear in the new Household Edition, *five hundred and fifty* in number, and occupying less room than the Household, being in half the number of volumes, and sold at a less price for the set, it is preferred by many. It is an established favorite as *the* illustrated edition of Dickens's works. Price in cloth, per volume, $2 00; in sets, cloth, green or crimson, $56 00; in sets, half-calf, extra, $112 00. The illustration on the cover of the catalogue is a specimen of the steel plate engravings used.

Recent Books.

Ready Wednesday, December 18.

ALICE AND PHŒBE CARY.

A MEMORIAL

OF

ALICE AND PHŒBE CARY

With some of their Later Poems.

BY MARY CLEMMER AMES.

Illustrated by two portraits on steel. In one volume crown 8vo, cloth extra. Price, $2 00.

Mrs. Ames has written a brilliant book. Her account of the sisters is full of pathos and interest, and her pictures of literary society in New York most fresh and lively. Dulness flies away at the touch of her pen.

Also on hand, fresh supplies of the

POPULAR POEMS OF THE SISTERS.

ALICE CARY'S BALLADS, LYRICS, AND HYMNS, beautifully illustrated. Popular Edition, in cloth, $2 25; in cloth gilt, $2 75.

"MORE THAN CONQUEROR." MEMORIALS OF COL. KITCHING. With portrait. One vol. 16mo. $1 50.

*** The striking memorials of a Christian soldier.

VIEUX MOUSTACHE'S BOARDING-SCHOOL DAYS. Illustrated by Nast and Darley. One vol. 16mo. $1 25.

*** A racy and genuine book.

DR. CAMPBELL'S SERMONS. In one vol. crown 8vo, cloth. $1 50.

*** Of dramatic power.

JOSEPH MAZZINI. His Life, Writings, and Political Principles; chiefly from Autobiographic Sources. With portrait. One vol. crown 8vo. $1 75.

*** The only complete record of this wonderful man.

PRINCIPAL SHAIRP'S STUDIES IN POETRY AND PHILOSOPHY. In one vol. 16mo, cloth. $1 50.

*** Delightful sketches of Keble, Coleridge, and Wordsworth.

F. D. MAURICE ON THE LORD'S PRAYER. In one vol. 16mo, cloth. $1 25.

*** Admirable as presenting Maurice's tone.

The Nation.

NEW YORK, THURSDAY, DECEMBER 26, 1872.

The Week.

WITH what must be called a very indecent regard for the feelings of Congressmen and a very indecent disregard for the public and the public service, a committee of the House of Representatives has been investigating the Crédit Mobilier business in secret and with closed doors. This concealment has naturally caused the circulation of a score of rumors which may be true or may be false; which leave everybody in uncomfortable doubt as to the real character of half a dozen men of whom everybody has thought well and would like to continue to think well. They are stories which, of course, no one has the right to believe, however badly the closed doors look. As for the scandal in general, no matter what partisan journals were saying about it two months ago, we suppose there was not then an editorial writer on the American press, and that there is not one to-day, who would not have instantly privately admitted to a friend that he had not the slightest morsel of doubt that Mr. Oakes Ames had tried to bribe certain members of Congress, and that some of them he had actually bribed. For our own part, we never believed that he had bribed General Garfield, for instance, to name one of the gentlemen accused, or that he could do so; but there are probably members with whom he had all the desired success, and it is for the plain interest of every good man in Congress, every member who is in politics with an honorable ambition—and there are some such—to demand full publicity and a report that means business. One of the tales that is told is to the effect that General Butler—whose element is dirty water—has got possession of the committee's secrets by means of a creature of his for whom he procured an appointment as a clerk to the committee. No one supposes that there will be any real secrecy about the affair, though the general public may never get a full and official report of the truth, and it is of little consequence whether the story is true or untrue. It reminds one, however, of the days of the barrel of telegrams, when a wise Congress placed the secrets of a whole community in the hands of this same Butler, who would have only to buy the same knowledge from detectives whom he would have paid with his own money.

The Massachusetts Legislature has passed a vote of censure on Mr. Sumner because of his resolution about striking the names of the battles in our late war off the regimental flags. The proposal was an insult to the loyal soldier, the Legislature declared. The debate was warm, but the vote not very heavy, the members in many instances performing the trick called "dodging"—a device which would have delighted Governor Endicott, for instance, and a most noble device it is. To us it seems that the Legislature might have found more profitable employment than attacking Senator Sumner just at present, especially as the same rather weak proposal was made by him some years ago, and such things have indeed always been to be expected. Besides, to charge Mr. Sumner with any wish to insult the Northern soldier is, on the face of it, absurd, and the whole affair is an indication of the degree of heat that is always, even in quiet times, in existence in the small politics of our State-houses. For the other things, too, Massachusetts politics have for the moment a national interest, which is real, though rather languid. Mr. Boutwell has indicated his determination to seek the senatorship, which it is thought he will be able to get, though of a contest such as will go on there the result is not wholly easy to predict. When one candidate has all but strength enough to carry him through, but not quite enough, and there is vigilance of opposition and numerous candidates, the candidate who comes out first may be the one with the apparent best chances, or he may not. Both Judge Hoar and his brother are reported to be candidates, and so are Governor Claflin and Governor Rice and Mr. Dawes. But the rumors of which we have spoken elsewhere, and which are busily disseminated by interested people now, connect Mr. Dawes's name very definitely with the Crédit Mobilier corruption, and that is a very dark business, especially for a candidate who has tepid and respectful friends, rather than enthusiastic friends, to work for him. We shall hope that the prize may fall to Mr. Boutwell. It would take him out of the Treasury, at all events.

The other good thing in Massachusetts politics is the selection of Mr. Henry Pierce as mayor of Boston. He occupied in the contest a position which unfortunately is rare. Dissatisfied with Mr. Gaston, the people asked for a change, and the great fire disposed them to wish for an able, capable man, and to care not so much as usual for party lines. But the Republican party in Boston is, as it is elsewhere, a highly organized machine, with its Postmaster, and its Federal Collector of Customs, and its State Committees, and its captains of tens, and its captains of fifties, and its galley-slaves, and its party lashes. The regular convention, then still hoarse over their victory in November, and secure of their game, declared that "good Republicans" only should go on the ticket for city officers, and nominated Mr. Pierce. Mr. Pierce declined, and announced as his reason that he was opposed to their views of fitness. This surprised and disgusted these gentry, and cost Mr. Pierce some of their votes, but, as always comes to them sooner or later, they have been permitted to do that thing which they like so much, and "have bowed to the popular will." Some of them bowed in the orthodox manner—that is to say, they first stuffed some of the ballot-boxes of the people with votes cast by an imaginary and non-existent people, which has no will; the people with a capital P, probably. A recount of the votes, however, shows the frauds to have been committed, and Mr. Pierce to have been elected over Mr. Gaston by a small majority. The reform aldermen are also elected in most instances, the Boston press having used some unexpectedly plain language, and, we doubt not, affected the result decidedly.

The familiar old French Spoliation Claims are once more before Congress, their sponsor this time being Senator Cameron, and a little debate has been held upon them. It was principally interesting because the Geneva award came in for a share of the discussion, and because it seemed to indicate that the friends of the bill may be intending to defer the distribution of the *Alabama* money by tacking on their bill to that which will regulate the payment of the Geneva award. As we expected, several honorable senators, notably the Hon. Mr. Morton of Indiana, were clear in their own minds, or had "some doubt," which we may expect to see crystallize into certainty, that any insurance company is a mere rascal which intends to come forward and put in claims on the ground that the gentlemen composing it insured A.'s ship for $30,000; that for this insurance A. paid a certain premium; that at the end of a certain time the gentlemen of the company paid A. the thirty thousand dollars of their money, his ship having been burned by the *Alabama*. We agree with Mr. Morton that some men there are who have a peculiar genius for fraud, and who are never really happy unless they are engaged in a swindle. Sometimes it is insurance men; sometimes it is Western lawyers and politicians; now it is a lawyer who wishes the United States to pay paper when it has solemnly agreed to pay gold, and who has cost his country millions or hundreds of millions by lowering her credit; now it is a Western lawyer and politician who wishes to cheat such of his fellow-citizens as happened to be in the business of marine insurance between 1861

and 1866. Mr. Butler, we see, has brought in a bill to regulate the disbursement of the fifteen and a half millions, and the correspondents say that he was so desirous of keeping it secret that he took it with his own hands to the public printer and had it privately printed. This he did, the same authorities inform us, because he did not wish the insurance companies to get any knowledge of the provisions of the bill, lest they should set up an opposition to its passage by the House. Here is Virtue again, who may always be found at Butler's elbow, when she is not at Morton's.

The money market during the week has been marked by nearly if not quite as much stringency as in the worst days of the "cornering" and "locking up" of Smith and Gould last September. Moreover, "Uncle" Boutwell, instead of coming to the relief of the community, aggravated the distress by a steady withdrawal of the $5,000,000 of greenbacks which Mr. Richardson, the Assistant-Secretary, took upon himself to issue in October, so that the quasi-providential interference during the first "squeeze" not only did no good, but helped to bring on and aggravate this last one, showing clearly that when anybody undertakes to exercise the power of a protecting deity, he needs to have a deity's foresight and insight. We would also call the attention of the friends of the usury laws, or, in other words, of those who believe they know better at what rate money ought to be lent than the people who borrow it, to the fact that though the law of this State makes it a criminal offence to lend money at more than seven per cent. per annum, money has now for three months been systematically, openly, and notoriously lent by tens of millions in this city at rates varying from 50 to 350 per cent. per annum. The only effect of the usury laws is to keep a large class of lenders out of the market, and thus increase the scarcity of money, and to enable and oblige those who do lend to add to their rates in consideration of the risk. The only consolation which the friends of this mediæval contrivance have to offer to borrowers under these circumstances is that usurers are bad men, and ought to be ashamed of themselves. We ought to add that the difficulties in the way of the repeal of the usury laws in this State are two in number. The first is the absolute indifference of the New York Legislature, as now composed, to all questions of reform, and, indeed, all questions which do not relate to the distribution of money or power; and the second, and perhaps most formidable, the fixed belief of the farmers that it is the usury laws which enables them to borrow money on mortgage at seven per cent.

We are glad to say the "tightness" is producing a good deal of serious discussion of the remedy, and that opinion is inclining, not towards the plan of having "the Great Father" in Washington issue fresh paper every harvest, but towards the plan of having the banks allowed to supply the wants of the community on ordinary business principles. That the community knows better than the Great Father how much money it needs, and how long it needs it, is a proposition which lies at the basis of all sound currency and sound banking; and a necessary consequence of this is, that bankers or dealers in money are the proper persons to supply the demand. Under the law organizing the national banks, however, matters are so arranged that the power of the banks to lend is cut off whenever the need of the community becomes very intense. That is, besides securing their bills by the deposit of Government bonds at Washington, they are obliged to secure their depositors by keeping a reserve of 25 per cent. in greenbacks of all their liabilities; and, whenever the reserve falls below this amount, as it does during a "squeeze," and as it has done constantly during the last three months, they are forbidden to make any new loans or discounts, or in any way increase their liabilities, or to divide any profits. In short, their power of giving relief is peremptorily cut off at the moment relief is most needed, and there is now a growing desire to have the banks freed from this restriction as to the reserve, and allowed to supply the community with money as it calls for it, under proper guarantees as to the redeemability of their paper, and have the Great Father at Washington mind his own business, and free his mind of all anxiety about "the moving of the crops."

The suit of the Erie Railroad against Jay Gould for $9,000,000 has had a singular termination, in the restitution by Gould of property valued at $6,000,000, if forced to sale, but at $9,000,000 if properly handled. The proposition came from Gould himself, and was promptly accepted by the directors, and the proceedings abandoned. The newspapers denounce the Board fiercely for sacrificing the interests of justice to the interests of the road, and accuse them of "compounding a felony," and declare that Gould has made enough by the rise in stock to compensate him for his display of virtue. This last theory, however, is absurd; he could only have made comparatively a small sum by the rise in the stock. His motives it is difficult to speculate about profitably. They were, probably, as usual, mixed. Nobody who has watched a long and heavy litigation can believe that he had much to fear from the results of the lawsuit; but he is cowardly, fickle, and impressionable, and was probably sick of the Erie game, and intent on some other field of action. The conduct of the directors is not so easily passed on as it seems. They *might* have punished Gould severely in the courts, but the chances were against them, and they have now certainly fined him in an enormous sum.

Our Washington correspondent, who is a very competent and well-informed observer, but whose opinions we do not and probably shall not always share, gives some account of the state of feeling at the capital on the subject of civil-service reform which we believe to be substantially correct, and which the President and his friends would do well to take note of. It is widely believed, for instance, and by well-informed persons, that the gentleman appointed to the Philadelphia postmastership was really "Cameron's man," and the journey to Washington in the drawing-room car, and "the elegant hospitality" on the way, merely devices for throwing dust in the eyes of the civil-service reformers, but as long as Mr. Fairman was the right man, as we believe he was "under the rules," as well as in other ways, neither the President nor the public need care whether he was Cameron's protégé or not. But when the Chicago postmastership is given, as it has been, to "Logan's man," instead of to the Chief Assistant, the President's friends are wrong in supposing that it is a sufficient answer to the query which has been called forth, to say that the Chief Assistant declined the place, and that therefore the President was at full liberty to go outside the rules and seek his appointee where he pleased. For some time yet, we may be sure, Chief Assistant clerks will have so distinct a recollection of the old system that it will be quite easy to induce them to "decline the place" when it is wanted by certain gentlemen. And technically, the President has this liberty mentioned, but we think most intelligent people are of opinion that when he goes outside the rules, he ought to go in the spirit of the rules, and not recur to the old system. The question about the Chicago appointment is, therefore, not whether the President was free to make it, but whether he chose a good man. We do not say he did not, but we do say that his champions ought to say something on this point.

All this applies with lamentable force to the appointment of Mr. George Bliss as United States District Attorney in this city. This is not an office under the rules, but it is *par excellence* one the appointment to which the spirit of the rules should govern—that is, the person selected for it ought to be a lawyer of long and high standing; and, as his duties under the revenue laws and in other ways are semi-judicial in their character, he ought to be a man whose

ways of life inspire general confidence in his impartiality and integrity. We do not think Mr. Bliss will take it as offensive when we say that he by no means answers to this description. He is not a lawyer of high standing; he has little, if any, practice; he has for many years devoted his time and attention to the lower walks of New York politics; he has long been the confidential friend, and adviser, and coadjutor of "Tom" Murphy in the business of "controlling primaries" in this city; he is the chief manager of the Custom-house party, in all its intrigues and little games; and his appointment is considered—we are not afraid to say this—by the best portion of the bar little short of discreditable. Moreover, it is generally believed that it is part of the disgraceful intrigue with Mayor Hall, under which this worthy has been appointing "Republicans" of the Custom-house faction to various city offices, in order to tie Mr. Havemeyer's hands; Mr. Delafield Smith having been put into the Corporation Counsellorship to make way for Mr. Bliss's happy accession to the District-Attorneyship. Don't tell us that "the new rules" don't apply here; we know they don't. But there are very *old* rules which *do* apply, and particularly that old rule which requires that a United States District Attorney in a great commercial city should be at least a good and experienced lawyer.

The latest contribution to the literature of the civil-service reform comes from Mr. Thurlow Weed, who, as might be expected from his antecedents, is opposed to it. He believes the new rules, if carried out, will convert the Departments in Washington and the Custom-houses and Post-offices "into close corporations." What is worse than this is, that if they are enforced, the President, when a "vacancy occurs in an important office," instead "of being able to cast his eye over the Union to find the most capable and deserving man, is required to appoint a subordinate." He asks, moreover, if the civil-service rules had prevailed at the close of the war, "what would have been the fate of several thousand wounded Union soldiers who, as a reward for their patriotism and gallantry, are now usefully employed in our custom-houses and post-offices?"—just as Mr. Boutwell might ask what would become of the young ministers and doctors whom he is training up in the Treasury Department. He declares "that if the people have not a right to compete for the honors and emoluments of office, republican institutions are a sham and a fraud."

This is very curious reading, the fact being that the old system of appointment to office denies the right of competition for office to the people as completely as it was denied to the French people under the old régime, and no person knows this better than Mr. Weed. When an American citizen wants an office now, far from "competing" for it, he "works" for Logan, or Conkling, or some member of Congress, or in some manner begs his favor. Moreover, when an important office is vacant, the President does not, or did "not cast his eye over the Union, in search of an honest and capable officer"; he "casts his eye" on the senator or representative from the district, and says, in the language of the period, "Who's to have it?" and the representative or senator mentions the name, and the nominee gets it. An old politician never gets so near talking downright poetry as when he rolls his eyes and begins describing the present system of appointments to office. Mr. Weed thinks Jefferson's plan of selecting offices—by asking, "Is he honest? is he capable? is he faithful to the Constitution?"—the best, which reminds us of the old gentleman in the West, who declared that he was sick of the fuss of Presidential contests, and asked, "Why can't people agree at once upon the best man, and make *him* President?"

We should be glad if we could call the close attention of Congressmen to the report, written by the Hon. Nathaniel Niles of New Jersey, one of the gentlemen who were appointed to make the annual visit to the Annapolis Naval Academy. It is the minority report, but four points it makes which are really of great importance, and merely to state them appears to us to be sufficient: (1) The midshipmen there certainly ought to have sufficient instruction in French; and this they can much better get if the elder boys are forced to pursue some of their studies in French text-books. This method is in successful operation in Harvard College, and is really admirable in its effects. (2) As being youths who hereafter, in foreign ports and on the high seas, will have to perform for the United States very delicate international duties, it is of great importance that they should have very thorough instruction in international law. The instructor should be a sound and perfectly competent student. This teaching has hitherto been done by gentlemen of capacity indeed, but who would not themselves pronounce themselves competent. At present, for instance, if we are not mistaken, the instructor in rhetoric happens to have this important work put upon him. (3) The chaplain, Mr. Niles thinks, should be left free to perform his strictly pastoral duties, and the boys should be permitted to hear the preaching of distinguished divines of various denominations, who should preach for nothing, and have their travelling expenses paid by the Government. (4) The houses built by the Government for the accommodation of the officers resident should not be occupied by civilians to the exclusion of such officers. The two first of these points are surely very important, and all are very easy of settlement.

There is probably no kind of "story" or "report" that the New York correspondents of the country papers enjoy so much inventing, compiling, or despatching, as a story or report about the doings of the New York editors. The death of Horace Greeley was, therefore, a perfect godsend to them, as it introduced great uncertainty into the affairs of a leading paper, and furnished the raw material for a thousand rumors. We believe "the crisis" is now over, and that we are not guilty of any impertinence in saying that there has been a vigorous contest for the control of the *Tribune*, in which certain capitalists, represented by Mr. Orton, the President of the Western Union Telegraph, formed one side, and the actual editorial corps, or leading members of it, the other. The Orton party were at first victorious, and purchased fifty-one shares for $500,000 or thereabouts, and endeavored to procure Mr. Schuyler Colfax as editor, under whose guidance the paper was to be led gently back into the Republican fold, and the subscriptions to the *Weekly Tribune*, which now begin to fall due, be saved, and the support of the postmasters taken away from the New York *Times*, which at present enjoys it. The negotiations with Mr. Colfax, however, failed, and nobody else with sufficient political reputation for the performance of the job of rehabilitation offered, and under these circumstances the paper became "an elephant" on Mr. Orton's hands. The editorial party then rallied once more, and bought the controlling interest back at an advance, and are now in full possession.

Whether they will try to get back into the bosom of the party and the good graces of the postmasters, or go forth to seek their fortune in the wilds of "independent journalism," remains to be seen. The former course would doubtless be the better course pecuniarily, but also the meaner, and less likely to succeed in the long run. The latter might not pay so well at first, but would pay tenfold better in the end. They print at the head of their columns Horace Greeley's expression of satisfaction at having established the *Tribune*. If they will print also the programme for the conduct of the *Tribune* which he issued two days after the election, and keep it standing, and live up to it, they will confer one of the highest benefits on American politics and society which it is now in the power of a journalist to bestow, and will have the hearty sympathy of all honest and patriotic men. The paper has ever since November 6th been a model of decorum, and the decorum has certainly not diminished its vigor, and has not prevented its being—we think we may say—much in advance of all its daily contemporaries in the fulness and arrangement of its news, as well as in the selection of topics of discussion. Why in the name of wonder can we not have a continuance of this decency and common sense?

THE PRESIDENTIAL INTERFERENCE AT THE SOUTH.

WE presume people are not generally satisfied with the condition of the South, and there are numerous signs that the most ardent friends of the Enforcement Act begin to doubt its value very seriously. Passing such an act for the purpose of suppressing Ku-klux outrages they begin to see somewhat resembled the amputation of a limb in order to get rid of a boil. The Ku-kluxery, if that be the proper term, has been suppressed; but the indirect effects of the measure, which are the ones which it is most difficult to get an average politician to bestow any thought upon, now begin to show themselves. One of the very first was, of course, to arm the Federal Government with enormous power over the State government—power such as it had never possessed before. As we pointed out in these columns at the time of its passage, it "declared that to be 'a rebellion against the United States' which was nothing more than violence to individuals, and permitted the writ of habeas corpus to be suspended in time of peace; it authorized the President to employ the military forces in suppressing opposition to the State law, without an application from the State authorities; it extended the prohibitions of the Fourteenth Amendment to cases of private wrong; and clothed the national courts with jurisdiction over ordinary crimes and with the function of ordinary police repression." When we said all this, it was mere theory or prediction; we now see it verified in practice. The act has actually converted the General Government into a supreme arbiter of State affairs at the South, and has taught the factions which in nearly every Southern State are contending for the possession of the treasury to disregard the local public opinion and the State constitution and laws, and look to Washington for the means for overcoming their opponents. The worst of this is, too, that the General Government does not interfere under some clearly defined code of procedure, but in the exercise of a vast semi-military discretion, which makes all things seem possible to the adventurers by whom the South is plundered. The condition of politics in that region at this moment bears a close and striking resemblance to that of the Spanish-American republics, inasmuch as in both two sets of adventurers are constantly striving for the mastery, and in their striving totally disregard the local opinion and the laws. In South America, however, they speedily take arms and end their quarrels by civil war; things do not reach this pass in our Southern States solely because the President stands ready to interfere, as soon as the parties prepare to come to blows; but if there were a power south of the Rio Grande which would prevent the politicians of that region from killing each other, public life in that region would closely resemble public life in our own States lately in rebellion.

This readiness of the President to interfere, however, so far from moderating the rage of the contestants, and turning their attention to the peaceful arts, stimulates their zeal, and increases their indifference to the regular and lawful modes of getting and keeping power. There is little hope of their spending their time in persuading their fellow-citizens into support of them, or coming to terms with their enemies, when they feel that a visit to Washington, or success in getting "the custom-house party" on their side, may give them all they want in the twinkling of an eye. There is a quarrel in Alabama about the election of the State Legislature—that is, the lawfulness of the count is disputed; and two bodies, each calling itself the State Legislature, meet in the capital, each hurling defiance at the other, South American fashion. If such a thing occurred at the North, the settlement would be sought through the State courts, or (more probably) the politicians engaged in the conflict would know so well the effect their performances would have on the public mind, that one set would give way, or some other mode of adjusting the difference be found. In Alabama, however, neither the State courts nor the local opinion count for anything in the matter; the whole difference is laid before the United States Attorney-General, and he supplies a *modus vivendi*, in an opinion which is accepted as law, because it is known that it may be backed, if the President gets his blood up, by Federal bayonets. So also in Louisiana there is a dispute about the election of Governor and Legislature between two sets of rascally adventurers, who carry it on with reckless disregard of local public opinion and it is again in due course carried before a Federal judge, who actually restrains by an injunction the State board of canvassers from counting the votes, and before the President, who, without any formal enquiry into the facts, promptly recognizes as the real State government the party most friendly to the Administration, and promises it through the Attorney-General that it will be, if necessary, supported with military force—this, too, being the party which contains General Grant's brother-in-law, Casey, as one of its chief men; and this Casey being a United States official, who last year used a United States revenue cutter for twelve days in carrying members of the Legislature out of reach of the lawful pursuit of the sergeant-at-arms. It is to be observed also that the section from which Judge Durell professes to have derived his authority to interfere simply gives any person who may have been denied the right to vote or hold office on account of race, color, or previous condition of servitude, the power of bringing "an appropriate suit or proceeding to recover possession of the office," and gives the United States courts jurisdiction of all offences committed against the provisions of the act. On this we see within one short year a subordinate judge builds up the right to control a State election, and he issues his injunction against the State government with as little ceremony as if it were a mere "board" of supervisors or of charities and correction.

There is one other point to which we wish to call the earnest attention of our readers. There can hardly devolve on the Executive branch of the United States Government a graver or more delicate task than that of deciding which of two bodies claiming to be the government of a State is the lawful one. It is a task which the President is sometimes forced to perform, but which he ought to avoid performing as long as he can, so that the people of the State may have every possible chance of performing it for themselves, for it is emphatically their concern. He ought not, however, under any circumstances, to undertake it lightly or hastily, or without making, for his own justification and for the information of the public, a full statement of the reasons which have governed him in his decision, and of the sources from which he has derived his knowledge of the facts. In the Louisiana affair, however, President Grant has acted hastily, appears to have made no proper enquiry, and has offered no public justification of his course. Moreover, a body of highly respectable citizens of the State, who do represent its real people and its real interests, have since visited him at Washington and begged him to make a formal investigation of the facts, instead of (they might have said, and probably wished to say) relying on the telegrams of one of the factions at New Orleans. He informed them very curtly that he would do nothing of the kind; that he had no funds for the purpose, and, at all events, had made his decision, and would not now reverse it.

The effect of all this on the South will, we fear, be to accelerate the social and political disorganization, and assimilate the other States more and more to South Carolina, in which there are distinct signs that the intelligent and respectable class have lost heart and hope with regard to political reform, and are adopting what is so often the resource even of good men in bad times, the pursuit of their share of the plunder, or, in other words, are trying to secure what they can of material wealth from the general wreck of moral and social interests. The probable effect on the Government of the United States we hope we do not need to point out. Such phenomena as those on which we have been commenting, and as the issue of paper money on his own responsibility by the Assistant-Secretary of the Treasury, however, are signs of progress on a path of which everybody can see the issue if he likes to examine it.

WHAT SHALL BE DONE ABOUT OUR FIFTEEN AND A HALF MILLIONS?

IT was decided at Geneva that whatever sum might be awarded by the Tribunal should be paid within one year from the date of

the award. During or before next September, then, the fifteen and a half millions will be paid over to us, and it behoves us to consider what disposition shall be made of it. Already we see in the newspapers articles which have been written from various points of view, and some of which will have a tendency to becloud the minds of the public, although a little attentive consideration of the case makes it, as we think, perfectly clear. And at the beginning we may say a word on one or two points as to which a good deal has been said, and about which there is still some misunderstanding.

The basis of our demand and of the subsequent award was a vast mass of claims filed at the State Department. How numerous and voluminous was this mass the reader will understand when we say that we have before us a volume which may be regarded as merely the bare index to the claims presented, for it names each claim with the utmost brevity, and appends the still briefer list of the documents relied upon to support the application, and yet it contains nearly 400 pages octavo. Here is a sample of its contents:

AUSTRALIA.—Bark *Australia* of Bath, Maine. Alfred Lomont, agent and managing owner. Was blockaded at the port of Adelaide, New Zealand, by the *Shenandoah*, and was in consequence compelled to be sold.
Total claim filed, $22,560.

Claim.

OWNERS.	
Loss of vessel	$33,000 00
Loss of outfit and expenses	2,500 00
	35,500 00
Less proceeds of forced sale	13,000 00
	22,500 00

List of Papers.

OWNERS.
a, Letter from Lawson & Walker, presenting claim.

Such being the index, the size of the whole documentary mass may be inferred, and it will be seen how impossible it would have been for the United States, in the brief six months allowed for the work, to have gone into the merits of each claim presented, taken evidence, cut down exaggerated estimates, and presented at Geneva precisely the sum, no more and no less, which we meant to take. It was known that claims were exaggerated, and it was perfectly well understood that there would have to be a cutting down of the amount asked for by very many of the claimants. There was no call, then, for the charge of shamelessness and rapacity which was freely brought against our State Department by the English journals and some of the Continental. As to the severe criticism passed upon the greed of the individual applicants, much of that was of course entirely deserved; only it is necessary to remember, too, that a great deal of what wore the appearance of greed was in reality ignorance of law and of the rules governing liabilities. A comparatively uninformed man who for many voyages has secured an average of three hundred or four hundred barrels of whale-oil by following the North Pacific fisheries, may well enough be excused for thinking that the English ought to make good to him not only the value of his ship and outfit burned by the *Shenandoah*, but also pay him for the oil which, humanly speaking, he would have brought home had the *Shenandoah* never got away.

But, apart from the fact that the United States could not, in the time allowed for preparing our Case, have audited the immense number of claims presented, there is the other fact that the State Department had not the right to go into the business of auditing. In 1870, the President recommended Congress to appoint a commission for such an audit, preparatory to our own payment of the claims, and a bill looking to that end was in progress when Great Britain sent out her negotiators; but, upon the Treaty's being made, it was abandoned. The Treaty itself provided, that in case a lump sum was not awarded, the individual claims should go before a board of assessors, who should determine the amount to be paid in each case. Here then was a board of audit provided for, and the State Department confined itself during the short time at its disposal to arranging the claims for submission in an intelligible shape.

The tribunal of arbitration, as we all know, decided that all the claims by the United States for damages received as a nation should be rejected. No loss or damage, then, that was not individual remained; and the further question came up whether these losses should be referred to an auditing board, or, on the other hand, a gross sum should be awarded. The latter course was taken, and the amount was set at $15,500,000, or about four and a half millions less than was contended for by the United States. Just how this particular result was arrived at no one is supposed to know. More or less of desultory statement was made in the British argument as to the probable degree of exaggeration in the estimates of losses incurred, and the fifteen and a half millions were awarded as the sum, principal and interest, which would cover everything; and it is held by well-informed people that it probably may very nearly do so. The question now is, as we have already said, What shall we do with it when we get it? Are we to pay any of it to the insurance companies which got heavy premiums for insuring vessels, or shall we turn it over to the owners? Are we not in danger of giving some of it to speculators who have bought up claims at nominal rates and whose demands are iniquitous? May not the United States justly lay hold of a certain portion of it?

Of these questions, the most important and one over which there is the best opportunity for a little muddle is that relating to the insurance companies. Not many men except a professional Watch-Dog of the Treasury with an ignorant constituency behind him, or Mr. George S. Boutwell, will be apt to think honestly and truly that the United States—which were expressly declared to have no claims of their own tenable before the tribunal—can have any shadow of right to a dollar. As to a possible change of hands on the part of some of the claims, there is no evidence adduced that any such transfer has taken place, and there is high probability that very little has been done in the way of purchase and sale. The owners of claims have had very good reason to be hopeful ever since their losses were incurred, and even to be sanguine, as they have tolerably well shown by the size of the bills they sent in as soon as an opportunity was afforded them.

As for the insurance companies, an opinion in regard to their right in the matter used to be current in high quarters in Washington which deserves full rank with that other opinion, that "the gold in our Western mountains" was somehow or other going to rise in its might and pay the national debt; or that still other opinion, that an American citizen for whose property at sea the Government failed to find protection was a traitor and a villain if he secured a French, or German, or British registry for his vessel; or that equally valuable opinion, that a bull-headed paying of the national notes not yet due is a sensible financial policy for a practical people which has out other notes overdue and gone to protest. It is, or rather it was, believed in Washington by many Congressmen, that in case the tribunal awarded money to America, no part of it should be paid to such Americans as had been in the insurance business during the war, taking risks on shipping exposed to capture. It is true that no money at all was awarded which was not awarded to American citizens individually, and that to America as a claimant not a cent was given; but there are reasons for fearing that a certain number of our legislators may find easy excuses for believing, and acting on the belief, that "the insurance men made money enough," and that some others may sincerely persuade themselves that such action would be equitable. In truth, however, no principle in law is more firmly established, and, we may add, more firmly established on the durable foundation of strict justice, than that if any part of insured property is, after insurance has been paid over, recovered, such part shall, to the extent of the money paid over as insurance, become the property of the insurer and not of the insured. The mere statement of this proposition is the refutation of all propositions in any way contradictory, for its justice is obvious at a glance and to everybody. The man who insured his vessel while the hostile *Alabama* was afloat paid more for the security and ease of mind which he got—for his private state of peace, as we may call it, in the midst of surrounding war—than he paid for his security and ease of mind as regards the same vessel exposed only to the ordinary perils of wind and sea. What he bought, that he got; the transaction was of his own seeking; and, he being judge, the commodity purchased was worth the price paid

for it. In case his vessel was burned, the full value of her, if she was fully insured, was paid him by the men who guaranteed him against loss.

Here, by the bye, are some words to the point, spoken in the Court of Queen's Bench by Lord Chief-Justice Cockburn, one of the judges at Geneva who decided, among other things, upon the admissibility of claims presented by the insurance men as by other Americans: "Now I take it to be clearly established in the case of a total loss, that whatever remains of the vessel in the shape of salvage, or *whatever rights accrue to the owner of the thing insured and lost*, they pass to the underwriter the moment he is called upon to satisfy the exigency, and he does satisfy it." Our excuse for dwelling upon this point is, that we should be very glad to bespeak the effective attention of the press to such Congressmen as may attempt to curry favor with ignorant constituencies by a disregard of the plain dictates of justice in this affair. It is a favorable occasion for some of those gentlemen, the true pests of our politics, who seek their own aggrandizement at all times and at all costs, but who are never so congenially employed or so thoroughly delighted as when they can attain their own ends and at the same time debauch the conscience of the country. They might indeed be pleased if they could induce a majority of us—acting all the time in the interest of virtue, and in opposition to wicked speculators—to take a course precisely similar to that of urging the attorney of a successful plaintiff to keep in his own pocket the money which his employer, after much labor and waiting, had at last got from the men who had robbed him. And remembering several chapters in our history, it will easily appear that fear on this head is by no means out of place; we may yet see the United States, which have no possible title to any of the money under the award, and which have indeed been formally told that as for their alleged claims for damages the tribunal would give nothing to satisfy them—we may yet see the United States holding back the money of the insurance men on the same preposterous ground, and adding it to Mr. Boutwell's balance or making a worse use of it.

For the rest, we hope that the American board of assessors, soon to be appointed, will be able men. One, we suppose, ought to be a lawyer; but general business knowledge and ability, as well as some special knowledge and ability in the shipping business, would also seem to be very desirable, and the salary should be fixed at a figure that will secure these. The bill now in Congress does not do that, we should say, although we think it might well do so by doubling the sum named and halving the time during which the assessors shall sit. One would think, considering the amount of work already roughly done at Geneva, and got out of the way, that twelve months might be sufficient for the business.

THE ENGLISH LECTURERS.—III.

PROFESSOR TYNDALL.

EXACTLY how many thousand people the great cave-like hall beneath the Cooper Institute will conveniently hold we do not know, but, on the evening of to-day week, it was crowded in every part. In point of intelligence, also, it was a very good audience. In fact, we were then and there informed by Mr. Abram S. Hewitt, in a few brief remarks, that we certainly represented all the intelligence and culture of the city, if, indeed, we did not include it all. He had begun by saying that he would not inform Professor Tyndall how much this audience esteemed and honored him; but he would say of the audience that it was of the character we have just put on record. Then Professor Tyndall himself stepped forward. Behind him was the screen on which were to be shown the prismatic hues which called forth subdued exclamations of a gratification which, if not coldly scientific, if even scientific, was at all events sincere; in front of him was the electric light which was to be sent through the various prisms; to his right, and a little in the rear, was the assistant who managed the ordinary gas-works of the hall, much of the lectures having to be delivered in a dim, twilight light; to his left were two or three more assistants, and some machines used in the experiments; in the middle stood the professor in an attitude somewhat suggestive of the Irishman—if any of our readers know precisely what that means. It was not an attitude of bolt-uprightness; it was easy, and it was more easy than graceful, if that remark may be permitted. But the fact is that of the many thousands who will attend the course, we may be sure that, for every score who go to hear the lecture, another score will go to see the lecturer and to gaze upon the pretty fireworks of the experiments. No account of a course of lectures which omitted some account of the personal appearance of the lecturer would be worth the money of a majority of those who would read it.

Certainly no one can listen to Prof. Tyndall or read his books without seeing that he is a very good teacher of scientific truth. He wastes no time on side issues, as, for instance, Mr. Max Müller is constantly doing, but keeps one's attention directly fastened to the core of the subject. He appears to have a very well outlined, distinct, vivid conception of the things that he knows, and his style of exposition leaves nothing to be desired so far as lucidity is concerned. We came to the conclusion, as we listened to the first of these lectures, and noted the faces about us, and conjectured whether or not much of the lecture was going over the heads of the auditors, that there were not many sentences which were not entirely comprehensible by a majority of the persons present. This is giving high praise to Professor Tyndall as a scientific man who can popularize science; for although we were perhaps an audience as representative as Mr. Hewitt assured us we were, there nevertheless were among us a certain number of persons who, previously to our assembling at the Institute, were not guilty of too much knowledge of the undulatory theory and the sine of the angle of reflection.

An American hearer will be likely to think that of all the English lecturers who have recently visited us, Professor Tyndall is, as a lecturer, very much the cleverest and most successful. Mr. Froude delivered lectures which were quite as brilliant in their different line as Professor Tyndall's are; but he delivered them in a way which the lyceum committee-man must have regarded with a good degree of bitter anguish. Exact as was the adaptation of his lectures to the platform, the platform is anything but Mr. Froude's native heath. Mr. George Macdonald appeared to us to make the mistake of supposing almost any sort of talk good enough for us masses over here; and as for his peculiar manner, we speak with all the civility that any hospitable fellow-citizen could require of us when we say that the manner of Mr. Macdonald's lecturing was entirely worthy of the matter. Mr. Yates, like Mr. Macdonald, had not sufficient knowledge of the American lyceum, and its intimate acquaintance with a great range of very accomplished speakers. But, coming to Professor Tyndall, we find that he lectures as well as any Yankee. He is entirely in earnest, and that the strenuous American likes to see; he makes his points really as plainly, if not so violently, as Mr. Wendell Phillips or the late Thomas Starr King; he is far from being insultingly obvious, yet he is as simple and intelligible as if he were teaching a class of beginners in a Normal School; the instructed are satisfied with what he says, and pleased with his workmanlike way of saying it, while to the young ladies he gives gorgeous exhibitions of color, which they freely admit to be most lovely, most splendid, and most nice. Even the policemen on duty are attentive, and the friends of "classical studies," except for their knowledge of the goodness of their cause and the impossibility of its overthrow, might fairly regard the pilgrimage of this captivating scientific teacher as a serious calamity.

This earnestness of manner in Prof. Tyndall will suggest to some of his hearers a topic which of late years has had much discussion, and on which respectable opinions vary. To some persons the ideal scientific mind is as absolutely indifferent to human interests as we may suppose the mind of the wise serpent to be. With it is associated no feeling whatever. It works, we may say, *in vacuo*. Professor Huxley preaching protoplasm, Professor Tyndall suggesting a prayer-gauge, appear to many of us quite as far from meriting such trust and credit and deference as may be due the truly scientific mind, as if each were roaming about the country clad in a suit of leather, denouncing woollens as godless, and swearing that the Inner Light had forbidden him to take off his hat except when he was by himself, and had ordained that he should say "thee" at such times as other people said "you." A sort of a "protracted meeting" variety of scientific man; an essentially unscientific man, is what such followers of science seem to some observers to be, and there is entertained towards them something of the same feeling with which nearly all men of our time regard the churchmen of three hundred years ago who thought it so important that everybody should hold their views of certain speculative matters that they honestly and industriously burned alive whatever men, women, and children differed from them. Science observes and compares, it is said, and does no dogmatism on matters which are to many people matters of opinion and dear belief; it is really as utterly unscientific in the true sense of the term "science" to say there was never such an event as the creation of Adam as it is to say with Parson Knak, of Berlin, that he is sure that the earth does not go round the sun, and knows that the sun does go over the world in a semicircular pathway, because that is

what the Bible tells him. That this view of the province of the scientific mind is one which ought to be insisted upon, nobody, we suppose, will think of denying; and it will as little be denied, we suppose, that, like most views of most matters, it is not exhaustive of the whole question, and that indispensable as it is, there is another view which also is indispensable, and in which is to be found the justification of such scientific observers as set themselves up to teach upon matters not scientific. The abstract scientific mind, separated and apart from some highly concrete man of science, with a human ancestry and an actual, probable, or possible human progeny, with a home, a country, friends, neighbors, appetites, desires, and aspirations, will always be rare. And that such human scientific men as may conceive themselves to have something to say on topics of universal concernment shall be required to hold their peace and not say it, is a proposition which, however often it may have been urged in substance, will not be urged in terms. A merely recording instrument we may be reasonably confident that no very capable human mind will ever become; and the world, which eventually judges of the scientific achievements of its instructors, will also judge as infallibly of their general achievements as well, and of their motives to work.

It is well to mention here that Professor Tyndall, we understand, intends to carry no money away with him from the United States. Whatever he receives over and above his expenses he means to hand over to some scientific body in this country.

THE NOVEMBER ATMOSPHERIC WAVE.

THE Department of Telegrams for the Benefit of Commerce is doing service to many not engaged in commerce by enlisting their interest in that one of the physical sciences which can be studied most cheaply and most healthfully. It is desirable that encouragement should be given for the publication in tabular form of the weather reports year by year; not of all the stations, for the promiscuousness of their situation would deprive the table of any graphic illustrative power, but of selected stations; as, let one list contain all stations in a given latitude arranged according to longitude, and another all stations in a given meridian arranged by latitudes; then the progress, eastward and northward respectively, of atmospheric phenomena would be clearly and compactly chronicled, and private hypotheses could be tested with a facility which would render such testing frequent and attractive. One such table would indicate more clearly than language can do the facts concerning the "November Atmospheric Wave" which lately swept over the United States, from west to east, suddenly substituting cold weather for mild. The newspaper accounts of this change have been very confused, some writers being evidently uncertain whether the "wave" was composed of wind, tide-water, snow, or meteors. It was really a freezing temperature attending the sudden annual transfer from the Pacific Ocean to our continent of one of those areas of cold, dense, heavy air which in summer cover all the oceans, and in winter cover all the continents.

Why this transfer takes place, why it is so sudden, and why its direction is eastward, can be clearly and separately shown.

The cause of the annual autumnal transfer from the oceans to the continents of the areas of cold descending air, and, it might be added, of the simultaneous transfer from the continents to the oceans of the regions of ascending warmer air, is the same as the cause of the movement of the equatorial belt of low barometer and rains southward in fall and northward in spring, viz., a change in the position of greatest relative heat. The temperature of the North Atlantic and Pacific Oceans (owing to their capacity for absorbing heat and cold) is nearly uniform throughout the year, changing less than 10 degrees each side of 50°; the temperature of the continents, on the other hand, varies extremely. In lat. 40° it may be called in round numbers 25° in winter and 75° in summer. There is thus a "steep gradient" of temperature along the coast lines in these extreme seasons. This difference is so great as to cause a constant ascension of air over the oceans in winter and over the continents in summer, accompanied by low pressure and rain; constant rain over the mid-oceans, occasional rains only (because of less material for evaporation) over the continents. In the transitional seasons the difference is less than 25°, but the very habit of descent keeps the regions where the air descends much cooler than those where air ascends, as long as other things are equal.

The cause of the suddenness and completeness of the transfer in November from the oceans to the continents of the region of descending cold air illustrates the principle that all influences conspire to help the winning side, embodied in the maxim, "It never rains but it pours." The change in the preponderance of temperature comes on so gradually that practically some decisive proximate cause is always the immediate occasion for the movement of the region of ascension from the United States to the North Atlantic, and of the region of descending air from the North Pacific to the Plains. But when this removal has occurred, which never happens until some time after the land would naturally be colder than the water, that very principle of momentum which delayed the removal confirms it when established. The chief factor in this momentum is the fact that descending air is constantly (for reasons which need not be given here) increasing in capacity for moisture, which causes a steady disappearance of clouds, renders haze impossible, and thus uncovers the surface to unrestrained radiation into space and night; whereas the reverse is true of ascending air, which is constantly weaving blankets of haze with which to confine the sun's heat to the lower strata. (The Mt. Washington despatches have referred to the remarkable suddenness with which the atmosphere becomes loaded with haze in May, an occurrence which indicates that the continental air has begun reascending).

The decisive proximate cause of every sudden fall of temperature on land is believed to be the advent of a group of spots upon the sun's disc. Such an event occurring after the equilibrium of temperature had become unstable (and the longer it was delayed, the less quantity of spots would suffice to reverse the balance) would be the last feather that would break the back of the ascending bulk of air, and would definitively determine the transfer to the Atlantic of the place of greater relative heat, ascension, and storms. It is safe to say that the Boston fire was just in time to fall in with and perhaps facilitate this latter removal. Sixty acres of surface hot enough to melt metal may be an item in thermic calculations, at a time when the sun is only thirty degrees above the horizon at noon. (The Chicago fire was located so near the centre of the continent that it rather tended to prolong the season of ascending air.) The tide of cold last year did not reach New England until "Thanksgiving" time, and on that day the temperature was lower in Boston than on any day during the three winter months which followed. And it is quite possible that New Orleans may not experience a colder temperature this winter than 37°, the point to which the mercury suddenly fell there when the "wave" reached it on November 15.

The cause of the eastward motion of these semi-annual phenomena, as of all other elements of weather in the temperate zones, and of the westward movement within the tropics, will be clear only to those who understand why the water opposite our moon masses itself into a tide. Just as this water is left behind by the more rapid movement of the solid part of the earth toward the moon (because the solid part, averaged at the centre, is nearer the moon), so the air above the torrid zone is left behind by the more rapid westerly motion of the solid earth beneath it, and thus always appears to be itself moving from the east (trade wind). For the atmosphere rotates (by a force which is known, but need not here be stated) independently of the earth and independently one portion of another; while the earth must move altogether; and thus the surface of the torrid zone moves faster, and the temperate zones slower, than either would move if liquid or independent of its neighbors. The average velocity of rotation is near latitude 30°, where air and earth move at equal pace. North of this latitude we may regard our prevailing westerly winds as (approximately) illustrating a more natural rate of rotation, while we are retarded by being so near the axis—approximately merely, for the enormously superior friction of solid over gas compels the atmosphere to conform almost entirely to the velocity of the surface. All extensive atmospheric phenomena, then, must in the temperate zones move from west to east (unless propagated backwards, as frequently happens, but not in relation to this topic) along with the air in which they are involved. Hence a movement from an ocean to a continent will always be directed towards the continent next east of the ocean. Other causes conspire with the one above stated, but this is the most comprehensive cause.

Two explanations will render more receivable the above statements: first, it is true that even in winter our idea of the ocean is an idea of something bleak and cold, and east winds seem to many persons chillier than west winds, and water always seems colder than air. This is merely because water conducts heat so much faster than air. Still water at 50° cools the hand more than calm air at zero; so a sea-wind loaded with moisture at 50° may cool the skin faster than a dry west wind at 25°. But this effect upon the feelings does not correspond to any depressing effect upon the superior ascensive tendency of ocean air at 50° over land air at 25°. The currents obey the thermometer, not men's nerves. Secondly, when the phrases "ascending" and "descending" are applied to currents of air, it is not asserted that such currents do nothing else but go up or down, but these movements are predicated of them in conjunction with other motions; thus, an ascending current is also moving inwards towards a place of lowest pressure in a circle of low barometer, and it is also moving rapidly around this circle; in fact, for every rod that it ascends it probably moves ten rods convergently and a hundred rods around the helix.

One easy inference from the fact that in winter the oceans are areas of comparatively warm air low pressure, and consequent spirally converging

winds is worth stating. It follows from the law of spiral convergence of wind around low pressures that the wind is always northerly to the left of areas of lowest pressure and southerly on the right of the same. Applying this to the oceans, we have prevailing northerly winds (NW) on their west-coast lines and southerly winds on their easterly coasts all winter, which winds *double the cold on the west coasts*, but mitigate it on the opposite coasts. Applying this fact to our continent, we find in winter, on the Atlantic coast, northerly winds prevailing, but, on the Pacific coast, southerly; while in summer, when the area of low pressure is over the continent, southerly winds on our coast and northerly on the Pacific, thus moderating both seasons on the Pacific coast, and intensifying both on the Atlantic. The same is true of the Old Continent. Every "cold snap" in winter causes an increase of the central storm over the Atlantic, bringing northwest winds to us and south winds to Europe, thus rendering their winter so moderate that oranges, olives, and figs can survive it in Italy and Spain at a latitude no further south than that of New England. Hence our forefathers committed a grave meteorological blunder in crossing the ocean. It is on an east coast and not on a west one that "the land of promise" and "the joy of the whole earth" are situated.

THE UNDERCURRENT AT WASHINGTON.

WASHINGTON, December 21, 1872.

THE enemies of civil-service reform in Congress are taking courage. To be sure, the opening of the war by Representative Snapp in the House was not strikingly effective; although Mr. Snapp, in his droll way, gave a fair summary of the staple arguments against the reform, he certainly failed to convince anybody not already convinced. It was more a characteristic demonstration of Mr. Snapp's high spirit. But the impression is gaining ground that the President's determination to carry out the new civil-service rules, however emphatically it may be expressed, does not mean much after all. This impression is strengthened by the fact that the rules were set aside in the appointment, upon political recommendation, of a postmaster at Chicago, and that of several other persons who would not have been chosen for responsible positions by an Administration sincerely favoring reform. Prominent among the latter class stands the case of Mr. Bliss, of New York, who has been appointed United States District Attorney; the same gentleman, known as "Decoy Bliss," who last winter acted as "counsel for the defendants" before the Retrenchment Committee of the Senate in the investigation of the abuses of the New York Custom-house. It is thought that the reform zeal of an Administration appointing such a man to such a place has not passed beyond the control of politicians, and that the hateful civil-service regulations may receive an endorsement by Congress without seriously disturbing the time-honored spoils system. This feeling, however, will not prevent the enemies of reform from doing their best to kill the whole scheme in Congress, as soon as they find an opportunity to do so, especially as they believe that they will not incur the displeasure of the Administration by making the effort.

Senator Carpenter has given notice of his intention to make a speech on his bill authorizing the Federal courts to condemn property in the States for the use of the General Government. On that occasion, according to current report, he will try to convince the country that the powers of the General Government under the Constitution are much larger, and that much more may constitutionally be done in the way of centralization, than has been generally supposed by the common run of people. Such a speech will open a vast subject, and a general debate on constitutional principles and the state of the country is likely to follow, at least when Mr. Carpenter's bill is reported back from the Judiciary Committee. Mr. Carpenter is also credited with saying that now, after its tremendous success in the late Presidential election, the Republican party is sure to remain in power for at least a generation, and that, there being no organized opposition to contest its ascendancy, it may without danger do pretty much as it pleases. Superficial and positively foolish as such a way of reasoning may appear to every impartial observer of human affairs, yet it is quoted in Administration circles as an emanation of profound wisdom, and I have heard it gravely repeated at least a dozen times as a truth above question. It is a fair indication of the spirit which prevails among the party managers, who think of making themselves comfortable by as extensive an assumption of power as possible. The fact that no severe attack has so far been made upon the "apostates" is explained on the same theory; the majority feel themselves so firmly seated in power that they can safely ignore the opposition. An exception to this rule, however, is made in the case of Mr. Sumner, who, with his proposition to remove the names of the battles of the civil war from the Army Register and the regimental colors, threatened to lay violent hands on the only political capital of so many celebrities of the day. With Mr. Sumner this matter is not new. He presented in the Senate a similar proposition in 1862, and, although it was not acted upon, it did not draw anybody's wrath upon his head. It is said that Gen. Scott highly commended it at the time. But now the same thing is vociferously denounced as a gross insult to the soldiers of the Union, and some Republican senators are reported to have considered it an intolerable disgrace that such a bill should lie on the table of the Senate. It was, intended, therefore, to call it up and dispose of it even before Mr. Sumner was ready to make the speech of which he had given notice, and the delivery of which he put off on account of the precarious condition of his health. It was for the purpose of having the matter before the Senate, independently of Mr. Sumner's bill, that a resolution was introduced and passed in the House of Representatives, the purpose of which is to strengthen the Union sentiment of the country by keeping alive the memories of the civil war. But the postponement of the matter until after the holidays was at last agreed upon, and then we may look for a grand explosion of patriotic eloquence on the part of those who will lose no opportunity to "fire the Northern heart," and to reanimate the war feeling, which politically has been found so useful. On the other hand, I learn that even those who approve of the spirit of Mr. Sumner's bill regret its introduction as untimely, and would rather not have any discussion of such topics at the present moment. But the House resolution would render such a discussion inevitable, even if Mr. Sumner were inclined to withdraw his bill, which, however, he is not.

The recommendations made by the President in his Message looking to a vast system of internal improvements, receive more attention than was expected at the beginning of the session. The subject is being privately discussed from two points of view. Many senators and representatives from the West say that greater facilities of transportation are needed between the West and the seaboard for "moving the crops," at the same time admitting that an enlarged system of railroads would in this respect be preferable to the system of canals recommended by the President. But the matter is also looked at in its political aspect, and, while some of our leading politicians were at first a little frightened by the vast expense with which the execution of the President's projects would burden the people, others maintain that a government and a party gain strength by scattering large sums of money among the masses, and nothing would, therefore, in the end be better calculated to fortify the party in power than a vast and expensive system of internal improvements; in other words, that there would be not only jobs, but also votes in it. The appointment of a special committee in the Senate to collect information and report upon the President's recommendations seems to indicate that the matter is to be taken in hand in good earnest. Mr. Windom, of Minnesota, who was appointed chairman of that Committee, has the reputation of being a sensible and honest man; but you may rest assured, when the subject comes up for action, you will find those who are in favor of the largest political corruption funds also in favor of the largest system of internal improvements.

Scarcely a word has been spoken yet in either House of Congress about the startling events in Louisiana. There is a variety of reasons for this apparently strange silence. The regular Administration men do not deem it necessary to say anything as long as the interests of the party are served, and thus, in the Louisiana case, they let well enough alone. There are many honest and thoughtful men among the Republicans in Congress who feel alarmed and shake their heads at the proceedings of the Federal authorities, but fear to speak lest they be classed with the Opposition. And the Opposition think that their advice will not be listened to by those in authority, and that in view of the indifference with which the events in question are received by public opinion, their warnings would remain unheeded by the people. So far, there has been on all sides a certain reluctance to touch the case. But it may force itself at any moment into the discussions of Congress, especially if the appeal to the people, which is intended by the Citizens' Committee from New Orleans, should meet with any response in the country. There is a strained and uneasy feeling in political circles here which renders it very uncertain whether this session, which so far has been devoted to the quiet transaction of current business, will close without an explosion of excitement. It will depend somewhat upon the impressions members of Congress bring back with them from the contact with their constituents during the holidays.

THE CRISIS IN FRANCE.

PARIS, Dec. 6, 1872.

I HAVE often wondered at the curious incapacity of the English mind to understand the political circumstances of other countries than England.

Everybody remembers the strange mistakes of the English press and of English statesmen at the time of the great American war. Though the community of race, of origin, of language, and to a great extent of institutions, ought to have helped the English leaders of opinion to appreciate the true character and the probable results of the struggle between the North and the South, they seemed more bewildered and they were led further from the truth than German, Russian, Italian, or French observers. England and France lie so close together that England ought to understand French affairs almost as well as her home politics; and it cannot be said that there is any negligence on the part of her press in keeping the English public informed of the incidents of French politics. The Paris correspondents fill now half the pages of the English journals; every night a long telegram is sent to the *Times* by "Our Special Correspondent," and the great city paper publishes besides long letters of "Our Own" and of "Our Parisian" correspondents. The paper which has "the largest circulation in the world" (I mean the *Telegraph*) has now a magnificent office on the square of the New Opera. The *Times* has informed its readers every day during the summer, with the minutest details, of all the "movements" of M. Thiers. Every English farmer knew when Princess Troubetzkoi breakfasted at the cottage where the President spent the vacation-days; when Charles Sumner was received as a guest; when Timaschef, the Russian Minister of the Interior, had the honor of dining with M. Thiers; how many times M. Thiers sat for his picture, how often for his bust. Two active correspondents of the *Times*, Lawrence Oliphant and M. Blowitz, go everywhere, see everybody; they are ubiquitous. Their assumed neutrality allows them to run to Lucerne, when the Count of Chambord is holding a levee, to interview the Princes of Orleans, to closet themselves almost daily with M. Thiers himself, to see all the leaders of the Opposition. They can see Gambetta in the morning and Bishop Dupanloup in the evening, Count d'Arnim one day and the next day General Chanzy or Ducrot; and, with such golden opportunities, it is hardly conceivable that the *Times* should not have a clear perception of men and things.

It has, however, distinctly invited M. Thiers, for several days past, to extricate himself from his present difficulties by a *coup d'état*, and to force a dissolution on the Chamber. Now M. Thiers is not at all in the position of a constitutional king; and even in constitutional countries the royal right of dissolution has been practically abolished, and the power of dissolution remains only in the hands of a Cabinet, chosen from the majority of the House of Commons, but which thinks that its majority has become so weakened that an appeal to the country has become a necessity. But M. Thiers, who is a mere delegate of the National and Sovereign Assembly, has no more right to dissolve the Chamber than I have to dissolve the House of Commons. It is at least singular that, when all is in confusion in France, when the only legal power in existence is the Assembly which concluded peace, when the Communists are openly talking of taking their revenge on the Chamber, the paper which pretends to represent an old aristocratic, monarchical, and parliamentary country should daily boldly advise M. Thiers to recommence a Second of December.* M. Thiers has said himself, in his last speech, that if he made an appeal to the army, the army would only answer him with horror and disgust; whatever may be his defects, and I have never been over-indulgent to them, he will never become a vulgar conspirator and plunge his country in the deplorable condition of Spain. What can be the object of the *Times* in insulting France, M. Thiers, and the Assembly in the way it has done lately? We remember well that Napoleon III., after his *coup d'état*, thought it necessary to enter at once into common action with England against Russia. Kinglake has, with great reason, given a place to the 2d of December among the causes of the Crimean war. Does England meditate another Crimean war? And is she willing to sacrifice to some unknown and mysterious object the parliamentary liberties of France? I do not exaggerate in saying that the views expressed by the *Times* on French politics have given as much offence to the French people as the conduct of the *Times* during your war did to the American people. I may add that this interference will no more alter the course of events in France than it did in America.

It would be very imprudent to prophesy what this course of events will be. The inner divisions of the French people have never been more apparent. The country, as well as the House, is divided into two parts, of nearly equal strength. The Republicans are the least numerous, but they are the most ardent, and they constantly threaten the majority with civil war. The Monarchical party, which has the good fortune to be free from all communistic and socialistic elements, is for the present neutralized by the fatal antagonism between the principles of the Comte de Chambord and those of the Orleans family. If the Comte de Chambord was generous enough to abdicate, his party, composed of the old French nobility, would at once rally round the Comte de Paris, and, as the views of the Orleans family are liberal, a great number of moderate Republicans would soon rally round him and accept a constitutional monarchy in preference to a Gambettist republic. For the present the various monarchical parties are obliged to rally on a purely conservative platform. M. Thiers has avowed that during the Commune he entered into engagements with the leaders of the advanced party in Bordeaux, Lyons, and other great towns. What the exact nature of these engagements was is not well known. But it is clear that they were at variance with the Pact of Bordeaux, which proclaimed a sort of political neutrality till the total liberation of the French territory. It is very freely said also that M. Thiers has made a distinct treaty with a member of the Commune of Paris, called M. Ranc, who was the chief of Gambetta's police at Tours and at Bordeaux. M. Ranc remained for two weeks in the Commune, and then was heard of no more. He is now one of the editors of Gambetta's paper, the *Republique Française*, and a member of the Municipel Council of Paris. Everybody knows why this dangerous demagogue, who signed the decree for the arrest of the hostages, has never been prosecuted. He says himself that he has a talisman. M. Thiers is fond of quoting the Cardinal de Retz, and during the Fronde, Retz signed many a secret treaty, sometimes with Mazarin, sometimes with the Spaniards.

There is something very extraordinary in the quiet assurance with which the leaders of the Radical party repeat that M. Thiers belongs to them. "Bring in your prisoner," said a captain to a soldier who was holding a prisoner. "Why, captain, I can't, he is holding me." Such is nearly now the situation of M. Thiers and of the Radical party. The Conservatives of the Chamber made a desperate effort to extricate M. Thiers from the hands of his new friends; but their effort was of no avail, and now the two parties are well in line in front of each other, and M. Thiers is on the same side as Gambetta. It must be well understood by those who wish to have a precise knowledge of the situation, that the Republican army in the Chambers contains only about one hundred Gambettists proper, and that the greatest force on that side is composed of what is called the Left Centre; that is, of nearly two hundred gentlemen, who are only accidentally Republican, who have followed the leadership of M. Thiers in the interest of public order and of the liberation of the territory. These gentlemen have, most of them, belonged in former times to the Constitutional party; they were resigned to a conservative republic, but they are as much afraid as the members of the Right of a republic which should be in the hands of Gambetta and of the Communists. They may some day play the part of the Saxons at the battle of Leipzig, and if the alliance between Gambetta and Thiers becomes too close, they may wheel round and rejoin their former friends and allies. On the Conservative side there is more compactness; but the Conservative army has no good leaders, no man capable of standing before M. Thiers as Mr. Disraeli stands before Mr. Gladstone. But since the message, the resolution, the *entrain* of the Conservative army has surprised everybody. The deputies have returned from their provinces, thoroughly convinced of the necessity of raising a barrier before the tide of radicalism. M. Thiers has tried in vain to frighten them into submission, he has made the greatest oratorical efforts in order to break their union; it seems as if all his power was now lost. The spell is broken; there is no longer any confidence in him on one side of the house, and three hundred and thirty-five members have been bold enough to say so.

The political crisis might, I believe, have been delayed, but now it is too late. We have before us a long session, which will be nothing better than civil war. This extraordinary tension is felt in all the circumstances of life. Society is at a stand-still. When the future of France hangs on a thread, nobody can find time for the quiet pastimes of polite intercourse. France is like a beautiful marble which is slowly eaten up by an acid. In the few salons which are open you will hear no more literary, historical, or philosophical discussions. "Sonata, what wilt thou of me?" said a desperate man who could go nowhere without hearing a sonata of Beethoven played on the piano. Many would willingly scream now, "Thiers, what wilt thou of me?" He has become the unavoidable, the everlasting, the irrepressible Thiers. Elegant ladies will discuss the results of the last divisions. In the theatres, during the *entr' acte*, people are seen nervously looking over the evening papers. The officers at their mess, the workingmen in their dark taverns, the bankers at their desks, are all talking of the same things. The whole life of the country seems in suspense. Publishers have told me that they have never sold so few books, that they actually hesitate before publishing the most excellent works. The attention of the public is entirely drawn to the daily incidents of the political drama.

The French are much more passionate than they are supposed to be; they feel besides that France is now very much like Hercules at the opening

* It also advised General McClellan to seize the Government at Washington.—Ed. Nation.

of the two diverging roads. They feel that if they engage themselves in the wrong direction they may bring endless misfortunes on their too unfortunate country. They have the sad consciousness that they show to the foreigner the spectacle of a house divided against itself, and they see no means of bringing these divisions to an end. If ever France, in her greatness, has committed excesses and crimes; if she has been too ignorant of other countries' misfortunes, too disdainful of her enemies, too intoxicated with the feeling of her own strength and grandeur, she is indeed too much punished now. Her destinies are in the hands of an old man of seventy-six, who has already helped to destroy many governments, and who may now destroy his own, and half the country has lost its confidence in this saviour of an hour. The great Communist army is secretly reforming its ranks, and before the monuments of Paris are rebuilt dreams of making new ruins. Parties as hostile to each other as if they belonged to different races are all ready to devour the ephemeral reign of M. Thiers, waiting, as the poet says,

"A qui dévorera ce règne d'un moment."

The Germans are increasing the fortifications of Belfort, and are only waiting for an opportunity to seize permanently this last key of our frontier. The man whom so many would like to seize the sceptre of Saint Louis, of Louis XIV., and of Louis XVIII., lives on a political Sinai, and contents himself with emitting oracular declarations. The future is as dark as the present; and France is drifting to an unknown destiny without a pilot, without a helm.

Correspondence.

ENGLISH AUTHORS AND AMERICAN REPRINTS.

To the Editor of the Nation:

Sir: Allow me through your columns to take up a little slip in the new edition of my "Two Years in an English University," an *omission to omit*. I wish to do so because it involves a curious transient item of literary history, now generally forgotten.

On p. 500, it is stated that full ten per cent. of the novels republished here are credited to the wrong authors. This assertion may well surprise a reader of the present day; nevertheless in 1851 it was literally true. At that time a certain class of our re-publishers had a fashion of taking some tolerably well-known name (though not one of the very first names) and attaching to it any sort of rubbish, frequently reprints of books ten or fifteen years old. There was, I remember, a Mrs. Grey, who had somehow achieved considerable popularity in America (and I suppose some reputation previously in her own country). She was a great favorite in this way, and made to do duty on all occasions. The practice had become so prevalent that I mentioned it to Mr. Duyckinck, editor of the *Literary World* (the American critical weekly of those days), asking him to make some animadversion upon it, which I believe he did.

Circumstances attending the republication of the "Two Years" obliged me to revise it in great haste, at a time when I was pressed with other work. I intended and endeavored to strike out every assertion which had become an anachronism. But these statements and references being scattered here and there, some of them in odd holes and corners of the book, so to speak, they occasionally escaped my notice, as in this instance.

C. A. Bristed.

Washington, D. C., Dec. 14, 1872.

SMITH'S LATIN DICTIONARY.

To the Editor of the Nation:

Sir: *Apropos* of your notice of the "White-Riddle Latin Dictionaries," the neglect of Dr. William Smith's work has long puzzled me. It would seem hardly possible that your reviewer too could be ignorant of its merits, and yet if he were familiar with it, how could he speak of the relation of *ascor* and *gigno* with each other and with *γίγνομαι*, of the kinship of *Suavis* and Sanskrit Svâdu, and, by implication, of other kindred roots from cognate languages, as something quite new to a school dictionary? And it is said to be a novel feature, "not to be found in other books of reference," to give the French and Italian equivalents under each word. This Smith certainly does not do—as in a plain case like *conquérir* and *conquiro*, for instance—but he does give *abeille* and *pecchia* under *apicula* (one of your citations) and many others, where the changes of a word have obscured its parentage. At all events, when the reviewer remarks that the reader of Livy (he might have added Cæsar), "can *now* have authority for '*Saltus*, a mountain pass,'" he clearly could not have looked into Smith.

My only object is to call attention to a very useful book, and to its singular neglect in this country. I have used it for a dozen years or so, and for the rough work, at least, of an occasional dabbler, who pretends to no scholarship at all, have found it better than Andrews, and much more satisfactory than the older editions of Riddle. I don't venture to say that it is better than the new works of White and Riddle, with their advantage in point of time, for I have not seen them, and am not competent to judge if I had, but perhaps you will think it hardly fair to yourself, to Dr. Smith, or to American letters, to allow us to send this volume of the *Nation* to the binder's without some limitation of the statement, that of the last thirty years of activity in the study of comparative grammar and new interpretation, "the American student can find, in his books of reference, not the slightest trace."

T. S.

Philadelphia.

[We had in mind only American dictionaries when we wrote. With the merits of Dr. Smith's work, which is in but too few American hands, we have long been acquainted.—Ed. Nation.]

CHURCH AND STATE.

To the Editor of the Nation:

Sir: The inordinate length of my letter published last week fully justified you in omitting a few of its paragraphs. But as the suppression of one of them may do me some injustice, permit me to mention that it affirmed that I wrote in no depreciation of the Christian Church in any of its branches, and expressed my profound sense of the good it had done and was destined to do.

That the influence of our organized ecclesiastical bodies is on the whole elevating and noble, is a proposition which commands my hearty assent. I also admit that, in view of the good they accomplish, they may make a claim—and a very strong claim—for state aid. Although I am personally inclined to the belief that it is for the true interest of religion in America to owe nothing to the state, I do not assert that opinion with undue confidence, and cheerfully bow to the wisdom of our legislators if they think otherwise. My protest is directed to the manifest injustice of permitting irresponsible corporations to *help themselves* to the people's money under general laws. I do not deny that it may be a good thing for the State of Massachusetts to present the Old South congregation with half a million of dollars. I ask, however, that it may be done openly by the representatives of the people, and that I may have the opportunity of presenting the claims of my church for a similar bounty.

If, then, in view of the services which churches undoubtedly render the state, we grant that it is expedient to tax the people in their aid, there remains this question: How shall we justly levy that tax and distribute its proceeds? I can see but one answer. Let our legislatures appropriate an annual sum for the assistance of ecclesiastical bodies. Let the representatives of different sects present their claims before some tribunal constituted to distribute the money as equity shall seem to demand.

J. P. Quincy.

Quincy, Mass., Dec. 13, 1872.

LOWLAND SCOTCH NAMES.

To the Editor of the Nation:

Sir: Referring to your note of the 7th Nov., page 298, on the erection of the Scott Statue in the Central Park, New York, you give *Johnson, Thompson*, and *Robinson*, as typical lowland Scotch names. To us, again, they appear distinctly English names—*i. e.*, when so spelt. I take the "Edinburgh Directory," and the names of residents under these names, and the corresponding Scotch names, are as follows: Johnson, 5; Johnston and Johnstone, 160; Thompson, 8; Thomson, 235; Robinson, 4; Robertson, 254.—I am, etc.,

S.

Edinburgh, Dec. 3, 1872.

Notes.

A WORK on the "Cetaceans and other Marine Animals of California," by Capt. C. M. Scammon, U. S. Revenue Marine, San Francisco, will be published by subscription at the Naturalists' Agency, Salem, Mass. The plates will be full and finely executed.

—We announce with sincere regret the death of Mr. George P. Putnam, the well-known publisher, which took place very suddenly on Friday last. His name is associated, both by friendship and by business relations, with the lives and literary fame of Irving, Cooper, Bryant, Duyckinck, Tuckerman,

Kennedy, the Clarkes, and others of the older generation of American writers, and of Hawthorne, Lowell, Curtis, Taylor, "Harry Franco," and others of the present. We do not know that it could be said that his most intimate and valued associations were with the former of these groups of writers rather than with the latter; but certainly he placed upon the men of the "former days," which were "better than these," a very high estimate, and one which differed a good deal from the later and less laudatory estimate which the rising generation placed upon it. However, be that as it may, he maintained with these writers, as with his brethren of the trade, an enviable reputation for kindly, liberal, and upright dealing and amiable manners, and perhaps no American publisher ever had fewer enemies or more numerous friends. For all these qualities he will be long and deservedly remembered, and also for his hearty efforts to bring about an international copyright law for the protection of foreign authors. Indeed, he was himself an author before he became a publisher, beginning at a very early age with editing the *Bookseller's Advertiser*, a monthly periodical, and afterwards "Chronology: An Introduction and Index to Universal History, Biography, and Useful Knowledge," on which was founded his "World's Progress" (1850), besides "American Facts" (1845), two European guide-books, and other statistical works. His connection with magazine literature in this country is too recent and familiar to our readers to need more than a mere mention here. Mr. Putnam was a native of Brunswick, Me., and was in his fifty-ninth year at the time of his death. His sons, we presume, will continue the business without interruption.

—The *Times* has recently printed one or two local articles, which must have had a great deal of interest for old inhabitants, and the perusal of which we recommend to such of our present citizens as Providence decreed should be born among the outside barbarians. It will tend to make them feel like sons of the soil, for one thing; and it may tend to make them better citizens. The latest of these articles appeared on Saturday last, and gave us some information about Murray Hill. Not so famous as Beacon Hill, Murray Hill is nevertheless known to most New Yorkers as the best quarter of the city; it is the apex and centre of that "architect's brown study," that expanse of tall houses with brownstone fronts which is the Earthly Paradise of the stock-broker and the heavy burden on the soul of the artist in architecture. In the very middle of it, at the corner of Thirty-seventh Street and Fifth Avenue, many of our readers have seen an odd old wooden house, perched on a little hill which rises directly and abruptly from the sidewalk, and which still makes some feeble efforts to remind the passer-by that it has been a garden. In front of it, in the yard, are numerous rustic seats; and a new conservatory, built out from the right side of the melancholy old cottage, extends to the street, and offers its shop door to the public, which may here buy its flowers. The house itself, as a signboard informs us, is occupied by a French milliner. Very queer is the aspect of the whole place, house and yard, amid the "palatial residences" of Murray Hill. Yet from the builder of this house, who, a hundred and fourteen years ago, was living in it in a style of much magnificence, the fashionable quarter takes its name.

—In 1758, Mr. Robert Murray, an American citizen of good Scotch descent, and a member of the Society of Friends, had his town-house in Pearl Street; but out in the country, on a hill looking towards Harlem and commanding a view of the East River and the Hudson, he had a fine country-seat and beautiful grounds. His pleasure gardens reached down to the southward as far as the Madison Square of our day—Madison being at that time about seven years old, and perhaps dreaming that he was one day to be distinguished, and perhaps not. Mr. Murray's kitchen-gardens, screened from view by a plantation of evergreens, were on the Fourth Avenue side, and it was from the southern side that an avenue fringed with tall trees wound through smooth lawns to the house. English elms, Lombardy poplars, Virginia tulip-trees and magnolias, were among the trees which grew where we now see the Belgian pavement and the long lines of five-story houses all alike. This Robert Murray, by the way, was inclined to be a Tory when the Revolution came. His ancestors had been Scotch Episcopalians, a loyal breed, and his sympathies were with the Government, although his wife and his two daughters—whose beauty was the theme of Major André's enthusiastic praises—sympathized with the rebels. It was, for instance, by an enormous fib of Mrs. Murray's that Gen. Israel Putnam, on September 15, 1776, was able to escape Sir William Howe. Putnam had been in command in this city, his headquarters being at No. 1 Broadway, but after the defeat of the American forces in the battle of Brooklyn Heights it became necessary for him to evacuate, and make for Westchester where Washington was encamped. He therefore ordered what stores could be packed up to be got together, and was soon marching rapidly for the Bloomingdale Road and Westchester. But, as Putnam had been informed, Sir William Howe had indeed crossed, and was marching by the Middle Road to capture the Americans. When he reached the spot where the hedges of the Murray garden touched the Middle Road, he found at the gate Mrs. Murray, and with her the beautiful Miss Beulah and the more beautiful Miss Susan, and Mrs. Murray begged the General to alight and dine. Howe said that he could not; he must pursue Putnam and his rebels. "Ah, William, thee art late," said Mrs. Murray; "my daughters and I saw them march up the Middle Road shortly after the dawning. They marched in haste like men that are afeard." To this inexact statement the young ladies gave a full and dutiful corroboration, and Friend William, who was never averse to a dinner nor to the society of ladies, alighted and dined, while Putnam's men with their hearts in their mouths got stealthily to McComb's Dam, and so went safe to the camp of Washington. Mr. Murray's son, Lindley, by the way, was the famous grammarian. As a young man he was very athletic and active, a great leaper and walker. He disdained the use of carriages and horses, and always walked to his place of business. One morning on his way down, when he came to Peck Slip, which was then exactly twenty-two feet wide, he attempted to leap across it, and did so, but fell as his feet struck the far side, and in some way so injured his spine that he was ever after an invalid. Taken to England for treatment, he was so much better there than here that it became his residence, and he there composed his grammar and became one of the household gods of the British schoolmaster, who, we may be sure, has seldom known that he was bowing down before a Yankee. We have just said that Lindley Murray disdained the use of carriages. That, however, was not the language to be used. Carriages were then very scarce, and in this part of the country were very unpopular as signs of aristocracy and effeminacy. Mr. Murray, having imported a coach for the greater convenience of his ailing son, was imitated by Dr. Cadwallader Colden, who, in 1761, became Lieutenant-Governor of the Province, and by two other gentlemen; but when the troubles broke out between the colonies and the old country, Governor Colden, who was a Tory, was burned in effigy at the Bowling Green, at the foot of Broadway, and his coach, which had been forcibly taken from his stables, was burned in reality.

—Mr. Dorman B. Eaton's plan of municipal reform has been given to the public through the press; it was to have been delivered as an address, but Mr. Eaton's ill-health rendered this impossible. The suggestions it contains are worth listening to, as coming from a man who has learnt what the evils of our present government are by practical experience of them—very nearly at the expense of his life. Calling attention at the outset to the fact that no real system of government has ever been attempted in New York, the charter having grown by successive heterogeneous partisan amendments into a shapeless mass of what might be called crude statute, Mr. Eaton intimates the opinion that "constructive reform" must begin with the abolition of all the other partisan "squares, parallelograms, and triangles"—pestiferous nests of pot-house politicians—and the recognition of the city as a representative unit. The chief political question of the day, however, Mr. Eaton thinks, is that of "better administrative methods." Instead of the chaos of laws at Albany relating to cities and villages, the proportion between these and the whole annual legislative product having gradually increased from one-eighth in 1840 to one-fourth in 1870 (in which year thirty-nine laws were passed for Brooklyn alone), we need a statesmanlike system in harmony with the social tendencies and political institutions of the country. Any change of the basis of suffrage Mr. Eaton regards as impracticable, if nothing else. As the first step towards reform, he would have a commission appointed to codify the laws relating to New York, with general powers of investigation and recommendation. He would then have it distinctly understood and agreed by the managers that for the future the city was to be governed on business, not partisan, principles. The vital question of official responsibility Mr. Eaton treats ably. He shows very clearly that the system of party responsibility has utterly failed, and that the only reforms introduced have been through commissions, or, in other words, through individual responsibility. "The desire of securing the good opinion of honest men, and the fear of exposure in the press, of punishment in the courts," are, as he says, the only feelings that produce a salutary sense of responsibility in a city official. Civil-service reform, general publicity of proceedings, appointment instead of election of administrative officers—all these reforms are advocated. The constructive part of his essay is less valuable than that which is occupied with criticism of the existing state of affairs. In fact, Mr. Eaton's criticism is so good as almost to prove the impossibility of any lasting reform without a much more complete revolution in system than he is willing to admit necessary.

—Mr. Wendell Phillips's lecture on the "Lost Arts," well known throughout the United States as perhaps the most famous product of the Lyceum period, was delivered the other evening at Steinway Hall, and reported for the first time in the *Tribune*. Of course, so much is lost in printing that it would be unfair to speak of its total effect. Every one who has heard Mr. Phillips knows how much he is able to make out of his materials; but the

materials themselves are interesting also. The motive of the lecture was, Mr. Phillips says, the reduction of the national conceit by a comparison of the condition of the science, art, mechanics, and so on of the present day with those of past generations; the comparison showing how little progress even we, the foremost of modern nations, have made, with all our gunpowder, steam, and electricity. The lecture is cleverly constructed and full of anecdote, but it seems doubtful whether it can ever have done much as "a medicine for what is the most objectionable feature of our national character." To tell your fellow-citizens that they are but pigmies, in the eyes of him who is familiar with the general history of the race, while at the same time you admit that they are the foremost of now-existing pigmies, may make them feel their common humanity, but will hardly tend to cultivate a spirit of humility or self-depreciation. Nowadays a lecturer who wished to force this disagreeable medicine down the throats of the American people, would institute comparisons, not between ourselves and the Medes and Persians, but between ourselves and our own contemporaries, showing wherein we fall behind other modern nations in the race of progress, how well our system of education compares with the Prussian, our civil service with English, our roads with those of France. Perhaps, however, it is more probable that Mr. Phillips lectured on the "Lost Arts" rather for the pleasure of lecturing than for any moral object. The lecture has, on the whole, a curiously remote, old-fashioned country-village effect, which is heightened every now and then by the introduction by name of the John Thompsons and Abijah Wings of the lecturer's acquaintance, who "had recently returned from foreign travel," or who "tell me that they saw in China" or "among the British aristocracy," such and such curious things. But we speak of it only as it appears in type.

—Our three-meals-eating readers may be interested to know that the Oneida community at Madison, in this State, have adopted the plan of eating but two meals *per diem*, and that they nevertheless do not become uncomfortably hungry, nor too low in flesh; but on the contrary that, during the month in which the self-denying ordinance has been in force, a gain has taken place in the aggregate weight of the family, which now is heavier than it was by 126 pounds avordupois;—unless, indeed, the family weighs itself by Troy weight, as being a particularly precious crew of ladies and gentlemen. "Greater leisure for study" these pundits also secure by cutting off some of their victuals, for less kitchen work is required. We observe, too, that "a strong clothing committee" is called for by the financial committee, which remarks that "this committee should investigate the needs of all the members of the community, and make up their estimates, to be handed in before the first of January." We should say that here is an occasion when the Community's pleasing custom of Free Criticism would come in to advantage, and we trust each sister will remember that the others should adorn themselves with calico and the like, and not with all-wool delaine—with modest apparel, as the Apostle Paul says—to the people over in the next pew—with shame-facedness and sobriety, not with broidered hair, or gold, or costly array. Very profitable some of the critical evenings might be made, we feel sure, if each of the ladies would give her real views as to the minimum in garments which the other ladies of the family could perfectly well get on with if they liked. We see, by the way, that the Oneida family's dear friend, W. Hepworth Dixon, having sued the *Pall-Mall Gazette* for libellously calling him a writer of "obscene books" and of "vamped up books of travel," has got the sum of one farthing damages. Other Americans than the Communists will heartily rejoice at the luck which has overtaken this literary scavenger. They will, at all events, if they recollect particularly his "New America," into which he raked these same Communists, the Mormons, and half a dozen other obscure varieties of such sectaries as are distinguished for low sexual morality, and invited Europeans to regard them as specimen Americans. He has at last got something like his deserts. There is always an end to such people, sooner or later. We may usually expect with good reason to live until we see our desire upon our enemies; all that is necessary is to select our enemies with care.

—The last number of the *Historische Zeitschrift* (1872, No. 4) gives especial praise to three recent historical works. Hausrath's History of the New Testament period ("Neutestamentliche Zeitgeschichte") is pronounced to be composed "in a form not merely enjoyable, but really admirable, satisfying the enlightened taste and most cultivated æsthetic demands of the time"; that it combines with this the results of the latest and best scholarship may of course be assumed. The second volume, just published, covers the time of the apostles. After reading Coulange's frantic and ludicrous onslaught upon German historiography in the *Revue des Deux Mondes*, it is refreshing to take up a warmly commendatory notice, by W. Arndt, of Monod's "Etudes Critiques sur les Sources de l'Histoire Mérovingienne," the first part of which comprises Gregory of Tours and Marius of Avenches. "It is the best work that we as yet possess upon the person and works of Gregory of Tours"—"even Loebell's 'Gregory of Tours and his Time' cannot be compared" with it. Sohm, the author of the latest work on the early German constitution, praises Hensler's "Ursprung der Deutschen Stadtverfassung," as distinguished by "eminent capacity for the intuitive comprehension and presentation of mediæval relations, as well as by judicial clearness and precision." A book dealing satisfactorily with this difficult subject will be acceptable to many students.

—Doctor Schliemann, who has for some time been digging on the site of ancient Troy, thinks that, on the 19th of July last, he struck the colossal Trojan wall described by Homer. It is built of cut stone, held together by clay, three and a half metres wide on the west, and four on the east side. While engaged in this work, he discovered thousands of pieces of *terra cotta* with the most varied religious symbols. Schliemann was having the spot where the temple of Apollo was built explored when he found a marble block magnificently worked representing Phœbus Apollo, and dating from the time of Lysimachus. In a letter written subsequent to the discovery, Schliemann announces the fact that the wall above mentioned belongs to a tower forty feet high, and built on a rock sixteen feet down. While digging about the temple, another immense wall was discovered towards the north.

—A congress of Italian publishers has lately been sitting at Venice. The result most interesting to foreigners was the warm approval given to the proposition of Signor Petochi in regard to the publication of a "Bibliography of all Works printed in Italy from the Invention of Printing to our own Time." Sig. Bertocci, who has been preparing a "Bibliography of Italian Publications during the XIXth Century," was invited by the congress to unite in the work. There are many careful monographs on the literature of particular cities, as Affo's "Parma," Argelati's "Milan," Fantuzzi's "Bologna," Mongitore's "Sicily," Tiraboschi's "Modena," and many others, and there is a general Italian bibliography by Mazzuchelli, which never went beyond the letter B, to say nothing of Haym's "Libri rari" and Melzi's "Opere anonime e pseudonime." But all these stop short of the present time, most of them belonging to the last century, all are incomplete even for the period they cover, and some of them might be much improved in the method of treating their materials. Certainly it is to be hoped that Sig. Petochi and Bertocci will not adopt the inconvenient folio form affected by so many of their predecessors. To compress their rich literature within a reasonable number of volumes, they will be obliged to study brevity—a rare quality in an Italian; but they may at least give references to the works in which disputed questions are treated at length. If they carry out their plans the English Watt, the French Quérard, the German Kayser, will be outdone. As for America, to mention Roorbach and Kelly is to blush. It appears from representations made to this congress by the society of journeymen printers of Venice, that they are paid just half as much as compositors are at Florence, not a hundred and fifty miles away. Whether this is a relic of Austrian dominion at Venice, and the difficulty of leaving that city, or is due to the well-known local affection and pride of Italians, or some peculiar inertness in Italian workmen, it is remarkable. An American compositor who could obtain double wages in a city half a day's ride distant and not much more expensive to live in, would go there at once.

—The first and second parts of Professor Salazaro's work on the development of painting in the South of Italy, of which we have twice spoken in the *Nation*, have at length reached this country, having been imported by F. W. Christern, 77 University Place. The full title of the work, which promises, judging from these two parts, to be of unexpected value, is as follows: "Studi sui Monumenti della Italia Meridionale dal IVo. al XIIIo. Secolo, per Demetrio Salazaro, Ispettore della Pinacoteca nel Museo Nazionale di Napoli. Napoli, 1872." In the Dedication to Fiorelli, the learned and efficient Director of the Museum, Salazaro complains of the false notions relative to the renaissance of art in Italy, and of the lacunæ that exist in the museums in consequence of these false notions. Speaking further of the early Christian art, which he traces to the Catacombs, he says:

"At first it appears simple in its conceptions, dry in its forms, but profound and full of feeling in expression. It is not my purpose to hold the reader to a long demonstration how the arts lived through the first ages of Christianity, how the new belief transformed the classic paganism, and how painting, emerging from the Catacombs, mounted to more splendid light in the basilica and other public edifices after the first century. But art, in its transformation, leaned more and more to a psychological development, to the loss of plastic excellence. And, for ten centuries, painting slowly developed itself, following with constancy the reawakening movement which came from the South of Italy. From the first revival it declined, under the gilded ornamentation of the Byzantines, and in the eleventh century reappeared anew in its primitive form, but richer in composition. Of this grand movement of Christian art we shall present numerous and convincing monuments and not a few names of illustrious artists, known even to-day. It is

our intention, therefore, to demonstrate that in these southern provinces of Italy, from the fourth to the thirteenth century, the arts were abundantly cultivated (*coltivate abbastanza*), and that in these regions, in which the civilization (*stato*) and the language of Italy had their birth, the twin arts were also in flower according to the times."

These extracts will give at least a notion of the scope and aim of the work. It is got up in a sumptuous style, and the illustrations are executed in chromo-lithography with much skill and an evident desire to preserve the spirit of the original wall-paintings. The illustrations begin with the frescoes of St. Angelo, in Formio, remarkable, says Salazaro, for the vastness of their conception, and will be drawn not only from the regions immediately about Naples, but also from Apulia and the Abruzzi, from Calabria and Sicily. Each of the two parts thus far published contains two plates. Those in Part First are: I. La Orante (The Virgin in Prayer), a fresco of the fourth century, from the Catacombs of Naples. II. The Saviour (sixth century); St. Peter and St. Paul (fifth century). Those in Part Second are: I. A Youth between Sts. Peter and Paul and two other Saints (fourth century). II. The Virgin praying between two Saints and the Founder of the Church (seventh century), from the Cimiterio di Badia, near Majori (Riviera di Amalfi).

—The public debate last February in Rome on the question whether St. Peter had ever visited the city of the Popes, was much more satisfactory as evidence of a certain tolerance in the Papal See than as a solution of historic doubts. Neither of the parties engaged in it seemed able to go to the bottom of the subject, and as usual it has remained for a German to make a profound and thorough examination of the sources, and render a decision on which the lay mind, at least, may perhaps rest as final ("Die Quellen der römischen Petrussage, kritisch untersucht von Richard Adelbert Lipsius." Kiel, 1872). The sources of the Peter legend, according to Lipsius, fall under three heads, according as they consist of writings referable to one or other of the three tendencies of Christendom represented by the Ebionites, the Gnostics, and the Catholics; the two first embodying the antagonism between Jewish and heathen Christianity, and the last being the reconciling and unifying element which gradually assumed to be and became the Church one and indivisible. In the books ascribed to Clement of Rome we have the Ebionitic authority; in the "Acts of Peter and Paul," the Catholic; and in the "Passion of Peter and Paul," the Gnostic. A careful analysis of the first-named has convinced Lipsius that it is derived from a still older writing (*Grundschrift*) that must have been composed a long time before the middle of the second century. This was in substance an account of the contest between St. Peter and Simon Magus, between the true and the false apostleship; and the Clementine version had only to identify the sorcerer with the heathen apostle Paul to set Simon Magus over against Simon Peter. The scene of their encounters was laid first in Syria, where the historic differences between Peter and Paul were duly improved upon as a basis; and afterwards in Rome, whither Peter, not having fully overcome his adversary, was obliged to follow him and incurred martyrdom. But this portion of the story the Clementine version rather hints at as something known to the writer, than attempts to develop. In the Catholic version, which belongs in the fifth or sixth century, we have the two apostles acting as co-workers, but the influence of the *Grundschrift* is visible in the subordination of Paul. In Rome the Jews entreat him to defend their religion against Peter; but he busies himself in stilling the quarrels between heathen and Jewish Christians. Simon Magus appears upon the scene under the patronage of Nero, and challenges the apostles to a trial of supernatural powers; and having undertaken to fly from a high tower, Paul with tears in his eyes witnesses his success, and urges Peter to make haste with his counter-charm. This Peter does, tumbling the magician to the ground; but the martyrdom of both the apostles follows inevitably. (The incident of Simon's flying, by the way, is traceable to the record, found in pagan writings, of a real occurrence of the sort in the reign of Nero—the amphitheatre in the Campus Martius being the scene of the failure.) In a great many minor features the two versions thus far related betray a common origin. The Gnostic version is in two parts—the second describing the sufferings of Paul, and apparently being a pure invention (*freie Dichtung*), not connected as yet with any anterior writing. The first part agrees essentially with the Catholic version as to the sufferings and death of Peter, except that it entirely separates him from Paul, and on this account cannot be supposed to have been taken from the Catholic. In conclusion, the Romish Peter-Paul legend appears to have been originally a Peter-Simon legend, and a mere continuation of that of which Syria was the theatre. It can, therefore, lay no claim to an historic character, but must be regarded as a poetic manifestation of the Ebionitic, Jewish-Christian hostility to Paul, and can neither be used as a proof of his nor of Peter's stay in Rome. The argument for the latter drawn from the connection which it has in Catholic tradition with Paul's sojourn and death in the same city, thus falls to the ground, as soon as the real nature of the connection is revealed.

TUCKERMAN'S GREEKS OF TO-DAY.*

BOOKS of travel are generally of ephemeral value, because the progress of a few years makes their statements inadequate or inaccurate. Especially is this true in regard to such a country as Greece, where during the last forty years the changes have been almost as great and as rapid as in the United States. In criticising such books, therefore, one may fairly praise the latest, although in absolute merit it may be inferior to some of its predecessors. In this sense, and yet not perhaps in this sense only, this book of Mr. Tuckerman's is the best English account of Modern Greece. Compared with Baird's volume, published in 1856, it is greatly inferior in fulness and accuracy. Compared with Felton's "Letters from Europe," written in 1853, a large part of which is occupied with Greece, it lacks variety and vividness. But we know of no book which so combines freshness and fulness of information. The author had many advantages from his official position, and seems to have used them well. He betrays now and then an amusing consciousness of his dignity, as when he almost complains that Athens "is surfeited with foreign ministers, and they come and go as noiselessly as the seasons" (p. 21), or when he mentions "the plain dress-coat of the American Minister at public ceremonials, contrasting with the glitter and gold of the rest of the diplomatic corps," as eliciting "the favorable comment of the press" (p. 336). Unfortunately, Mr. Tuckerman does not seem to have had the advantage of previous practice in literary work to chasten his taste and form his style. He indulges himself in metaphors and occasionally in fine writing, to the injury of his book. One example may suffice of a metaphor needlessly used and cruelly protracted. Speaking of the desire of Greece in 1827 for more territory than the Great Powers were willing to give her, he says (p. 126): "Dissatisfied with the spoonful of political broth, the Oliver Twist of nations had the unblushing temerity to 'ask for more.' The plump beadles stood aghast; then made a show of earnest consultation, which resulted in stamping the little upstart with the badge of deep-dyed ingratitude, and refused a second spoonful." The author's attempts at sprightliness and fine writing may be accounted for by the supposed necessity of adapting his style to the magazine readers for whom some of these chapters, we are not told which, were originally prepared. But only want of skill in the use of language can explain such expressions as the following: in Greek architecture "vanity was a subjective principle to that of religious faith" (p. 72); "the exceptional condition which Greece holds toward the rest of Europe" (p. 103); "the Greek journals reproduced [my paper] with fulsome encomiums, but I was not so blind as not to perceive that the *touchstone* of their gratification lay in the passages," etc. (p. 246); "here, or supposed to be here, which is much the same thing, the warrior-king Ulysses found safety from shipwreck, and held the famous interview with Nausicäe [*sic*]—she who has been called," etc. (p. 295); Greece "has long been recognized as the football ground of Europe" (p. 330), where we suppose he means the football.

Other errors or inaccuracies, which cannot all be due to the alleged (p. 365) haste of preparation, appear here and there. The spelling of Greek words is a stumbling-block to our author, so that we find Rangabéz. Botzaris (both end alike in Greek), Kolocrotoni and Colocotronis for Kolokotronis, Megira for Megara, Pandrosa for Pandrosos, Erectheum for Erechtheum, Praxitiles for Praxiteles, metropes always for metopes, Jupiter Olympius and Jupiter Olympus, kleft and klepht, Sina and Sinna. The hill of the museum is not "crowned with an unsightly observatory" (p. 36). The hill of Kolonus is not "the hill of columns" (p. 78). Of "the most ancient naval battle recorded in history" (p. 297), nothing is known but the mere statement of the fact in Thucydides, and when Mr. Tuckerman gives the scene of it and the number of ships engaged, it must be from private information of his own, or from a confused recollection of one which Thucydides describes as fought in 435, not in 657, B.C. We should be glad to know also where he ascertained that the people of Corfu (Korkyra) are descended from "Spartan ancestors" (p. 321), for Thucydides, as well as Strabo, had the idea that the island was settled from Corinth. The modern Greek may be glad to prove that the vitality of his mind is due to "hereditary influences going back to the Illyrian or even to the Pelasgian tribes" (p. 330), but the ancient Greek would have thought that almost a Darwinian development. It may be true that "to be out-manœuvred in a bargain, especially by one of his own countrymen, is a source of the deepest mortification" to the Greek, but when Mr. Tuckerman adds, "hence the proverb, 'When Greek meets Greek, then comes the tug of war'" (p. 341), we fear his love of metaphor makes him do injustice to old Nathaniel Lee, who did not mean "bargain-

* "The Greeks of To-day. By Charles K. Tuckerman, late Minister Resident of the United States at Athens." New York: G. P. Putnam & Sons. 1872.

ing" when he said "war." And we wonder whether it is his memory or his knowledge of Latin that is at fault when he regards the rejection by the Eastern Church of the famous *filioque* clause to mean a rejection of the "doctrine of the procession of the Holy Ghost from Father to Son" (p. 197). These may appear trifling matters, but in judging the quality of a man's work, especially when there was no pressing necessity of its being done and done at once, and when, too, it is a work of information from a source presumably authoritative, such matters (and many more may be cited) are valid tests of thoroughness and accuracy.

We turn now to the general statements and arguments of the book. Some of these are new and of real value. Such is the account of the present King and Queen, which, though brief and evidently somewhat rose-colored, yet shows clearly the gain to the Greeks in having exchanged Otho for George. Another is the paper on brigandage, and the sketch of the "Massacre near Marathon" in 1870. No other writer, we think, has stated so fairly and fully the hold which the brigands have on all classes of the people, and the consequent difficulty of suppressing them. The account of the way in which young men who wish to live by their heads rather than by their hands drift into politics as a profession, is also new and interesting. The chapter on the modern city (we prefer to say nothing of that on the "Parthenon and other Ruins"), though trivial and shallow in many points, gives a good picture of what a traveller staying a week or two might observe or learn in conversation, making a fairly good magazine sketch to impart information or revive pleasant memories. The discussion of the "Great Idea," the dream of a Greek Empire with Constantinople for its capital, seems just in its reasoning and right in its conclusion.

Mr. Tuckerman enters upon his account of the Greek character with the expressed intention "to correct existing prejudices and widespread misconceptions." For the accomplishment of such a purpose, he ought to have provided himself with new facts or with well-supported explanations of old facts. How, then, does he deal with the matter of honesty among the Greeks, as to which there is certainly an "existing prejudice" that it would hardly outweigh the snakes in Ireland? He admits that "the most distinctive feature in their intellectual system is finesse," but argues that such "subtlety," "polish of manner and politeness of speech," because natural to the Greek and not implying "premeditated deception," ought not to be "mistaken by the foreigner for dishonesty." "Modern Greeks embellish facts as their ancestors embellished their architecture" (p. 333)! It looks as if he had caught the infection of their "subtlety" by his residence among them. After speaking of other qualities, he comes back to another part of this topic, "the almost universal charge that the Greeks are a set of thieves and swindlers" (p. 342). This extravagant statement is fairly met by pointing out that it rests in large measure upon the hasty assumptions of travellers, who ascribe to Greeks all the sins of the mixed population of the Levantine ports, somewhat as in other lands the blame of every pedlar's cheating is laid by many people on the Jew. But when the author goes on to allege that "the commercial and working classes of the cities of free Greece are as respectable and honest as the same classes in other European cities" (p. 343), we cannot go along with him. He tells some good stories about the character of servants in Greece, but when he argues their honesty from the facts that a Russian lady in Athens could trust her Greek servants, while an American lady in Saxony or a Swiss official could not trust their German or Swiss ones, we cannot help thinking that the induction is too narrow, and that each story might easily be balanced by one to the opposite effect. Finally, he asks why, if the Greeks are honest, they have so bad a reputation; and, incredible as it may appear, his answer is that it is because their "political aspirations are not in keeping with the policy of Western Europe" (p. 351), and so the people and press of Europe, particularly of England, have tacitly agreed to denounce them as dishonest. We should say that in this discussion our author almost entirely avoids the points upon which it ought really to turn. We regard the Greeks as deserving to a lamentable extent their reputation in this regard, because we see that they do not trust one another, nor regard falsehood as a serious evil and sin; because they consider the financial statements of their Government as hardly worthy of confidence; because they disregard truth in dealing with children, and fail to teach them to observe it themselves; because they value a triumph of wit or cunning too much to regard the deception involved in it; because in their ideas of themselves and their nation they let their dreams and wishes blind them to the facts, content themselves with an appearance and an impression, and are unwilling to learn to seek out and face the truth because it is the truth.

The brief article on the Greek Church is in the main good, but it takes no notice of one grand defect of that Church—its failure to teach and enforce morality. Neither by doctrinal system, nor by practical precepts, nor by the example of the clergy, does it accomplish what it ought in this direction. All Greeks are by baptism members of it, as in Catholic countries, and remain so, be they brigands or bishops, so long as they observe the required rites. The lack of honesty in the people testifies to the neglect of morality on the part of the Church, and the arguments by which Mr. Tuckerman tells us the Greeks resist reform in the Church are evidence of their indifference to truth when compared with something that is old, settled, and, above all, Greek. The one serious blemish in this book, in our view, is the attack upon the American missionaries in Athens. The charges insinuated are mostly mistaken, and the opinions expressed, we think, out of place in such a book. Dr. King is dead, and what faults he had might surely, for the purpose of this book, be buried with him. It might be added that Mr. G. P. Marsh, then our Minister at Constantinople, and Professor Felton of Harvard College, neither of them men likely to be carried away by zeal for the missionary cause, found no fault with Dr. King's course, and that no missionary has since that time been troubled by the Government. When Mr. Tuckerman rakes up from the past and puts before the public in permanent form old forgotten caricatures, born of a fanaticism quite equal to that of the missionaries, and goes out of his way to charge the present missionaries with coloring their reports to the home society with "cant and embellishments," even printing a supposed report with an "unvarnished" edition of it on the opposite page, he offends against good taste, courtesy, and justice.

TREADWELL'S MANUAL OF POTTERY.*

THE publication of this manual is one of the many signs of a growing interest in art on this side of the Atlantic, which marks the present time. Mr. Treadwell may be congratulated on having recognized a want, and on having supplied it in so satisfactory a manner. Those who would collect understandingly will find his "vade mecum" a most useful guide, as it is the result of intelligent observation, fortified by the study of some of the best authorities upon the subject of which it treats.

We must confess that we do not understand why Mr. Treadwell speaks in his preface of ancient pottery as "not a part absolute of keramic art." The potteries of Corinth, and Athens, and of the Greek Islands, as well as those of Nola, Chiusi, and Ruvo, not to speak of those of Thebes and Memphis, or of Tyre and Sidon, surely belong as absolutely to keramic art as the majolicas of Urbino, Castel Durante, Ferrara, and Modena, or the porcelains of Sèvres, Dresden, and Capo di Monte. A word of explanation would not have been amiss, as the Greek derivative "*κεραμεία*" is applicable to all varieties of pottery.

Faïence, as Arnoux defines it, is "any clay which, after having passed through the fire, preserves a certain amount of porosity, and which is then covered with a glaze." The different kinds of faïence are produced by the use of common or of fire-clay; the admixture of sand with the clay, as in Persian ware; the use of a transparent or of a colored glaze; of an opaque or translucent enamel; and also by the combination of all these processes upon one and the same piece. Porcelain, as Mr. Treadwell tells us, differs from pottery "in being made of a fusible material which is vitrified and translucent." Some tests by which porcelain may be recognized are the homogeneity of its outer and inner coating, its hardness, which approaches to that of flint; its resistance to the action of boiling water and fire, and even to that of any acid but the fluorhydric. At page 10 of his manual the author proposes "fracture" as an infallible test whether an object be of pottery or porcelain. This test being of somewhat dangerous application, we would suggest, as of a more innocent character, that of relative weight, and that of the difference of sound produced by the contact of two pieces of Satsuma or Nankin, say a cup and saucer. If of faïence the sound is soft and muffled; if of porcelain it is sharp and clear. This is explained by the difference of material.

In entering upon the subject of Oriental porcelain the author speaks of its introduction into Europe by the Portuguese in the beginning of the sixteenth century. The statement, though often made, we believe to be incorrect. The inventories of Italian princes make mention of porcelain objects at the end of the fifteenth. In the year 1487 Lorenzo de' Medici received several valuable porcelain vases from the Sultan of Egypt. The French King Charles VII., whose reign ended in 1422, possessed some pieces of porcelain. These facts are given in a late work by the Marchese Campori of Modena, who furnishes some valuable information, based upon documentary evidence, about the place and date of the first fabrication of porcelain in Europe. He cites a letter written in 1567, by Bernardo Carnigiani, the Florentine Ambassador at the Court of Ferrara, in which Camillo da Urbino, then in the service of Duke Alfonso II., is spoken of as the rediscoverer of the art of making porcelain. A letter written nine years later (1576) from Florence, by the Venetian Ambassador,

* "A Manual of Pottery and Porcelain for American Collectors. By John H. Treadwell." New York: G. P. Putnam & Sons. 1872.

claims the same honor for the Duke Francesco de' Medici. These almost simultaneous discoveries in Italy were made more than a century before Böttcher's day, but as the secret was lost, the credit of its recovery, and that of having made its processes common, may fairly be given to the Saxony of the sixteenth century.

In reviewing the history of pottery, Mr. Treadwell takes up each country in turn, beginning with Egypt. He quotes Pliny's statement that Corœbus of Athens and Hyperbius of Corinth invented the potter's wheel, and says that its incorrectness is proved by the mention of that object in the Bible at a much earlier period. Still more positive evidence is, however, furnished us by the wall-paintings in the tombs of Thebes and Beni Hassan, which, though executed long before the foundation of Athens, represent all the different processes of vase-making, such as turning, baking, and polishing. We know nothing of the origin of the art in Egypt, nor can any proof of an early intercourse between Egypt and China be brought forward, since "the wonderful little bottles with Chinese inscriptions," cited by Mr. Treadwell, at page 112, as evidences of the manufacture of porcelain in the East "at a remote period," are now acknowledged to be modern. Maryatt, in the second edition of his well-known work, p. 251, tells us that the writing characters upon some of these bottles were only introduced into China B.C. 43–33, and that the verses upon one of them in the museum at Sevres are taken from a Chinese author of the 8th century of our era. In a note (8) he says: "We believe that Sir G. Wilkinson is quite prepared to abandon all idea of the antiquity of these bottles," which are supposed to have been fraudulently placed in the tombs by Arab hands.

From Egypt the potter's art was probably introduced into Greece by the Phœnicians. Want of space prevents us from saying something about the earliest pottery found in the Greek islands, upon which subject the curious will find much valuable information in A. Conze's pamphlet, "Zur Geschichte der Anfänge Griechischer Kunst" (Wien, 1870).

At page 27, Mr. Treadwell, before stating the now universally accepted view that the vases found in Etruscan tombs are of Greek manufacture, says that Winckelmann's distinction of all Etruscan work as Campanian is almost frivolous, because Campania formed part of Etruria." We would remind him, however, that Campania "was peopled," to quote Dr. Mommsen, "by all sorts of Hellenic races, often amalgamated so as no longer to be distinguishable." The discovery of 6,000 vases since Winckelmann's day in the necropolis of Vulci, where there is no tradition of a Greek population, all decorated with Greek subjects and inscriptions, proved either that they were brought from Greece to Italy, which is improbable, or that they were made in local workshops under Greek direction, as is now generally believed. If we disagree with Mr. Treadwell on this point, so also we disagree with him about certain points connected with the early history of Italian majolica. Passeri, whom he quotes, says that he has seen glazed pottery upon a tomb of the year 1100. If this be so, the glaze used was transparent like a varnish. The proper starting-point for the manufacture of majolica is about the year 1300, when the opaque glaze was introduced, whose processes were perfected in the fifteenth century at the manufactories established by the Estes of Ferrara, the Sforzas of Pesaro, the Ganzagas of Modena, and the Della Roveres of Urbino. In point of precedence, we now know through the documents published by the Marchese Campori that Ferrara comes before Pesaro. Manufactories were established there about 1450, but at Ferrara we have the names of workmen who were employed by the Marchese Lionello d'Este in 1436 and 1443. Before Lucca della Robbia's invention, "mezza majolica" only was made. This differs from fine majolica in that its glaze is plumbiferous, while the white opaque enamel of Robbia ware is stanniferous, of extreme brilliancy and hardness, and not liable to crack. The question as to whether Raphael ware is so-called because Raphael made designs for it, our author frankly confesses himself unprepared to consider. It would be rash to decide it in the negative, but we may state the opinions of the best authorities that the name was given because the designs of the great painter, made for other purposes, were copied in its decorations, or that the name is derived not from Raphael, but from Raffaelino del Colle, a painter who worked for Guidobaldo della Rovere. We notice that at page 85 Mr. Treadwell, in speaking of a specimen of Beauvais ware belonging to the National Library at Paris, expresses a fear lest it may have been destroyed during the Communist conflagration. This fear is, we think, groundless, for, thanks to the courage and devotion of the persons who had the care of the building and its precious contents, it and they escaped unharmed.

In conclusion, we would speak of Mr. Treadwell's manual as a highly creditable and most useful addition to American art literature. In wishing for it a wide circulation, we indirectly wish that American collectors of pottery and porcelain may multiply. It will be a welcome assistant to those who have already begun to indulge in so attractive a mode of spending time and money, and to all beginners it will be an indispensable guide.

Pertes Eprouvées par les Bibliothèques Publiques de Paris pendant le siége par les Prussiens en 1870 et pendant la domination de la Commune révolutionnaire en 1871. Rapport à M. le Ministre de l'Instruction Publique par M. Baudrillart, Inspecteur-Général des Bibliothèques. Paris. (New York: F. W. Christern. 1872.)—This official report reveals the extent of the losses which the libraries of the city of Paris sustained during the late German-French war; or rather, to adopt the terms of the report, "during the siege by the Prussians in 1870 and the domination of the revolutionary Commune in 1871." The report opens with a short statement of the injuries sustained by libraries outside of Paris; refers to the total loss of the important collections of Metz, Colmar, and Schélestadt, which, with the conquered provinces, passed into Prussian hands; and mentions the destruction, by bombardment, of the Palace of St. Cloud, with its magnificent library, especially rich in great illustrated works and magnificent bindings. In the other cities with libraries occupied by the enemy there have been no losses, except in the case of the library of the Military School of St. Cyr, partially destroyed by the Prussians.

From Prussian bombardment and occupation the great collections of the capital suffered little or nothing. But at the hands of the Communists the losses are immense, incalculable. As a question of mere money value, they must be counted in millions; as an intellectual loss, no figures can adequately represent it. Take, for instance, the case of the library of the Hôtel de Ville—one hundred and twenty thousand volumes—of which a large proportion treated of the history of Paris, and among which was the famous Missal of Juvenal des Ursins, illustrated with exquisite miniatures of the fifteenth century—a total loss. Total losses, also, the valuable special libraries of the Council of State, with its minutes of official sittings for long years past; of the Court of Accounts; of the Court of Appeals, with its fifty thousand volumes of jurisprudence; of the Legion of Honor; of the Society of Advocates; of the Ministry of Finance; and, finally, of the library of the Prefecture of Police, rich in manuscripts on the Revolution, and a collection, unique, of journals and newspapers, future material for the political history of our period. Of the national libraries in Paris, only one is reported as having received serious damage—a damage amounting to utter destruction—viz., the library of the Louvre, which has totally perished. The reporter appears to be almost at a loss for language to describe the wealth, taste, erudition, and beauty of this collection, the jewel of the libraries of France, "un joyau qui brillait d'un éclat particulier, inappréciable," which included valuable manuscripts, the most admirable specimens of rare books, proof engravings, illustrations of painting and engraving in large numbers, a complete museum of all that is perfect in the art of binding. All this has disappeared without leaving a trace, not even of mention in a catalogue, for all its catalogues have also perished, and many of them were masterpieces and models of patience and industry. They of themselves filled sixty volumes in folio, the names of authors alone occupying twenty-seven. The catalogue of subjects connected with the Revolution was of itself a literary treasure. It is now bitterly regretted that these catalogues were not printed, and the reporter takes occasion to recommend that an order be issued for the publication of the catalogues of all the public libraries of France, and recapitulates the many advantages to all concerned of the printed over the manuscript catalogue.

The list of losses of special and rare MSS. and literary curiosities is very large. First and most to be regretted is the Bull, written on papyrus, of Pope Agapetus, dated 951. A fac-simile of the document exists at Narbonne, and a copy of it is published in the Papyri Diplomatici of Marini. Then follow—we select only a few of the most striking—a beautiful Persian MS. of the Shah Hamet, with vignettes; a Biblia Sacra MS., in quarto, of the thirteenth century, on parchment, binding of black morocco by Simier, on the last leaf of which was read: "*Ista Biblia fuit gloriosissimi sancti Ludovici, quondam regis Francorum*"; a large collection of autograph letters of kings, princes, ambassadors, generals, etc.; the original account of expenses kept by the jailers of the Temple who had charge of "Louis Capet and family"; the MS. "Reflections on the Mercy of God," by Louise de la Vallière, with marginal notes by the hand of Bossuet.

One of the special glories of the Louvre library was its collection of Elzevirs, acquired by gift from M. Charles Motteley. This collection was the fruit of more than forty years of labor and travel, vast expenditure of money, and a thorough knowledge of the subject which amounted to a special science. It exceeded in value even the celebrated collection of Elzevirs in the library at the Hague. The Motteley collection was also rich in MSS.: the Bible of the Dukes of Guise, parchment MS. of the fifteenth century, with exquisite miniatures on every page; four large folios, "The Campaigns of Louis XIV.," with pictures by Vandermeulen and ornaments by Damoiselet; a large number of Greek and Latin MSS., nearly all from the library of the Oratory, and all anterior to the fifteenth century; a Cicero and a Horace of

the twelfth and a Virgil of the thirteenth, a Lucretius and an Ovid of the fourteenth, and the autograph MS. of the works of St. Agobard, of the ninth century.

The Louvre library was entered late in the night of the 23d–24th of May by incendiary Communists in the uniform of the National Guard, set on fire with the aid of petroleum, and by midday of the 24th its total destruction was accomplished.

Songs from the Dramatists. By Abby Sage Richardson. With Designs by J. La Farge. (Boston: J. R. Osgood & Co. 1872.)—Perhaps the most entirely satisfactory of the season's gift-books is that made by Mrs. A. S. Richardson, or rather by Mrs. Richardson and Mr. John La Farge, who furnishes the volume with its pictures. It will readily be seen that the book is one which could not well avoid having a great charm. Our dramatic literature, rich as it is in all descriptions of writing, yet has for a principal merit the exquisiteness of the lyrical poetry scattered purposely up and down its plays; and the compiler would indeed have a curiously bad taste who should be able to put together a volume so large as this one and not make a very delightful and otherwise valuable book. Mrs. Richardson, who appears to have a great liking for her subject—a fondness for the songs, and a lifelong enjoyment of them, which argues the possession of much of the fitness required for the task—has gathered together some hundred or so of the pieces which we all know, and Mr. La Farge has exercised his own poetic power in aid of her purpose. His theory of illustrating a book appears to be much like the theory of those instructors in elocution who used to inculcate it upon the pupil that his gesticulation should follow, not the words to be spoken, but should rather attempt to express his feeling and thought in another way. In like manner, to attempt expressing by picture just what our author has already expressed fully in her words, seems to a certain school of designers to be a mistake. If we understand the theory, it calls for designs which are no more than suggested by the words to be illustrated; it allows of a variation of the theme; it allows to the artist a look at his subject from other points of view; it is, in short, symbolical to a great extent, and not literal. Perhaps we do not state the thing correctly. However that may be, Mr. La Farge's imaginative pencil has worked very gracefully in some of these pictures, and we only wish the publishers had been more sumptuous, and allowed us three or four times as many. But, as it stands, we recommend the volume to the attention of all readers—to those who are good readers at other times, as well as bookbuyers at holidaytime, and readers of gift-books. Well adapted as it is for this time of the making of presents, it nevertheless has about it nothing of an ephemeral quality. The sweetest poetry of the best poets, illustrated by the always interesting and often beautiful work of one of the most refined and thoroughly cultivated of artists, makes a book that certainly is not for a day.

We will send THE WEEK for one Year,

With our new edition of

TAINE'S ENGLISH LITERATURE.

2 vols. Retail price $7 50; both for $7 75. The same to Teachers or Clergymen for $6 75.

LIPPINCOTT'S MAGAZINE

AN ILLUSTRATED MONTHLY OF

POPULAR LITERATURE AND SCIENCE.

FOR 1873.

The New Volume, commencing with the January issue, will be replete with

THE MOST ATTRACTIVE FEATURES.

It is the intention of the conductors of the Magazine to render it a model of literary and mechanical excellence, and with this view no advantage will be neglected which either talent or capital can command to render each issue an agreeable and instructive compendium of

POPULAR READING.

The contributions now on hand, or specially engaged, embrace an unusually attractive list of Tales, Short Stories, Narratives, Descriptive Sketches, Papers on Science and Art, Poems, Popular Essays, Literary Criticisms, etc., by talented and well-known writers; together with a variety of able and interesting articles on the important questions of the day. In addition to the shorter articles, the following

ATTRACTIVE SERIAL WORKS

will appear in LIPPINCOTT'S MAGAZINE during the year.

I.

A Charming New Novel,

"THE PRINCESS OF THULE,"

A Story of London Life and Society.

BY WILLIAM BLACK,

Author of "A Daughter of Heth," "In Silk Attire," etc.

II.

A Powerful New Story,

"MALCOLM,"

BY GEORGE MACDONALD LL.D.,

Author of "Alec Forbes," "Robert Falconer," etc.

These productions are confidently believed to be masterpieces of their authors, abounding in incident and humor, in striking characters and dramatic situations.

A large amount of space will be devoted to OUR MONTHLY GOSSIP, which will be enriched with short and lively articles on persons of note, incidents of the day, and other novel or amusing topics.

A large proportion of the articles, especially those descriptive of travel, will be

PROFUSELY ILLUSTRATED.

The pictorial embellishments of the Magazine will constitute one of its most attractive features.

LIPPINCOTT'S MAGAZINE

Is for sale by all Periodical Dealers. TERMS: Yearly Subscription, $4; single number, 35 cts. Liberal Clubbing rates. Specimen Number with Premium List, mailed on receipt of 20 cts.

J. B. LIPPINCOTT & CO., PUBLISHERS,
715 and 717 Market Street, Philadelphia.

A CARD.

EDITOR OF THE NATION:

You are aware that we are introducing to the Trade, etc., this most desirable and greatly needed improvement in Cooking, and having found it to be, without doubt, most valuable, indeed, almost indispensable to every Family, Hospital, Charitable Institutions, etc., etc., we feel it our duty to bring it to the attention of all your readers; and that they may rely upon our statement as to the great merits we claim for it, we append the accompanying testimonials, and take this opportunity to express our thanks for the kindness and willingness with which they were given.

Respectfully,
NORTON & CO., 240 Broadway.

MESSRS. NORTON & CO., 240 Broadway, New York:

GENTLEMEN: For the information of the Public, and as a duty to Humanity, we, the undersigned, are willing to say that we have purchased of you the "WARREN PATENT COOKER," and have used it in our HOMES, and find that it performs all you claim for it, and take pleasure in recommending an invention so valuable to every household.
